Important Safeguards

1. Read Instructions

Read all the safety and operating instructions before operating the product.

2. Retain Instructions

Retain the safety instructions and user's manual for future reference.

3. Warnings

Comply with all warnings on the product and in the user's manual.

4. Follow Instructions

Follow all operating and use instructions.

5. Cleaning

Disconnect this camera from the power supply before cleaning.

6. Attachments

Do not use attachments not recommended by the camera manufacturer as they may posesafety risks.

7. Water and Moisture

Do not use this camera near water. Some examples are: near a bath tub, wash bowl, kitchensink, or laundry tub, in a wet basement, or near a swimming pool.

8. Accessories

Do not place this camera on an unstable cart, stand, tripod, bracket or table. The cameramay fall, causing serious injury to a person, or serious damage to the product. Use only withstand, tripod,bracket,or table recommended by the manufacturer, or sold with the camera.Any mounting of the product should follow the manufacturer's instructions, and should use amounting accessory recommended by the manufacturer.

9. Ventilation

This camera should never be placed near or over a radiator or heat register. If this productis placed in a built-in installation, verify that there is proper ventilation so that the cameratemperature operates within the recommended temperature range.

10. Power Sources

This camera should be operated only from the type of power source indicated on theirinformation label. If you are not sure of the type of power supply at your location, consult yourproduct dealer.

11. Power-Cord Protection

Power cords should be routed so that they are not likely to be walked on or pinched by itemsplaced upon or against them. Pay particular attention to cords at plugs, screws and the pointwhere they exit the product.

12. Installation

Install this camera on a secure part of the ceiling or wall. If installed on an unsecured location the camera could fall causing injury and damage.

13. Lightning

For additional protection on this camera during a lightning storm, or when it is left unattended and unused for long periods of time, unplug it from the wall outlet and disconnect the power supply and cable system. This will prevent damage to the camera due to lightning and power line surges. If lightning occurs, do not touch the unit or any connected cables in order to avoid electric shock.

14. Overloading

Do not overload the power supply or extension cords as this can result in a risk of fire or electric shock.

15. Object and Liquid Entry

Never push objects of any kind into this camera through openings as they may touch dangerous electrical points or short-out parts that could result in a fire or electrical shock. Never intentionally spill liquid of any kind on the camera.

16. Servicing

Do not attempt to service this camera yourself as opening or removing covers may expose you to dangerous electrical or other hazards. Refer all servicing to qualified service personnel.

17. Damage Requiring Service

Disconnect this camera from the power supply and refer servicing to qualified service personnel under the following conditions.

- a. When the power-supply cord or plug is damaged.
- b. If liquid has been spilled, or objects have fallen into the camera.
- c. If the camera has been submerged in water.
- d. If the camera does not operate normally by following the operating instructions in the user's manual. Adjust only those controls that are covered by the user's manual as an improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the camera to its normal operation.
- e. If the camera has been dropped or the cabinet has been damaged.
- f. When the camera exhibiting a distinct change in performance which indicates a need for service.
- g. Other trouble.

18. Replacement Parts

When replacing parts, be sure the service technician uses parts specified by the manufacturer or have the same characteristics as the original part. Unauthorized substitutions may result in fire, electric shock or other hazards.

19. Safety Check

Upon completion of any service or repairs to this camera, ask the service technician to perform safety checks to determine that the camera is in proper operating condition.

Precautions

Operating

- Before using, make sure power supply and others are properly connected.

- While operating, if any abnormal condition or malfunction is observed, stop using the camera immediately and then contact your local dealer.

Handling

- Do not disassemble or tamper with parts inside the camera.
- Do not drop or subject the camera to shock and vibration as this can damage camera.
- Care must be taken when you clean the clear dome cover. Scratches and dust will ruin the image quality of your camera. Do not use strong or abrasive detergents when cleaning the camera body. Use a dry cloth to clean the camera when it is dirty. In case the dirt is hard to remove, use a mild detergent and wipe the camera gently.

Installation and Storage

- Do not install the camera in areas of extreme temperatures in excess of the allowable range. (14°F ~ 122°F / -10°C ~ 50°C)
- Avoid installing in humid or dusty places. The relative humidity must be below 90%.
- Avoid installing in places where radiation is present.
- Avoid installing in places where there are strong magnetic fields and electric signals.
- Avoid installing in places where the camera would be subject to strong vibrations.
- Never face the camera toward the sun. Do not aim at bright objects. Whether the camera is in use or not, never aim it at the sun or other extremely bright objects. Otherwise the camera may be smeared and damaged.

Should you notice any trouble

- If any trouble occurs while you are using the camera, turn off the power and contact your dealer. If you continue to use the camera when there is something wrong with it, the trouble may get worse and an unpredictable problem may occur.

Disclaimer

- We disclaim any responsibility and shall be held harmless for any damages or losses incurred by the user in any of the following cases:
 1. Fire, earthquake or any other act of God; acts by third parties; misuse by the user, whether intentional or accidental; use under extreme operating conditions.
 2. Malfunction or non-function resulting in indirect, additional or consequential damages, including but not limited to loss of expected income and suspension of business activities.
 3. Incorrect use not in compliance with instructions in this user's manual.
 4. Malfunctions resulting from misconnection to other equipment.
 5. Repairs or modifications made by the user or caused to be made by the user and carried out by an unauthorized third party.
- Notwithstanding the foregoing, Toshiba's liabilities shall not, in any circumstances, exceed the purchase price of the product.

Copyright and Right of Portrait

- There may be a conflict with the Copyright Law and other laws when a customer uses, displays, distributes, or exhibits an image picked up by the camera without permission from the copyright holder. Please also note that transfer of an image or file covered by copyright is restricted to use within the scope permitted by the Copyright Law.

Protection of Personal Information

- Images taken by the camera that reveal the likeness of an individual person may be considered personal information. To disclose, exhibit or transmit those images over the internet or otherwise, consent of the person may be required.

Usage Limitation

- The product is not designed for any "critical applications." "Critical applications" means lifesupport systems, exhaust or smoke extraction applications, medical applications, commercialaviation, mass transit applications, military applications, homeland security applications, nuclearfacilities or systems or any other applications where product failure could lead to injury topersons or loss of life or catastrophic property damage.
- Accordingly, Toshiba disclaims any and all liability arising out of the use of the product in anycritical applications.

Regulation

FCC (USA) Information

This device complies with Part 15 of the FCC Rules.Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2)This device must accept any interference received, includinginterference that may cause undesired operation.

NOTE: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules.

These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

CAUTION: Your authority to operate this FCC verified equipment could be voided if you make changes or modifications not expressly approved by the party.

Industry Canada Information

CAN ICES-3 A / NMB-3 A

This symbol on the product or on its packaging indicates that this product shall not be treated as household waste in accordance with Directive 2002/96/EC. Instead it shall be handed over to the applicable collection point for the recycling of electrical and electronic equipment. By proper waste handling of this product you ensure that it has no negative consequences for the environment and human health, which could otherwise be caused if this product is thrown into the garbage bin. The recycling of materials will help to conserve natural resources.

For more details information about recycling of this product, please contact your local city office, your household waste disposal service or the shop where you purchased the product.

Compliance is evidenced by written declaration from our suppliers, assuring that any potential trace contamination levels of restricted substances are below the maximum level set by EU Directive 2002/95/EC, or are exempted due to their application.

Warning

TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE.

DANGEROUS HIGH VOLTAGES ARE PRESENT INSIDE THE ENCLOSURE.

DO NOT OPEN THE CABINET.

THIS INSTALLATION SHOULD BE MADE BY A QUALIFIED SERVICE PERSON AND SHOULD CONFORM TO ALL LOCAL CODES.

REFER SERVICING TO QUALIFIED PERSONNEL ONLY.

Caution

INTRODUCTION

OVERVIEW

The Surveillix Tamper Resistant IP Mini Dome cameras are capable of providing real time streaming video with smooth image quality. The IP Mini Dome cameras offer quad streaming and can be used in a variety of installations including shops, stores, banks, parking lots, factories and for building surveillance.

With Power over Ethernet (PoE) the need for separate power lines is eliminated and cabling and installation costs can be significantly reduced. The light weight, small size, and large degree of rotation of the IP Mini Dome facilitate quick and simple installation on either the ceiling or walls of structures or vehicles.

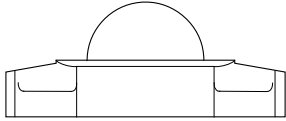

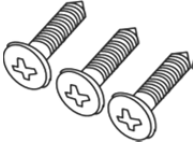

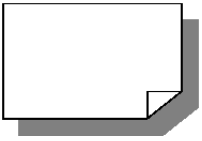

Product Features

- ONVIF™ compliant
- H.264 and MJPEG
- Power over Ethernet
- 2MP (1080p HD)
- Quad streaming
- Built-in microphone with one-way audio (indoor cameras only)
- Security Torx screws to prevent unauthorized tampering

GETTING STARTED

BOX CONTENTS

Before proceeding, please check that the box contains the items listed here. If any item is missing or has defects, DO NOT install or operate the product and contact your dealer for assistance.

