# Introduction

## System Requirements

- Operating Systems: Windows XP Professional, Windows 7 Professional or Ultimate, or Windows Vista
- Core 2 Duo 2.0 Ghz or higher
- 2 GB RAM or higher
- Video Card w/ 256 MB RAM or higher
- 10/100/1000 Ethernet Controller

# End User License Agreement

## Salient CompleteView™ SOFTWARE LICENSE

1. GRANT OF LICENSE. Salient grants to you the right to use one (1) copy of the Salient CompleteView Server SOFTWARE on one (1) computer. Salient grants to you the right to use one (1) copy of the Salient CompleteView Client SOFTWARE on any numbers of computers, provided that the Salient CompleteView Client is solely used to connect to a Salient CompleteView Server. The SOFTWARE is in "use" on a computer when it is loaded into temporary memory (i.e. RAM) or installed into permanent memory (e.g. hard disk, CD-ROM or other storage device) of that computer.

2. COPYRIGHT. The SOFTWARE is owned by Salient and/or its licensor(s), if any, and is protected by copyright laws and international treaty provisions. Therefore you must treat the SOFTWARE like any other copyrighted material (e.g. a book or a musical recording) except that you may either (a) make a copy of the SOFTWARE solely for backup or archival purposes or (b) transfer the SOFTWARE to a single hard disk provided you keep the original solely for backup purposes.

3. OTHER RESTRICTIONS. You may not rent, lease or sublicense the SOFTWARE but you may transfer SOFTWARE and accompanying written materials on a permanent basis provided that you retain no copies and the recipient agrees to the terms of this agreement. You may not reverse engineer, decompile, or disassemble the SOFTWARE. If the SOFTWARE is an update or has been updated, any transfer must include the most recent update and all previous versions.

4. THIRD PARTY Software. The SOFTWARE may contain third party software, which requires notices and/or additional terms and conditions. Such required third party software notices and/or additional terms and conditions are located in the readme file or other product documentation. By accepting this license agreement, you are also accepting the additional terms and conditions, if any, set forth therein.

5. TERMINATION. This License is effective until terminated. Your rights under this License will terminate automatically without notice from Salient if you fail to comply with any term(s) of this License. Upon the termination of this License, you shall cease all use of the SOFTWARE and destroy all copies, full or partial, of the SOFTWARE.

6. GOVERNING LAW. This agreement shall be deemed performed in and shall be construed by the laws of United States, Texas.

### 7. DISCLAIMER

THE SOFTWARE IS DELIVERED AS IS WITHOUT WARRANTY OF ANY KIND. THE ENTIRE RISK AS TO THE RESULTS AND PERFORMANCE OF THE SOFTWARE IS ASSUMED BY THE PURCHASER/THE USER/YOU. Salient Systems Corporation DISCLAIMS ALL WARRANTIES, WHETHER EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE AND NON-INFRINGEMENT, OR ANY WARRANTY ARISING OUT OF ANY PROPOSAL, SPECIFICATION OR SAMPLE WITH RESPECT TO THE SOFTWARE.

Salient AND/OR ITS LICENSOR(S) SHALL NOT BE LIABLE FOR LOSS OF DATA, LOSS OF PRODUCTION, LOSS OF PROFIT, LOSS OF USE, LOSS OF CONTRACTS OR FOR ANY OTHER CONSEQUENTIAL, ECONOMIC OR INDIRECT LOSS WHATSOEVER IN RESPECT OF SALE, PURCHASE, DELIVERY, USE OR DISPOSITION OF THE SOFTWARE.

Salient TOTAL LIABILITY FOR ALL CLAIMS IN ACCORDANCE WITH THE SALE, PURCHASE, DELIVERY AND USE OF THE SOFTWARE SHALL NOT EXCEED THE PRICE PAID FOR THE SOFTWARE.

# Operation

## Getting Started

### Starting the CompleteView Client

You may launch the CompleteView Client application by double-clicking on the icon labeled *Client*, as shown below:

Start » All Programs » CompleteView » Video Client

You may also find the *Video Client* icon located on your desktop, depending on the following factors:

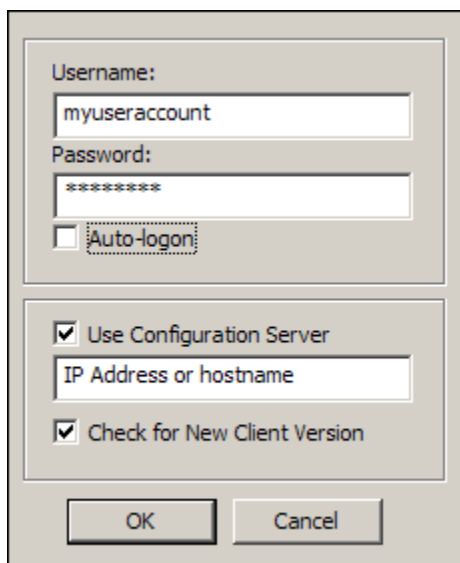

1. The item "Create Desktop Icon" was selected during the installation of the application.
2. Windows has been configured to show desktop icons.

## Logging In to the CompleteView Client

### The Login Dialog

To log in to the CompleteView Client application, you must enter the user name and password that has been assigned to you by an administrator of the Video Management System.

**Note:** The user name and password are case-sensitive.

The image shows a login dialog box with a light gray background and a thin border. It contains two main sections. The top section has labels 'Username:' and 'Password:' in blue. The 'Username:' label is above a text box containing 'myuseraccount'. The 'Password:' label is above a text box containing '\*\*\*\*\*'. Below the password box is a checkbox labeled 'Auto-logout'. The bottom section has two checked checkboxes: 'Use Configuration Server' and 'Check for New Client Version'. Below these is a text box labeled 'IP Address or hostname'. At the very bottom are two buttons: 'OK' and 'Cancel'.

1. **Username** — Enter your user name.
2. **Password** — Enter your password.
3. **Auto-logout** — Check this box if you wish to bypass the login dialog whenever you launch the client application. The next time that you launch the client, it will automatically login using the user name and password that were present when you selected the auto-logout feature.

**Note:** To turn off auto-logout, click the task button labeled "logout" from the main application screen. This will return you to the login dialog, where you may un-check the auto-logout box.

4. **Use Configuration Server** — If your administrator has supplied you with the IP address or hostname of a configuration server, enter it here. The configuration server is a centralized database containing your personalized camera view layouts.
5. **Check for New Client Version** — If you are using a configuration server, check this box to automatically check for program updates whenever you login.

**Note:** CompleteView ONE client software is updated manually.

When you click on the button named "OK", the Client application will contact the configuration server (if selected) in order to download your camera viewing layouts and check for program updates. After it has

retrieved your layouts, the application will prompt you if an updated version of the client application has been found. Lastly, the client application attempts to contact each video server in order to obtain the latest camera names.

## Client Application Update

If a program update was found, select **"Yes"** when prompted to download the updated version of the client application. The entire update process may take from as little as a few moments to as long as several minutes, depending on the network bandwidth that is available to you at the time you begin the update process.

Once the client application update has finished, you will be returned to the login dialog.

