EAI USER MANUAL

Version 1.39 August 2015

Document History

Version	Date	Change Log
1.0	Aug. 20, 2007	Minimal Version – Movements interface only as part of the Proof of Concept for connecting a Mobile Application to the Sanitel EAI Services
1.1	Oct. 9, 2007	Initial ‘full’ Setup – draft version for discussion and basic implementation based on Slaughtering Structure Interfaces definition table
1.2	Nov. 3, 2007	Initial Design + Discussions VRV / ALV / Internal
1.3	Nov. 16, 2007	Major part of documentation Added some initial examples – a lot of examples still missing either completely or sometimes just missing the namespace definitions
1.4	Nov. 17, 2007	Coding Examples
1.5	Dec. 15, 2007	Feedback + Error Handling
1.6	Jan. 8, 2008	Non-Official copy to some users
1.7	Jan. 24, 2008	Feedback + Extra examples + Added ExportMovementNotificationOverview documentation + Update for new EEC Trasys guideline
1.8	Feb. 15, 2008	Change + Import
1.9	Mar. 15, 2008	FAQ extended Important Change – Animal Numbers in Export Interfaces from now on contain the check digit. To make them clearly visible the checkdigits are surrounded by spaces. E.g. BE 9 52395189 New fields in Export: <ul style="list-style-type: none">- SanitaryUnitOverviewRequest: FCLT_CDE- SanitaryUnitOverview: TUST_CDE- Party Overview: LNGE_CDE- Party Overview Request: TPH, VAT_NBR, RLM_RGS_NBR- AnimalImport: PPPU_CDE New Interface: Import Treatment Notification (to register treatments such as bluetongue)

1.10	Apr. 30, 2008	Extra Documentation Web Service Stub Generation
1.11	May 15, 2008	Cosmetics
1.12	Jun. 4, 2008	<p>Erronuously named NOTP_ID field has been renamed to NOTF_ID impacting the movement XML structures:</p> <ul style="list-style-type: none"> • AnimalMovementNotificationOverviewExportRequest • AnimalMovementNotificationOverviewExport • ChangeNotificationOverviewExportRequest • ChangeNotificationOverviewExport • MovementNotificationOverviewExportRequest • MovementNotificationOverviewExport
1.13	Jun. 10, 2008	Improved Example - Treatment Notification
1.14	Aug. 10, 2008	<p>FAQ Question19 added</p> <p>Agreement Overview Export interface Added</p> <p>Notification Status Import Added</p> <p>Additional geographical fields in Facility / San. Unit</p>
1.15	Sep. 1, 2008	<p>PopulationNotificationImport added</p> <p>RetaggingNotificationImport added</p>
1.16	Sep. 17, 2008	<p>LiablePartyOverviewExport added</p> <p>NotificationMovementImport extended with VRV data</p>
1.17	Oct. 1, 2008	<p>Party Type – PATP missing documentation documentation</p> <p>NOST Code: IVD -> IVLD</p> <p>ExportSanitaryUnit API-Break !!! Replaced the incorrect UPD_DTE_FRM/UPD_DTE_TO fields to the single UPD_DTE field</p> <p>AnimalDisposalType (Rendac) on AnimalImport and MovementNotificationImport</p> <p>Update Date Search on export movement /animal movement VRV fields in import animal</p> <p>Extra animal fields in notification overview export</p> <p>MarkingSeriesImport added</p> <p>Working On Behalf Of functionality</p>
1.18	Oct. 22, 2008	<ul style="list-style-type: none"> • Added the slaughter vignet number (SLG_VGN_NBR) in the Animal Tag of the MovementNotificationImport-XML

		<ul style="list-style-type: none"> Completed ANCO codes in the documentation + a rule has been added that in AnimalBirth registrations the SlaughteringCode DEAD cannot be used anymore... Added SNUN_CDE as search criteria for AnimalMovementNotificationOverview Added 2 Technical fields in interaction result defining the raw pattern string of the exceptions and the individual arguments. Technical application integration can than check on the pattern string and retrieve certain parameters directly
1.19	Nov. 5, 2008	<ul style="list-style-type: none"> New Interface: ExportMarkingSeries New Interface: ExportRetaggingNotification Export AnimalOverview API- Break !!! Removal of the incorrect field VRV_IND_CRD_FLG. The correct field VRV_IDN_CRD_FLG remains “Work On Behalf Of” Functionality added
1.20	Nov. 25, 2008	<ul style="list-style-type: none"> Security Documentation added UserLanguage documentation added
1.21	Dec. 15, 2008	<ul style="list-style-type: none"> Birth / Import Examples Refreshed incomplete drawings Update FAQ (Animal number formats, Security Token)
1.22	Jan. 7, 2009	<ul style="list-style-type: none"> ExportProductionUnit Interface
1.23	Feb. 15, 2009	<ul style="list-style-type: none"> ExportWaterManureAllocation Interface
1.24	Mar. 06, 2009	<ul style="list-style-type: none"> Fix in export XML example Import Change Notification – Attribute codes re-aligned / extended with online application
1.25	May 18, 2009	<ul style="list-style-type: none"> ExportWaterAndManure Interface – extended with Milk production quota
1.26	June 02, 2009	<ul style="list-style-type: none"> Changed Sanitrace-references to the more actual Sanitel notation
1.27	June 26, 2009	<ul style="list-style-type: none"> Final Documentation Version
1.28	Jan 20, 2009	<ul style="list-style-type: none"> ProductionUnitNotificationImport redefined + examples
1.29	June 2011	<ul style="list-style-type: none"> Risk, Import Passport, FCI XMLs
1.30	June 2012	<ul style="list-style-type: none"> Update all import schema's

1.31	December 2012	<ul style="list-style-type: none"> ImportOrder Interface
1.32	July 2013	<ul style="list-style-type: none"> Added SlaughterFile methods & usercodes Added chapter on migrating to EAI service v2
1.33	September 2013	<ul style="list-style-type: none"> General review and update
1.34	7 th October 2013	<ul style="list-style-type: none"> Update all the interface definition diagrams Update the XML styling in the interface definition Add guidelines section in the interface definition
1.35	6 th August 2014	<ul style="list-style-type: none"> Removed chapter on migrating to EAI v2 services Applied remarks from DGZ New functionality added to IMPUN ImportProductionUnit
1.36	27 th November 2014	<ul style="list-style-type: none"> Added ChangeAnimalMeatQualityImport and ChangeProductionQualityImport Interfaces Added ExportAnimalBasicData Interface
1.37	28 th January 2015	<ul style="list-style-type: none"> Field FUNC_CDE added to ImportSlaughterFile. Included ImportSlaughterDetailInfoForAnimalGroup Field DETAIL_INFO_FLG added to ExportSlaughterFile. Search period validation added. Included changes for ExportAnimalBasicData Interface. Field RETURN_ALL_ANOMALIES added to Import Order, Movement Notification and Birth Notification. Included new Export Slaughter Lot Observations Interface
1.38	24 th April 2015	<ul style="list-style-type: none"> Updates to URLs in Interfaces – Technical Usage section Updated the URLs for the interface layout from ‘http’ to ‘https’ Add Transport animal subtype (TASB) in Coding schema’s Changes to Export SlaughterlotObservation XML (: Inclusion of Working Reference, Animal Count , Organ Count and Weight fields)
1.39	3 rd August 2015	<ul style="list-style-type: none"> Added new XML EXANE – ExportAnimalExternalLabs Added new XML EXANR - ExportAnimalRisk

Instructions to test the interfaces:

Introduction

XML and Web Services

The goal of web services is to allow external applications exchange data with the Sanitel.Net application in a standardized, efficient and transparent manner. The data is formatted as XML and the interaction is in two ways: Information can be imported in the Sanitel.Net-application (e.g. birth notifications, movements,...) and information can be exported / retrieved from the Sanitel.Net application.

Sanitel.Net provides three channels for exchanging XML: Formal SOAP 1.* web services, XML Streaming and manual XML uploads.

The Web Services are meant to complement other usage of the Sanitel.Net application like online access, reports, etc...

The web services are in principle not meant to synchronize databases, although some possibilities obviously do exist. Please refer to the appendix for more information on synchronization alternatives...

Interface Overview

For the Sanitel Renewal a number of formal interfaces have been defined for exchange of information (Imports of Movements, Export of Notifications, etc...).

The list underneath gives an overview of a first set of interfaces

Direction	#	Code	Name	Allows an external application to...
Export	S.01	EXAN	ExportAnimal	Retrieve a detailed insight of an animal (All characteristics, risk status, history,...)
Export	S.02	EXAMN	ExportAnimalMovementNotificationOverview	Retrieve an overview of movements (of a certain animal – from /to a certain facility ...)
Export	S.03	EXANO	ExportAnimalOverview	Retrieve an overview of animals and their key characteristics
Export	S.04	EXCNO	ExportChangeNotificationOverview	Retrieve an overview of changes to a Facility, a Sanitary Unit or Animal characteristics
Export	S.05	EXFAO	ExportFacilityOverview	Retrieve a general overview of facilities (name/address infor, reference numbers, liable party details,...)
Export	S.06	EXMVN	ExportMovementNotification	Retrieve a detailed insight in a movement (involved parties, involved facilities, involved animals,...)
Export	S.07	EXMV	ExportMovementNotificationOverview	Retrieve an overview of movements (of a certain animal – from /to a certain facility ...)
Export	S.08	EXPAO	ExportPartyOverview	Retrieve a general overview of Parties (Name/Address, Reference Numbers, Contact Data,...)
Export	S.09	EXPUO	ExportProductionUnitOverview	Retrieve a general overview of which exploitation units are used at which facilities / sanitary units
Export	S.10	EXSU	ExportSanitaryUnit	Retrieve detailed info about a sanitary unit (Location, Address, Sanitary Characteristics, Involved Parties, Production Unit Info, Marking Inventory, Capacity, Population Inventory, Risk Information, History Information...)
Export	S.11	EXSUO	ExportSanitaryUnitOverview	Retrieve a general overview of sanitary units and their key characteristics
Export	S.12	EXSLO	ExportSlaughteringOverview	Retrieve summary statistics of slaughtered animals
Import	S.13	IMANN	ImportAnimalNotification	Submit births or import records
Import	S.14	IMCHN	ImportChangeNotification	Submit changes on an Animal, a Facility, a Sanitary Unit or even a Party

Import	S.15	IMINN	ImportInventoryNotification	Submit marking inventory results
Import	S.16	IMMWN	ImportManureWaterNotification	Submit water/manure consumption statistics / corrections
Import	S.17	IMMVN	ImportMovementNotification	Submit a movement (e.g. Mobile App)
Import	S.18	IMPPN	ImportPopulationNotification	Submit population inventory results
Import	S.19	IMPUN	ImportProductionUnitNotification	Submit assignments of production units (exploitation units) to Sanitary Units
Import	S.20	IMRSN	ImportRiskNotification	Submit risk notifications, laboratory results,...
Import	S.20	IMRSN	ImportTreatmentNotification	Submit a treatment
	S.21	IMPST	ImportStatusUpdateNotification	Submit a status update notification – currently limited to treatments but extendable to other notifications
Export	S.22	EXAGR	ExportAgreementOverview	To test if certain parties have certain (active) agreements with certain other parties ;-)
Import	S.23	IMRTN	ImportRetaggingNotification	To import a retagging notification
Export	S.24	EXLPO	ExportLiablePartyOverview	To export information about veterinaries and other liable parties. This interface has limited access only because of privacy concerns
Import	S.25	IMPMS	ImportMarkingSeries	Submit a marking series allocation
Export	S.26	EXMSO	ExportMarkingSeriesOverview	To retrieve an overview of Marking Series / Marking Series Allocations
Export	S.27	EXRNO	ExportRetaggingNotificationOverview	To retrieve an overview of Retagging Notifications
Export	S.28	EXPU	ExportProductionUnit	To retrieve all Animal allocations to any old or current production unit of a certain facility including the from and the to of these allocations
Export	S.29	EXWMA	ExportWaterManureAllocation	To retrieve all WaterManureAnimalAllocations to do a correct calculation of Water / Manure consumption
Export	S.30	SLGHE	ExportSlaughterFile	
Export	S.31	SLGHE	ExportSlaughteringFacilitiesOverview	
Export	S.32	SLSTE	ExportSlaughteringStatisticsOverview	
Import	S.33	IMSLD	ImportSlaughterDetailInfoForAnimalGroup	
Import	S.34	SLGHX	ImportSlaughterFile	
Import	S.35	SLLOX	ImportSlaughterInfo	

Schema Overview

The following table gives, for each interface an overview of the document types used as input and the document type obtained as a result.