 <p>Camera</p>	 <p>Self Tapping Screws</p>	 <p>Plastic Anchors</p>
 <p>Rubber Washers (outdoor model only)</p>	 <p>Security Torx Tool</p>	 <p>CD</p>
 <p>Quick Start Guide</p>		

CAMERA OVERVIEW

Before installing or connecting the dome camera, please refer to this section and complete preparations for dome setup and all switch settings.

Dome Diagram

1	Reset Button	Restore camera settings to default settings
2	Lens Lock Nut	Loosen the nut to adjust the lens
3	Lens	Rotate the lens left/right to adjust the focus
4	Tilt Fixed Screw	Loosen the screw to adjust the tilt angle
5	Pan Fixed Screw	Loosen the screw to adjust the pan position

Dimensions

- Diameter – 110.21mm (4.3 inches)
- Height – 47.66mm (1.87inches)

Connections

Indoor Camera

The Indoor Tamper Resistant IP Dome Cameras use Power over Ethernet (PoE) to power the cameras. The only connection on the camera is the RJ45 Ethernet connector located on the rear of the camera. Connect one end of the Ethernet cable to the RJ45 port on the camera and the other end to power sourcing equipment (PSE) like a hub or router.

Check the status of the network connection by looking at the link indicator and activity indicator LEDs. If the LEDs are not lit check your network connection. The green link LED indicates a network connection and the orange activity LED flashes to indicate network activity.

Micro SD Card

All Surveillix Tamper Resistant IP Mini Dome cameras include a Micro SD card slot. Use a Micro SD card for on-board emergency recording.

LOCATE CAMERA

SURVEILLIX DEVICE SEARCH

Use the included Device Search software to easily find your network cameras for initial setup. The Surveillix Device Search software is included on the CD with all Surveillix IP devices.

Installation

You can run Device Search on any personal computer (PC) or laptop using the software CD included with your Surveillix IP camera or by downloading the program from toshibasecurity.com.

Note Device Search will only work on PCs or laptops that use a Windows operating system. It is compatible with Windows XP, Vista, 7, and 8.

Starting Network Camera Manager

After installing the program on your PC or laptop, open the program to begin configuring your cameras.

To access Device Search on a Toshiba recorder, you must operate the recorder in Windows Mode.

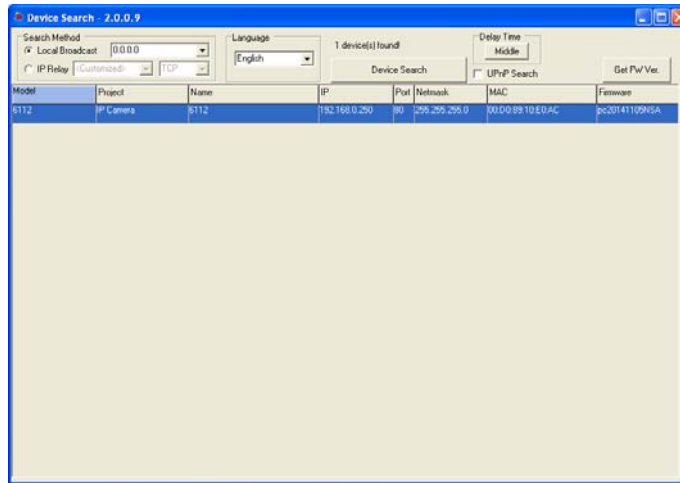

1. In the Live Screen, click **Exit**.
2. Click **Restart in Windows Mode**.
3. Click **OK**.
4. Double-click **Device Search**.

Device Addressing

The functions on the Device Addressing tab allow you to find network cameras.

Finding Network Devices

1. Click **Device Search**.
2. To sort your search by **Camera Model**, **Project**, or **Camera Name**, select your desired criteria from the appropriate lists.

SETUP & CONFIGURATION

CONNECTING TO THE CAMERA

1. Locate the camera on the Device Search list.
2. Double-click the camera to open the Viewer software in your web browser.
3. Log in to the camera with the appropriate User Name and Password.

Note The default User name is Admin and the default Password is 1234. The username and password are case sensitive

Resetting the Camera

If it is necessary to reset the camera to the factory default settings, hold down the Reset button (see *Camera Overview* for 30 seconds. This will return all settings, including network setup, to the factory default. The IP address of the camera will return to 192.168.0.250.

Administrator/User Privileges

The Administrator account has the authority to configure the IP camera and authorize users' access to the camera. The User accounts have access to the camera with limited authority.

Lens Adjustment

The Viewer software will display an image from the camera on the Home tab. Adjust the camera's focus to produce a clear image.

1. Remove the screws from the camera dome cover.
2. Loosen the lens lock nut and rotate the lens to adjust the focus. Loosen the tilt fixed screw and adjust the camera's tilt angle.
3. Hand tighten the lens lock nut. Do not over tighten.

Connecting a Stream

Surveillix IP cameras are optimized for use with Toshiba recorders, but you can also connect to your Surveillix IP cameras using third party software like VLC media player (<http://www.videolan.org>).

To connect the camera you may need to provide the stream URL. All Surveillix IP cameras are capable of delivering two RTSP streams, as well as streaming MJPEG over HTTP. The stream URLs are listed below.

rtsp://<ip address>/mjpeg

rtsp://<ip address>/mpeg4

rtsp://<ipaddress>/h264

http://<ipaddress>:8008

The MJPEG over HTTP stream is identified by a port number. The default port is 8008; this port can be configured in the cameras **Network** page:

The screenshot shows a web interface for network configuration. The top navigation bar includes 'Home', 'System', 'Streaming', 'Camera', and 'Logout'. The left sidebar lists various system settings: System, Security, Network, Basic, QoS, SNMP, UPnP, DDNS, Mail, FTP, HTTP, Events, Storage management, Recording, Schedule, File location, Information, Software version, and Maintenance. The main content area is titled 'Network' and is divided into three sections:

- General:** Contains radio buttons for 'Get IP address automatically' and 'Use fixed IP address'. Under 'Use fixed IP address', there are input fields for IP address (192.168.0.250), Subnet mask (255.255.255.0), Default gateway (192.168.0.254), Primary DNS (0.0.0.0), and Secondary DNS (0.0.0.0).
- Advanced:** Contains radio buttons for 'Use PPPoE' and 'Use fixed IP address'. Under 'Use fixed IP address', there are input fields for User name and Password, and a 'Save' button.
- IPv6 Address Configuration:** Contains a checkbox for 'Enable IPv6' and an 'Address' input field with a 'Save' button.

Connecting Over the Internet

There are some challenges with connecting to Surveillix IP cameras over WAN (internet) connections because the camera streams video over RTSP. RTSP is an excellent protocol for media and is now used on many IP cameras (including Surveillix) as the default streaming option.

However, RTSP is not suitable for transmission between two locations that are behind different routers. In this case, the client (for example, the ToshibaNVR or NVR server software) connects to the camera, then requests a stream. The camera uses that connection to return a stream, but since the connection originated on the client side and has now switched to the camera (remote) side, the router does not have any way to determine where the traffic should be routed, so no video appears at the recorder.

There are three solutions to this:

1. Connect modems on both sides directly to the recorder and camera. If there is no router, no network address translation is needed.
2. Use routers with VPN support and set up a small VPN. Once this is done, the traffic will be treated as though it were all on the local network.
3. **(Best solution)** – Use routers with **connection tracking**. This is quite easy; VOIP also uses RTSP and faces the same challenges. If a router is marketed as having “VOIP Support”, it will have the necessary connection tracking capability to allow any type of RTSP communication (not just VOIP).

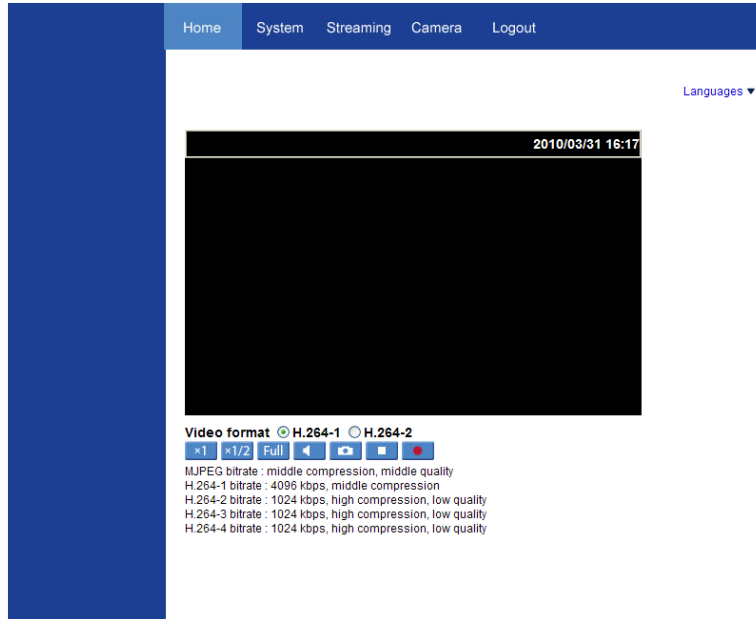

With proper planning and the correct equipment, RTSP cameras CAN stream over the WAN to a recording device for minimal additional cost and labor.

Please contact Toshiba support if you require any additional information on these topics.

VIEWER SOFTWARE

To access the setup menu, you need to install the viewer software on your PC or recorder. The viewer software will install automatically the first time you connect to the camera. If your internet browser doesn't install the viewer software, check the security settings or ActiveX controls and plug-in settings. If your internet browser asks for permission to install the ActiveX control, you must allow the ActiveX control to continue the installation.

