1 Utility Shutdown System Overview

Weather-resistant, easy-to-install, right-size capacity - the USS effectively monitors towers and remote sites.

The Utility Shutdown System (USS) uses a cellular data connection to report to your master station using DNP3/TCP. It reports the current state of all discrete alarm inputs, analog inputs (including the Nexus meter), and control relay outputs.

If your master station determines that a relay should be latched and sends a command, the NetGuardian 216 RTU within the USS will respond accordingly. Relay 1 is a warning, while Relay 2 interrupts power.

- **DNP3 Over Serial, Cellular, or LAN**
- **Battery Backup**
- **10 Discrete User Alarm Inputs**
- **2 User Control Relay Outputs**
- **Accessible Web Interface (via LAN)**

2 Specifications

User Discrete Alarm Inputs:	10
Temperature Sensors:	1 Integrated Analog Sensor
Temperature Thresholds:	4 (High and Low , Major/Minor)
Battery Monitoring:	2 Integrated Analog Sensors
Battery Thresholds:	4 (High and Low , Major/Minor)
User Control Relays:	1
Protocols	
Over LAN:	SNMPv1, SNMPv2c, TELNET, HTTP, Email, DNP3
Over Cellular:	DNP3, Telnet
Dimensions:	20.00" H x 20.00" W x 8.00" D (50.8 cm x 50.8 cm x 20.32 cm)
Weight:	60 lbs.
Mounting:	Wall mount
Power Input:	110V A/C & 24V Battery Backup
Current Draw:	0.25 Amp @ 110V A/C 2.11 Amp @ 110V A/C
Fuses:	10 Amp Fuse 32V 25 Amp FlatType Fuse Inserts +24V 3/4 Amp GMT Fuse (NetGuardian 216 G3)
Battery Shelf Life:	9 months*
Interfaces:	1 RJ45 10BaseT half-duplex Ethernet port 1 DB9 front-panel craft port 1 - 1/8" Stereo connector for external temperature probe 1 Push button switch Cellular CDMA Modem RS232/RS485 Serial port (Build option instead of Cellular)
Visual Interface:	6 Front Panel LEDs 2 Back Panel LED
Audible Notification:	Alarm speaker with volume control
Industrial Temperature:	-22°→+158° F (-30°→+70° C) when heater is running, which is contingent on main power
Operating Humidity:	0%–95% non-condensing
MTBF:	60 years
Windows Compatibility:	XP, Vista, 7 32/64 bit
RoHS:	5/6

*The battery needs to be charged within 9 months from manufactured date.

3 Shipping List

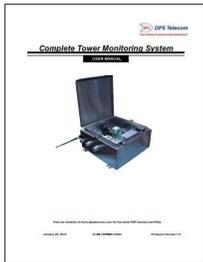

Please make sure all of the following items are included with your Utility Shutdown System. If parts are missing, or if you ever need to order new parts, please refer to the part numbers listed and call DPS Telecom at **1-800-622-3314**.

4 Installation

4.1 Tools Needed

To install the NetGuardian, you'll need the following tools:

Phillips No. 2 Screwdriver

Small Standard No. 2 Screwdriver

**PC with terminal emulator,
such as HyperTerminal**

4.2 Battery Installation

Upon receiving your unit, you will find the battery packaged separately. Use the following instruction to install the battery.

Warning:

Only qualified specialist personnel may install and start up the device. Always ensure protection against electric shock. Always keep flames, embers, and sparks away from the battery and observe thermal and mechanical limits.

To install the battery:

1. Open the Utility Shutdown System.

2. Take the battery and place it on top of the rail. Hook it in at a slight angle while applying light pressure. You should hear it click into place.

3. To remove the battery simply place a screwdriver into the tab. Gently pull the tab back while lifting the battery.

4. Locate the input inside of the casing (circled in the second image below). Attach the power wires from the battery to the input.