Direction	#	Code	Name	Allows an external application to...	Input XML - Schema Name	Result XML - Schema Name
Export	S.01	EXAN	ExportAnimal	Retrieve a detailed insight of an animal (All characteristics, risk status, history,...)	AnimalExportRequest	AnimalExport
Export	S.02	EXAMN	ExportAnimalMovementNotificationOverview	Retrieve an overview of movements (of a certain animal - from /to a certain facility ...)	AnimalMovementNotificationOverviewExportRequest	AnimalMovementNotificationOverviewExport
Export	S.03	EXANO	ExportAnimalOverview	Retrieve an overview of animals and their key characteristics	AnimalOverviewExportRequest	AnimalOverviewExport
Export	S.04	EXCNO	ExportChangeNotificationOverview	Retrieve an overview of changes to a Facility, a Sanitary Unit or Animal characteristics	ChangeNotificationOverviewExportRequest	ChangeNotificationOverviewExport
Export	S.05	EXFAO	ExportFacilityOverview	Retrieve a general overview of facilities (name/address info, reference numbers, liable party details,...)	FacilityOverviewExportRequest	FacilityOverviewExport
Export	S.06	EXMVN	ExportMovementNotification	Retrieve a detailed insight in a movement (involved parties, involved facilities, involved animals,...)	MovementNotificationExportRequest	MovementNotificationExport
Export	S.07	EXMV	ExportMovementNotificationOverview	Retrieve an overview of movements (of a certain animal - from /to a certain facility ...)	MovementNotificationOverviewExportRequest	MovementNotificationOverviewExport
Export	S.08	EXPAO	ExportPartyOverview	Retrieve a general overview of Parties (Name/Address, Reference Numbers, Contact Data,...)	PartyOverviewExportRequest	PartyOverviewExport
Export	S.09	EXPUE	ExportProductionUnitOverview	Retrieve a general overview of which exploitation units are used at which facilities / sanitary units	ProductionUnitOverviewExportRequest	ProductionUnitOverviewExport
Export	S.10	EXSU	ExportSanitaryUnit	Retrieve detailed info about a sanitary unit (Location, Address, Sanitary Characteristics, Involved Parties, Production Unit Info, Marking Inventory, Capacity, Population Inventory, Risk Information, History Information...)	SanitaryUnitExportRequest	SanitaryUnitExport
Export	S.11	EXSUO	ExportSanitaryUnitOverview	Retrieve a general overview of sanitary units and their key characteristics	SanitaryUnitOverviewExportRequest	SanitaryUnitOverviewExport
Export	S.12	EXSLO	ExportSlaughteringOverview	Retrieve summary statistics of slaughtered animals	SlaughteringOverviewExportRequest	SlaughteringOverviewExport
Import	S.13	IMANN	ImportAnimalNotification	Submit births or import records	AnimalNotificationImport	Interaction Result
Import	S.14	IMCHN	ImportChangeNotification	Submit changes on an Animal, a Facility, a Sanitary Unit or even a Party	ChangeNotificationImport	Interaction Result
Import	S.15	IMINN	ImportInventoryNotification	Submit marking inventory results	InventoryNotificationImport	Interaction Result
Import	S.16	IMMWN	ImportManureWaterNotification	Submit water/manure consumption statistics / corrections	ManureWaterNotificationImport	Interaction Result
Import	S.17	IMMVN	ImportMovementNotification	Submit a movement (e.g. Mobile App)	MovementNotificationImport	Interaction Result
Import	S.18	IMPPN	ImportPopulationNotification	Submit population inventory results	PopulationNotificationImport	Interaction Result
Import	S.19	IMPUN	ImportProductionUnitNotification	Submit assignments of production units (exploitation units) to Sanitary Units	ProductionUnitNotificationImport	Interaction Result
Import	S.20	IMRSN	ImportRiskNotification	Submit risk notifications, laboratory results,...	RiskNotificationImport	Interaction Result
Import	S.20	IMRSN	ImportTreatmentNotification	Submit a treatment	RiskNotificationImport	Interaction Result

Export Interfaces always have a ‘request’ document type as input. Import interfaces always return an interaction result as result.

All document types are described in the interface description.

Schema design conventions

As there is no Industry XML-standard for this type of information, we have defined a number of dedicated schema's. We tried to make this structure as consistent as possible and have made the following conventions

The following interface design conventions were followed:

- Full Schema definition in English
- Schema names + Structure names + Steering Attributes: Camel Case, No abbreviations
- Field Names:
 - o Abbreviation Based
 - o Upper Case
 - o 4 character abbreviations refer to a Coding Schema's or to a main Entity
 - E.g. ANTP_CDE denotes a code from the coding schema ANTP – Animal Type
 - E.g. FCLT_CDE refers to the code/id/main reference number of a Facility.
 - o Rest 3 (2) character abbreviations
 - o No indication of the type string / number except for dates (_DTE) or Booleans (_FLG)
 - o Fields as short as possible without jeopardizing readability
- Coding Schema's optimized for 'maximal stability'
 - o Coding schema's are NOT included in the schema (new codes could be added without change in the interface)
 - o Minimal validation rules in the schema (no input length definitions, no mandatory fields,...) -> All business logic on the Server
 - o Only standard data types: string, decimal (decimal point) , datetime
 - DateTime = YYYY-MM-DDTHH:MM:SS.FFF UCT –
 - Examples: 2007-03-01, 2007-03-01T10:04:12,
 - A Null date time can be represented as
0001-01-01T00:00:00
- Best practices
 - o Cardinality and structure complexity
 - 0 to limited rather than minimal 1 and maximal 3
 - Minimal Depth and Redundancy
 - Similar information requirements – Similar field names
 - o Import Interfaces
 - Multiple input records possible
 - Standardized interaction result
 - o Export Interfaces
 - Request = Single Line Search Criteria => but all criteria freely combinable
 - Result = list-result
 - o Standardized Header Info*
 - All Headers

- Username – name of the user on whose behalf the import is made – this user needs to have the adequate permissions as if he would register this action in the online
- Security Token – Reserved if a stricter security is necessary in case of XML abuse
- Extra Header Info Export Results
 - Return Code – can be negative in case the search failed e.g. missing / incorrect search criteria ... 0 means all OK. A Return code 999 will mean that the result is truncated to the first 1000 results
 - Return Message – specification why the search failed
- Extra Header Info Export Request Steering Parameter
 - Result Index – ReservedPaging parameter in case of multiples of X000 of records (1 = first X000, 2 = second X000,...)

*) Remark that we use the Header of the MessageType for storing these special information elements. This is a preferred practice over e.g. the use of a special context element for the following reasons:

- Security and routing can be done on just the information in the header of the message without the need to “parse” the full message structure
- The header info can be extended e.g. with message version information again accessible without the need to “parse” the full message structure
- Conceptually the header info is NOT part of the message so it should not be part of a special context element

Schema Definitions

The attached zip file contains a collection of all schema's.

Schemas.zip

XSD Schema's

When discussing channel 1 we also explain how one can retrieve the XSD Schema's online...

Coding Schema's Overview

The following coding schema's have been used in the XML definition

AAST	AnimalAllocationStatus
AATP	AnimalAllocationType
ABFY	Beefiness
ABSP	AnimalBirthSpecifics
ADPR	AnimalDepartureReason
ADSP	AnimalDeliverySpecifics
AGEC	AgeCategory
AMQL	AnimalMeatQualityLabel
ANCO	AnimalCondition
ANCP	AnimalConception
ANDT	AnimalDisposalType
ANPR	AnimalPremiumCodes
ANRC	AnimalRace
ANRT	AnimalRaceType
ANSB	Animal SubType
ANTP	Animal Type
ANVN	Animal VRV name
ANVS	Animal VRV specification
ANWF	Animal Welfare
ASRV	AnimalSurvival
BLST	Blocking Status
CITY	CleaningFacilityType
CTRY	Country
DNAQ	DNA Quality Code
FATP	FacilityType
FLTP	FacilityLocationType
GNDR	Gender
HRTP	Hairtype
LNGE	Language
MSAL	Marking Series Allocation
NFTP	NotificationFacilityType
NOKD	NotificationKind
NORS	NotificationReason (Reserved for later usage)
NOST	NotificationStatus
NOTP	NotificationType
NPTP	NotificationPartyType
NRCR	NotificationRiskChangeReason
OILB	Order Item Label

OISN	Order Item Serie Numbering
OITP	Order Item Type
ORIG	Origination
PATP	Party Type
PBRS	SanitaryUnitPassportBlockingReason
PBST	SanitaryUnitPassportBlockingStatus
PPPR	PassportPrintReason
PPPU	Passport Print Urgency
PRQU	Production Quality
PRWA	Production Ware
PUTP	ProductionUnitType
RIIT	RiskItemType
RIOG	RiskOrigin
RIQR	RiskQualificationReason
RIQU	RiskQualification
RIST	RiskStatus
RITP	RiskType
RSST	RiskCondition
SLGT	Slaughtering Type
SLKD	Slaughtering Kind
SLPT	SlaughteringPartyType
SLST	SlaughteringStatusAction
SPTP	SanitaryUnitPartyType
SUHS	Sanitary Unit Housing
SUKD	SanitaryUnitKind
SUTP	SanitaryUnitType
TITP	Type of treatment item (e.g. 1 st , 2 nd , ...)
TMLV	Treatment Notification Group level
TMTP	Type of treatment (e.g. Oral, Inoculation,...)
TUBR	BlockingReason
TUST	TrackingUnitStatus
UNIT	Unit
VATP	VLMAnimalType
VEOR	Veterinary Organization
WGHC	WeightCategory

Main Entity Overview

The following 4 letter codes refer to a main entity. You have to know their key before you can access them

ANML	Animal
ANPP	AnimalPassport
ATRB	AnimalSanitaryUnitHistory
FALO	FacilityLocation
FCLT	Facility
MACT	MarkingCountryCode
MEDC	Medicine
NORI	NotificationRiskDetail

PATY	Party
PRUN	ProductionUnit
RIIM	RiskItem
SNUN	SanitaryUnit
TRGR	TrackingGroup
VIST	Visit
ORIM	Order Items (e.g. Retagging Earmarks)

Abbreviations

The following abbreviations have been used

ID	Identification	MCP	Municipality	RCV	Receive
TO	AgreementComment	MHR	Mother	RDC	Rendac
AL1	Adress Line 1	MLK	Milk	REF	Reference
AL2	Adress Line 2	MRK	Marking	RLM	Realm

Coding Schema's Content

The following is a list of accepted/returned user codes. Codes can be recognized as <USERGROUP>_CDE.

e.g. ADSP_CDE, AGEC_CDE, ...

AATP Animal Allocation Type	
SYS	System created animal allocation
OVR	System created overriding animal allocation
ABFY Beefiness	
MLK	0 Milk calf
LBFY	1 Low Beefiness
MBFY	2 Normal Beefiness
HBFY	3 Robust Beefiness
FAT	4 Double-muscled
ADPR Animal Departure Reason	
03	Ouderdom Age
04	Overtollig Surnuméraire
05	Afgemest/Slachtrijp Fini/pret à abattre
10	Been/Klaauwaandoening Affection d'un membre ou de l'onglon
11	Voedingsstoornissen Trouble alimentaire
12	Problemen rond het afkalven Problème de vêlage
13	Hoog celgetal/Mastitis D G Z
14	Vruchtbaarheid Fertilité
19	Overige gezondheid Autre problème sanitaire
20	Lage productie Faible production
21	Melkbaarheid En lactation
22	Slecht exterieur Mauvais extérieur
23	Gedrag Comportement
ADSP AnimalDeliverySpecifics	
EASY	Easily
NRML	Normal
DIFF	Difficult
CSRN	Caesarean
SWD	Sawed Off
OTH	Other Aid
AGEC AgeCategory	
LT18	Younger than 18 months (SHP,GOAT,DEER)

GE18	18 Months or Older (SHP,GOAT,DEER)
LT6	Younger than 6 months (BOV)
B612	Between 6 and 12 Months (BOV)
B1224	Between 12 and 24 Months (BOV)
GE24	24 Months or Older (BOV)
AGSA	Agreement Status
ACT	Active
STP	Stopped
SUSP	Suspended
DRF	Draft

Interface Definition

The archive underneath contains a more detailed description for the interfaces. For each interface we list it's direction, it's short description, it's input and output schemas, etc...

Guidelines

The following figure having the symbols description

For the mandatory and optional fields

[0..1] optional or occurred once only.

[0..*] optional or occurred Many.

[1..*] mandatory occurred one or more.