The first time you connect to a camera, the browser will ask for permission to install the ActiveX Control necessary to display the camera video. Right-click the information bar and click **Install ActiveX Control** to allow the installation.

Note IP camera audio is only available on the Indoor IP mini dome camera.

Viewer Tabs

Home – Monitor live video.

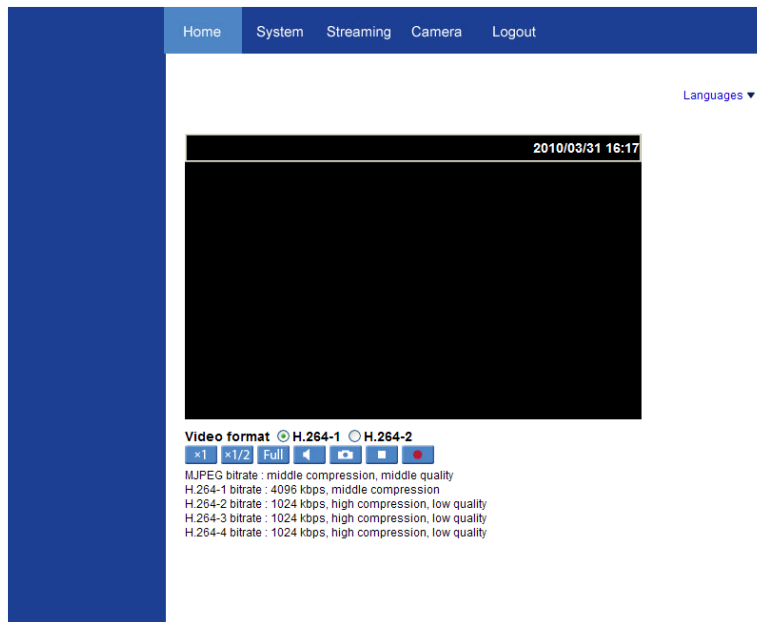

System – Set the host name, system time, root password, and network related settings. (Admin access only)

Streaming – Modify the video resolution and select the audio compression type.

Camera – Adjust the camera parameters including Exposure, White Balance, Brightness, Sharpness, Contrast, and Digital Zoom.

Logout – Change user.

Home

Screen Size Adjustment – Click the screen size buttons to adjust image display size x1/2 and full screen.

Digital Zoom Control – In full screen mode, right-click to activate digital zoom and use the scroll wheel to zoom in/out.

Talk – Talk allows the local site to talk to the remote site. This function is only available to Users who have been granted this privilege by the Administrator.

Listen – The speaker function allows the local site to listen to the remote site. This function is only available to users who have been granted this privilege by the Administrator.

Note The Talk and Listen functions are only available on the Indoor IP mini dome camera.

Snapshot – Click the  button, and a JPEG snapshot will automatically be saved in the appointed place. The default location is: C:\.

Note If you are using Windows Vista or 7, you will need to change the Snapshot location. Windows UAC does not allow internet programs to write directly to C:\ for security reasons.

Record – Click **Record** to start recording live video. Click **Record** again to stop recording video. Recorded video will be saved automatically to the designated location on the local workstation. The default location is C:/. This location can be changed in **File Location**, in the **System** menu.

Note If you are using Windows Vista or 7, you will need to change the video clip location. Windows UAC does not allow internet programs to write directly to C:\ for security reasons.

System

Note The System tab is only accessible by the Administrator.

Admin Password

To change the administrator password, type a new password in the Admin Password box and confirm below.

Note The maximum length of the password is 14 characters. The following characters are valid: A-Z, a-z, 0-9, !#\$%&'-.@^_~.

Add User

The user name and passwords are limited to 16 characters. There is a maximum of twenty user accounts

1. Type the new User name and Password
2. Select the appropriate check boxes to give the user Camera Control, Talk and Listen permissions.

I/O Access – Basic functions that enable users to view video when accessing to the camera.

Camera Control – Allows the User to change camera parameters on the Cameratab.

Talk/Listen – Talk and Listen functions allow the user at the local site (DVR) to communicate with, the administrator at the remote site.

3. Click **Add**.

Delete User

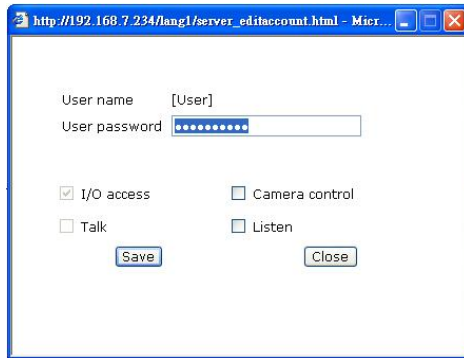

1. Select the user name on the **User Name** list under **Manage User**.
2. Click **Delete** to remove the user.

Edit User

1. Select the username on the **User Name** list under **Manage User**.
2. Click **Edit** to edit the user password and permissions.
3. Type a new password or the existing password in the User password box.

Note You must type a password in the User password box to make any changes to an account.

Note For security reasons, every time the user properties are opened the access check boxes are automatically cleared. Make sure you select any user access options each time you edit the user properties.

The screenshot shows a web browser window titled "http://192.168.7.234/lang1/server_editaccount.html - Micr...". The page content includes a form with the following elements:

- User name: [User]
- User password: [Masked]
- Permissions section with four checkboxes:
 - I/O access
 - Camera control
 - Talk
 - Listen
- Buttons: Save and Close

HTTPS port	443
<input type="button" value="Save"/>	
IPv6 Address Configuration	
<input type="checkbox"/> Enable IPv6	Address :
<input type="button" value="Save"/>	

You can choose to use a fixed IP address or a dynamic IP address (assigned by a DHCP server or router) for the camera.

Get IP address automatically (DHCP)

The camera comes preconfigured with a fixed IP address, selecting **Get IP address automatically** requires a router or DHCP server to assign an IP address to the camera.

Note Every network device has a unique Media Access Control (MAC) address that can be used for identification. The MAC address is located on the bottom of each camera, and on the box label (Surveillix Device Search also displays the MAC address for identification). Record your camera's MAC address for identification in the future.

Use Fixed IP Address

To setup a new static IP address:

1. Select the Use fixed IP address option.
2. Type a new IP address in the **IP address** box.
3. Type a new address in the **Default Gateway** box.
4. Click **Save** to confirm the new setting.

When using static IP address to login to the IP Camera, you can access it either through Surveillix Device Search software or type the IP address directly in the address bar of your Internet Explorer.

General

- **IP address** – The IP Address is necessary for network identification.
- **Subnet mask** – Used to determine if the destination is in the same subnet. The default value is 255.255.255.0.
- **Default gateway** – Used to forward frames to destinations on different subnets or for internet access.
- **Primary DNS** – The primary domain name server that translates hostnames into IP addresses.
- **Secondary DNS** – A secondary domain name server that backups the primary DNS.

Advanced

- **Web Server port** – Defines the port that Internet Explorer uses to connect over the web and view video. If this port is changed then the new port must be defined when attempting to web connect (ex: if your camera's IP address is 192.168.0.100 and you change the web port to 8001, then you must type http://192.168.0.100:8001 in your browser).

Note This is also the port used in ToshibaServer Software.

- **RTSP port** – The default RTSP port is 554; setting range: 1024 ~65535.
- **MJPEG over HTTP port** – The default HTTP Port is 8008; setting range: 1024 ~65535.
- **HTTPS port** – The default HTTPS Port is 443; setting range: 1024 ~65535.

Note No port number can be used in duplication on more than one item.

IPv6 Address Configuration

To enable IPv6 select **Enable IPv6** and click **Save**. See your network administrator if you are unsure of your network configuration.

QoS (Quality of Service)

Quality of Service allows you to prioritize network traffic services of the camera's functions. The QoS function utilizes the Differentiated Services prioritized using Codepoint values (DSCP).

Note Routers and switches on the network must be QoS or DSCP capable, and have these settings enabled for this function to operate on your network.

DSCP Settings

The DSCP value range is 0 to 63. The default value is 0, which indicates the function is disabled; and rates 1 as the highest priority, and 63 as the lowest priority.

- **Video DSCP:** prioritize video streaming over HTTP or RTSP
- **Audio DSCP:** prioritize audio streaming
- **Management DSCP:** prioritize web interface traffic over HTTP

SNMP

With Simple Network Management Protocol (SNMP) enabled, the camera can be monitored and managed remotely with a network management system. Contact your network administrator if you are not familiar with SNMP setup.

SNMP v1/v2

- **Enable SNMP v1**
- **Enable SNMP v2**
- **Read Community:** Specify the community name that has read-only access.
- **Write Community:** Specify the community name that has read/write access.

Traps for SNMP v1/v2

Traps are used to send a message to the network management system for important events or status changes.

- **Enable Traps:** enables trap reporting
- **Trap Address:** enter the IP address of the network management system
- **Trap Community:** enter the community to use when sending trap messages

UPnP (Universal Plug and Play)

- **Enable UPnP:** When enabled the camera will appear in My Network Places on Windows computers running UPnP on the same network.
- **Enable UPnP Port Forwarding:** When enabled the camera will attempt to open the web server port on the router automatically.
- **Friendly Name:** Set a name to easily identify the camera.