## Contacting Video Servers

Prior to showing the main application screen, the client attempts to contact each video server, as shown below:

| Server  | Status        |
|---|---------------|
|  192.168.1.176 | Connecting... |
|  demo          | Done.         |

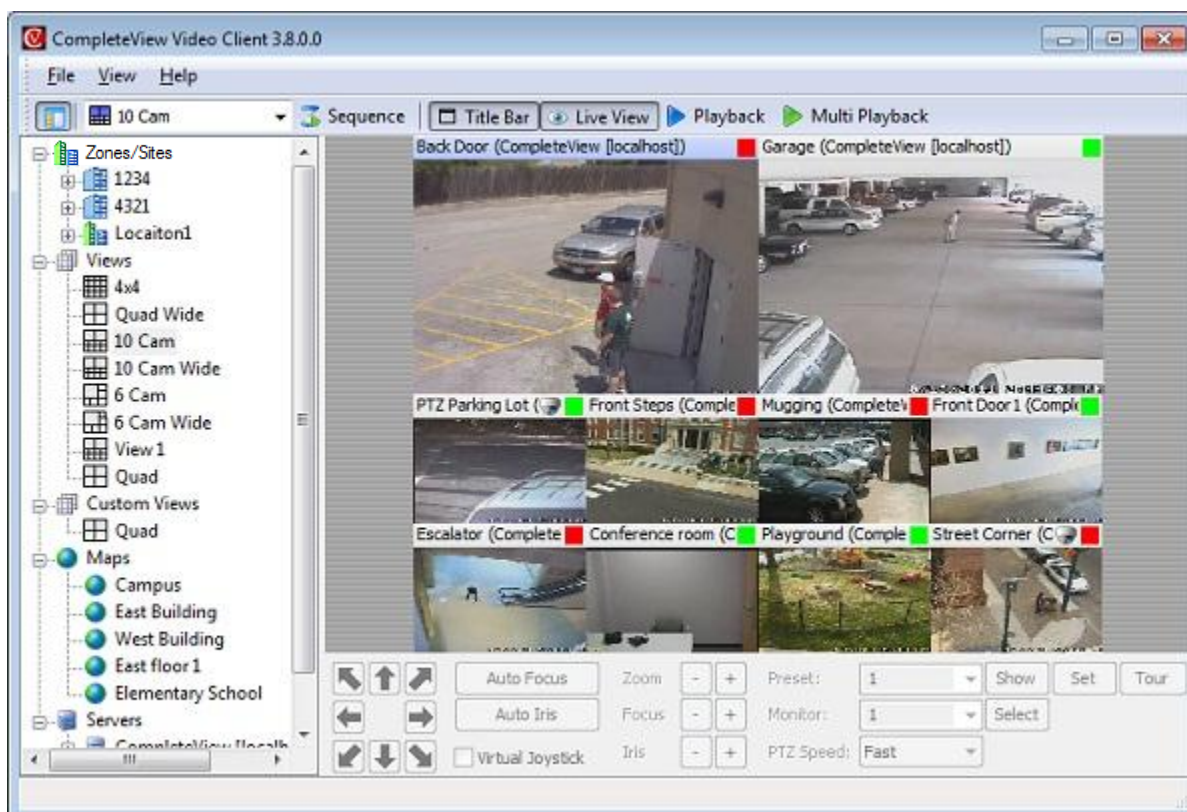

The colored dot to the left of each video server indicates the connection status for that server. You may cancel the connection process at any time by clicking on the application exit (X) icon in the upper right-hand corner of the connection dialog.

- Green indicates a successful connection.
- Yellow indicates a connection in progress.
- Red indicates a failed connection.

## Application Overview

Once you have successfully logged into the CompleteView Client application, you will be presented with the primary graphical user interface. From this screen, you will be able to perform the following functions:

- Switch among live camera view layouts that have been configured by an administrator for your use.
- Create custom live camera view layouts.
- Enable/disable automatic switching of live camera view layouts.
- Monitor the recording status of each camera on a live camera view layout.
- Move pan-tilt-zoom capable cameras that you have the permission to control.
- Listen to a live audio feed that is associated with a particular camera.
- Search for recorded video events.
- Search for motion within recorded video events (SmartSearch).
- Easily export video events to a standard .AVI file format on a variety of media, including:
  - Export to file.
  - Export to recordable CD or DVD data discs.
- Export still images taken from recorded video events as standard .BMP or .JPG files.
- Print annotated still images taken from recorded video events.
- Perform time-synchronized playback of recorded video events on up to four simultaneous video sources.

Main Screen

## Keyboard Shortcuts

Full-screen mode causes the view layout to be scaled to fit your monitor. The graphical user interface ('GUI') will be hidden from view. Use the following keyboard shortcuts to control the Client application.

|                        |   |
|------------------------|---|
| <b>F11</b>             | Enables / Disables full-screen mode.  |
| <b>ESC</b>             | Exits full-screen mode. (alternative to F11)  |
| <b>→<br/>TAB</b>       | Selects the next video source.  |
| <b>←<br/>SHIFT+TAB</b> | Selects the previous video source.  |
| <b>↑</b>               | Selects the previous view layout.   |
| <b>↓</b>               | Selects the next view layout.   |
| <b>ENTER</b>           | Causes the currently selected video source to fill the screen. Press again to return to the original view layout. |

## Enlarging a Live Video Source

You may easily enlarge a live camera to VGA resolution by double-clicking on the video source. Double-click on the live camera view a second time to return to the original size.

## File Menu

The File Menu contains two items:

1. **Log out** — Logs the current user out of the Client application.
2. **Exit** — Exits the Client application.

## View Menu

The View Menu consists of the following items:

1. **Toolbar** — Enables/disables the horizontal toolbar.
2. **Status Bar** — Enables/disables the status bar located at the bottom of the Client window.
3. **Navigation Pane** — Enables/disables the Tree View.
4. **Live View Mode** — Selects *Live View*.
5. **Playback Mode** — Selects *Playback*.
6. **Multi Playback Mode** — Selects *Multi Playback*.
7. **Sequence Views** — Enables/disables view layout sequencing.

# Live View

## Live View Controls

### Toolbar

The toolbar is used for changing view layouts, enabling and disabling view layout sequencing, entering into playback and multi-channel playback modes, and for opening the pan-tilt-zoom control panel. In addition, you may logout of or exit the CompleteView Client application.

*Toolbar*

1. **Tree View** — Enables/disables the tree view.
2. **View Name** — Allows you to select a live view layout. The icon to the left of the name of the view layout indicates the number, size and position of video sources on the view layout.
3. **Sequence** — Enables automatic switching between live view layouts.

**Note:** In order to utilize sequencing, your administrator must first enable this function for each view layout to be included in the sequence. The administrator must also configure the length of time to pause on each view layout in the sequence.

4. **Title Bar** - Enables/Disables overlay of title bars on video windows.
5. **Live View** — Enables viewing of live video.
6. **Playback** — Enables viewing of archived video.
7. **Multi Playback** — Enables viewing of archived video for multiple video sources.

### Automatic Switching Between View Layouts

Automatic switching between live video view layouts is also referred to as "sequencing." To enable sequencing, find and click on the button labeled "Sequence" that is located on the toolbar.

View layout sequencing is enabled.

View layout sequencing is disabled.

### Title Bar

The Title Bar contains camera name and status information.

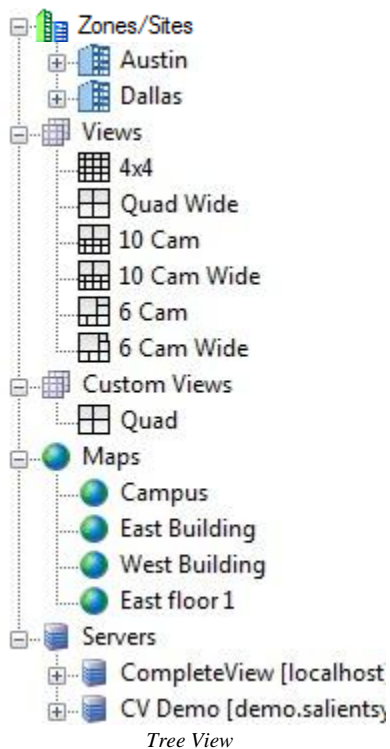

Titled Bars are enabled.

Titled Bars are disabled. Camera status is shown as a border around the viewing window.

## Tree View

The tree view is used for selecting view layouts, creating custom view layouts and selecting individual cameras.

## Zones/Sites

Select the Site or Zone containing the view layouts and maps you wish to use. Sites and Zones allow the administrator to organize view layouts and maps.

**Note:** Sites and Zones is a feature of CompleteView Enterprise. If you do not have CompleteView Enterprise contact your Salient reseller for upgrade details.

## Views

Select the view layout you wish to use from *Views* or *Custom Views* lists.

You may also select view layouts from the *toolbar*. To select a view layout, find the down-arrow located on the left side of the toolbar. When you click on the down-arrow, a list of available live view layouts will appear. Click on the name of the view layout that you wish to select.