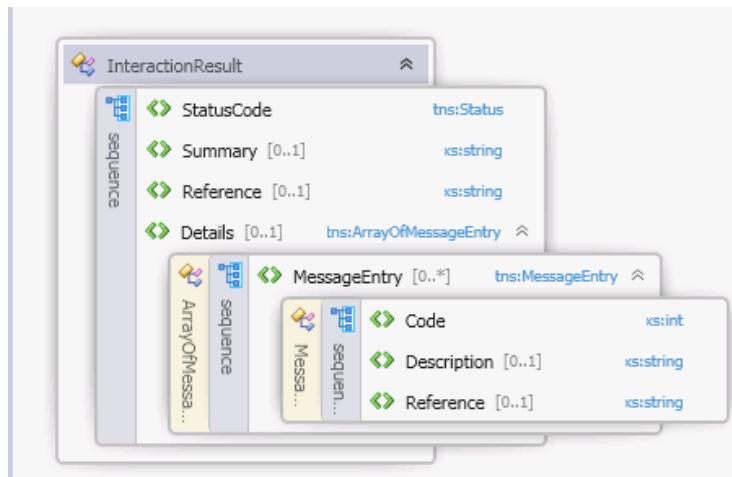

Note: The definitions for multi scenarios indicates the mandatory field and the optional on the Business level so make sure that read the various sample on the same Method

Interaction Result (only for import actions)

Purpose

Schema to give feedback regarding an import of information

Schema

<http://Sanitel.EAI/SanitelRepository/InteractionResult>

On success you receive an interaction result like shown underneath. Important is the StatusCode “Success” and the Reference “868538067”

```
<?xml version="1.0" ?>
<InteractionResult xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
                     xmlns:xsd="http://www.w3.org/2001/XMLSchema">
<StatusCode>Success</StatusCode>
<Summary>Import ImportChangeNotificationUseCase successfull: Change Notification
          Importing 2322-343453 ChangeNotification information is imported.</Summary>
<Reference>868538067</Reference>
<Details />
</InteractionResult>
```

In case of incorrect URLs you receive an interaction result like shown underneath. Important is the StatusCode “Error”, a Summary Message and one or more Detail Message Entries.

```
<?xml version="1.0"?>
<InteractionResult
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"

    </Movement>
</AnimalMovementNotificationOverviewExportRequest>
```

Output Schema: AnimalMovementNotificationOverviewExport

This schema is slightly more general than strictly necessary. In fact a distinction could have been made between individual animals and herds. If called for herd-animals these fields remain empty.

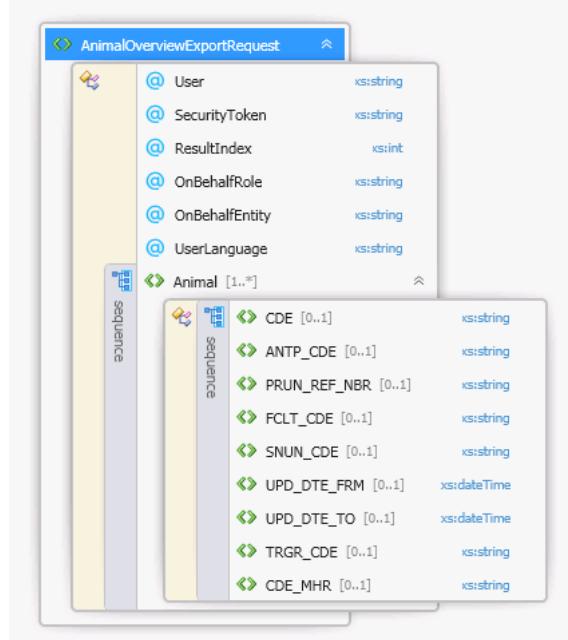

<http://Sanitel.EAI/SanitelRepository/SanitelServices/AnimalMovementNotificationOverviewExportSchema>

Interface EXANO - ExportAnimalOverview

Direction: Export

Purpose: Retrieve an overview of animals and their key characteristics

Layout-Documentation:

https://qas.sanitel.be/int/QAS_Sanitel_ExtInterfacingSvcs_v2/SanitelServices.asmx?op=ExportAnimalOverview

Input Schema: AnimalOverviewExportRequest

<http://Sanitel.EAI/SanitelRepository/SanitelServices/AnimalOverviewExportRequestSchema>

XML Example(s)

Example EXANO-1 – Retrieve all bovines in a certain Sanitary Unit

```
<?xml version="1.0" encoding="utf-8"?>
<AnimalOverviewExportRequest
    xmlns="http://Sanitel.EAI/SanitelRepository/SanitelServices/AnimalOverviewExportRequestSchema"
    User="TESTXML" SecurityToken="N/A" ResultIndex="0">
    <Animal>
        <ANTP_CDE>BOV</ANTP_CDE>
        <SNUN_CDE>BE12345678-0101</SNUN_CDE>
    </Animal>
</AnimalOverviewExportRequest>
```

Example EXANO-2 – Retrieve all bovines that have been updated / changed today

```

<?xml version="1.0" encoding="utf-8"?>
<AnimalOverviewExportRequest
    xmlns="http://Sanitel.EAI/SanitelRepository/SanitelServices/AnimalOverviewExportRequestSchema"
    User="TESTXML" SecurityToken="N/A" ResultIndex="0">
    <Animal>
        <ANTP_CDE>BOV</ANTP_CDE>
        <UPD_DTE_FRM>2007-11-15T00:00:00</UPD_DTE_FRM>
        <UPD_DTE_TO>2007-11-15T23:59:59</UPD_DTE_TO>
    </Animal>
</AnimalOverviewExportRequest>

```

A query like this one can take some time as we have chosen for now not to put an index on it yet (in addition – because of the migration – all animals last update date will be the day of the migration) If this query is to be used structurally and regularly let us know...

Interface EXANR – ExportAnimalRiskData

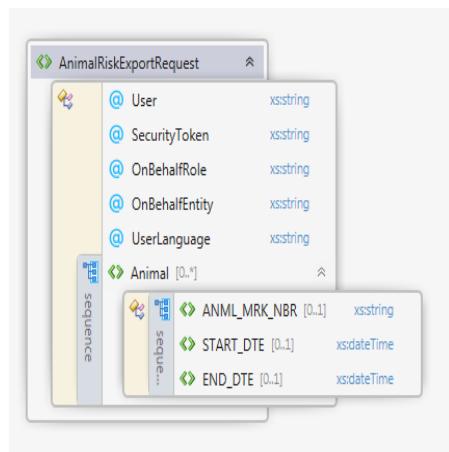

The ExportAnimalRiskData Interface will be used to retrieve the risk details of the animals based on the input marking number.

If START_DTE and END_DTE tags are not specified or set equal to system date, all actual animal's risk are exported.

If START_DTE and END_DTE aren't equal system date, no risk is exported

Direction: Export

Purpose: Retrieve actual risks of an animal based on marking number. In addition, the users with PCE, federation-users, SLGHS roles can only view the PI01 (kidneys) and Hormone (H) and Residue (R) and Unauthorized substance (N) and Medicine (M) risks.

Layout-Documentation:

Interface EXFAO - ExportFacilityOverview

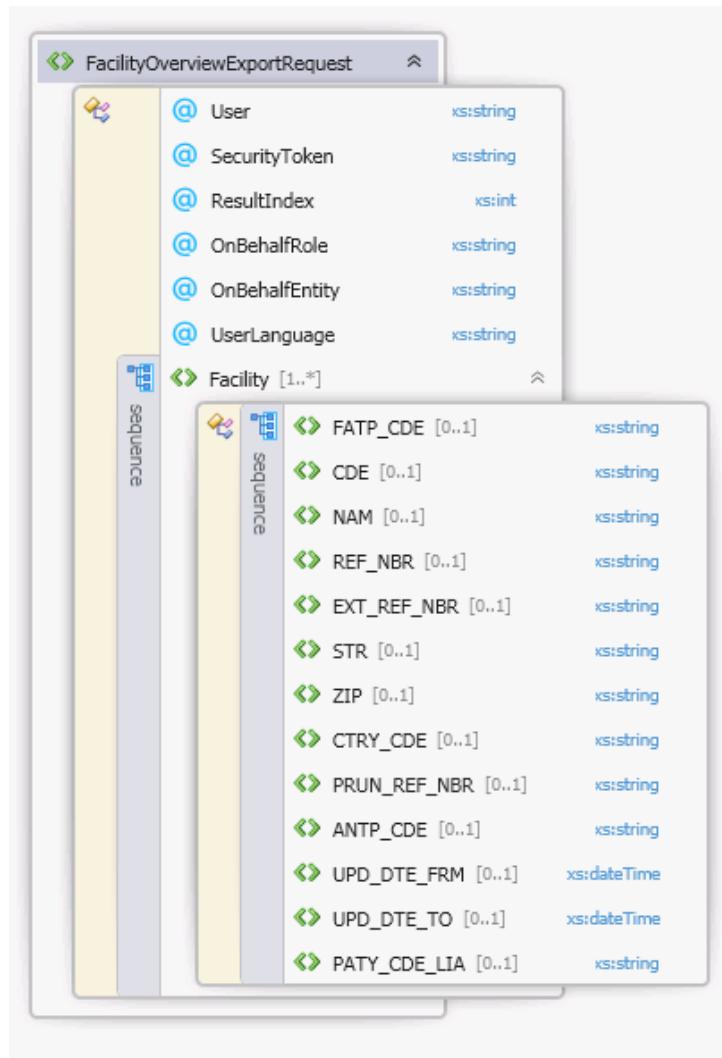

Direction: Export

Purpose: Retrieve a general overview of facilities (name/address info, reference numbers, liable party details,...)

Layout-Documentation:

https://qas.sanitel.be/int/QAS_Sanitel_ExtInterfacingSvcs_v2/SanitelServices.asmx?op=ExportFacilityOverview

Input Schema: FacilityOverviewExportRequest

<http://Sanitel.EAI/SanitelRepository/SanitelServices/FacilityOverviewExportRequestSchema>

XML Example(s)

Example EXFAO – 1 – Retrieve all sheep owners in Brugge

```
<?xml version="1.0" encoding="utf-8"?>
<FacilityOverviewExportRequest
    xmlns="http://Sanitel.EAI/SanitelRepository/SanitelServices/FacilityOverviewExportRequestSchema"
    User="TESTXML" SecurityToken="N/A" ResultIndex="0">
    <Facility>
        <FATP_CDE>FARM</FATP_CDE>
        <ANTP_CDE>SHP</ANTP_CDE>
        <ZIP>8000</ZIP>
    </Facility>
</FacilityOverviewExportRequest>
```

Example EXFAO – 2 – Retrieve all facilities that were updated this month

```
<?xml version="1.0" encoding="utf-8"?>
<FacilityOverviewExportRequest
    xmlns="http://Sanitel.EAI/SanitelRepository/SanitelServices/FacilityOverviewExportRequestSchema"

WaterManureAllocationExport.jpg

<http://Sanitel.EAI/SanitelRepository/SanitelServices/ExportWaterManureAllocationOverviewExportSchema>

It is out of the scope of this document to discuss how to calculate Water/Manure information based on this information. Please consult the dedicated Water and Manure calculations user manual.

Interface IMAN - ImportAnimalNotification

Direction: Import

Purpose: Submit births or import records

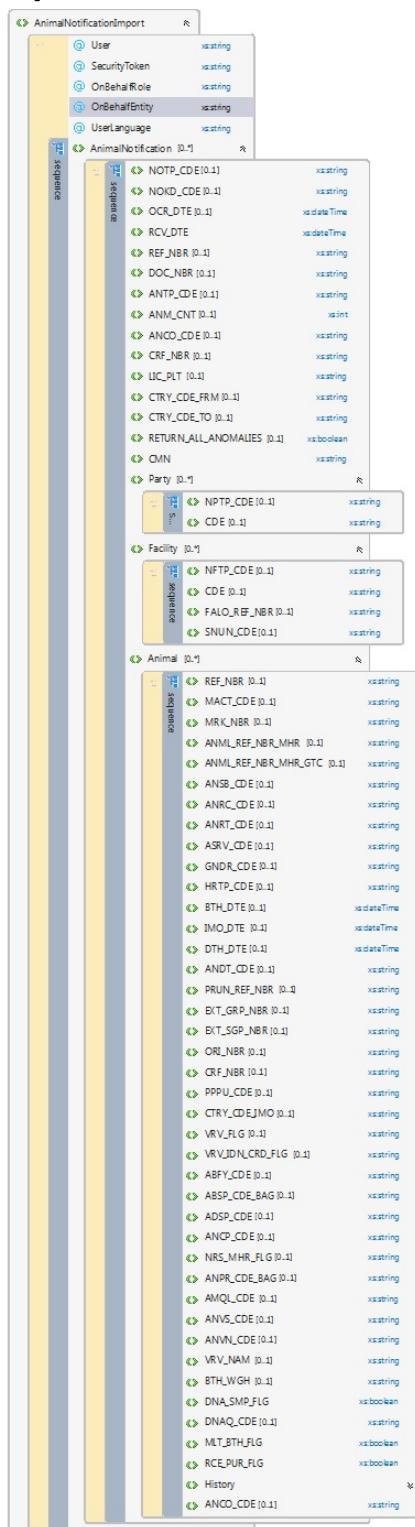

Layout-Documentation:

https://qas.sanitel.be/int/QAS_Sanitel_ExtInterfacingSvcs_v2/SanitelServices.asmx?op=ImportAnimalNotification

- Layout-Details: Input field “RETURN_ALL_ANOMALIES”: Depending on the input RETURN_ALL_ANOMALIES, the anomalies are returned in the response.
- Functionality:
When the input for RETURN_ALL_ANOMALIES is “Y”, all the anomalies are returned in the response (irrespective of BR1, BR3 and BR5) and the notification is not registered.

When RETURN_ALL_ANOMALIES is “N”, only the BR1 are returned in response and other BR errors are ignored. The response of the XML will be a success if there are no severity (BR1) errors.

Input Schema: AnimalNotificationImport

<http://Sanitel.EAI/SanitelRepository/SanitelServices/AnimalNotificationImportSchema>

XML Example(s)

Birth Notification with Return all anomalies flag

CHANM	ChangeAnimal
CHSNU	ChangeSanitaryUnit
CHFCY	ChangeFacility
CHPTY	ChangeParty

Possible Values for ATRB_CDE as defined today ... It is still not clear whether all discussed attributes will also be in the final release as sometimes there might be organizational or juridical reasons for not doing it (see items in italic). E.g. an animal cannot have its earmark changed yet ANRT – attributes suggest this possibility

The goal is to make this mechanism of attribute changes more or less configurable and hence extensible. An initial list of possible attribute codes is given in the table underneath. Obviously depending on the context these attributes can trigger changes on animals, sanitary units, parties or facilities.

Some attributes reappear in multiple categories – this has more to do with the display on the screens. Currently a change notification should only update attributes in one category.

Interface IMCMQ - ImportChangeAnimalMeatQuality

The ImportChangeAnimalMeatQuality interface will be used by the labelling organization to add/delete the animal meat quality for Bovine animal.

To add an animal meat quality, the user needs to provide the FUNC_CDE as “ADD” and include the meat quality in AMQL_CDE to be added to the various animals.

If the FUNC_CDE code is “ADD/DEL” and no value is given in AMQL_CDE code, error will be populated animal meat quality is mandatory field.

To delete an animal meat quality, the user needs to provide FUNC_CDE as “DEL” and include the meat quality to be deleted from the various animals.

If the FUNC_CDE code is “blank”, error will be populated.

For all success response, a change notification will be created in notification and notification change item tables.

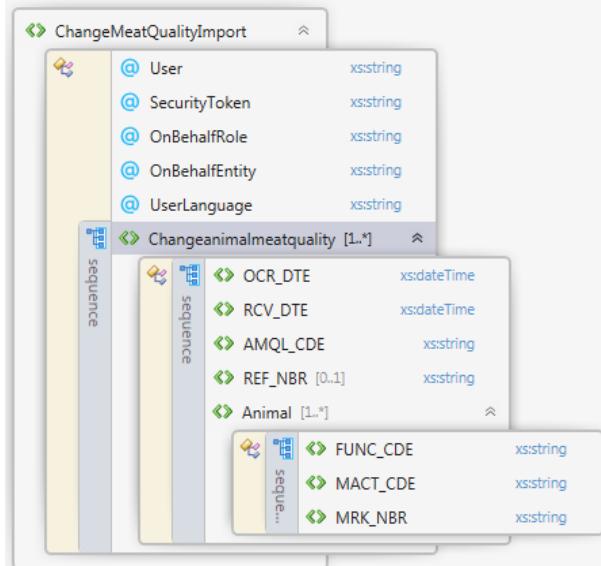

Direction: Import

Purpose: Labelling Organisation to submit changes in Meat Quality on an Animal

Layout-Documentation:

https://qas.sanitel.be/int/QAS_Sanitel_ExtInterfacingSvcs_v2/SanitelServices.asmx?op=ImportChangeAnimalMeatQuality

Input Schema: ChangeMeatQualityImport

<http://Sanitel.EAI/SanitelRepository/SanitelServices/ChangeMeatQualityImportSchema>

XML Example(s)

Adding Animal Meat Quality to an animal