DDNS

DDNS (Dynamic Domain Name Service) is a service that allows a connection to an IP address using a hostname (URL) address instead of a numeric IP address. Most Internet Service Providers use Dynamic IP Addressing that frequently changes the public IP address of your internet connection; this means that when connecting to the camera over the internet, you need to know if your IP address has changed. DDNS automatically redirects traffic to your current IP address when using the hostname address.

The screenshot shows a web interface with a navigation bar at the top containing 'Home', 'System', 'Streaming', 'Camera', and 'Logout'. The 'System' menu is active. On the left is a sidebar with a tree view containing: System, Security, Network, DDNS, Mail, FTP, HTTP, Events, Storage management, Recording, Schedule, File location, Information, Software version, and Maintenance. The main content area is titled 'DDNS' and contains the following configuration options:

- Dynamic DNS**
Use Dynamic DNS If You Want To Use Your DDNS Account.
- Enable DDNS
- Provider: DynDNS.org(Dynamic) (dropdown menu)
- Host name: (text input field)
- Username/E-mail: (text input field)
- Password/Key: (text input field)
- Save (button)

- **Enable DDNS** – Select the check box to enable DDNS.
- **Provider** – Select a DDNS host from the Provider list.
- **Host name** – Type the registered domain name in the field.
- **Username/E-mail** – Type the username or e-mail required by the DDNS provider for authentication.
- **Password/Key** – Type the password or key required by the DDNS provider for authentication.

Mail

The camera can send an e-mail via Simple Mail Transfer Protocol (SMTP) when motion is detected. SMTP is a protocol for sending e-mail messages between servers. SMTP is a relatively simple, text-based protocol, where one or more recipients of a message are specified and the message text is transferred. The configuration page is shown as follows:

The screenshot shows a web interface for configuring mail settings. At the top, there is a navigation bar with tabs for Home, System, Streaming, Camera, and Logout. On the left side, there is a sidebar menu with categories: System, Security, Network, DDNS, Mail, FTP, HTTP, Events, Storage management, Recording, Schedule, File location, Information, Software version, and Maintenance. The main content area is titled 'Mail' and contains the following configuration fields:

- SMTP**
- 1st SMTP (mail) server: [Text input field]
- 1st SMTP (mail) server port: [Text input field with value 25]
- 1st SMTP account name: [Text input field]
- 1st SMTP password: [Text input field]
- 1st recipient email address: [Text input field]
- 1st SMTP SSL
- 2nd SMTP (mail) server: [Text input field]
- 2nd SMTP (mail) server port: [Text input field with value 25]
- 2nd SMTP account name: [Text input field]
- 2nd SMTP password: [Text input field]
- 2nd recipient email address: [Text input field]
- 2nd SMTP SSL
- Sender email address: [Text input field]
- [Save button]

Two sets of SMTP accounts can be configured. Each set includes SMTP Server, Account Name, Password and E-mail Address settings. For SMTP server, contact your network service provider for more specific information.

FTP

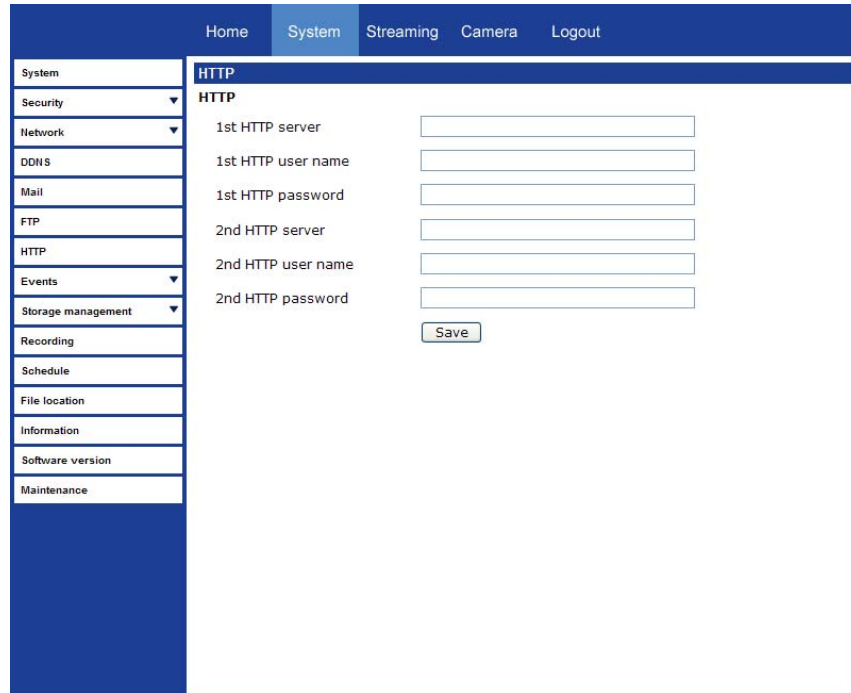

The camera can send alarm message to a specific File Transfer Protocol (FTP) site when motion is detected. You can assign alarm message to up to two FTP sites.

The screenshot shows a web application interface with a navigation menu at the top containing 'Home', 'System', 'Streaming', 'Camera', and 'Logout'. On the left side, there is a vertical menu with categories: System, Security, Network, DDNS, Mail, FTP (highlighted), HTTP, Events, Storage management, Recording, Schedule, File location, Information, Software version, and Maintenance. The main content area is titled 'FTP' and contains configuration fields for two FTP servers. The first server fields are: '1st FTP server' (text box), '1st FTP server port' (text box with '21'), '1st FTP user name' (text box), '1st FTP password' (text box), and '1st FTP remote folder' (text box). Below these is a checkbox for '1st FTP passive mode'. The second server fields are: '2nd FTP server' (text box), '2nd FTP server port' (text box with '21'), '2nd FTP user name' (text box), '2nd FTP password' (text box), and '2nd FTP remote folder' (text box). Below these is a checkbox for '2nd FTP passive mode'. A 'Save' button is located at the bottom right of the configuration area.

1. Type the FTP details, including server, server port, user name, password and remote folder, in the appropriate boxes.
2. Click **Save** when finished.

HTTP

The camera can send alarm messages to a specific Hypertext Transfer Protocol (HTTP) site when motion is detected or when the sensor input is activated. You can assign alarm messages to up to two HTTP sites.

The screenshot shows a web interface with a navigation bar at the top containing 'Home', 'System', 'Streaming', 'Camera', and 'Logout'. The 'System' menu is expanded on the left, showing options like Security, Network, DDNS, Mail, FTP, HTTP, Events, Storage management, Recording, Schedule, File location, Information, Software version, and Maintenance. The 'HTTP' option is selected, displaying a configuration form with the following fields:

HTTP	
1st HTTP server	<input type="text"/>
1st HTTP user name	<input type="text"/>
1st HTTP password	<input type="text"/>
2nd HTTP server	<input type="text"/>
2nd HTTP user name	<input type="text"/>
2nd HTTP password	<input type="text"/>
<input type="button" value="Save"/>	

1. Type the HTTP details, including server, user name and password, in the appropriate fields.
2. Click **Save** when finished.

Motion Detection

Motion Detection allows the camera to detect motion and trigger alarms when the motion level in the detected area exceeds the determined sensitivity threshold value.

Motion Detection Windows add delete

In the Motion Detection page, there is a motion detection window (red box) displayed on the Live View Pane. The Motion Detection window defines the motion detection area. To change the size of the Motion Detection window, drag the edge of the frame to resize.

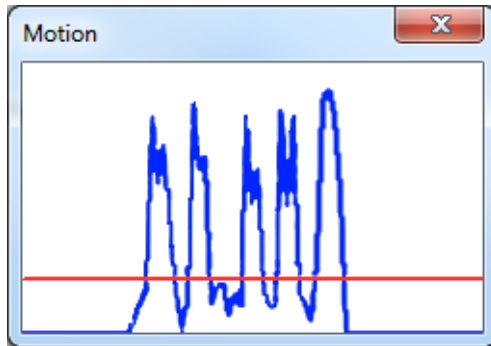

You can add up to 10 motion detection windows.

- Click **add** under the Live View Pane to add a Motion Detection window.
- To delete a Motion Detection window, use the mouse to select the frame and click **delete**.

When motion detection is activated, the **Motion** pop-up window will open.

When motion is detected, the signals will be displayed on the Motion window as shown below.

Motion Detection

Turn motion detection on or off. The default setting is Off.

Motion Detection Setting

- **Sampling pixel interval [1-10]** – Default value is 10, which means system will take one sampling pixel for every 10 pixels.
- **Detection level [1-100]** – Default detection level is 10. This item sets the detection level for each sampling pixel; the smaller the value, the more sensitive it is.
- **Sensitivity level [1-100]** – The default sensitivity level is 80, which means if 20% or more sampling pixels are detected as changing, the system will detect motion. The bigger the value, the more sensitive it is. As the sensitivity value is increased, the red horizontal line in the motion indication window will be lowered accordingly.
- **Time interval (sec) [0-7200]** – The default interval is 10. The value is the interval between each detected motion event.

Triggered Action

You can specify which actions the camera should take when motion is detected.

