

## Attentions:

1. When connect the electric power wires, you should make clear about the positive and negative electrode ( the red one is positive and the black is negative). If you wrongly connected the fuse in the filter box will be broken protectively. Please replace the fuse in same parameter.
2. Because the LCD screen is the main component It should be paid attention to be damp-proof.
3. The device must be installed firmly to prevent falling of device that will possibly cause injury and device-broken.
4. The connecting-point of direct current (12V) should connect on the Main line of storage battery as possible as it can , for keeping this device in normal operation and be away from the large voltage drop influence.
5. There is high voltage cluster in this machine, if you are the professional person, should never to take part the machine if malfunction and contact the dealer in time.