```
<?xml version="1.0"?>

Interface IMCPQ - ImportChangeProductionQuality

The ImportChangeProductionQuality interface will be used by the labelling organization to add/delete the Production quality for a Sanitary Unit.

To add a Production quality, the user needs to provide the FUNC_CDE as “ADD” and include the meat quality in PRQU_CDE to be added to the various Sanitary Units.

If the FUNC_CDE code is “ADD/DEL” and no value is given in PRQU_CDE code, error will be displayed as Production quality is mandatory.

To delete a Production quality, the user needs to provide FUNC_CDE as “DEL” and include the Production quality to be deleted from the various Sanitary Units.

For all success response, a change notification will be created in notification and notification change item tables.

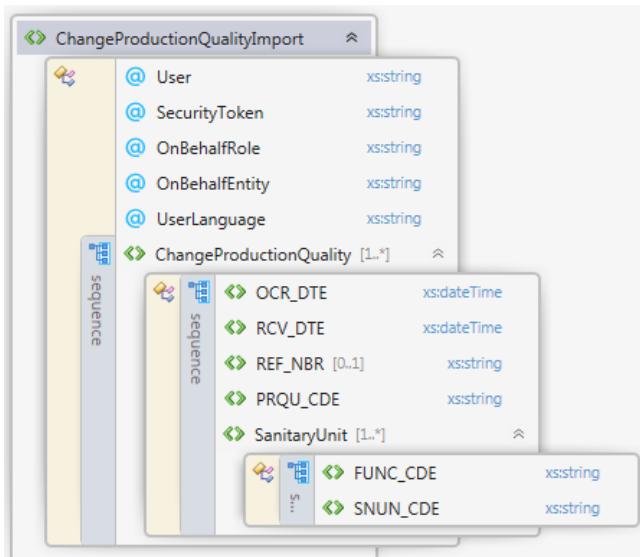

Direction: Import

Purpose: Labelling Organisation to submit changes in Production Quality on an Sanitary Unit

Layout-Documentation:

https://qas.sanitel.be/int/QAS_Sanitel_ExtInterfacingSvcs_v2/SanitelServices.asmx?op=ImportChangeProductionQuality

Input Schema: ChangeProductionQualityImport

<http://Sanitel.EAI/SanitelRepository/SanitelServices/ChangeProductionQualityImportSchema>

Interface IMMVN - ImportMovementNotification

Direction: Import

Purpose: Submit a movement (e.g. Mobile App)

Layout-Documentation:

https://qas.sanitel.be/int/QAS_Sanitel_ExtInterfacingSvcs_v2/SanitelServices.asmx?op=ImportMovementNotification

Layout Details:

- Input field ‘RETURN_ALL_ANOMALIES’: Depending on the input RETURN_ALL_ANOMALIES, the anomalies are returned in the response.
- Functionality: When the input for RETURN_ALL_ANOMALIES is “Y”, all the anomalies are returned in the response (irrespective of BR1, BR3 and BR5) and the notification is not registered.

When RETURN_ALL_ANOMALIES is “N”, only the BR1 are returned in response and other BR errors are ignored. The response of the XML will be a success if there are no severity (BR1) errors.

Note: The “RETURN_ALL_ANOMALIES” currently returns the anomalies for Departure notifications based on the input value.

Input Schema: MovementNotificationImport

<http://Sanitel.EAI/SanitelRepository/SanitelServices/MovementNotificationImportSchema>

XML Example(s)

Departure of an animal from a FARM with RETURN_ALL_ANOMALIES flag

```

Output Schema: Interaction Result

See definition Interaction Result Schema

Interface IMPUN - ImportProductionUnitNotification

Direction: Import

Purpose: allows the user to

- manage the ProductionUnits of a SanitaryUnit (used by ALV and SPW)
- Manage the links between the animals of a SanitaryUnit and its ProductionUnits

The XML import can be done

- **Explicitly, to create a ProductionUnit notification per animal**
 - <AnimalProductionUnit> part to be used
 - executed in case the field <NOKD_CDE> = 'ANML'
 - for each animal ANML_REF_NBR (in AnimalProductionUnit), a ProductionUnit notification is created with the given SU, occurrence date and the given ANML_PRUN_REF_NBR (in AnimalProductionUnit).
 - Note that the field ANML_PRUN_REF_NBR can be empty!
In that case the given animal is unlinked from its PU
- **Implicitly, to manage the ProductionUnit(s) of a SanitaryUnit**
 - <ProductionUnit> part to be used
 - executed in case the field <NOKD_CDE> = 'PRUN' or blank (used by ALV and SPW)
 - for each animal in the SanitaryUnit inventory, a ProductionUnit notification is created (see XML example) only if
 - no PU's passed → all animals are unlinked from the existing PU's
 - a single PU passed → all animals are linked to this (new) PU (if not yet the case)
 - more than 1 PU → no effect on the animals

Layout-Documentation:

https://qas.sanitel.be/int/QAS_Sanitel_ExtInterfacingSvcs_v2/SanitelServices.asmx?op=ImportProductionUnitNotification

Input Schema: ProductionUnitNotificationImport

ProductionUnitNotificationImport_update

<http://Sanitel.EAI/SanitelRepository/SanitelServices/ProductionUnitNotificationImportSchema>

XML Example(s)

Implicitly specified XML import (No Animals)

After processing this XML only the Production Unit information / definition is updated. This will have no impact on the animals if the Production Unit Code(s) already existed. Where before it was not possible to delete a productionunit definition (read: specify a SanitaryUnit without ProductionUnits or with another ProductionUnit), all animals having this deleted production **unit** will be decoupled from it...

e.g. in the example underneath the addresses of the production units will be updated for SanitaryUnit BE10179333-0501 and for SanitaryUnit BE10179333-0101 the Production Unit will be removed and all animals decoupled

```
<?xml version="1.0" encoding="utf-8"?>
<ProductionUnitNotificationImport
  xmlns="http://Sanitel.EAI/SanitelRepository/SanitelServices/ProductionUnitNotificationImportSchema"
  User="TESTXML" SecurityToken="N/A">

      <PRC_NAM>CHARLETS JOSEPH</PRC_NAM>
      <PRC_STR>GRAND CHEMIN DE MESSINES 200</PRC_STR>
      <PRC_ZIP>7780</PRC_ZIP>
      <PRC_CTY>COMINES</PRC_CTY>
    </ProductionUnit>
    <ProductionUnit>
      <PRUN_REF_NBR>10179333123</PRUN_REF_NBR>
      <PRUN_IDX>2</PRUN_IDX>
      <PRC_REF_NBR></PRC_REF_NBR>
      <PRC_NAM>CHARLETS JOSEPH</PRC_NAM>
      <PRC_STR>GRAND CHEMIN DE MESSINES 200</PRC_STR>
      <PRC_ZIP>7780</PRC_ZIP>
      <PRC_CTY>COMINES</PRC_CTY>
    </ProductionUnit>
  </ProductionUnitNotification>
  <ProductionUnitNotification>
    <OCR_DTE>2011-01-30T17:46:29</OCR_DTE>
    <REF_NBR>10179333</REF_NBR>
    <SNUN_CDE>BE10179333-0101</SNUN_CDE>
    <ProductionUnit/>
  </ProductionUnitNotification>
</ProductionUnitNotificationImport>
```

Concrete consider the following situation

- SNUN ABC -> PRUN XXX -> 5 animals attached to PRUN XXX

Scenario 1: XML is processed that has NO Production Units defined
Impact:

- No PRUN for the SanitaryUnit any more
- No animals attached any more

Use this scenario to terminate a certain production unit at a Sanitary Unit.

Scenario 2: XML is processed that defines Production Units XXX and YYY

Impact:

- PRUN YYY is being added to the PRUNS of SNUN ABC, No animals will be added to this PRUN
- PRUN XXX might have been updated but retains all its animals attached to it

Use this scenario to add a new PRUN to the SNUN ABC and No animals will be added to this PRUN

Scenario 3: XML is processed that defines a Production Unit YYY only

Impact:

- PRUN XXX deleted from SNUN ABC and all animals detached from PRUN XXX
- PRUN YYY added and all animals attached to new PRUN YYY

Explicitly specified XML import (Per Animal)

After processing this XML only the Production Unit Notification is created at animal level. This will have no impact on the animals of the Production Unit which is not available in the Xml. Animals can be coupled or decoupled from production unit using this XML...

e.g. in the example underneath Production Unit Notification will be created for Animals BE192141446 and for BE657721947 the Production Unit will be coupled or decoupled as below