- **Send Alarm Message by FTP/E-Mail** – Select to send an alarm message to a configured FTP and/or E-Mail address when motion is detected. When sending to email, the alarm notification is text only. When sending to FTP, the alarm notification will upload a text file to the FTP location.
- **Upload Image by FTP** – Select to assign an FTP site and configure various parameters as shown in the figure below. When motion is detected, event images will be uploaded to the appointed FTP site.

<input checked="" type="checkbox"/>	Upload image by FTP
FTP address	FTP1 ▾
Pre-trigger buffer	1 frame ▾
Post-trigger buffer	0 frame ▾
<input type="checkbox"/>	Continue image upload
<input checked="" type="radio"/>	Upload for 1 sec
<input type="radio"/>	Upload during the trigger active
Image frequency	Max. ▾ fps

Upload Image by E-Mail – Select to assign an e-mail address and configure various parameters as shown in the figure below. When motion is detected, event images will be sent to the appointed e-mail address.

<input checked="" type="checkbox"/>	Upload image by E-Mail
E-Mail address	E-Mail 1 ▾
Pre-trigger buffer	1 frame ▾
Post-trigger buffer	0 frame ▾
<input type="checkbox"/>	Continue image upload
<input checked="" type="radio"/>	Upload for 1 sec
<input type="radio"/>	Upload during the trigger active
Image frequency	Max. ▾ fps

Note Make sure SMTP or FTP configuration has been completed. See the Mail and FTP sections for more information.

File Name – Enter a file name in the box, ex. image.jpg. The uploaded image’s file name format can be set in this section. Please select the one that meets your requirements.

- **Add date/time suffix**
File name: imageYYMMDD_HHNNSS_XX.jpg
Y: Year, M: Month, D: Day
H: Hour, N: Minute, S: Second
X: Sequence Number
- **Add sequence number suffix (no maximum value)**
File name: imageXXXXXXXX.jpg
X: Sequence Number
- **Add sequence number suffix (limited value)**
File Name: imageXX.jpg
X: Sequence Number

The file name suffix will end at the value entered in this box. For example, if the setting is up to “10,” the file name will start from 00, end at 10, and then start all over again.

- **Overwrite** – The original image on the FTP site will be overwritten by the new uploaded file with a static filename.

Storage Management

All Surveillix Tamper Resistant IP Mini Dome cameras include an integrated microSD™ card that can be used to record video or images. The card slot is compatible with a microSD™ card up to 16GB.

Device Information – Displays the storage total size and free space information of the included microSD™ card.

Device Setting – Allows you to format the microSD card.

Device Cleanup Setting – Use this feature to enable overwrite settings on the SD card. The camera can remove files from the card after they reach a certain age, or when the card is a certain percent full.

Recording List – Displays a list of files saved to the card. You can delete files from the card, or save them to your local PC.

Note If you are using Windows Vista, 7, or 8, you will need to change the Snapshot location. Windows UAC does not allow internet programs to write directly to C:\ for security reasons.

Recording

The recording schedule allows you to set up scheduled recording to the microSD™ card.

The screenshot shows a web interface for configuring recording settings. The top navigation bar includes 'Home', 'System', 'Streaming', 'Camera', and 'Logout'. The left sidebar contains a menu with categories like System, Security, Network, DDNS, Mail, FTP, HTTP, Events, Storage management, Recording, Schedule, File location, Information, Software version, and Maintenance. The main content area is titled 'Recording' and includes sections for 'Recording Storage' (with 'SD Card' selected) and 'Recording Schedule'. Under 'Recording Schedule', there are radio buttons for 'Disable' (selected), 'Always', and 'Only during time frame'. Below these is a table with columns 'Weekday', 'Start time', and 'Duration'. The table has 10 rows, each representing a schedule entry. At the bottom of the table, there are checkboxes for each day of the week (Sun, Mon, Tue, Wed, Thu, Fri, Sat). Below the table are input fields for 'Start time' and 'Duration', both set to '00:00', and 'Save' and 'Delete' buttons.

	Weekday	Start time	Duration
1	- - - - -	----	----
2	- - - - -	----	----
3	- - - - -	----	----
4	- - - - -	----	----
5	- - - - -	----	----
6	- - - - -	----	----
7	- - - - -	----	----
8	- - - - -	----	----
9	- - - - -	----	----
10	- - - - -	----	----

Sun Mon Tue Wed Thu Fri Sat

Start time : 00:00 Duration : 00:00

Save Delete

To set up continuous recording:

1. Select **Always** to continually record until the card is full.
2. To set the camera to overwrite old data, see the instructions for Disk Cleanup Setting earlier in this section.

To set a recording schedule, follow these instructions.

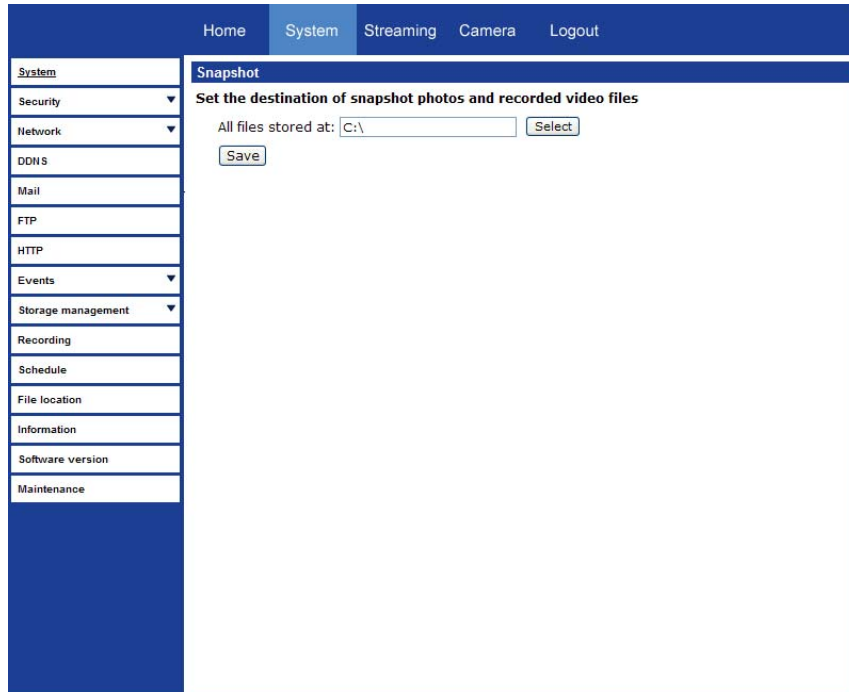

1. Select **Only During Time Frame**.
2. Click the schedule you would like to create (**1 ~ 10**).
3. Select the days of the week for this schedule.
4. Type a **Start Time** and a **Duration**.
5. Click **Save**.
6. To create another schedule, click another number in the **Schedule** list, and set your parameters.
7. Click Save after each schedule is completed.

File Location

The camera supports a JPEG snapshot function. You can specify a storage location for snapshot images. The default location is: C:\.

Note If you are using Windows Vista,7, or 8, you will need to change the Snapshot location. Windows UAC does not allow internet programs to write directly to C:\ for security reasons.

Note Make sure the selected file path contains valid characters such as letters and numbers.

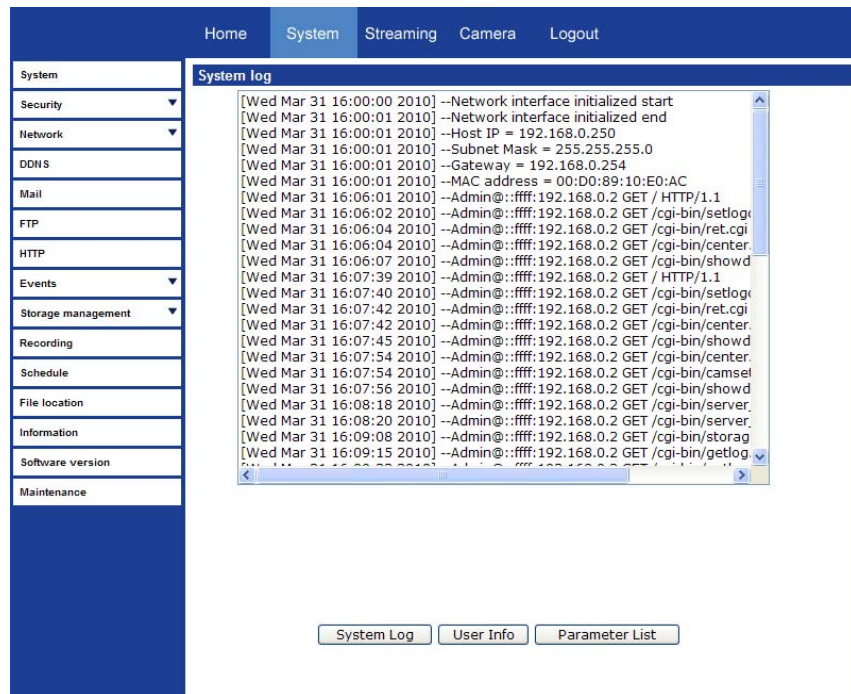

The screenshot shows a web interface with a dark blue header containing navigation links: Home, System (selected), Streaming, Camera, and Logout. On the left is a vertical sidebar menu with the following items: System, Security, Network, DDNS, Mail, FTP, HTTP, Events, Storage management, Recording, Schedule, File location, Information, Software version, and Maintenance. The main content area is titled "Snapshot" and contains the heading "Set the destination of snapshot photos and recorded video files". Below this heading, there is a text input field labeled "All files stored at:" with the value "C:\", a "Select" button, and a "Save" button.