4.3 How to Connect the Interface Box

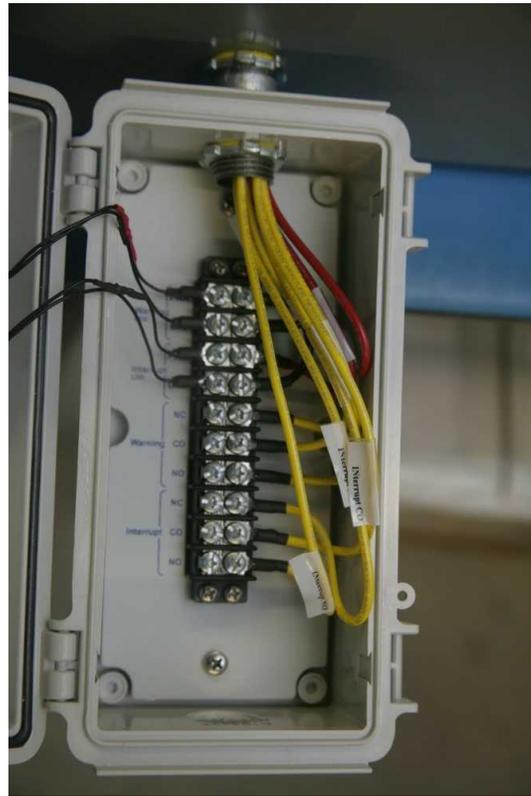

Warning:

Connect the pigtail to the interface box before connecting power.

1. The interface box must be attached with a short conduit. The bundle of wires ('pigtail') must be threaded through the conduit from the main box to the interface box.

2. Match the wire label to the silk screen, terminating each wire on the right terminal. The top 4 terminals are the 2 LEDs (warning and interrupt). The lower 6 are the 2 relays (warning and interrupt).

4.4 How to Connect Power

The Utility Shutdown System uses A/C to power the NetGuardian 216-63 device and to charge its backup battery. Use the following instructions to connect A/C power to your unit.

To connect the power:

1. Locate the A/C input inside of the casing. This will be located at the middle-left hand side.
2. Attach the three power wires. The left is for 'N' (Neutral), middle is 'GND' (Ground), and right is 'L' (Line).

Insert the three power wires into the A/C power input, located on the middle left-hand side of the unit

4.5 How to Connect Antenna

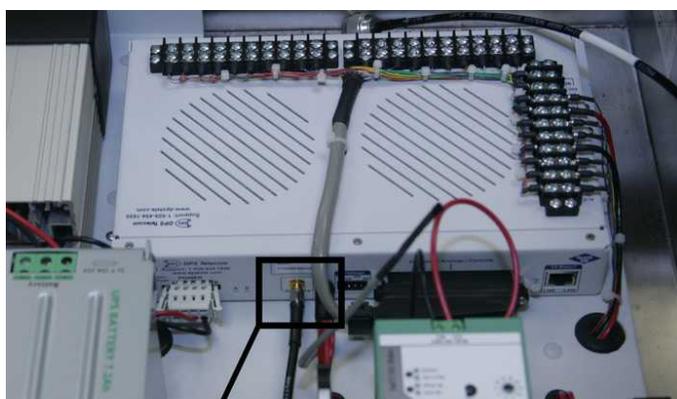

The Utility Shutdown System uses an antenna to send DNP3 over wireless with its CDMA modem. Use the following instructions to connect the antenna.

What you will need:

- 1 900MHz Antenna
- 1 3 ft. Antenna Cable

To connect the antenna:

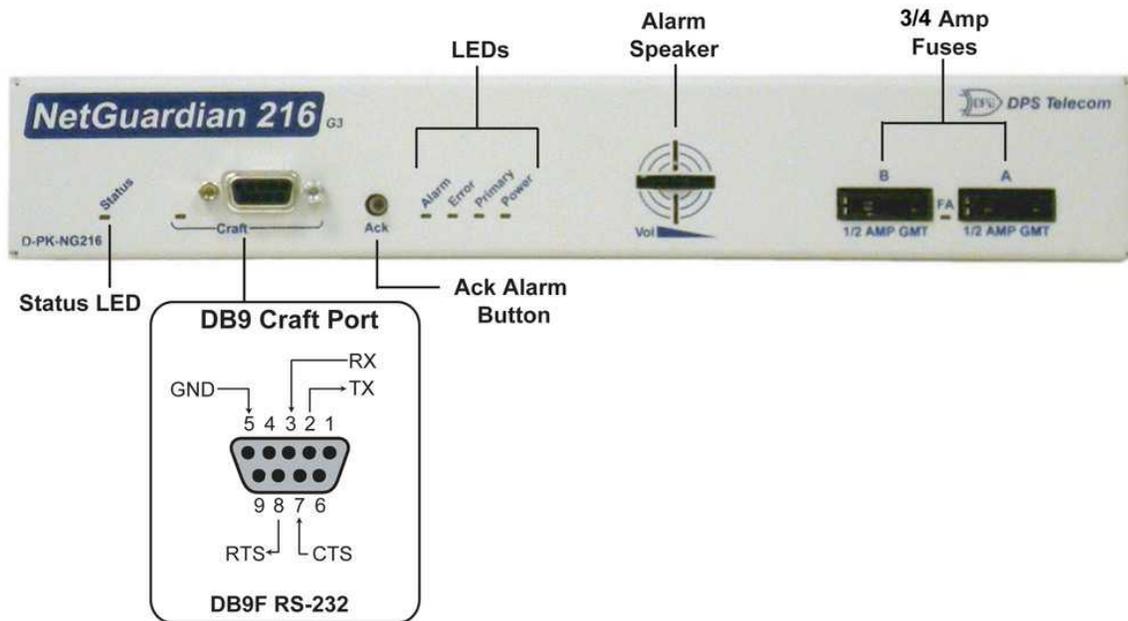

1. Open the weather-proof case of the USS and locate the antenna port on the NetGuardian 216 G3 back panel.
2. Attach the antenna cable to the node labeled "Antenna," and tighten the nut to fasten it to the NetGuardian.

Antenna Port

3. Now attach the antenna surge protector to the hole in the metal weather-proof case. The surge protector will fit inside of the smaller hole, located above the three larger conduit holes.
4. Once the surge protector is set up, attach the antenna cable to the protector, tightening the nut to fasten it in place. Now attach the antenna to the the surge protector on the outside of the case.

5 NetGuardian 216 G3 Front Panel

NetGuardian 216 G3 Front panel connections

5.1 Craft Port

Use the front panel craft port to connect the NetGuardian 216 G3 to a PC for onsite unit configuration. To use the craft port, connect the included DB9 download cable from your PC's COM port to the craft port. Pinout is shown above for reference, but this is a standard DB9 to DB9.

5.2 Alarm Speaker

The NetGuardian 216 G3 has a built-in speaker for local audible alarm notification. The NetGuardian 216 G3 ships with the speaker turned off. When enabled, the speaker will beep repeatedly when new alarms happen.

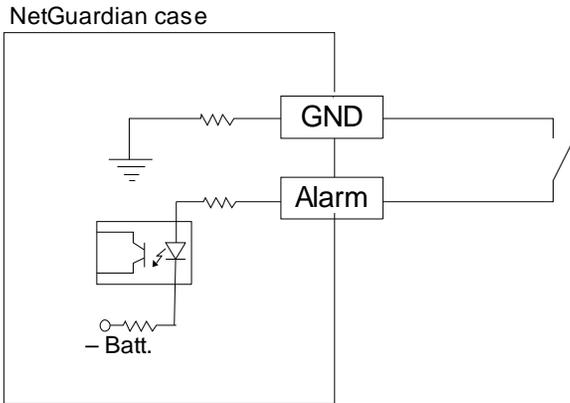

To enable the speaker:

1. Log-in to Web Interface
2. Go to Edit Menu and select Timers
3. Change **Sound on time** setting to something other than zero.
4. Click Save

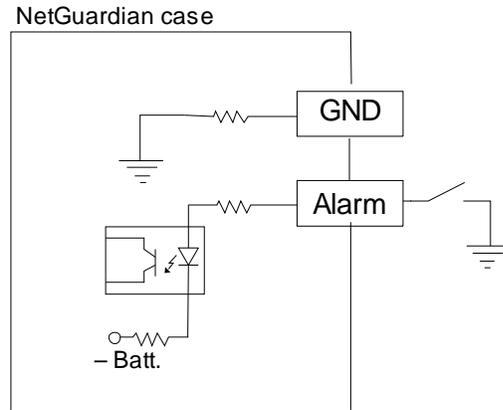

To adjust the speaker volume, use the volume control thumb wheel on the NetGuardian's front panel.

5.3 Discrete Alarms

Dry Contact

Contact to Ground

Note: Make sure that grounds have a common reference this is usually done by tying grounds together.

5 Discrete alarm points can connect as a dry contact or a contact to ground

The Complete Tower Monitoring System's NetGuardian 216 G3 features 10 user discrete alarm inputs - also called digital inputs or contact closures. Discrete alarms are either active or inactive, so they're typically used to monitor on/off conditions like power outages, equipment failures, door alarms and so on.