```
<?xml version="1.0" encoding="utf-8"?>
<ProductionUnitNotificationImport
  xmlns="http://Sanitel.EAI/SanitelRepository/SanitelServices/ProductionUnitNotificationImportSchema"
  User="TESTXML" SecurityToken="N/A">
  <ProductionUnitNotification>
    <NOTP_CDE>ANML</NOTP_CDE>
    <OCR_DTE>2011-01-30T17:46:29</OCR_DTE>
    <REF_NBR>10179333</REF_NBR>
    <SNUN_CDE>BE90012647-0101</SNUN_CDE>
    <ANIMALPRODUCTIONUNIT>
      <ANML_REF_NBR>BE192141446</ANML_REF_NBR>
      <ANML_PRUN_REF_NBR>9202020588</ANML_PRUN_REF_NBR>
    </ANIMALPRODUCTIONUNIT>
    <ANIMALPRODUCTIONUNIT>
      <ANML_REF_NBR>BE657721947</ANML_REF_NBR>
    </ANIMALPRODUCTIONUNIT>
  </ProductionUnitNotification>
</ProductionUnitNotificationImport>
```

Scenario 1: XML is processed that defines Animal XXX with Production Unit YYY

Impact:

- Animal XXX is attached to Production unit YYY after creating a production unit notification on animal

Use this scenario to add animal to a PRUN

Scenario 2: XML is processed that defines a No Production Unit for animal XXX

Impact:

- Animal XXX will be decoupled from attached PRUN by creating a PRUN notification

Output Schema: Interaction Result

Field Descriptions

M: Mandatory

O: Optional

C (Condition): Conditional (depend on value of other field)

RiskNotification				
Field	Type	Description		Allowed Values
NOTP_CDE	string	Notification Type	M All animal Types	
OCR_DTE	dateTime	Notification Date	M All animal Types	Any valid Date
RCV_DTE	dateTime	Date	O Current date will be taken when left blank.	Any valid Date
REF_NBR	string	Reference Number	M for FED users All animal Types	Any Alphanumeric text(15 char)
DOC_NBR	string	Document Number	O All animal Types	Any Alphanumeric text(50char)
ANTP_CDE	string	Animal Type	M All animal Types	
FCLT_CDE	string	Facility Code		
SNUN_REF_NBR	string	Sanitary unit code		
ANML_REF_NBR	string	Animal marking		
RIOG_CDE	string			
NRCR_CDE	string			
DES	string	Description	O	Any Alphanumeric text(50char)
VIST_ID	string	Visit id	O	Existing visit id
LBO_REF_NBR	string		O	Not used
LMS_REF_NBR	string		O	Not used
SMP_REF_NBR_BAG	string		O	Not used
CMN	string	Comment	O All animal Types	Any Alphanumeric text(800 char)
Party				
Field	Type	Description		Allowed Values
NPTP_CDE	string	Notification party type	M if Party tag is defined in xml All Animal Types	
CDE	string	Party Code	M if Party tag is defined in xml All Animal Types	Existing Party Code
RiskItem				
Field	Type	Description		Allowed Values
RITP_CDE	string	Risk Item Type		
RIIT_CDE	string	Risk item type		
RIIM_CDE	string	Risk item		
RIST_CDE	string	Current risk condition		
RSST_CDE	string	Current risk status		
RSST_CDE_APT	string	New risk status		
RIST_CDE_APT	string	New risk condition		
DTE_FRM	dateTime	Risk item date from	O	
DTE_TO	dateTime	Risk item date to	O

Field Descriptions

M: Mandatory

O: Optional

C (Condition): Conditional (depend on value of other field)

FoodChainNotification				
Field	Type	Description		Allowed Values
NOTP_CDE	string	Notification Type	M All animal Types	See Valid codes
NOKD_CDE	string	Notification Kind	O All animal Types	
OCR_DTE	dateTime	Notification Date	M All animal Types	Any valid Date
RCV_DTE	dateTime	Receive Date	M All animal Types	Any valid Date
REF_NBR	string	Reference Number	M for FED users All animal Types	Any Alphanumeric text(15 char)
DOC_NBR	string	Document Number	O All animal Types	Any Alphanumeric text(50char)
ANTP_CDE	string	Animal Type	M All animal Types	See valid Codes
ANSB_CDE	string	Animal Subtype	M All animal Types	See valid Codes
ANM_CNT	integer	Animal Count	M All animal Types except BOV as it is calculated automatically	Any numeric value
ORIG_CDE	string	Origin Code	M All animal Types	See Valid codes
ADPR_CDE	string	Animal Departure Reason	C(VRV_IDN_CRD_FLG=true) All animal Types	See Valid codes
VRV_IDN_CRD_FLG	Boolean	VRV Identification card	O All animal Types	True or False
CMN	string	Comment	O All animal Types	Any Alphanumeric text(250 char)
DTH_FLG	Boolean	Death	O All animal Types except Poultry	True or False
DIS_FLG	Boolean	Disease	O All animal Types except Poultry	True or False
DTH_CMT	string	Death Origin	C (DTH_FLG =true) All animal Types except Poultry	Any Alphanumeric text(250 char)
DIS_CMT	string	Disease Origin	C (DIS_FLG =true) All animal Types except Poultry	Any Alphanumeric text(250 char)
ISP_FLG	Boolean	Inspection	O All animal types except PIG as it is set by default to true for Pigs	True or False
SLRN_CDE	string	Slaughter Reason	O Sheep/Goat/Deer only	See Valid codes
CAG_NBR	string	Cage Number	O Poultry Only	Any Alphanumeric text(30 char)
LOT_NBR	string	Unique Lot Number	O Poultry Only	Any Alphanumeric text(30 char)
CRF_FLG	boolean	Valid belplume certificate	O Poultry Only	True or False
DTH RTE	integer	Total % of Death	O Poultry Only	Any number between 0 and 100
SEU_DTE	dateTime	Set Up Date	O All Animal Types	Any valid Date
ANM_CNT_SLG	number	Animal set-up Count	O Poultry Only	Any numeric value
NRV_FLG	Boolean	Nervous Symptoms	O Bovine Only	True or False
NRV_CMT	string	Nervous Symptoms Origin	C (NRV_FLG=true) Bovine Only	Any Alphanumeric text(250 char)
RSK_SNU_FLG	string	Risk Sanitary Unit	O	

CMPC_CTRY_CDE_BAG	string	Pig 3rd Country Compliancy	Pig Only O Pig Only	See Valid codes
INFL_TMT_FLG	Boolean	Anti-inflammation medicine	M for PIG Medicine Type Administration for Pig Only	True or False
ANTIB_TMT_FLG	Boolean	Antibiotics	M for PIG Medicine Type Administration for Pig Only	True or False
ANTI_TMT_FLG	Boolean	Anti-parasites medicine	M for PIG Medicine Type Administration for Pig Only	True or False
Party				
Field	Type	Description		Allowed Values
NPTP_CDE	string	Notification party type	M if Party tag is defined in xml All Animal Types	See Valid codes
CDE	string	Party Code	M if Party tag is defined in xml All Animal Types	Existing Party Code
Facility				
Field	Type	Description		Allowed Values
NFTP_CDE	string	Notification Facility Type	M if facility tag is defined in xml All Animal Types	See Valid codes
CDE	string	Facility Code	M if facility tag is defined in xml All Animal Types	Existing Facility Code
SNUN_CDE	string	Origin Sanitary Unit Code	M for source facility only for animals that require a sanitary unit. All Animal Types	Existing Sanitary Unit Code
Animal (Should only be used if animal type is Bovine)				
Field	Type	Description		Allowed Values
REF_NBR	string	Animal Reference Number	M for Bovines	Origin Code is Local: Existing Animal Code <u>Origin Code is not Local</u> Any valid animal number.
Inspection (Inspection Data will only be added if ISP_FLG is true or animal type is PIG)				
Field	Type	Description		Allowed Values
NAM	string	Inspection Name	M if inspection tag is defined in the xml All Animal Types	Any Alphanumeric text(200 char)
RSLT	string	Inspection Result or Inspection Report Reference Number in case of Poultry	O All Animal Types	Poultry : Any Alphanumeric text(50 char) <u>Others:</u> Any Alphanumeric text(200 char)
DTE	dateTime	Inspection Date	O All Animal Types	Any valid Date
Treatment				
Field	Type	Description		Allowed Values
NFTT_CDE	string	Notification Treatment Type	M if treatment tag is defined in the xml All Animal Types	See Valid codes
MEDC_ID	string	Medicine Code (field name was not ideally chosen)	M if treatment tag is defined in the xml All Animal Types	Existing Medicine <u>Code</u> (!) MEDC_CDE
TMT_DTE_FRM	dateTime	Treatment Date From	C (NFTT_CDE = ADD OR MED) All Animal Types	Any valid Date
TMT_DTE_TO	dateTime	Treatment Date To	C (NFTT_CDE = ADD OR MED) All Animal Types	Any valid Date
WAI_PER	integer	Waiting Period	C (NFTT_CDE = ADD OR MED) All Animal Types	Any numeric value
ANM_AGE	integer	Animal Age	C (NFTT_CDE = VACC OR MED)	Any numeric value

			Poultry Only	
RAW_MAT_SUR_NAM	string	Raw Material supplier Name	C (NFTT_CDE = ADD) Poultry Only	Any Alphanumeric text(50 char)
ANM_DIS	string	Animal Diseases/Symptoms	C (NFTT_CDE = MED) Poultry Only	Any Alphanumeric text(250 char)
FOD_SUR_NAM	string	Food Supplier Name	C (NFTT_CDE = ADD) Poultry Only	Any Alphanumeric text(50 char)

Interface IMORD- ImportOrder

Direction: Import

Purpose: Submit orders for all existing order items.

Layout-Documentation:

https://qas.sanitel.be/int/QAS_Sanitel_ExtInterfacingSvcs_v2/SanitelServices.asmx?op=ImportOrder

Layout Details:

- Input field “RETURN_ALL_ANOMALIES:
Depending on the input RETURN_ALL_ANOMALIES, the anomalies are returned in the response.
- Functionality:
When the input for RETURN_ALL_ANOMALIES is “Y”, all the anomalies are returned in the response (irrespective of BR1, BR3 and BR5) and the notification is not registered.

When RETURN_ALL_ANOMALIES is “N”, only the BR1 are returned in response and other BR errors are ignored. The response of the XML will be a success if there are no severity (BR1) errors.

Input Schema: OrderImport

<http://Sanitel.EAI/SanitelRepository/SanitelServices/OrderImportSchema>

Interface ImportSlaughterFile

Direction: Import

Purpose :

Schema to import slaughter file data into Beltrace (formerly called Guichet_in).

In principle it is a matter of filling in the basic SlaughterFile info, the relevant parties (Submitter, Transporter, Owner) and the slaughter lots.

There also is an information element 'Documents' where a foreign document reference number (local reference or certificate) can be added.

Layout-Details:

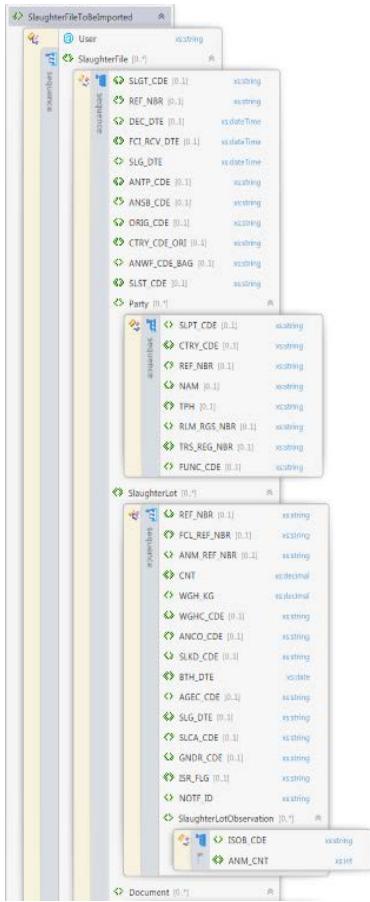

- Input field Functionality code "FUNC_CDE":
Depending on the FUNC_CDE the transporter/submitter/owner details are added or updated for the Slaughter File.
The field is added to give Luxemburg the update-possibility.

Functionality:

If FUNC_CDE field contains "UPD", the passed party will replace the existing party on the SlaughterFileParty DB of the given party type SLPT_CDE (being SUB, TRS or OWN).

If the field FUNC_CDE is omitted, or contains ADD or is blank, the passed party will be added on the SlaughterFileParty DB with the given party type SLPT_CDE.

Input Schema: SlaughterfileToBelImported

<http://sanitel.eai/SanitelRepository/SlaughteringServices/ImportSlaughterFile/SlaughterFileToBeImported>

Example XML

```

Response:

```
<?xml version="1.0"?>
<InteractionResult xmlns:xsd="http://www.w3.org/2001/XMLSchema"
                     xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
    <StatusCode>Success</StatusCode>
    <Summary>Import successfull: Slaughter Importing 9685-1500001 information is imported.</Summary>
    <Reference>9685-1500001</Reference>
    <Details>
        <MessageEntry>
            <Code>2</Code>
            <Description>Updated</Description>
            <Pattern/>
            <ArgumentsCSV/>
            <Reference>9685-1500001</Reference>
        </MessageEntry>
    </Details>
</InteractionResult>
```

Empty SlaughterFile Numbers

If one does not specify a SlaughterFile Reference Number, the system will automatically generate this number and pass it back in the Interaction Result (field reference).

Obviously also for the lots, the numbers will be incremented as <Number>/1, <Number>/2, ...