Information

The Information page contains the System Log, User Information, and Parameter List.

System Log

Click System Log to view the system log file. The content of the file provides useful information about configuration and connections.

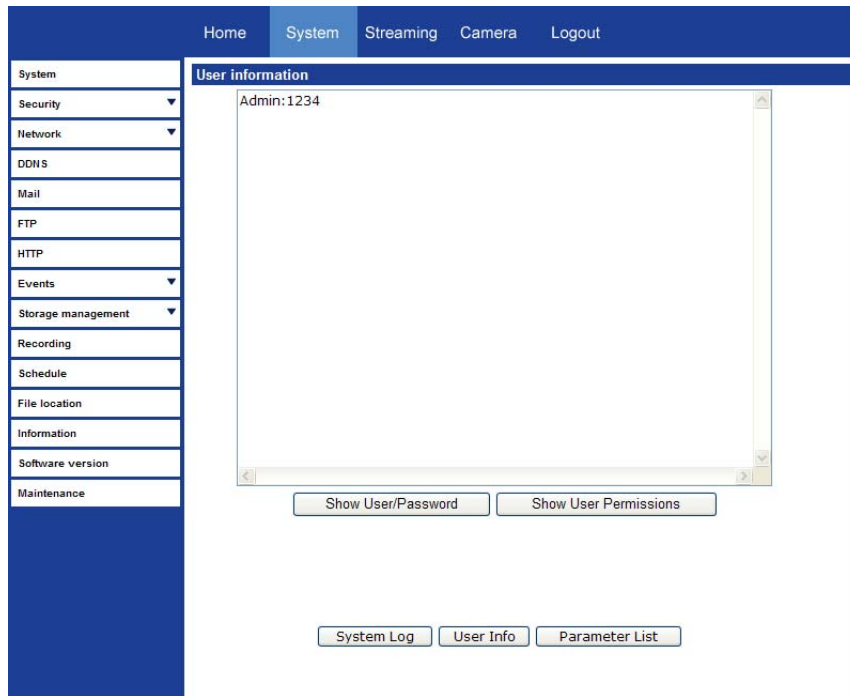

The screenshot shows a web interface with a navigation menu at the top containing 'Home', 'System', 'Streaming', 'Camera', and 'Logout'. The 'System' menu item is selected. On the left side, there is a vertical menu with various system categories: System, Security, Network, DDNS, Mail, FTP, HTTP, Events, Storage management, Recording, Schedule, File location, Information, Software version, and Maintenance. The main content area is titled 'System log' and displays a list of log entries. The entries are as follows:

```
[Wed Mar 31 16:00:00 2010] --Network interface initialized start
[Wed Mar 31 16:00:01 2010] --Network interface initialized end
[Wed Mar 31 16:00:01 2010] --Host IP = 192.168.0.250
[Wed Mar 31 16:00:01 2010] --Subnet Mask = 255.255.255.0

[Wed Mar 31 16:06:07 2010] --Admin@:ffff:192.168.0.2 GET /cgi-bin/showd
[Wed Mar 31 16:07:39 2010] --Admin@:ffff:192.168.0.2 GET / HTTP/1.1
[Wed Mar 31 16:07:40 2010] --Admin@:ffff:192.168.0.2 GET /cgi-bin/setlog
[Wed Mar 31 16:07:42 2010] --Admin@:ffff:192.168.0.2 GET /cgi-bin/ret.cgi
[Wed Mar 31 16:07:42 2010] --Admin@:ffff:192.168.0.2 GET /cgi-bin/center
[Wed Mar 31 16:07:45 2010] --Admin@:ffff:192.168.0.2 GET /cgi-bin/showd
[Wed Mar 31 16:07:54 2010] --Admin@:ffff:192.168.0.2 GET /cgi-bin/center
[Wed Mar 31 16:07:54 2010] --Admin@:ffff:192.168.0.2 GET /cgi-bin/camsel
[Wed Mar 31 16:07:56 2010] --Admin@:ffff:192.168.0.2 GET /cgi-bin/showd
[Wed Mar 31 16:08:18 2010] --Admin@:ffff:192.168.0.2 GET /cgi-bin/server
[Wed Mar 31 16:08:20 2010] --Admin@:ffff:192.168.0.2 GET /cgi-bin/server
[Wed Mar 31 16:09:08 2010] --Admin@:ffff:192.168.0.2 GET /cgi-bin/storag
[Wed Mar 31 16:09:15 2010] --Admin@:ffff:192.168.0.2 GET /cgi-bin/getlog
```

At the bottom of the page, there are three buttons: 'System Log', 'User Info', and 'Parameter List'.

User Login Information

All users for the camera are listed under **User information**. The example below shows that the Admin password is 1234 and there is one user named User with the password 4321.

The screenshot displays a web interface with a navigation menu on the left and a main content area. The navigation menu includes: System, Security, Network, DDNS, Mail, FTP, HTTP, Events, Storage management, Recording, Schedule, File location, Information, Software version, and Maintenance. The main content area is titled "User information" and contains a text box with the text "Admin:1234". Below the text box are two buttons: "Show User/Password" and "Show User Permissions". At the bottom of the main content area are three buttons: "System Log", "User Info", and "Parameter List".

View User Privilege

Select a user account from the list and click **get user privacy** to view the permissions for the user account.

Parameter List

Click **Parameter List** to view the system parameter settings.

The screenshot shows a web interface with a blue header and a left-hand navigation menu. The main content area displays the 'Parameter list' for a camera system. The settings are as follows:

Upgrade

Follow These Steps To Do The Software Upgrade

Step1:

Upload the binary file

Step2:

Select binary file you want to upgrade

Step3:

Click the upgrade button to start the upgrade process

Upgrading the Camera Viewer Software

Note Make sure the software upgrade file is available before starting the software upgrade.

1. Click **Browse** and find the upgrade file.

Note Do not change the file name, or the system will fail to find the file.

2. Select the file name from the list under **Step 2**.
3. Click **Upgrade**. The system will check to find the upgrade file, and then start to upload the upgrade file. The upgrade status bar will display on the page. When it reaches 100%, the viewer will return to Home page.
4. Close the internet browser.
5. Go to the **Windows Control Panel** and double-click **Add or Remove Programs**. Locate the **Camera Viewer** software on the **Currently installed programs** list and click **Remove** to uninstall the previous software version.
6. Open the internet browser again and login to the camera. The system will automatically download the new version of the Camera Viewer software.

Maintenance

On the Maintenance page you can export the camera's current configuration, or import the configuration for a camera. Use the factory default page to reset the IP camera to factory default settings if necessary.

Note Do not import configuration files from different models of cameras.

System	Factory default
Security	Restore factory settings and lose any changes? System will restart and need installer program to setup network.
Network	
DDNS	
Mail	<input type="button" value="Full Restore"/>
FTP	
HTTP	Restore factory settings (excluding network settings)
Events	<input type="button" value="Partial Restore"/>
Storage management	
Recording	
Schedule	Reboot the system.
File location	<input type="button" value="Reboot"/>
Information	
Software version	
Maintenance	Maintenance
	Export Files
	Export configuration files <input type="button" value="Export"/>
	Upload Files
	Select configuration files <input type="text"/> <input type="button" value="Browse..."/> <input type="button" value="Upload"/>

Full Restore – To reset the IP camera to the factory default settings, including the default IP address, click Set Default. The system will restart after 30 seconds. If you cannot access the camera menu, you can return the camera to the factory default settings by holding down the reset button on the camera connection board for 30 seconds. See camera diagram for the button location.

Reboot – To restart the IP camera without changing the current camera settings, Click **Reboot**.

Export – You can save the system settings by exporting the configuration file (.bin) to a specified location for future use. Click **Export**, then **Save**, and specify the desired location.

Upload – To copy an existing configuration file to the IP camera, click **Browse**, select the desired configuration file, then click **Upload**.

Video and Audio Streaming Settings

On the Streaming tab, the Administrator can configure specific video resolution, video compression mode, video protocol, audio transmission mode, etc.

Video Format

Select the desired video resolution for the camera on the Video Format page. The recorder will record video based on the resolution selected here.

The screenshot shows a web interface for configuring video settings. At the top, there is a navigation bar with tabs for Home, System, Streaming (selected), Camera, and Logout. On the left side, there is a sidebar menu with options: Video Format (selected), Video Compression, Hot Spot, Video OCX Protocol, Frame Rate Control, Video Mask, and Audio. The main content area is titled 'Video Format' and contains several sections:

- Video Resolution:** A dropdown menu is set to 'H.264 + H.264'. Below it, 'H.264-1 format:' is set to '1920 x 1080 (30 fps)' and 'H.264-2 format:' is set to '720 x 480 (30 fps)'. 'BNC support:' is 'N/A'. A 'Save' button is present.
- Text Overlay Settings:** Includes checkboxes for 'Include date' and 'Include time', and a text input field for 'Include text string:'. A 'Save' button is present.
- Video Orientation:** A dropdown menu is set to 'Normal video'. A 'Save' button is present.
- GOP Settings:** Four input fields for 'H.264-1 GOP Length', 'H.264-2 GOP Length', 'H.264-3 GOP Length', and 'H.264-4 GOP Length', all set to '30'. A 'Save' button is present.
- H.264 Profile:** Four dropdown menus for 'H.264-1', 'H.264-2', 'H.264-3', and 'H.264-4', all set to 'Main profile'. A 'Save' button is present.

