

Wireless Snake CAM work w/i-Phone

USERS MANUAL

Welcome...

to your new Snake Pipe Inspection!

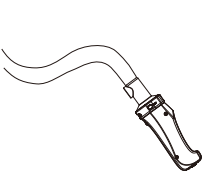

The iSPC-11 serves as a good handy flexible video inspection tools. It provides an extremely convenient help to investigate damages, issues, and situation within a deep hole, pipe, or between wall and closet. Furthermore, the iSPC-11 sends the Camera video to your i-Phone by Wi-Fi technology (LAN). You can watch the video from smart phone, tablet or i-pad easily. And it supports 480P video to inspect clearly with 4 LED light.

Snake CAM Operation

Step 1: Power on the device: switch to “on”.
(please make sure the battery power is full first.
check if the power light is in Green)

Step 2: Open the app after 10~20 seconds. (about
App installation, please refer to next page)

Step 3: You will see the snake CAM video by App.

WiFi Source Setting

Step 1:

Please go to Apple APP Store, and search
“Is CAM” then download it.

Step 2: Please go to “” on
iphone then find the Wi-Fi source
named “Is CAM”

Step 3:

Please link “Is CAM”. (as right
photo)

Step 4:

Please install or open the App.

* Please power on the snake CAM first or you may not
catch Wi-Fi signal on your i-phone.

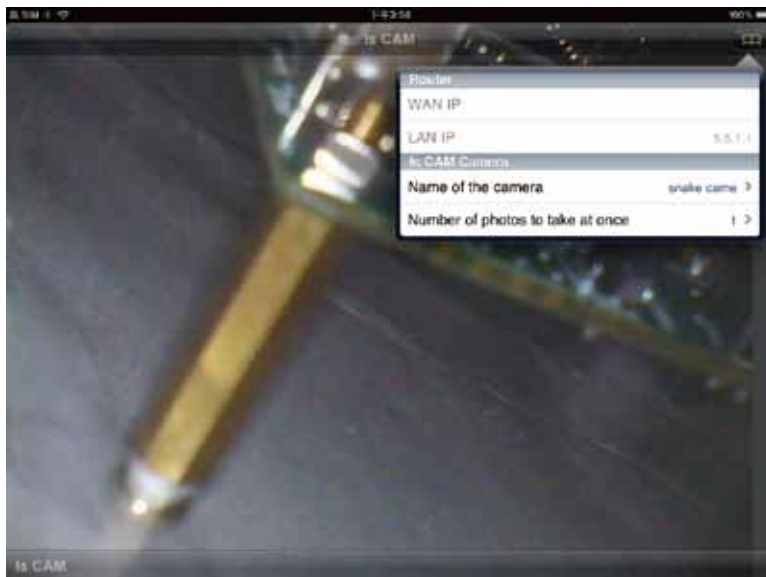

* You just set it once, and then the system will memorize
the Wi-Fi source automatically, so it will autolink when you
use this product next time.

■ Is CAM Introduction

1. Open the App then please wait for 10~20 seconds to link with.

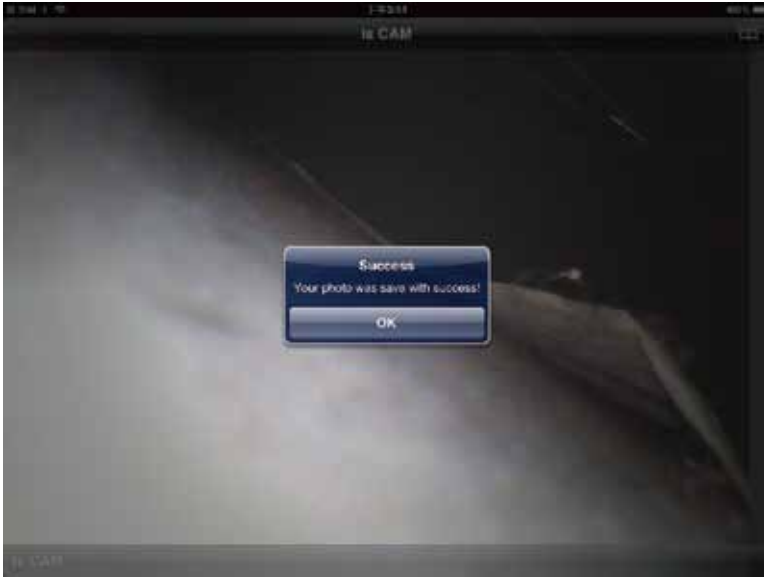

2. And you will see the snake cam video after linking, you also can set your camera name.

■ Is CAM Introduction

3. Taking picture: Touch the screen twice to take a picture.

* Press “📖” and set up then press “Done” to go back to snake cam video.

Trouble Shooting

Why Can't I get device signal on Apps?

- (1) First, please check if the snake cam is out of power.
- (2) Please check if Snake CAM is switched to "on".
- (3) Please go to "setting" (on your iphone) to check if it is linking up the "Is CAM", if not, please re-link the right Wi-Fi source.
- (4) If there is any interference source between your i-phone and snake CAM, try to shorten the distance to get a best performance.

I can't see anything through my Wireless Snake CAM.

- (1) If your image is too dark, please make sure the light is on.
- (2) If there are spots in your viewing field, clean the lens with lens cleaner.
- (3) Please make sure the target you want to see is in the range of focal length (around 6~20 cm in the sufficient light, 7~16 cm in the insufficient light), if it is not in the range, please closer or further your Snake CAM as possible.
- (4) Please check if it is linking up "Is CAM", if not, please re-link the right Wi-Fi source.
- (5) The effective transmission range is 70m (open sight), try to close the distance between iphone / ipad and Snake CAM to get better video signal.
- (6) If it still can't work, please refer to follows :
 - a) Check if your iphone / ipad 's iOS version, it should be at least iOS 5.1 .
 - b) Check if your iphone / ipad is "JB (Jailbreak)", It might be shut down if your iphone / ipad is "JB"

Why the Video image is dusky?

- (1) Please adjust the LED light to acceptable brightness by hand.

Trouble Shooting

How do I make sure the power capacity of battery?

- (1) Please make sure the power switch is “on”.
- (2) Please notice the power light;
Green: full power
Red: out of power (It means it needed to be recharged)
- (3) Power recharge;(recharging light)
Blue: recharging

Can the snake CAM throw into the water?

- (1) Yes, it is IP67 and can be under water for 1 meter within 30 minutes.Except the handlebar, only the lens and pipe are waterproof.

Does the Apps for free download?

- (1) Yes, it is free, but the app works with snake CAM only.