To prevent an XML file without reference numbers to be registered

Foreign Animals

If the animals are imported from abroad, you need an international certificate or a local reference numbers. To register this via the XML interface you can add a document section

```
<Document>
    <DOCT_CDE>CERT</DOCT_CDE>
    <REF_NBR>123455</REF_NBR>
</Document>
```

When this section is present it is OK to leave the facility blank. I.e.

```
<FCL_REF_NBR></FCL_REF_NBR>
```

Obviously do not forget that the origin code has to be specified accordingly. E.g

```
<ORIG_CDE>EEC</ORIG_CDE>
```

Workflow Integration: SUBM or SAV

A SlaughterFile-XML can be uploaded as many times as you want if you use the Status Action “SAV”. i.e.

```
<SLST_CDE>SAV</ SLST_CDE >
```

It will every time update the corresponding slaughterfile (only applicable for XMLs where you specify the Reference Number). An action “SUBM” can also be used. This action can only be done once and is actually an indication you will not update the file information anymore (obviously you still can report back the weights)

Output Schema: Interaction Result

See definition Interaction Result Schema

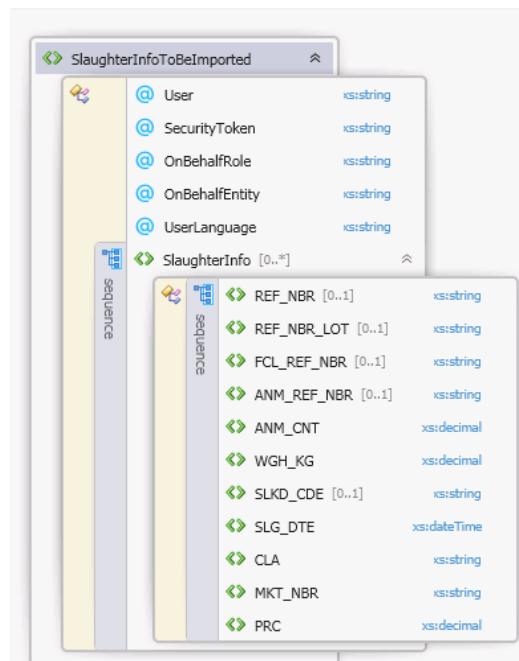

Interface ImportSlaughterInfo

Direction: Import

Purpose

Schema to import slaughter info into Beltrace (e.g. Weight, Date,...). This schema was formerly called Abattage_in). In this schema you just provide feedback on the weights. It is not necessary to group per slaughter file.

Input Schema: SlaughterInfoToBeImported

<http://sanitel.eai/SanitelRepository/SlaughteringServices/ImportSlaughterInfo/SlaughterInfoToBeImported>

Example XML

```
<?xml version="1.0" encoding="utf-8"?>
<SlaughterInfoToBeImported User="TESTXML"
xmlns="http://sanitel.eai/SanitelRepository/SlaughteringServices/ImportSlaughterInfo/SlaughterInfoToBeImported">

</SlaughterInfo>
</SlaughterInfoToBeImported>

```

Output Schema: Interaction Result

See definition Interaction Result Schema

Interface ImportSlaughterDetailInfoForAnimalGroup

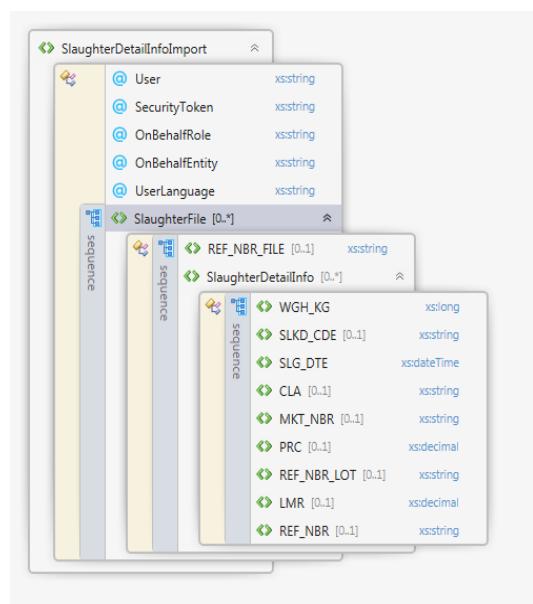

Direction: Import

Purpose

Schema to import slaughter detail info into Beltrace (e.g. Weight, Date,...). In this schema you just provide feedback on the weights.

The SlaughterInfoDetail web service will UPDATE or CREATE a SlaughterInfoDetail record, based on the passed <REF_NBR_FILE> + <REF_NBR_LOT> + <REF_NBR> (depending whether or not the SlaughterInfoDetail already exists in the DB)

Input Schema: SlaughterDetailInfoImportSchema

<http://Sanitel.EAI/SanitelRepository/SanitelServices/SlaughterDetailInfoImportSchema>

Example XML

```
<?xml version="1.0" encoding="utf-8"?>
<SlaughterDetailInfoImport
    xmlns="http://Sanitel.EAI/SanitelRepository/SanitelServices/SlaughterDetailInfoImportSchema"

  <Reference>3335</Reference>
  <Details/>
</InteractionResult>
```

Interface ExportSlaughterFile

Direction: Export

Purpose : request an export of slaughter data from Beltrace.

A validation is included to limit the search using “Date From” and “Date to” to a maximum of 7 days

When difference between DTE_TO & DTE_FRM is greater than 7 days the error message “Period of search limited to 7 days” will be populated.

Layout-Documentation:

https://qas.sanitel.be/int/QAS_Sanitel_ExtInterfacingSvcs_v2/SanitelServices.asmx/ExportSlaughterFile

Layout details :

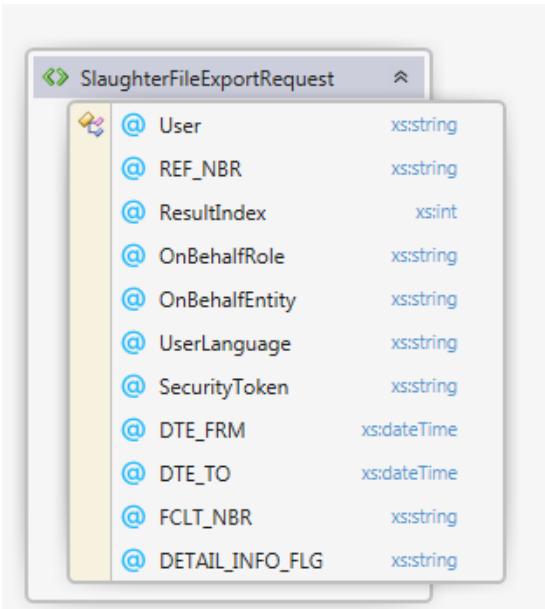

- DETAIL_INFO_FLG:
The flag DETAIL_INFO_FLG offers the requestor the choice whether or not the answer to the request will contain slaughter detail info within the Slaughter lot section <SlaughterLot>.

Functionality:

When DETAIL_INFO_FLG="Y", the Slaughter Detail Info details are populated from “SlaughterInfoDetail” table.

When the flag DETAIL_INFO_FLG="N" or DETAIL_INFO_FLG flag is omitted in the XML, the Slaughter info details are not populated in the response.

Input Schema: SlaughterFileExportRequest

<http://sanitel.eai/SanitelRepository/SlaughteringServices/ExportSlaughter/SlaughterFileExport>

- The input request should have either the “REF_NBR” or (DTE_FRM + DTE_TO + FCLT_NBR)

Example XML 1 (Search by File Reference)

```
<?xml version="1.0" encoding="utf-8"?>
<SlaughterFileExportRequest User="TESTXML" REF_NBR="3215-070132" DETAIL_INFO_FLG="Y"
 xmlns="http://sanitel.eai/SanitelRepository/SlaughteringServices/ExportSlaughterFile/SlaughterFileExport"
 />
```

Example XML 2 (Search by Declaration Date and Slaughter House)

Note: From and To date should not exceed 7 days.

```
<?xml version="1.0" encoding="utf-8"?>
<SlaughterFileExportRequest DETAIL_INFO_FLG="Y" DTE_TO="2015-01-29" DTE_FRM="2015-01-22"
 FCLT_NBR="LU95003417" SecurityToken="N/A" User="jz03zn"
 xmlns="http://Sanitel.EAI/SanitelRepository/SanitelServices/SlaughterFileExportRequest">
</SlaughterFileExportRequest>
```

Example XML 3 (Exclude DETAIL_INFO_FLG="Y")

```
<?xml version="1.0" encoding="utf-8"?>
<SlaughterFileExportRequest User="TESTXML" FCLT_NBR="LU97700026" DTE_FRM="2007-10-18" DTE_TO="2007-10-25"
 xmlns="http://sanitel.eai/SanitelRepository/SlaughteringServices/ExportSlaughterFile/SlaughterFileExport"
 />
```

Output Schema: SlaughterFileExport

Schema returning the contents of a certain SlaughterFile. The content is enriched with party data

<http://sanitel.eai/SanitelRepository/SlaughteringServices/ExportSlaughter/SlaughterFileExport>

Example XML

```
<?xml version="1.0" encoding="utf-8"?>
<SlaughterFileExport xmlns="http://Sanitel.EAI/SanitelRepository/SanitelServices/SlaughterFileExport"
ReturnCode="0" ReturnMessage="XML OK" User="jz03zn" xmlns:xsd="http://www.w3.org/2001/XMLSchema"

```

Output Schema: SlaughterLotObservations

The output schema for Export SlaughterLotObservations is as below:

<http://Sanitel.EAI/SanitelRepository/SanitelServices/SlaughterLotObservations>

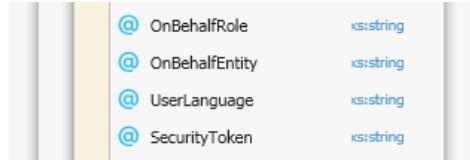

Working On Behalf Of

To support 3rd party services, we added ‘work on behalf of’ functionality. The principle is quite simple. Besides passing user /security token you know pass two additional information elements:

OnBehalfRole	The application role of the entity you are working on behalf of e.g. FARM, ...
--------------	---

OnBehalfEntity	The entity you are working on behalf of. This typically will be a Facility or a Sanitary Unit. However, the functionality might be extended to parties to

We have currently only updated the schema's for movements and birth/imports. And we will not 're-display' all XSD schema's – but the picture underneath shows how the 'OnBehalf' information is added in the root – element of an XML

If you are working 'on behalf of' always add the tokens. They might be non-functional now but will become functional soon...

Localized Error Messages

As seen in the above structure there is also an attribute called UserLanguage. This attribute has to be set with every message call.

The allowed languages are EN (English), NL (Dutch), FR (French), DE (German)

The interaction result or exception messages are then localized in the specified language

Interfaces – Technical Usage

Web Application

The online application can be accessed via

- https://qas.sanitel.be/web/QAS_Sanitel_Web/Pages/Common/Default.aspx

In principle you should log in with your user name and then navigate to the Upload XML page. Select an XML, submit it and save or open the result XML...

It is a good practice to study the application online behavior before you start using the back-end services. In fact a lot of the functionality is very similar

Please consider the user manuals discussing the online application, general working, registering accounts, updating your profile, registering issues, etc. To retrieve the manuals click on the InfoCentre link in the top right corner of the application header.

Channel 1. upload / download via secured web service

The web services can be access via

https://qas.sanitel.be/int/QAS_Sanitel_ExtInterfacingSvcs_v2/SanitelServices.asmx

This site is secured you need to enter credentials so please contact your partner to obtain a test user and logon

This provides the list of both import and export Web Methods as shown underneath.

Sanitel_SanitelServices

Sanitel Services

The following operations are supported. For a formal definition, please review the [Service Description](#).

- [ExportAgreementOverview](#)
- [ExportAnimal](#)
- [ExportAnimalBasicData](#)
- [ExportAnimalMovementNotificationOverview](#)
- [ExportAnimalOverview](#)
- [ExportChangeNotificationOverview](#)
- [ExportFacilityOverview](#)
- [ExportLiablePartyOverview](#)
- [ExportMarkingSeriesOverview](#)

Modern development environments such as .Net or Java can reference the asmx file and generate WebService stubs in your development environment. After that you can code