Video Resolution

The camera provides four codec options under video resolution (two single streaming options and two sets of dual streaming options):

- MJPEG only
- H.264 only
- MJPEG+ H.264
- H.264 + H.264

Once a codec option is selected, multiple resolutions are available for each stream.

MJPEG Resolutions*	H.264 Resolutions*
1920x1080	1920x1080
	1920x1080 (@ 15 FPS)
1280x1024	1280x1024
1280x720	1280x720
1024x768	1024x768
800x600	800x600
720x480	720x480
640x480	640x480
352x240	352x240

*All resolutions are at 30 Frames Per Second (FPS) unless otherwise noted.

Note Due to resource management, some resolutions may be unavailable when selecting a dual stream option.

Note Due to resource management, the Motion Detection, 3DNR, and Privacy Mask functions are not available when using the **H.264 Only** codec option and selecting the **Low Latency** H.264 format.

Text Overlay Settings

Text Overlay allows you to select text to be display over the video. Three options are available: Date, Time, and a Custom String (up to 20 alphanumeric characters).

Video Rotate Type

You can change the orientation of the video output if necessary.

Normal Video – This is the default rotation designed for a normal setup with the camera mounted with the dome facing down.

Flip Video – This option will vertically flip the video image (without the intervention of another device this may cause the reversal of perceived left and right when viewing the image).

Mirror Video – This option will horizontally flip the video image (without the intervention of another device this may cause the reversal of perceived left and right when viewing the image).

90 Degree Clockwise – This option will rotate the video image 90 degrees to the right.

180 Degree Rotate – This option will rotate the video image 180 degrees (this is the option most commonly needed if the image appears upside-down when the camera is first installed).

90 Degree Counterclockwise – This option will rotate the video image 90 degrees to the left.

GOP Settings

The Group of Pictures settings allow you to modify the frame structure of the video stream. This setting changes the frequency of the I-frames that occur within the stream of P-frames (2-64). Increasing this number increases the number of P-frames between each I-frame; decreasing the file size of the stream, but increasing the risk of video decoding errors. Decreasing this number decreases the number of P-Frames between each I-frame; increasing the file size of the stream, but decreasing the risk of video decoding errors.

H.264 Profile

The H.264 Profile may need to be changed if you are using a third party recorder that is not capable of decoding H.264 Main Profile video compression. Select the compatible compression type for each stream if necessary.

Video Compression

You can select the MJPEG/H.264 compression mode on the video compression page appropriate for your application. You can also select to display compression information on the Home page.

The screenshot shows a web interface with a navigation bar at the top containing 'Home', 'System', 'Streaming', 'Camera', and 'Logout'. The 'Streaming' tab is active. On the left is a sidebar menu with items: 'Video Format', 'Video Compression', 'Hot Spot', 'Video OCX Protocol', 'Frame Rate Control', 'Video Mask', and 'Audio'. The main content area is titled 'Video Compression' and contains several sections:

- MJPEG Compression setting :** 'MJPEG Compression : Mid' with a dropdown arrow and a 'Save' button.
- H.264-1 Compression setting :** 'H264-1 bit rate : 4096' with a dropdown arrow and a 'Save' button.
- H.264-2 Compression setting :** 'H264-2 bit rate : 1024' with a dropdown arrow and a 'Save' button.
- H.264-3 Compression setting :** 'H264-3 bit rate : 1024' with a dropdown arrow and a 'Save' button.
- H.264-4 Compression setting :** 'H264-4 bit rate : 1024' with a dropdown arrow and a 'Save' button.
- Compression information setting :** A checked checkbox for 'Display compression information in the home page' and a 'Save' button.
- CBR mode setting :** Four checkboxes: 'enable H.264-1 CBR mode', 'enable H.264-2 CBR mode', 'enable H.264-3 CBR mode', and 'enable H.264-4 CBR mode'. Each has a 'Save' button.

MJPEG compression settings include:

- high compression, low bitrate, low quality
- middle compression, default
- low compression, high bitrate, high quality

H.264 compression settings include:

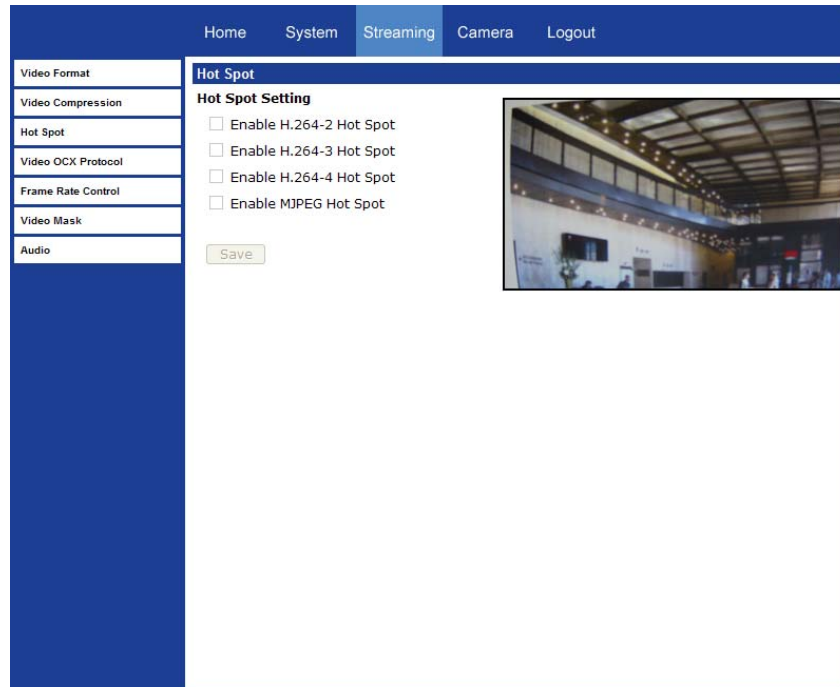

- 1024kbps, highest compression, lowest quality
- 2048kbps
- 4096kbps, middle compression, default
- 6144kbps
- 8192kbps, low compression, highest quality

CBR Mode Setting

- The Constant Bit Rate mode allows you to lock in the bit rate of the H.264 stream. If this setting is not enabled bit rate may fluctuate based on available bandwidth.

Hot Spot

The Hot Spot feature allows you to transmit different parts of the camera image on separate streams. Each stream is displaying a portion of the image at the full size of a regular image. This is useful for focusing on details in different areas of a single camera view.

1. On the **Video Format** screen, set the **Video Resolution** to transmit at least three streams, and then click Save.

Note The Hot Spot feature will only function when the camera is set for multiple streaming at 3 or more streams.

2. Click **Hot Spot**.
3. Select **Enable H.264-2 Hot Spot** to add a selection area. Click and drag the selection rectangle to the desired position and size.
4. Click **Save**.
5. Repeat for any other Hot Spots you want to enable.

Video OCX Protocol

On the Video OCX protocol page, you can select different protocols for streaming media over the network. In the case of multicast networking, you can select the Multicast mode.

Video OCX protocol setting options include:

- RTP over UDP
- RTP over RTSP(TCP)
- RTSP over HTTP
- MJPEG over HTTP

Select a mode according to your data delivery requirements. If you are transmitting over the internet using a router and port forwarding, you will need to use RTP over RTSP (UDP). You will also need to forward the RTSP port to the camera (see the network setup page to find the RTSP port).

Multicast Mode

1. Enter all required data, including multicast IP address, H.264 video port, MJPEG video port, audio port and TTL into each box.
2. Click **Save** to confirm the setting.

Frame Rate Control

Setting the camera to transmit fewer frames can save bandwidth. Use the Frame Rate Control screen to adjust the frame rate of each stream.