## Custom Views

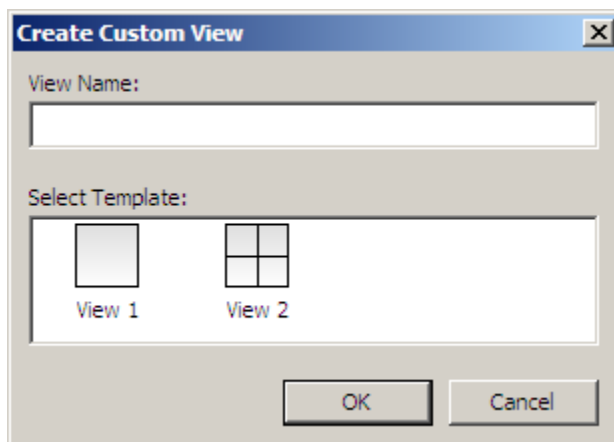

Lists view layouts that have been created by you.

### Creating a Custom View

1. Right-click on the tree item named "Custom Views". The following context menu will appear:

2. Click on the item named "Create". The following dialog window will appear:

3. Enter a name that is meaningful to you in the field titled "View Name".
4. Select a view layout template.
5. Click 'OK'.
6. A custom view layout will now be available under the "Custom Views" tree item, using the name that you provided in step 3.

### Populating a Custom View with Live Video

Adding live video to your custom view layout is a simple process.

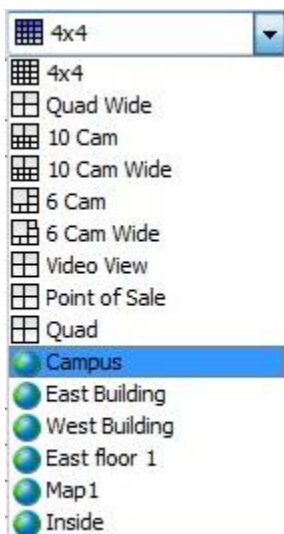

1. Expand a server in the "Servers" tree item.
2. Click on a camera in the list.
3. Without releasing the mouse button, drag the camera onto the view layout in the position that you wish it to appear.
4. Release the mouse button when the camera is in the desired position.

### Maps

Lists all maps that you have access to. Click on a map under the 'Maps' object to access that map.

You may also select maps from the *toolbar*. To select a map, find the down-arrow located on the left side of the toolbar. When you click on the down-arrow, a list of available live view layouts and maps will appear. Click on the name of the maps that you wish to select.

### Servers

Lists all servers to which you have access. When you expand the node for a specific server, a list is displayed of every camera on that server to which you have access.

**Note:** When connected to a CompleteView ONE multiple server can be connected in a single client session, however cameras from multiple servers cannot be viewed simultaneously in a single view layout.

#### **Quick Selection of Cameras**

To select a single camera for display, click on the camera name in the tree view. The currently selected view layout will change to a single-camera view layout populated with the camera that you selected.

## Pan Tilt & Zoom Control

Certain camera models are capable of being controlled on one or more axes. The most prevalent of these are more commonly referred to as 'PTZ' cameras. The term PTZ refers to the three axes that are capable of being controlled — pan, tilt and zoom. In addition to being able to control the field of view, these cameras often offer additional control mechanisms, such as opening and closing of the camera iris, changing the focal length (focus in and out), and the ability to store one or more 'preset' locations. Presets allow you to store the current position settings within the camera itself for easy recall at a later time.

Additionally, CompleteView includes the ability to digitally control fixed cameras. Fixed cameras can only be controlled when the administrator has configured the camera as a PTZ camera.

If a video source is configured as a controllable camera, you will see the following icon in the video source information bar:

— Indicates that a video source is a controllable camera

**Note:** In order to control a camera, your administrator must first have granted you the appropriate access.

## PTZ Control Bar

|  |   |
|--|---|
|  | <p>PTZ Control Buttons: Each button will move the camera incrementally in the direction clicked.</p>  |
| <p><input type="checkbox"/> Virtual Joystick</p> | <p>Virtual Joystick: When selected the PTZ Control Buttons will be changed to the Virtual Joystick Control (see below)</p>  |
|  | <p>Virtual Joystick Control: This control will simulate a real joystick. Left click and drag the center circle in the direction you wish to move the camera. The further from the center the center circle is move the faster the camera will move in that direction.</p> |
| <p>Auto Focus</p>                                | <p>Auto Focus: enables automatic focus function on the selected camera. This function does not apply to fixed cameras configured as digital PTZ cameras.</p>  |
| <p>Auto Iris</p>                                 | <p>Auto Iris: Enables automatic iris control on the selected camera. This function does not apply to fixed cameras</p>  |

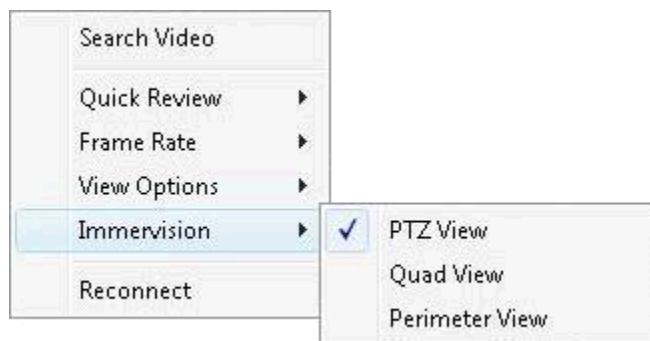

|  |  |
|--|--|
|  | configured as digital PTZ cameras.   |
| Zoom    | Zoom: Incrementally changes the zoom level of the camera.  |
| Focus   | Focus: Manually adjusts the focus of the selected camera incrementally. This function does not apply to fixed cameras configured as digital PTZ cameras.   |
| Iris    | Iris: Manually adjusts the iris of the selected camera incrementally. This function does not apply to fixed cameras configured as digital PTZ cameras.   |
| Preset:   | Preset: Changes the preset number to be controlled. Use the Show and Set buttons to control the preset number selected.  |
|   | Show: Moves the camera to the selected preset number.  |
|   | Set: Sets the current camera position to the selected preset number.   |
|   | Tour: Enables an administrator-configured preset tour (if configured).   |
| Monitor:   | Monitor: When a PTZ camera is controlled through a Pelco ACSII compatible matrix switch this sets the monitor associated with the camera. This function does not apply to fixed cameras configured as digital PTZ cameras. |
| PTZ Speed:   | PTZ Speed: Sets the speed of the camera movement.  |

**Note:** In order to control a digital PTZ camera, you must first use the zoom control to zoom into the image. The Pan and Tilt controls will allow you to move to the edges of the camera's field of view.

## USB Joystick Control

Any USB joystick can be used to control a PTZ capable camera using Video Client.

## Immervision Panomorph Lens Support

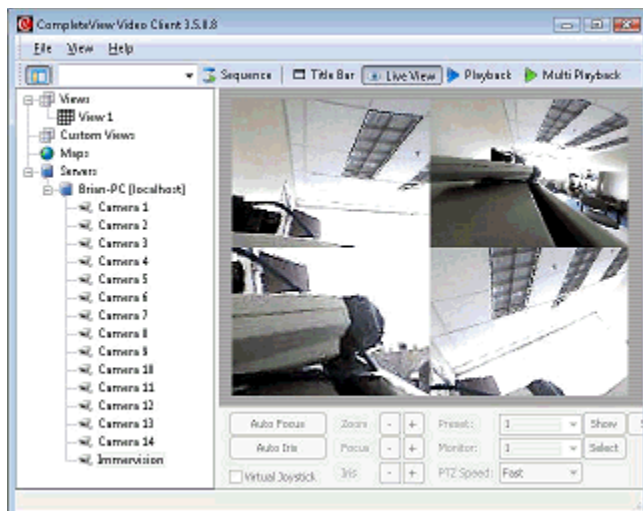

Immersion lens functionality can be accessed by right-clicking on a video window of a camera configured for Immersion support (see Administrators Manual for setup details).