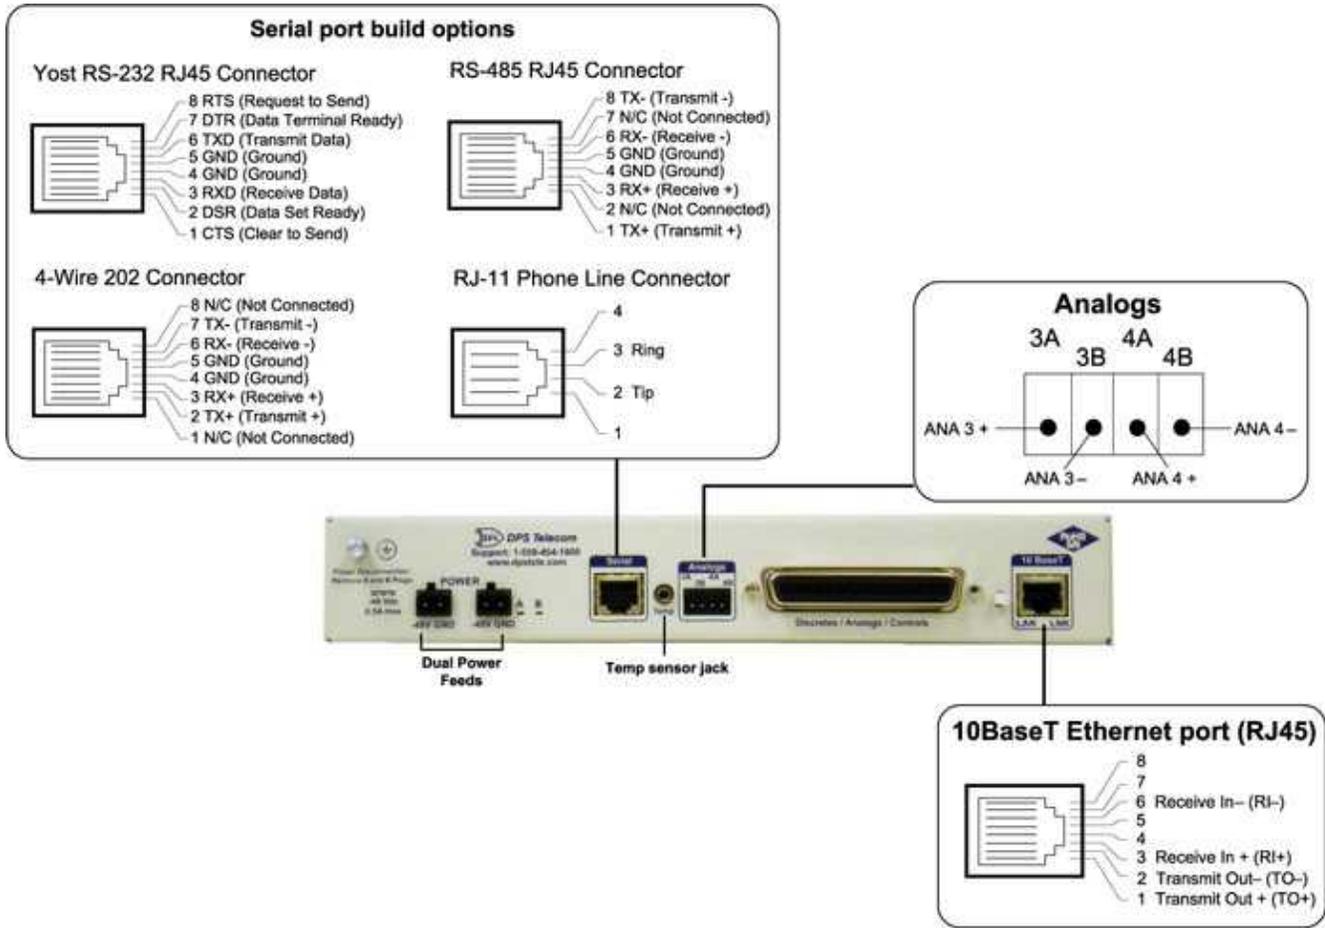

The NetGuardian's discrete alarm points are single-lead signals referenced to ground. The ground side of each alarm point is internally wired to ground, so alarm points can connect either as a dry contact or a contact to ground.

In a dry contact alarm: The alarm lead brings a contact to the ground lead, activating the alarm.

In a contact to ground alarm: A single wire brings a contact to an external ground, activating the alarm.

You can reverse the polarity of each individual discrete alarm point, so that the alarm is activated when the contact is open. This is done with a software configuration change.