using direct access of the XML structures

Publishing web services as an asmx has some additional advantages. First it is very convenient to get insight in to the XML input and output structure and get a basis to start from. Just click on a method (e.g. Export Animal Overview)

```

HTTP/1.1 200 OK
Content-Type: text/xml; charset=utf-8
Content-Length: length

<?xml version="1.0" encoding="utf-8"?>
<soap:Envelope xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xmlns:xsd="http://www.w3.org/2001/XMLSchema">

Input structure + all attributes

Output structure + all attributes

Another powerful feature of Web Services is that one can retrieve the online Web Service Definition in general and all XSD schema's in particular.

i.e. https://qas.sanitel.be/int/QAS_Sanitel_ExtInterfacingSvcs_v2/SanitelServices.asmx?wsdl

The schema names are automatically generated so might get changed when updating the proxy. See the table underneath for the active configuration. A Schema can be retrieved directly via https://qas.sanitel.be/int/QAS_Sanitel_ExtInterfacingSvcs_v2/SanitelServices.asmx?schema=schemaXXX with XXX the schema number as defined in the table underneath

Schema76	AnimalExport
Schema68	AnimalMovementNotificationOverviewExport
Schema6	AnimalNotificationImport
Schema72	AnimalOverviewExport
Schema9	ChangeNotificationImport
Schema82	ChangeNotificationOverviewExport
Schema67	ExportAnimalMovementNotificationOverviewRequest
Schema71	ExportAnimalOverviewRequest
Schema75	ExportAnimalRequest
Schema81	ExportChangeNotificationOverviewRequest
Schema85	ExportFacilityOverviewRequest
Schema89	ExportMovementNotificationOverviewRequest
Schema93	ExportMovementNotificationRequest
Schema97	ExportPartyOverviewRequest
Schema101	ExportProductionUnitOverviewRequest
Schema109	ExportSanitaryUnitOverviewRequest
Schema113	ExportSanitaryUnitRequest
Schema86	FacilityOverviewExport
Schema18	InventoryNotificationImport
Schema94	MovementNotificationExport
Schema21	MovementNotificationImport
Schema90	MovementNotificationOverviewExport
Schema98	PartyOverviewExport
Schema24	PopulationNotificationImport
Schema27	ProductionUnitNotificationImport
Schema102	ProductionUnitOverviewExport
Schema30	RiskNotificationImport

The zip file underneath gives a .Net example on how to make calls to the Web Service

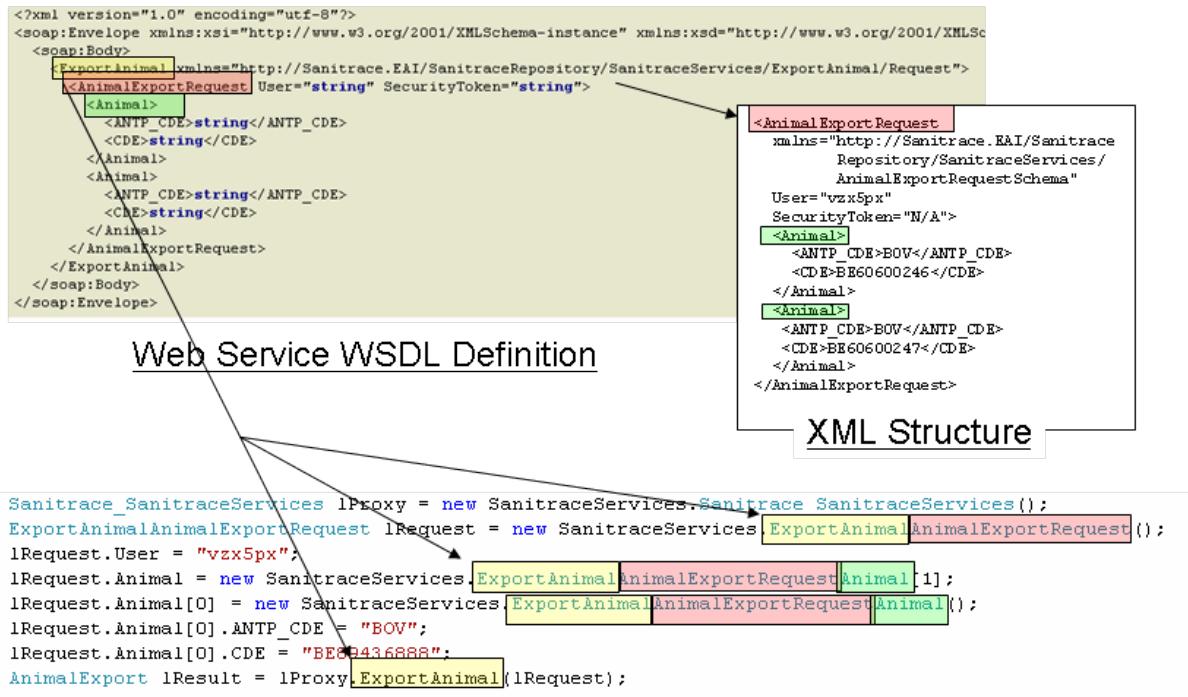

Package

Since Microsoft Patch 928365 – the behavior of the XSD tool is definitively prohibiting the use of anonymous types -- System.Xml.Serialization.XmlTypeAttribute(AnonymousType=true)

The effect is the following stub generation strategy:

WSDL -> SOAP Envelope

As such you actually get “long names” in your code which can be a bit confusing. However, as you get the ‘method name’ –‘structure name’- ‘structure table’ insight it is rather straightforward again...

Channels 2 to 4

The examples given in this document actually where slightly ‘altered’ for better readability. i.e. the xmlns-directive should be without spaces / linebreaks. The XML as such should look like...

EXPA – 2 – Retrieve all Slaughterhouses – correct XML

```
<?xml version="1.0" encoding="utf-8"?>
<PartyOverviewExportRequest
  xmlns="http://Sanitel.EAI/SanitelRepository/SanitelServices/PartyOverviewExportRequestSchema"
  User="TESTXML" SecurityToken="N/A" ResultIndex="0">
  <Party>
    <PATP_CDE>SLGHS</PATP_CDE>
  </Party>
```

The zip file underneath contains some example XML files these can be used by all subsequent scenario's as these work with pure XML files rather than Web Services. Obviously the XML's are formed according to the schema's defined above.

TODO – as soon as the code = operational – add a zip file of the above XML examples but with actual examples

Channel 2 - upload / download via secured streaming page

SlaughterFile and SlaughterInfo XML files to be imported can be streamed to the following secured page

https://qas.sanitel.be/int/QAS_Sanitel_ExtInterfacingSvcs_v2/GenericXMLHandler.ashx

This site is secured you need to enter credentials so please contact your partner to obtain a test user and logon

Channel 3 - upload / download via unsecured streaming page

XML import files can be streamed to the following page

https://qas.sanitel.be/web/QAS_Sanitel_Web/Interfacing/GenericXMLHandler.ashx

The code in scenario 2 can be used. Just replace the URL as mentioned above and delete user name and password

Channel 4 - upload / download via web page

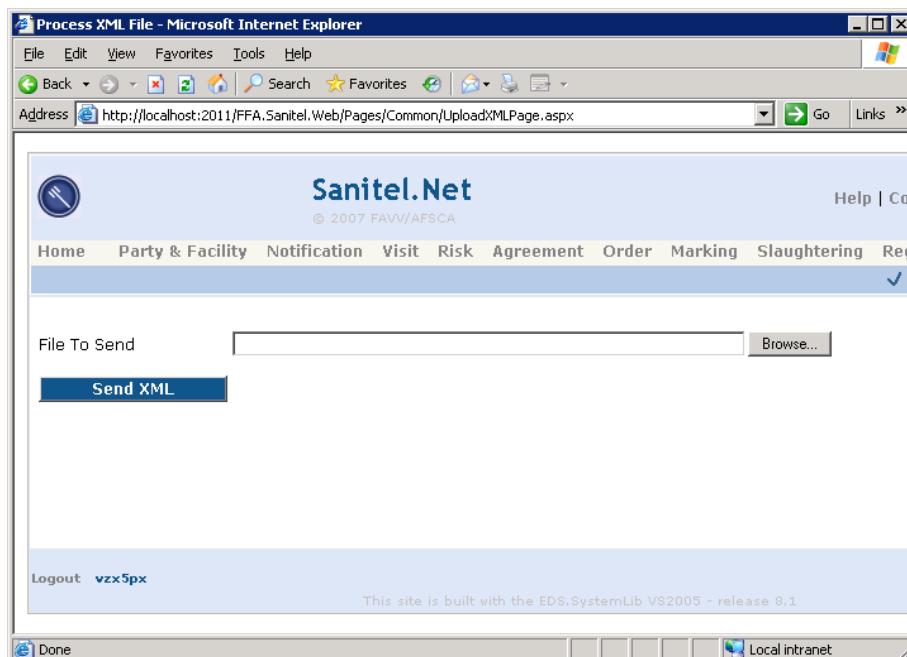

After selecting the menu option

Upload XML

Or by entering the URL

https://qas.sanitel.be/web/QAS_Sanitel_Web/Pages/Common/UploadXMLPage.aspx

You get to the manual upload page which is rather straight forward.

On this page you can test whether your xml is correctly filled in. In case your streaming does not work or give satisfactory results please test it first using the manual scenario.

Be sure you get on this page and NOT on the XML upload page for the slaughter module...

URL Summary

For testing in the ongoing development environment

- https://qas.sanitel.be/int/QAS_Sanitel_ExtInterfacingSvcs_v2/GenericXMLHandler.ashx
- https://qas.sanitel.be/int/QAS_Sanitel_ExtInterfacingSvcs_v2/SanitelServices.asmx
- https://qas.sanitel.be/web/QAS_Sanitel_Web/Pages/Common/UploadXMLPage.aspx

The Luxembourg URLs

In addition all interface URLs and definitions will be standardized on the “**Sanilux**” – naming and the .be suffix needs to be changed to lu

i.e.

https://qas.sanitel.be/int/QAS_Sanitel_ExtInterfacingSvcs_v2/GenericXMLHandler.ashx

will become

https://qas.sanitel.lu/int/QAS_Sanilux_ExtInterfacingSvcs_v2/GenericXMLHandler.ashx

Schema definition like

<http://Sanitel.EAI/SanitelRepository/SanitelServices/RiskNotificationImportSchema>

are unchanged

Production URLs

All URLs specified contain the word QAS at least once in the URL. For production all of the above will remain the same, except that the characters qas or QAS are to be replaced by prd or PRD

i.e.

*

http://prd.sanitel.be/int/PRD_Sanitel_ExtInterfacingSvcs_v2/GenericXMLHandler.ashx

or for Luxembourg

http://prd.sanitel.lu/int/PRD_Sanitel_ExtInterfacingSvcs_v2/GenericXMLHandler.ashx

Web Service Security

The Web Services are until now only secured using the XML web services user-account and password. And this account is shared by all XML users. Furthermore, we do not intend to introduce https for the web services, both for performance reasons and stability reasons. Especially in web services high-frequent https connectivity can cause problems. Additionally we do not expect people to strongly authenticate them using X509 certificates as this is probably overkill for this application...

All XML users have to specify their User-account in the message. This account is used for treating the XML this sharing of the same connection is on itself not a problem.

This user account is linked to the Party and Facility for whom the XML requests are being done (e.g. an arrival, a change notification,...) and security and business rules are validated against this user account (Read: The XML is processed against the rights of this user). In addition, this user account is also used in the audit trail.

Now, the attentive reader has detected two possible security issues. What if a hacker sniffs the message and resubmits it possibly with other information? What if you specify a user name you should not use? Let's ignore the first one and focus on the second one...

Indeed, theoretically people having access to XML messaging and knowing accounts of other users could submit an XML as if they were that user...

That's where the security token comes into play...

In practice you still can leave the security token blank as this is a trusted user community. In addition you need to know the other user name and last but not least we do quiet some tracing on IP-address level to detect abuse or to do some analysis in case abuse is detected. This XML tracking also includes the content of the XML request so we actually can verify if XML users do not 'abuse' there XML capabilities by querying information they should not access...

So no additional Web Service Security is for the time being still an option. Nevertheless we do invite you to implement one of the method-security elements discussed underneath. And as soon as you are on level 3 or 4 you also make the life of the hacker a lot more difficult...

We now discuss how in the online application the XML security can be configured. This is done in tab 6 in the user profile. In this tab we manage some advanced security settings managing connectivity with the application both in the online as well as for the XML. The settings defined in this tab will define how you need to send your XML messages.

p.1 p.2 p.3 p.4 p.5 p.6

Must Use SSL Logon
 Uses XML
 XML Security Active

XML Security Token Type **TokenKeyHashed**

XML Token / Encryptor  Ge5Y0+n8cSTYNZUGKI  

XML Security Key **324**

Update Profile

Must Use SSL Logon Checkbox

This flag indicates whether this User should logon via the Secure Server. If the user logs on via the normal login he is blocked for 2 minutes. We deliberately do NOT lock the user out because;

- The password has been sent clear text over the line – so the ‘harm’ has been done anyway
- the https channel might be closed down as protection against from a standard https/virus attack

Uses XML Checkbox

The Uses XML checkbox is a flag that indicates that a certain LOGIN-account can also use XML to load / export information.

XML Security Token Type

This setting defines which Security strategy is followed in the XML messages. i.e. it defines what is being passed in the security token. The options are:

1. Security Token
2. Hashed Security Token
3. Date-based Security Token
4. Hashed Date-based Security Token
5. Key-based Security Token
6. Hashed Key-based Security Token
7. AES Encrypted Date-Time Value

The table underneath gives an overview of what the XML Security Token Settings are and additionally demonstrate how the security token can be filled in. Finally, column 5 gives an example of the real security token as filled in in the XML .

Option	Description	Security Token example	Key example	XML Security Token
1. Security Token	The security token plays the role of a kind of password	SomeSecret	-	SomeSecret
2. Hashed Security Token	The above security token is hashed with the SHA1 algorithm	SomeSecret	-	o3En/+Fm638yxFW4AHI Skb7Taz4=
3. Date-Based Security Token	The security token is combined with the key	Some{0}Secret SomeSecret		Some20080929Secret
4. Hashed Date-Based Security Token	The security token is combined with the key	Some{0}Secret SomeSecret		hNvdH6haYJ4WAdMYJx9vF/ewpaQ=
5. Key-based Security Token	The security token is combined with the key	Some{0}Secret SomeSecret	210*	Some210Secret SomeSecret210
6. Hashed Key-based Security Token	The combined key / security token is hashed with the SHA1 algorithm	Some{0}Secret SomeSecret	210*	/bvVn9ub3lj1yOKKedP2I024ftc= v+KoBSaBWH AqMCDVzXGnJi3ejDQ=
7. AES Encrypted Date-Time Value	A <USER> XML date time now> value encrypted using AES	SomeSecretAESSaltValue	-	TESTXML 2008-11-12T12:00:00 = encrypted Sn1Qn6B6bUakN2kjztRMjQU7jf wXor0Jg WTpX2lrljibwR/iO15rkSX4Gzf y0Nufjyb9q M1lSVvSU34fRRoPhg==

(1) Security Token is the simplest form and could be easily rolled out.

(2) Hides this secret from the user

(3) And (4) are still quite simple and make the connection already quite secure. This should be the targeted average security level...

(5),(6) and (7) are advanced security means making the connection more or less as secure as if you would have installed a special certificate on the PC of this user.

The AES example is based on an EAS encryptor initialized based on the following settings