### PTZ View

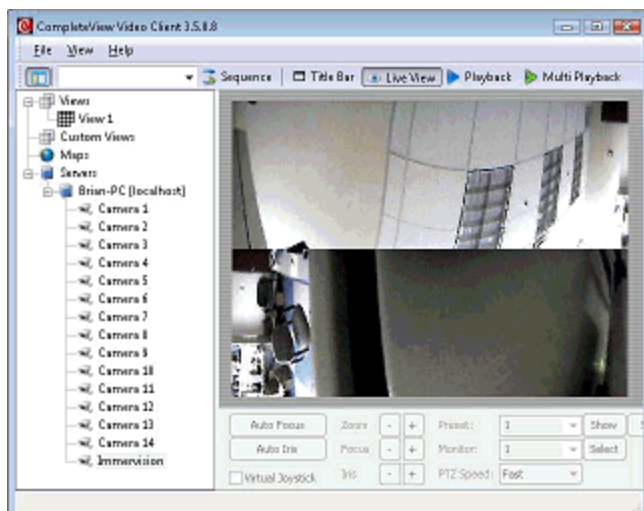

PTZ View is the default viewing mode for an Immersion configured camera. Left click and drag will rotate the image in the direction the mouse is dragged. Right click and drag left will zoom in digitally. Right click and drag right will zoom out.

### Quad View

Choosing Quad View from the right-click menu will split the camera display window into four sections which can be independently panned and zoomed to different areas of the camera's field of view. Each quadrant is independently movable and is controlled in the same way as PTZ View is controlled. Left click and drag will rotate the image in the direction the mouse is dragged. Right click and drag left will zoom in digitally. Right click and drag right will zoom out.

### Perimeter View

Choosing Perimeter View will split the video windows into a top and bottom section corresponding to the top and bottom of the field of view. Left click and drag right or left to move the perimeter view to the right and left.

## Camera Status

Information regarding camera status is shown within the title bar for each individual video source.

At the top of each video source is an *title bar*. This bar contains the following camera status information (left to right):

- **Friendly Name** — Video sources may be labeled by the administrator to correspond to a camera's physical location (example: 'Building II, Front Entrance'), the camera "view" (example: 'Building Entrance'), or a combination of both. This is known as the *friendly name* of the video source.
- **(Server Friendly Name)** — Like the video source friendly name, the server friendly name is configured by the administrator, and is shown bracketed by parenthesis. The server friendly name will generally refer to a physical location (example: Building I, Server I) or follow an internal naming convention.
- **[IP Address or host name]** — The actual IP address or host name of the server is shown between the square brackets.
- **Audio Status** — If audio is available for the video source, you will see one of two icons, as shown below. Clicking on the audio icon switches between *mute* and *listen*.

Indicates that audio is available for this video source, but is currently muted.

Indicates that audio is available for this video source and is currently enabled.

- **Pan-Tilt-Zoom** —

Indicates that this is a controllable video source. Your administrator must have granted you the appropriate permissions in order for you to control the camera.

- **Recording Status** — The current recording status of the video source is indicated by a square icon located to the far right of the information bar. The color of the square changes based on what type of recording is currently occurring.

N/A No recording is occurring.

-  Scheduled recording is active and the system is continuously recording video.
-  Motion is occurring in one or more motion zones and the system is recording the video as a motion event.
-  An external alarm is active and the system is recording the video as an alarm event.
-  Pre-alarm recording has been enabled and is currently active. The system will record up to two minutes of video prior to the start of a motion or alarm event.
-  The video signal has been lost or the camera is unreachable. The system is **not** recording video, even if it has been configured to do so!
-  ... and scheduled recording is currently active.
-  ... and motion has been detected.
-  ... and an external alarm is active.
-  ... and pre-alarm recording has been enabled and is currently active.

**Note:** When the title bar is disabled, the video window will have a border when motion or an alarm event occurs on the associated camera. The border will be either red or yellow to correspond to the event type.

## Quick Review

To quickly access video events for review, right-click on the live video window for the camera that you wish to review. A "context-menu" will appear, as shown below:

*Live Video Source with Context Menu*

1. **Search Video** — Switches to "playback" mode with the current server and camera pre-selected.
2. **Quick Review** — Opens a new window with recently recorded video from the previous:
  - a. 30 Seconds
  - b. 1 Minute
  - c. 2 Minutes
  - d. 3 Minutes
  - e. 5 Minutes
  - f. 10 Minutes
3. **Frame Rate** — Allows you to set the frame rate for the current camera from among the following choices:
  - a. 1 FPS
  - b. 4 FPS
  - c. 8 FPS
  - d. 15 FPS
  - e. 30 FPS

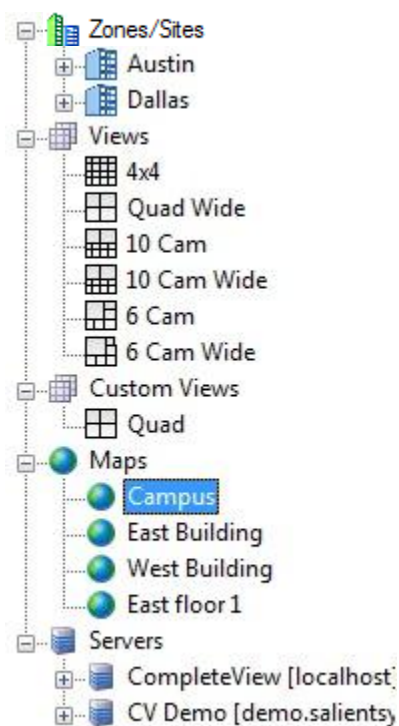

**Note:** The maximum number of frames-per-second delivered to the Video Client will never exceed the rate configured by the administrator on the server. For example, if you select 30 FPS in step 3, but an administrator has set a maximum of 10 FPS on the server for that camera, then the Video Client will only display live video at 10 FPS.

4. **Reconnect** — Initiates a reconnection attempt between the client application and the video management server for the current camera.

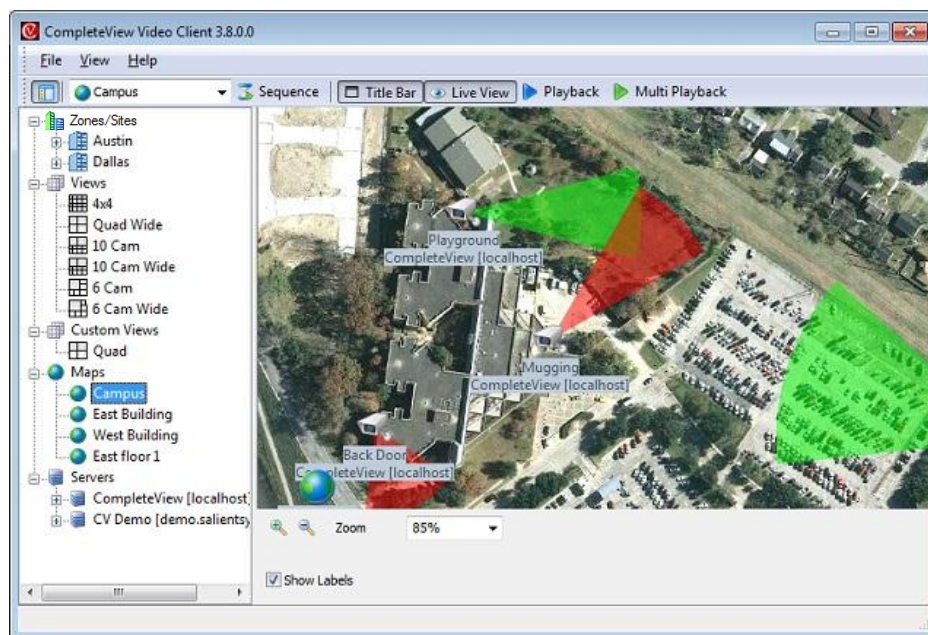

## Map View

View camera locations on a series of hyperlinked maps. To access maps which have been loaded and configured by the CompleteView administrator expand the 'maps' item in the Tree View and click on the map you wish to start on.

*Tree View with a map selected*

This will display the selected map as shown below.

