CASA

Tap twice to see
home screen

Wi-Fi status

Tap the Wi-Fi icon to display the current status of connectivity :

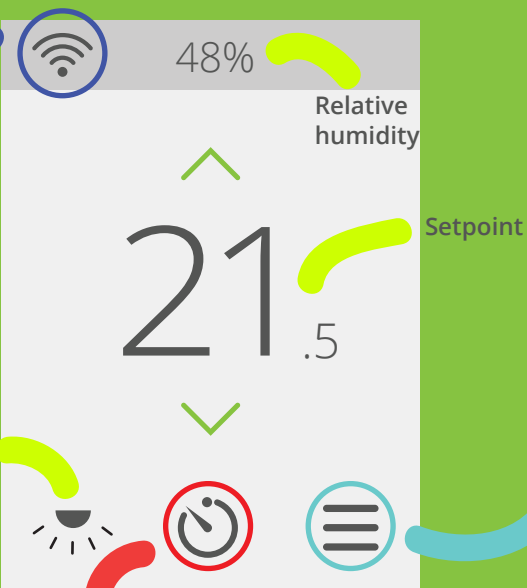

Your device is properly configured and connects to your router.

The connection is healthy and Caleo is able to communicate on the Internet.

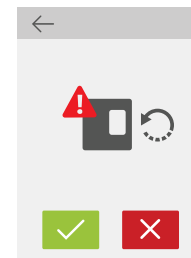

Something's wrong ! Visit support.casaconnect.com for possible causes and solutions.

"Settings" screen

Change Caleo from Celsius to Farenheit. You can also do this change online under the "My Settings" tab

Wrong password ? New router ? Moving out ? All of the above ?

Select "Factory defaults" in the "Settings" page. Caleo will forget all about the WiFi network and you can start fresh

CAUTION
This means Caleo will no longer connect to the Internet !

48%

Relative humidity : While Caleo cannot actively control the humidity level in your house, it will monitor and report it so you can achieve the optimal comfort level in every room of your home.

21.5

Setpoint : The setpoint is to a thermostat what the steering wheel is to a car. Simply press the up/down arrows to tell Caleo what your desired temperature.

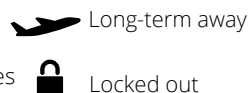

Nightlight : To keep the closet monsters away, or simply not to stub your toe again on that corner post, let Caleo give you a bit of light in the night. Press the icon to cycle through two levels of nightlight.

"Modes" screen

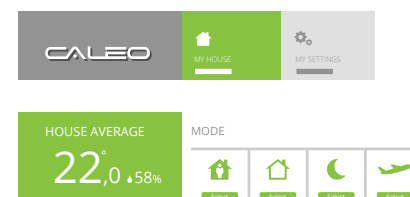

All of these modes allow the scheduled actions and programs to run automatically.

These mode disable the scheduler. Programs will **NOT** run with these modes activated.

Tap the center icon to display the Mode screen. Modes will be replicated on every Caleo in the house, except for "Lock Out" which only affects the unit on which it's selected.

You can change each mode's setpoint by going to the "My Settings" tab of your dashboard.

Once selected, a mode will remain active until a scheduled change occurs, except for "Long term away" and "Lock out".