```
passPhrase="PassPhraseToGenerateAnAESPassword"  
saltValue="SomeSecretSaltValue"  
hashAlgorithm="SHA1"  
initialVector="gucpLaGR"  
keySize="Size128"
```

The Salt Value = the one you add in the security token!

(*) Remark that with every XML – message the key is incremented.

Is it an option to leave the Security Token Type blank?

Actually it is. At that moment there is no extra web service security.

Frequently Asked Questions

1. Q: Can we still use the old Sanitel/Beltrace numbers?
A: Yes you can, however there is still a small change. The new Beltrace/Sanitel makes the difference between Liable Party and Facility more explicitly. E.g. Transporters, Submittors and Owners refer to Parties. Farms where the animals come from refer to facilities. However sometimes a farmer is also the submitter or transporter. So you should know his party number and his facility number. To minimize the effort needed, the application accepts the facility number as a party number too. However in the export of data the correct numbers will be used.
2. Q: What about foreign transporters, or private persons? Are they in the system?
A: The best way is to first have a look in the system (search by name, realm register number,...), and if they are not there, create a new party using “Simple Party Maintenance” – the party than generated will have an S000XXXX number and this number can be permanently used for referring to this party.
3. Q: A few of these persons already have a 9-digit zero prefixed FAVV BOOD / KBO number. Can I use that number?
A: Unfortunately it is not possible to use this number (yet) as in the Sanitel application there still can be multiple parties linked to the same FAVV BOOD / KBO number. However, you can search on this 9-digit zero prefixed number too for finding the party, and in case it is not there you can fetch its BOOD / KBO information when creating the party (i.e. create simple party maintenance > tab to field external reference number -> enter the 9-digit zero prefixed FAVV BOOD / KBO number -> Hit the check button -> Name + address info is fetched...)
4. Q: And foreign cattle farms – should we create those too as temporary parties?
A: No, in the XML –structure there is the document tag where you can specify the certificates of these foreign cattle farms. Both local or international (TRASYS) certificates can be used.
5. Q: What is the difference between a Party and a Facility?

- A: The Party is the Juridical entity and is in the process of being rationalized and aligned with the Central KBO registration, the Facility is the more down-to-earth number of a certain 'facility' on a certain 'location'. One party can be responsible for multiple facilities but a facility only has one liable party...
6. Q: Can we register now multiple transporters via the XML*
A: Yes you can, just an extra Party Tag with SLPT_CDE-code = 'TRS'
 7. Q: Can we now register dead animals via the XML*
A: Yes you can See example 2

8. Q: Can we put local animals and foreign animals in one SlaughterFile*
A: No, you can not. The origin code (ORIG_CDE) has to be filled in on SlaughterFile level and indicates if the animals come from abroad or local. So you need to split the declaration
9. Q: I get PATY_CDE mandatory FCLT_CDE mandatory messages. What do they mean?
*
A: I agree the error messages are not always optimal – but it typically refers to not specified or incorrectly specified parties (Submittor, Owner, Transporter) or facilities. Please check whether your specified codes are filled in and are in the correct format (BE12345678)
10. Q: What's the difference between SAV (Saving) and SUBM (Submitting) a declaration?
*
A: As soon as you SUBMit a declaration, it is the signal that the inspections can take place and it cannot be altered anymore. When SAVING a declaration you can do an update later (e.g. if you want to change weight categories or so...) However a manual or XML – SUBM-it is needed to progress the workflow.
11. Q: I just use trial and error and sometimes the messages are somewhat hard to understand. Is there a possible overview of all that can go wrong? What other messages are there?
A: I agree the error messages are not always optimal, and unfortunately I do not have an exhaustive list of all possible errors you can make when doing trial and error XML filling, but it is a point where we try to improve continuously. The most visible error checking is on the possible code-value schema's and mandatory fields, but excessive field lengths or duplicate keys can result in less user friendly messages... On the other hand this is not an online application, but a data-interchange protocol with 'trusted party' applications – so we do can assume some basic validation at the input side ;-)
12. Q: Is there a manual of the online application? Where can I get them?
A: There are three manuals: The EAI Manual (this one – in English only), a getting started manual with general application navigation tips (In Dutch and French) and a functional manual for the Slaughtering functionality (Also in Dutch and French). In total these manuals add up to over 10 MB so they cannot be easily send around. The manuals are distributed during the training and FAVV-AFSCA has made them available via the web site too. You can find all manuals by clicking the info-centre link on the top-right side of the application screens
13. Q: What integration scenario is preferred?
A: As described above both scenario's 1and 2 (Web Service and Secured Streaming) are the preferred ones. The Web Service has one additional advantage and that is that a local 'object structure' can be created rather than working with the XML itself. The Streaming has the advantage that you can use scenario 4 to test your stuff first...

14. Q: What username do we use in the XML? How do I get a logon? What if I am a systems integrator and not e.g. a Slaughterhouse?

A: You can use any logon of this Slaughterhouse as long as they exist in the application? Contact the general helpdesk for a user id. If you're a system integrator ask a Logon ID in the QAS-environment and have it configured for one of the slaughterhouses you work for. Please inform the slaughterhouse about this...

15. Q: Can I put everything in uppercase?

A: No, you cannot XML is case-sensitive so your structure tag-names e.g. for <SanitaryUnit> need to be exactly <SanitaryUnit> and not <Sanitaryunit>, <sanitaryunit> or <SANITARYUNIT>. The same applies to a namespace definition like xmlns="http://Sanitel.EAI/SanitelRepository/SanitelServices/PartyOverviewExportRequestSchema"

16. Q: My test XML gives an error and I copied it from your example

A: for readability we sometimes entered extra spaces in the XML – especially in the namespace definition, copying the example blindly will not work. E.g. the example shows:

```
xmlns="http://Sanitel.EAI/SanitelRepository/SanitelServices/PartyOverview  
ExportRequestSchema"
```

But it actually is one string

```
xmlns="http://Sanitel.EAI/SanitelRepository/SanitelServices/PartyOverviewExportRequestSchema"
```

17. Q: My XML still gives an error

A: As long as you get Error in XML your XML is not formatted correctly – reasons can include

- Incorrectly closed tags
- Special characters like % in strings
- Non-date representations
- ...

Most of the time the parser also gives a location e.g. line 12 char 44 – go to the corresponding line / column and check the error. It should be close in the neighbourhood there ;-)

18. Q: How can I specify an empty tag.

A: We support the standard W3C empty tags techniques.

For “strings” this includes:

No tag	<Animal> <ANTP_CDE>BOV</ANTP_CDE> <SNUN_CDE>BE10014385-0101</SNUN_CDE>
Closed tag	<Animal> <FCLT_CDE/> <ANTP_CDE>BOV</ANTP_CDE> <SNUN_CDE>BE10014385-0101</SNUN_CDE>
Open/Close tag -> STRINGS ONLY !!!	<Animal> <FCLT_CDE></FCLT_CDE> <ANTP_CDE>BOV</ANTP_CDE> <SNUN_CDE>BE10014385-0101</SNUN_CDE>

For “datetimes” this includes:

No tag	<pre><Animal> <ANTP_CDE>BOV</ANTP_CDE> <SNUN_CDE>BE10014385-0101</SNUN_CDE> </Animal></pre>
Null values	<pre><Animal> <ANTP_CDE>BOV</ANTP_CDE> <SNUN_CDE>BE10014385-0101</SNUN_CDE> <UPD_DTE_FRM>0001-01-01T00:00:00</UPD_DTE_FRM> <UPD_DTE_TO>0001-01-01T00:00:00</UPD_DTE_TO> </Animal> </AnimalOverviewExportRequest></pre>

For other XML types there is only the No Tag option

19. Q: How can I see the field lengths

A: Technically speaking, field length specifications are not standard part of XML. There have been proposed some standards but the general conclusion of any such debate is always that XML should not be specifying lengths.

For informational purpose these are our standards

Strings are by default 50 characters UNLESS:

- They represent “User Codes” -> Length 5
- They represent “Descriptions” -> Length 255
- They represent “Comments” -> Length 800
- They are explicitly constrained to another length for technical reasons. An example of this is street in the current interfaces which are constrained to 40 for printing reasons
- Examples:
 - o NAM VARCHAR2(50 CHAR)
 - o AL1 VARCHAR2(50 CHAR)
 - o AL2 VARCHAR2(50 CHAR)
 - o STR VARCHAR2(40 CHAR)
 - o ZIP VARCHAR2(50 CHAR)
 - o CTY VARCHAR2(50 CHAR)
 - o MCP VARCHAR2(50 CHAR)
 - o EMA VARCHAR2(50 CHAR)
 - o TPH VARCHAR2(50 CHAR)
 - o TPH_ALT VARCHAR2(50 CHAR)
 - o GSM VARCHAR2(50 CHAR)
 - o FAX VARCHAR2(50 CHAR)
 - o GNDR_CDE VARCHAR2(5 CHAR)

(*) = Slaughtering Module only

20. Q: How do we have to specify animal numbers when using them in the XML and how are these numbers formatted when exported?

A: This is a difficult problem so we have tried to come to the best and most informative information for anyone. There are different business rules for the validation of Bovine earmark numbers in different countries of the European Union. Some countries even have 2 checkdigits...

For example:

Belgium : Country Code + Check Digit + 12345678 BE 9 12345678

Germany : Country Code + 10 chars + check digit DE 1234567890 1

UK : 6 numbers + Check Digit + 5 Numbers UK 123456 7 89012

France: 10 Characters – no check digits

NL 42217978 4	BE10082933-0101	FR 5613882371	BE30041613-0101

Every country has its own rules, however in every country old animal numbers exist that do not conform with the last version of the rules. In addition the migrated data contains quite some incorrectly specified foreign numbers or incorrect / missing checkdigits.

For example:

In Belgium, the old numbering system has numbers like BE 123456, so only containing 6 numeric positions (instead of the 8 numbers currently used)

DK327701486	BE10173701-0101
DK329962453	BE10173701-0101
LU724645	BE30041613-0101
LU823435	BE30041613-0101
BE9018347	BE10111021-0101
BEA5173747	BE10111021-0101
BEA5187298	BE10111021-0101
BEN0042909	BE10111021-0101
IEBMQR0019W	BE30041613-0101
IECFCH0009X	BE30041613-0101
IEDCMV0020K	BE30041613-0101
IEFFZP0043R	BE30041613-0101
SK90266814	BE30041613-0101
SK93232165	BE30041613-0101

So as output we return the animal numbers in the most informative way. So INCLUDING information about country and check digit and all separated by a blank

CDE LT 03119426
CDE BE 8 65794680

Companies not interested in the check-digit can ignore the spaces

For input we allow the formats with spaces, without spaces and for bovines from the BENELUX we even accept them without checkdigit

21. Q: Are we forced to use Security Tokens?

A: So far we only implemented base level security in order not to make it too complex for the user community. This is possible because the external risk that the information is hacked / abused for malafide manipulation or financial gain is rather limited. The Internal risk is low too as this is a trusted community rather than an end-user community. Although we do have quite some loggings to assure the risk stays low ;-) Finally, a lot of the important processes are complemented by physical elements (passports) and veterinary visits / inspections in the field normally will result in an early detection of potential violations.

So to answer the question. Currently there is no enforcement of a certain type of Security Token. However we really invite you to consider using one. If you think you are ready for it or want to discuss – please contact us...

22. Q: How should we read the Interaction Result in an import-XML message?

A: The StatusCode and Message return general information whether the import was successful or not. If it was not successful a list of messages appears. The message structure is as follows:

The description is trying to give a meaningfull description in the language specified by the web service caller

The pattern is the English message template – possibly useful for catching / typing the kind of error we discuss. E.g. “{0} is missing” indicating a parameter that is missing. The ArgumentsCSV is the variable set of arguments, sometimes prefixed with a rule-engine code (PAMI) and rule-engine priority (1-2 blocking, 3-4 warning, 5 information only)

```
- <InteractionResult xmlns="http://Sanitrace.EAI/SanitraceReposi
  <StatusCode>Error</StatusCode>
  <Summary>Import ImportAnimalNotificationUseCase erroneous
    information.</Summary>
  <Reference />
- <Details>
  - <MessageEntry>
    <Code>911</Code>
    <Description>Birth Facility is missing</Description>
    <Pattern>{0} is missing</Pattern>
    <ArgumentsCSV>PAMI,5,Birth Facility,,,,</ArgumentsCSV>
    <Reference />
  </MessageEntry>
  - <MessageEntry>
    <Code>911</Code>
    <Description>Origin Facility is missing</Description>
    <Pattern>{0} is missing</Pattern>
    <ArgumentsCSV>PAMI,5,Origin Facility,,,,</ArgumentsCSV>
    <Reference />
```