*Video Client, displaying the selected map*

## Map Icons & Controls

Displayed on the map are icons representing camera locations and other maps. The camera icons additionally have cones which represent the field-of-view of the associated camera. Additionally the field-of-view cones change color dynamically to indicate recording status, activity and camera status as indicated below.

|   |   |
|---|---|
|    | <b>Map Link</b> - Links to another map. Doubleclick the map icon to switch to the associated map.   |
|    | <b>Camera Icon</b> - Represents a camera position on the map. The camera icon will have a field-of-view cone which is configured by the CompleteView administrator. The cone will change colors dynamically to indicate status. |
|    | ...Indicates motion was detected on the camera.   |
|   | ...Indicates scheduled recording is active on the associated camera.  |
|  | ...Indicates an external alarm associated with the camera has triggered recording.  |
|  | ...Indicates a pre-alarm buffer is active on the associated camera.   |
|  | ...Indicates no activity on the associated camera.  |
|  | ...Indicates there is no video from the associated camera, This could be no communication with an IP camera or a sync loss with an analog camera.   |

## Map Control Panel

To control the zoom level and display settings use the Map Control Panel located below the map.

*Map Control Panel*

|  |   |
|--|---|
|  | <b>Zoom In</b> - Click to zoom in on the map.   |
|  | <b>Zoom Out</b> - Click to zoom the map out.  |
|  | <b>Zoom Level</b> - Drop down to select zoom level. 100% corresponds to the original size of the image imported as a map. Zoom levels range from 10% of the original size to 200%. Choose 'Scale to Fit' to fit the entire map into the viewing area. |
|  | <b>Icon label On/Off</b> - Enables/Disables the display of map and camera icon labels   |

# Playback

## Event Review

### Overview

The CompleteView Client's *Playback* mode is comprised of several different functions:

- Video Event Search by Date.
- Video Event Search by Date using Video Motion Detection (*Smart Search*).
- Video Event Export
- Still Image Export
- Video Event Review

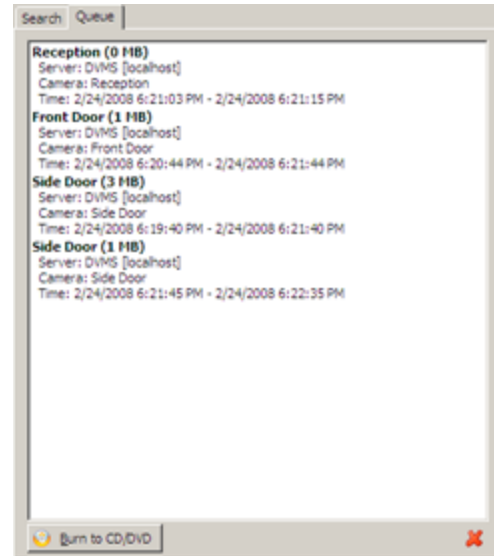

*Playback Interface*

### Search Panel

The *Search Panel* allows you to search for video events in several ways. The results of each search that you perform are displayed in the *Results* list, and can be filtered using three criteria: *Show Scheduled*, *Show Motion*, *Show Alarm*. The *Queue* tab allows you to select one or more video events for export.

Search Panel - Search Tab

Search Panel - Queue Tab

## Playback Panel

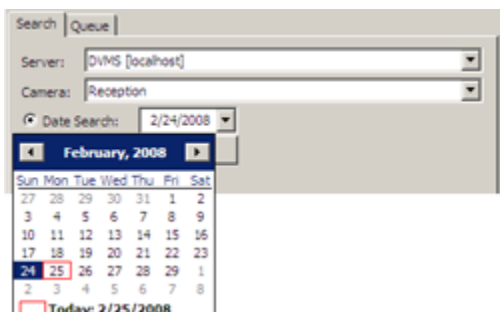

When you select an event displayed in the results list for further review, the video will be displayed in the *Playback Panel*. This panel consists of the *Video window*, *Time slider*, *Playback toolbar*, and *Export* buttons.

Playback Panel

## Date Search

Perform the following steps to begin a video event search by date.

*Search Controls*

1. From the *Server* drop-down list, select the appropriate *Server* for the camera that you wish search.
2. From the *Camera* drop-down list, select the camera that you wish to search.
3. Using the *Date Search* pop-up calendar, select the date on which the event occurred.
4. The *Results* list will be filled with video events that match the criteria that you entered above.

## Event Review

To review a video event, double-click on the event in the *results list*. The video will begin to play in the Playback Panel.

| Start Time           | End Time             | Size |
|----------------------|----------------------|------|
| 2/24/2008 6:18:21 PM | 2/24/2008 6:18:42 PM | 0 MB |
| 2/24/2008 6:19:00 PM | 2/24/2008 6:19:29 PM | 0 MB |
| 2/24/2008 6:21:03 PM | 2/24/2008 6:21:15 PM | 0 MB |
| 2/24/2008 6:21:22 PM | 2/24/2008 6:21:43 PM | 0 MB |
| 2/24/2008 6:22:01 PM | 2/24/2008 6:22:30 PM | 0 MB |
| 2/24/2008 6:24:04 PM | 2/24/2008 6:24:17 PM | 0 MB |
| 2/24/2008 6:24:23 PM | 2/24/2008 6:24:44 PM | 0 MB |
| 2/24/2008 6:25:02 PM | 2/24/2008 6:25:32 PM | 0 MB |
| 2/24/2008 6:27:05 PM | 2/24/2008 6:27:18 PM | 0 MB |
| 2/24/2008 6:27:24 PM | 2/24/2008 6:27:46 PM | 0 MB |
| 2/24/2008 6:28:03 PM | 2/24/2008 6:28:33 PM | 0 MB |
| 2/24/2008 6:30:07 PM | 2/24/2008 6:30:19 PM | 0 MB |
| 2/24/2008 6:30:26 PM | 2/24/2008 6:30:47 PM | 0 MB |
| 2/24/2008 6:31:04 PM | 2/24/2008 6:31:14 PM | 0 MB |

*Results List*

## Filtering Results

By default, the *results list* displays all of the archived video events for the selected day. You can filter these results by recording type, as shown below.

*Results List Filters*

## Smart Search

### First Steps

*Smart Search* allows you to search for motion within video events. Perform the following steps to begin a *Smart Search*.

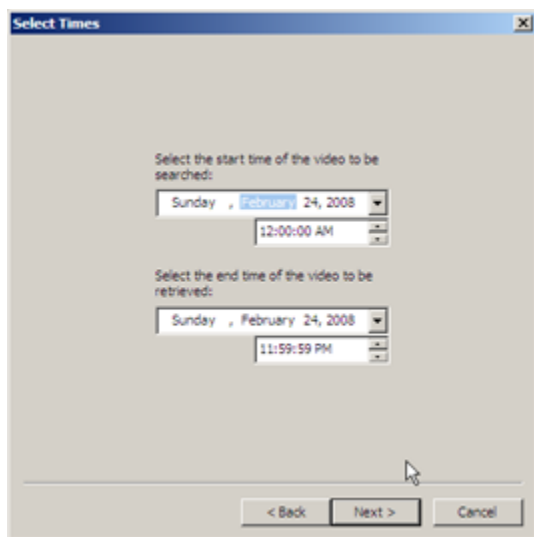

*Smart Search Controls*

1. From the *Server* drop-down list, select the appropriate *Server* for the camera that you wish search.
2. From the *Camera* drop-down list, select the camera that you wish to search.
3. Select *Smart Search*.
4. To begin the search, click on the button labeled *Search*.