The screenshot shows a web interface for Frame Rate Control. At the top, there is a navigation bar with tabs for Home, System, Streaming, Camera, and Logout. The Streaming tab is active. On the left, there is a sidebar menu with options: Video Format, Video Compression, Hot Spot, Video OCK Protocol, Frame Rate Control (selected), Video Mask, and Audio. The main content area is titled 'Frame Rate Control' and contains the following settings:

- MJPEG Frame Rate Setting:** MJPEG frame rate : Save
- H264-1 Frame Rate Setting:** H264-1 frame rate : Save
- H264-2 Frame Rate Setting:** H264-2 frame rate : Save
- H264-3 Frame Rate Setting:** H264-3 frame rate : Save
- H264-4 Frame Rate Setting:** H264-4 frame rate : Save

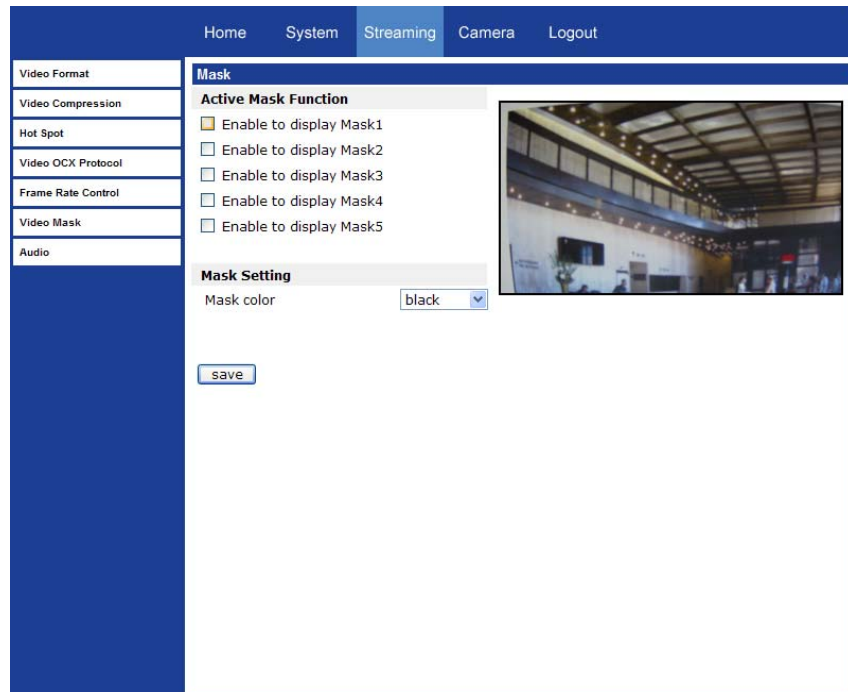

Each of the MJPEG and H.264 streams can have a separate frame rate setting from 1 to 30 frames per second.

Note Higher frame rate will increase video smoothness, as well as file size and bandwidth usage.

Note Lower frame rate will decrease video smoothness, as well as file size and bandwidth usage.

Video Mask

You can use the video mask page to define a privacy mask to keep users from viewing parts of the image.

The screenshot shows a web interface for configuring video masks. At the top, there is a navigation bar with links for Home, System, Streaming, Camera, and Logout. On the left side, there is a vertical menu with options: Video Format, Video Compression, Hot Spot, Video OCX Protocol, Frame Rate Control, Video Mask, and Audio. The main content area is titled "Mask" and contains two sections: "Active Mask Function" and "Mask Setting".

Active Mask Function

- Enable to display Mask1
- Enable to display Mask2
- Enable to display Mask3
- Enable to display Mask4
- Enable to display Mask5

Mask Setting

Mask color:

On the right side of the configuration area, there is a live video feed showing an indoor scene with a high ceiling and lights.

You can enable up to five privacy masks and choose a color to obscure the live view from users.

Audio

On the Audio page, you can select an audio transmission mode and audio bit rate. Audio is only available on the CM-611.

The screenshot shows a web interface with a navigation bar at the top containing 'Home', 'System', 'Streaming', 'Camera', and 'Logout'. The 'Streaming' tab is active. On the left, a sidebar menu lists various settings: 'Video Format', 'Video Compression', 'Hot Spot', 'Video OCX Protocol', 'Frame Rate Control', 'Video Mask', and 'Audio'. The 'Audio' page is displayed, featuring the following controls:

- Transmission Mode:** Two radio buttons: 'Simplex (Listen only)' and 'Disable' (which is selected).
- Server Gain Setting:** 'Input gain:' followed by a dropdown menu showing the value '3'.
- Bit Rate:** A dropdown menu showing 'ULAW'.
- Recording to Storage:** A dropdown menu showing 'Disable'.

Each of the gain, bit rate, and recording settings has a 'Save' button below it.

Note Audio monitoring and recording laws vary from location to location. It is highly recommended that you consult your local, state and federal laws to verify that you are in compliance before implementing audio recording.

Transmission Mode

- **Simplex (Listen only)** – The local/remote site can only listen to the other site.
- **Disable** – Turn off the audio transmission function.

Server Gain Settings

Set the audio input/output gain levels for sound amplification. The audio gain values are adjustable from 1 to 6, and will be turned off if 'Mute' is selected.

Bit Rate

Selectable audio transmission bit rates include the following:

16 kbps (G.726)	40 kbps (G.726)
24 kbps (G.726)	uLAW (G.711)
32 kbps (G.726)	ALAW (G.711)

Both uLAW and ALAW signify 64 kbps, but in different compression formats. A higher bit rate will provide higher audio quality and require more bandwidth.

Camera

The screenshot displays a camera control interface. At the top, there is a navigation bar with 'Home', 'System', 'Streaming', 'Camera', and 'Logout'. On the left side, there is a settings panel with the following sections: 'Exposure', 'White Balance', 'Picture Adjustment', 'Backlight' (set to Off), 'Digital Zoom' (set to Off), 'D-WDR Function' (set to Off), and 'Noise Reduction' (set to SPQ). Each section has a 'Set' button. On the right side, there is a 'Languages' dropdown menu. The main area features a live video feed of an indoor space, with a timestamp '2010/03/31 16:39' in the top right corner. Below the video feed, there are controls for 'Video format' (radio buttons for H.264-1 and H.264-2), zoom levels (x1, x1/2, Full), and playback controls (play, stop, record, refresh). A detailed bitrate table is provided below these controls.

Video format	Bitrate	Compression	Quality
MJPEG	middle compression	middle quality	
H.264-1	4096 kbps	middle compression	
H.264-2	1024 kbps	high compression	low quality
H.264-3	1024 kbps	high compression	low quality
H.264-4	1024 kbps	high compression	low quality

Exposure

The exposure is the amount of light received by the image sensor and is determined by the width of lens diaphragm opening (iris adjustment), the amount of exposure by the sensor (shutterspeed) and other exposure parameters. When you have made your changes, click **Set** in the **Exposure** section.

Auto Mode

- In Full Auto mode, the camera's Shutter Speed, IRIS and AGC (Auto Gain Control) control circuits work together automatically to set a consistent video output level. **Max Gain** can be adjusted between **1 ~ 3**, or turned **Off**. The maximum shutter speed is adjustable from **1/500** to **1 second**.

Manual Mode

- In Manual Mode, you can select the shutter speed and set the gain. The shutter speed range is from **1/10000** to **1 second**. The **Gain** can be adjusted between **1 ~ 9**, or turned **Off**.

White Balance

A camera needs to find reference color temperature, which is a way of measuring the quality of a light source, for calculating all the other colors. The unit for measuring this ratio is in degree Kelvin (K). Users can select one of the White Balance Control modes according to the operating environment. The following table shows the color temperature of some light sources for reference. When you have made your changes, click **Set** in the **White Balance** section.

Light Source	Color Temperature in K
Cloudy Sky	6,000 to 8,000
Noon Sun and Clear Sky	6,500
Household Lighting	2,500 to 3,000
75-watt Bulb	2,820
Candle Flame	1,200 to 1,500

Auto Mode

In Auto mode, white balance works within its color temperature range and calculates the best-fit white balance.

ATW Mode (Auto Tracing White Balance)

In ATW mode, the camera removes the signals within a range of 2000K to 10000K, which helps to even out the bright white portions of the image.

One Push

One Push balances color temperature based on a white object within the viewing area. Follow these instructions to use One Push white balancing.

1. Place a white object in the viewing area of the camera. A white piece of cardstock is the best option.
2. On the camera viewing software, click One Push, and then click Set.
3. Click the  button to adjust the color temperature based on the white object.
4. Click Set again to save your settings.

Manual Mode

In Manual mode, you can change the White Balance value manually by specifying the R gain and B gain; the R/B gain range is from 0 to 255.

Picture Adjustment

Adjust your image quality in the Picture Adjustment section. When you have made an alteration to any of the following settings, click **Set** to save your changes.

Brightness

Adjust the image's brightness on the camera. The Backlight value is adjustable from -12 (dim) ~ +15 (brightest).

Sharpness

Increasing the sharpness level can make the image looked sharper; it especially enhances an object's edge. The value of sharpness is adjustable from **0 ~ +15** (sharpest).

Contrast

Correct the contrast of the entire image by adjusting the Contrast level, ranging from **-6 ~ +19**.

Saturation

Adjust the saturation of color components in an image through the Saturation function, which is adjustable from **-6 ~ +19**.

Hue

Adjust the hue of color components in an image with the Hue function, which is adjustable from **-12 ~ +13**.

Backlight

Backlight compensation can correct for overly-bright backlit scenarios, which can occur if a camera is facing a door or window. Select **On** or **Off** for Backlight compensation. Click **Set** when you have made your choice.

Digital Zoom

You can choose to transmit an enlarged image from your camera, from **x2 ~ x8**. Click **Set** when you have made your choice.

D-WDR Function

Digital Wide Dynamic Range can even out lighting differences between areas of extreme light and extreme shade. Select your desired D-WDR level (Low, Mid, High, or **Off**), and then click **Set**.

Noise Reduction

Adjust your level of **Noise Reduction** as necessary, and then click **Set**.

TV System

Select your transmission type (**NTSC** or **PAL**), and then click **Set**.

Logout

Click the Logout tab to change users.

SPECIFICATIONS

CAMERA SPECIFICATIONS

Model		IKS-WD6112	
Indoor / Outdoor		Indoor	
Image Sensor		1/2.8" CMOS	
IP Rating		-	
Type / Format	H.264 / MJPEG