### Smart Search Wizard

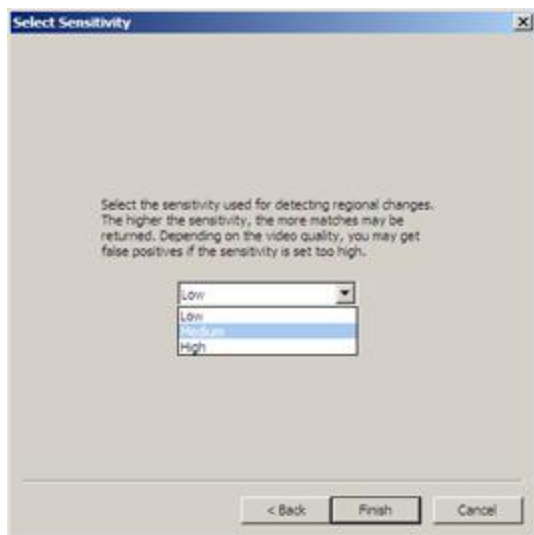

You should now see the first screen in the *Smart Search* wizard. Follow the instructions displayed on your screen to perform the search.

*Smart Search - Step 1*

*Smart Search - Step 2*

Smart Search - Step 3

Smart Search - Results

**Note:** As soon as you press the *Finish* button in step 3, the system will begin searching for video events. Entries are displayed as they are found. *Smart Search* can be a lengthy process, depending on the time period involved and the resulting amount of video that must be searched through. You can cancel a *Smart Search* at any time by clicking on the button labeled *Stop*. The search will terminate immediately. ***All entries currently in the results list will remain until your next search.***

## Event Playback

Once you have selected a video event for review, it will appear in the *Playback Panel*.

*Playback Panel*

Located immediately below the video window is the playback control toolbar.

**Seek Bar** - Changes position within the current video event. The time and date for the current position are displayed to the right of the seek bar.

**Play** - Plays the current video event to the end and then stops.

**Play Sequential** - Plays each video event in the results list from the current selection onwards, and then stops.

**Stop** - Stops playback.

**Jump to Beginning** - Moves position backwards to the beginning of the current video event.

**Step Backward** - Moves position backwards in the current video event by a single frame.

**Step Forward** - Moves position forwards in the current video event by a single frame.

|   |  |
|---|--|
|  | <b>Jump to End</b> - Moves position forwards to the end of the current video event.                |
|  | <b>Previous Event</b> - Loads the previous event in the results list.                              |
|  | <b>Next Event</b> - Loads the next event in the results list.                                      |
|  | <b>Speed</b> - Changes the playback speed of the current video event.                              |
|  | <b>Export Video</b> - Exports the current video event.   |
|  | <b>Take Snapshot</b> - Creates a still image from the current position of the current video event. |

### Digital PTZ controls

Any video clip may be controlled using the digital PTZ controls, even if the camera being reviewed is not configured as a PTZ camera.

**Note:** In order to Pan and Tilt within the recording, you must first use the zoom control to zoom into the clip. The Pan and Tilt controls will allow you to move to the edges of the original video clip.

|  |  |
|--|--|
|       | PTZ Control Buttons: Each button will move the camera incrementally in the direction clicked.  |
| <input type="checkbox"/> Virtual Joystick  | Virtual Joystick: When selected the PTZ Control Buttons will be changed to the Virtual Joystick Control (see below)  |
|       | Virtual Joystick Control: This control will simulate a real joystick. Left click and drag the center circle in the direction you wish to move the camera. The further from the center the center circle is move the faster the camera will move in that direction. |
| Zoom  | Zoom: Incrementally changes the zoom level of the camera.  |
| Preset: <input type="text" value="1"/> ▼   | Preset: Changes the preset number to be controlled. Use the Show and Set buttons to control the preset number selected.  |
|       | Show: Moves the camera to the selected preset number.  |
| PTZ Speed: <input type="text" value="Fast"/> ▼   | PTZ Speed: Sets the speed of the camera movement.  |

## Video Event Export

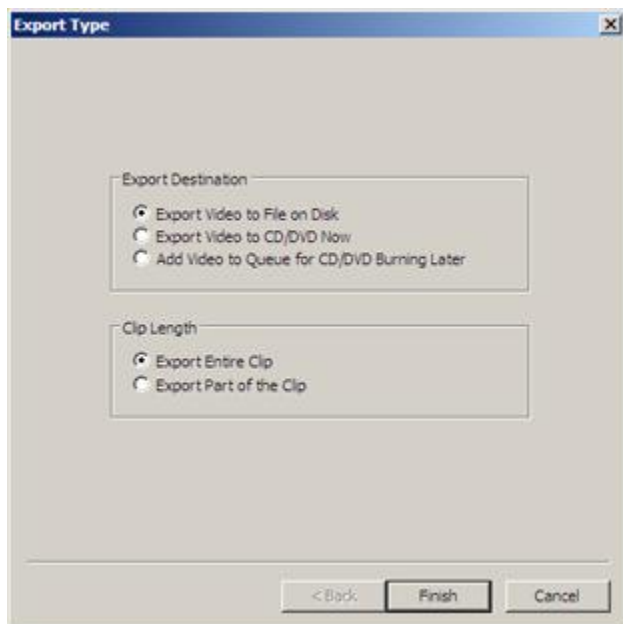

### Single Event Export

The CompleteView Client provides you with several ways to easily export video events from video servers to your PC.

- **File** — Exports a video event to an industry-standard AVI formatted file in your choice of locations.
- **CD/DVD** — Exports a video event to a CD-recordable or DVD-recordable data-format disc. Your computer must be equipped with a CD-recordable or DVD-recordable disc drive in order to utilize this feature.
- **Export Queue** — Adds the video event to an export queue. The contents of the export queue can be transferred to a CD-recordable or DVD-recordable data disc at a later time.

**Note:** Video event DVD discs are created in DVD-data format. DVD-data discs can only be read on personal computers equipped with a DVD-ROM or DVD-recordable drive. DVD-data discs will **not** function in DVD-video devices, such as DVD players that are connected to televisions.

1. Switch to Playback mode.
2. Perform a Date Search or Smart Search.
3. Review video events.
4. When you find a video event that you wish to export, stop video playback.
5. Click the button labeled *Export Video*.
6. Select from among the following export methods:.

## Export Destination

### Export Video to File on Disk

Exports the current video event from the video server to an AVI file in the location of your choice.

1. If the *Clip Length* is set to *Export Part of the Clip*, then you must first select the start and end times for the exported video clip.
2. Browse to the location that you want to export the video event to.

3. Enter a name for the exported video event in the *File name* field.
4. Click *Save* to finish.

### Export Video to CD/DVD Now

If you have chosen to "Export Video to CD/DVD Now", then you must complete a few additional steps to create the CD-recordable or DVD-recordable data disc.

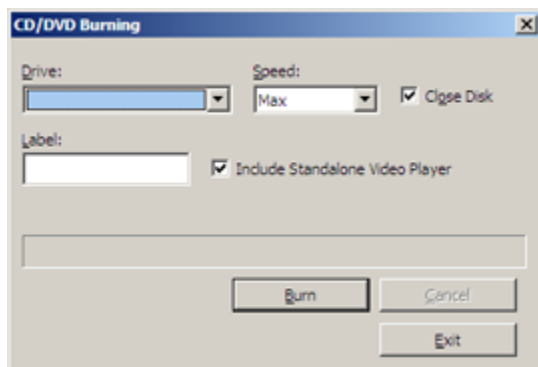

1. If the *Clip Length* is set to *Export Part of the Clip*, then you must first select the start and end times for the exported video clip.
2. Provide a name for the video clip. This will be used in conjunction with the camera name to create the filename for the video event.

3. Select the CD/DVD drive that you wish to record to.
4. Provide a *Label* (volume name) for the recordable media.
5. If you do not want to add additional video events to this recordable disc in the future, then make certain that "Close Disk" is checked. Otherwise, leave it un-checked and you will be able to add video events to the same disc at a later time.
6. If you wish to include a video player application with the exported video event, then check the box titled *Include Standalone Video Player*.
7. Click the button labeled *Burn* when you are ready to create the disc.

**Note:** If you are generating a video event disc for evidentiary or law enforcement purposes, it is generally advisable to include the standalone video player when creating the disc. In most cases, the video events can easily be played back by using Windows Media Player. For some PC's, however, the standalone video player is necessary in order to playback the video clip without requiring the installation of third-party software.

8. If there is not a recordable disc in the selected disc drive, then the computer will automatically eject the drive tray and prompt you to insert a blank (or previously recorded to, but left 'open') disc.

9. When the disc has been successfully recorded, you will be returned to the *CD/DVD Burning* dialog. Click on *Burn* again to create another copy of the disc. Otherwise, click the button labeled *Exit* to go back to the CompleteView Client application.

#### Add Video to Queue for CD/DVD Burning Later

If you want to create a disc with multiple video events, then you must first add the events to the export queue. After you have added all of the desired video events to the queue, then you will be able to use the queue manager to create a video event disc.

### Clip Length

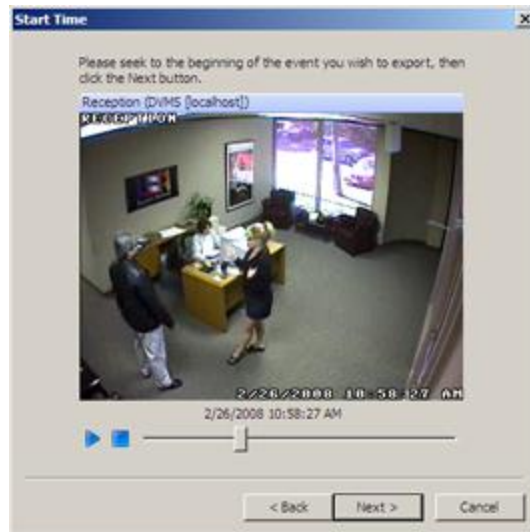

#### Export Entire Clip

This option exports the entire time period for the currently selected video event.

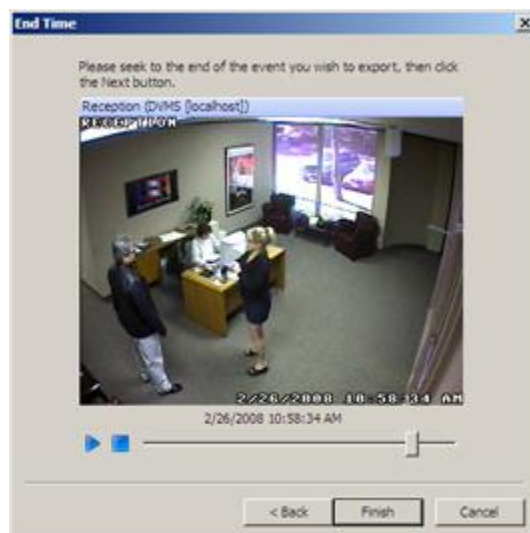

#### Export Part of the Clip

This option enables you to export only the time period of a video event that is of interest to you.

1. Select the *Start Time* using the seek bar. This is what the export process will use as the beginning time for the exported video event.

2. Select the *End Time* using the seek bar. This is what the export process will use as the ending time for the exported video event.

3. Click *Finish* to proceed.

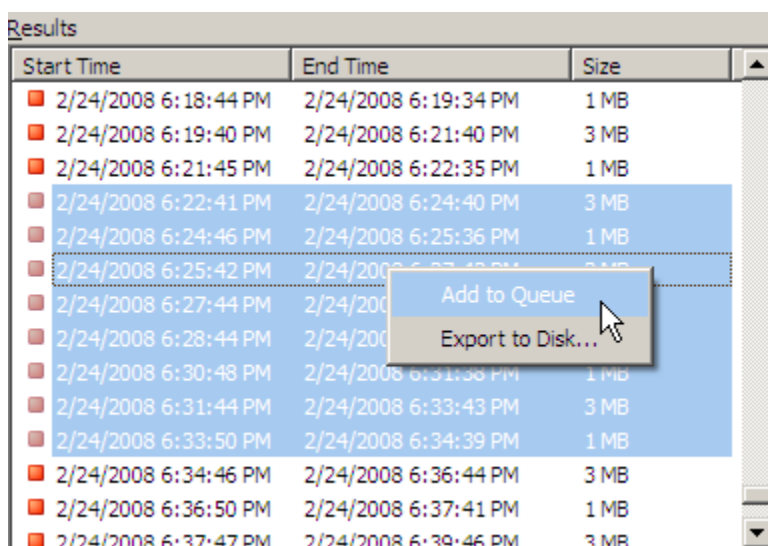

## Multiple Event Export

You can easily export multiple video events in a single operation.

First, select the events that you wish to export.

- For individual, non-contiguous events, hold down the [CTRL] key while clicking on each event in the *results list* that you wish to export.
- To add a range of contiguous events, click on the first event in the *results list* that you wish to export. While holding down the [SHIFT] key, click on the last event that you wish to export.

Next, right-click on any of the video events that you selected. The following menu will appear:

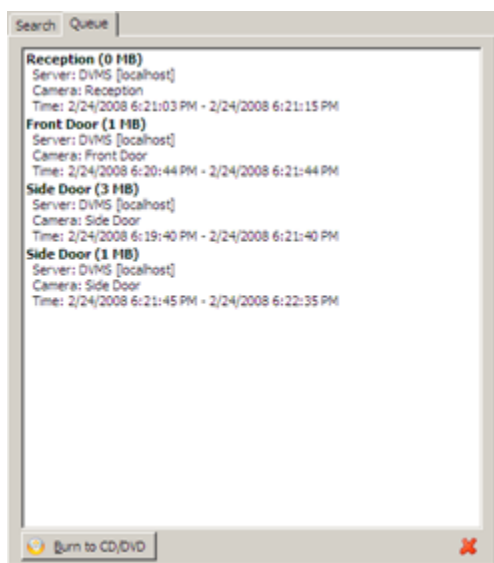

*Results Context-menu*

1. **Add to Queue** — Adds all of the selected video events to the export queue.
2. **Export to Disk...** — Performs an immediate *export to file* operation for all of the selected video events.

## Export Queue

The *Export Queue* is a temporary list of video events created by the user. It is used to export multiple video events in a single operation. These video events can be from any camera on any server to which you have access. In addition, the events can be from a single day, multiple days, or a span of days.

*Export Queue*

Each entry in the queue contains the following data:

- **Camera name**
- **Estimated file size**
- **Server name**
- **IP address or hostname**
- **Starting date and time**
- **Ending date and time**

### Exporting to CD/DVD

1. Select the events that you wish to export.
  - For individual, non-contiguous events, hold down the [CTRL] key while clicking on each event in the *Export Queue* that you wish to export.
  - To add a range of contiguous events, click on the first event in the *Export Queue* that you wish to export. While holding down the [SHIFT] key, click on the last event that you wish to export.

2. Click on the button titled *Burn to CD/DVD*.

3. Click on the button labeled *Burn Selected*.
4. Refer to Single Event Export for additional information regarding the CD/DVD burning interface.

## Exporting Still Images

You can easily export a single still image taken from the current position within the currently selected video event. The still image can be saved to your local disk as a JPEG or BMP file. Additionally, you can print the still image, along with annotations.

1. Switch to Playback mode.
2. Perform a Date Search or Smart Search.
3. Review video events.
4. When you find an image that you wish to export, stop video playback.
5. Use the *Step Forward* and *Step Backward* buttons refine your selection.
6. When you have determined the exact image that you wish to export, click the button labeled *Take Snapshot*.

7. Save or print the image
  - a. **Save BMP** — Saves the snapshot to a BMP image file.
  - b. **Save JPEG** — Saves the snapshot to a JPEG image file.
  - c. **Print** — Prints the image.
  - d. **Full Frame** — Resets the zoom level to 100%.
  - e. **Smooth Zoom** — Reduces the appearance of within zoomed-in images.
  - f. **Override Printer Driver** — Uses a more accurate, though slower, method of printing.

**Note:** Saving a zoomed-in snapshot to an image file will save the entire image. Printing a zoomed-in snapshot will print only the zoomed portion of the image.

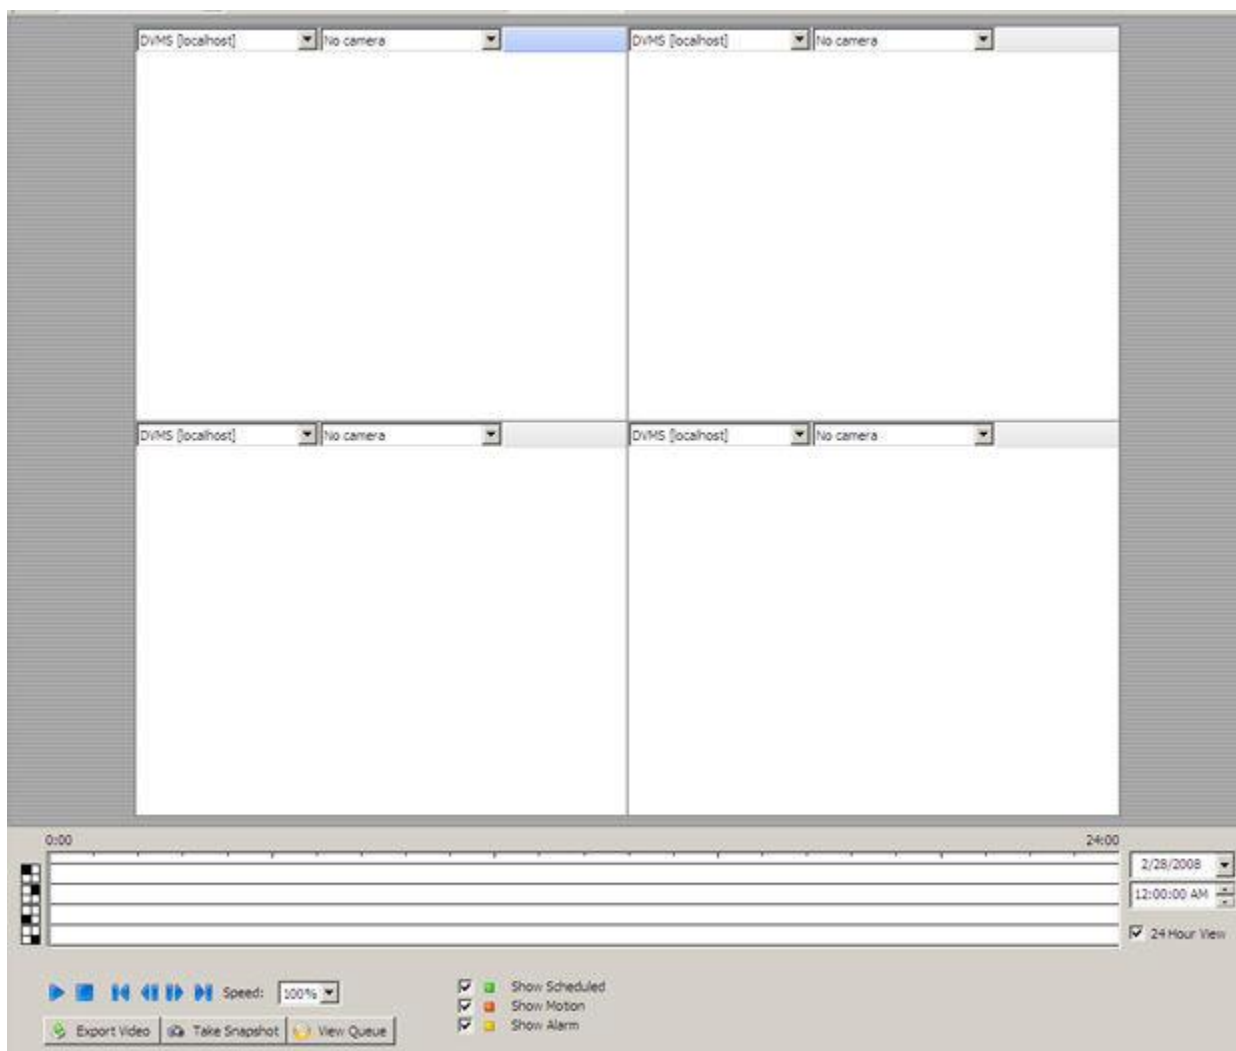

# Multi Playback

## Multi-channel Event Review

### Overview

The *Multi Playback* mode is comprised of several different functions:

- Time-synchronized Event Playback from up to 4 Simultaneous Video Sources
- Graphical Display of Video Events
- Video Event Export
- Still Image Export
- Video Event Review

*Multi Playback*

## Event Playback

*Multi Playback* consists of a *Quad Video Panel*, an *Event Timeline View*, and a *Multi Playback Control Toolbar*

### Quad Video Panel

Select the *Server* and the *Camera* for each position in the quad video panel that you wish to populate with video.

*Quad Video Panel*

### Event Timeline View

Event video is displayed in a graphical, time-oriented view for each of the quad video positions.

*Event Timeline View - Empty*

1. Select one or more cameras in the quad video panel.
2. Select the *Date* that you wish to display video for.
3. Video events will be displayed using the same color schema present in live video monitoring.
  - a. **Red** - video motion detection event
  - b. **Yellow** - external alarm event
  - c. **Green** - scheduled (continuous) recording

*Event Timeline View - With events*

- Click the left mouse button on an area of interest. The *position bar* will automatically snap to the location within a few seconds.

## Multi Playback Control Toolbar

The playback control toolbar is located immediately below the event timeline view.

*Multi Playback Control Toolbar*

**Play** - Starts playback for all quad positions.

**Stop** - Stops playback for all quad positions.

**Jump to Beginning** - Moves position backwards to the beginning of the current video event.

**Step Backward** - Moves position backwards in the current video event by a single frame.

**Step Forward** - Moves position forwards in the current video event by a single frame.

**Jump to End** - Moves position forwards to the end of the current video event.

**Speed** - Changes the playback speed for all quad positions.

**Export Video** - Exports the video event from the currently selected quad position.

**Take Snapshot** - Creates a still image from the current position of the video event in the currently selected quad position.

**Burn to CD/DVD** - Creates a data CD or DVD containing the contents of the export queue.

**Show/Hide Scheduled recordings**

**Show/Hide Motion recordings**

**Show/Hide Alarm recordings**

# Appendices

## Appendix A. Multiple Client Operation

The *CompleteView Video Client* is designed so that, by default, only a single instance can be loaded into memory. If a user attempts to launch the Video Client — and it is already resident in memory — then the application focus switches to that instance.

To enable multiple simultaneous instances of the Video Client, it is necessary to supply a command-line switch to override the default behavior, as follows:

1. Right-click on the desktop.
2. Select *New* from the resulting context-menu.
3. Select *Shortcut* from the next menu.
4. Browse to the CompleteView application directory and select the file named *MainClient.exe*. (ex: *C:\Program Files\CompleteView\MainClient.exe*)
5. Click *Next*.
6. Provide a name for the shortcut as it will appear to the user. (ex: *Top Left*)
7. A new icon will appear on the desktop with the name that you supplied in the previous step.
8. Right-click on the icon and select *Properties* from the resulting context-menu.
9. Position the cursor at the end of the text in the field titled *Target*.
10. Add a space and the following text: */ID "My Descriptive Label"* (Include the quotation marks. Replace the text between the quotation marks with your own descriptive name.)
11. Click *OK*.

Repeat the above procedure as necessary to create as many named instances as you require. As with the default behavior, each instance can only be loaded into memory a single time. Subsequent launches of the named instance merely switches the application focus to that instance. You can, however, create a virtually unlimited number of named instances which can be resident in memory simultaneously.

In order to make the best use of the Multiple Client Operation capabilities, you should also consider creating separate client user accounts, with each account having their own unique viewing layouts. By doing so, you can define custom view layouts and view layout switching sequences on a per-monitor basis.

### Parameters for MainClient.exe

*/ID "<string value>"* Starts a named instance of the CompleteView Client application.

### Example

| Window Title                         | Command Line  |
|--------------------------------------|---|
| CompleteView Video Client (Top Left) | "c:\program files\completeview\mainclient.exe" /ID "Top Left" |
| CompleteView Video Client (1)        | "c:\program files\completeview\mainclient.exe" /ID "1"        |

**Note:** When connected to a CompleteView ONE server, a maximum of one Video Client instance can be opened at a time.