6 NetGuardian 216 G3 Back Panel

NetGuardian 216 G3 back panel connections

6.1 LAN Connection

To connect the NetGuardian 216 G3 to the LAN, insert a standard RJ45 Ethernet cable into the 10BaseT Ethernet port on the back of the unit. If the LAN connection is OK, the LNK LED will light **SOLID GREEN**.

6.2 USS Wireless Modem

The Utility Shutdown System comes with a USS wireless modem. The unit polls devices by sending DNP3 over a cellular data network. Please refer to the Multitech website (multitech.com/support) for further instructions.

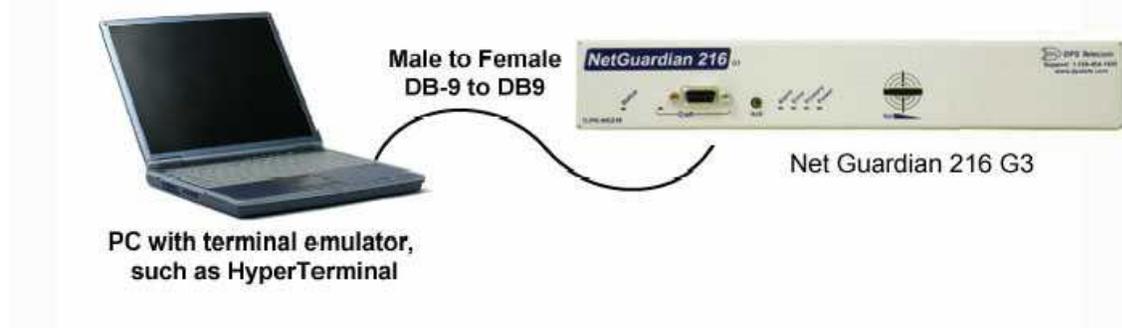

7 Quick Start: How to connect to the NetGuardian 216 G3

Most NetGuardian users find it easiest to give the unit an IP address, subnet and gateway through the front craft port (TTY interface) to start. Once these settings are saved and you reboot the unit, you can access it over LAN to do the rest of your databasing via the Web Browser interface.

Alternative option: You can skip the TTY interface by using a LAN crossover cable directly from your PC to the NetGuardian 216 G3 and access its Web Browser. See Section 7.2.

7.1 ...Connect via Craft Port (using TTY Interface)

1. The simplest way to connect to the NetGuardian 216 G3 is over a physical cable connection between your PC's COM port and the unit's craft port. **Note:** You must be connected via craft port or Telnet to use the TTY interface. Make sure you are using the straight through (1 to 1) Male to Female DB9-DB9 download cable provided with your NetGuardian 216 G3 to make a craft port connection. We'll be using HyperTerminal to connect to the unit in the following example - however, most terminal-emulating programs should work.

To access HyperTerminal using Windows:

2. Click on the **Start** menu > select **Programs > Accessories > Communications > HyperTerminal**.

Continued on next page...

3. At the Connection Description screen, enter a name for this connection. You may also select an icon. The name and icon do not affect your ability to connect to the unit.

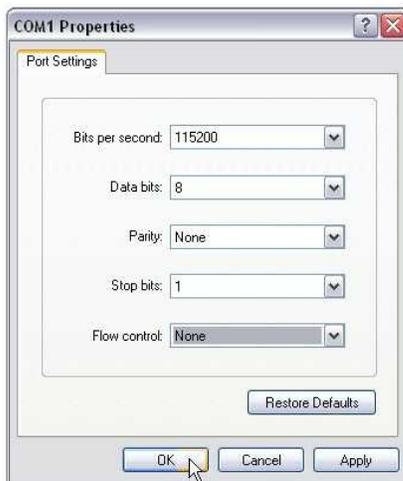

4. At the Connect To screen, select Com port you'll be using from the drop down and click OK. (COM1 is the most commonly used.)

5. Select the following COM port options:

- Bits per second: 9600
- Data bits: 8
- Parity: None
- Stop bits: 1
- Flow control: **None**

Once connected, you will see a blank, white HyperTerminal screen. Press Enter to activate the configuration menu.

6. When prompted, enter the default user name **admin** and password **dpstelecom**. **NOTE:** If you don't receive a prompt for your user name and password, check the Com port you are using on your PC and make sure you are using the cable provided.

Additional cables can be ordered from DPS
Telecom: *Part number* D-PR-045-10A-04

Continued on next page...

7. The NetGuardian 216 G3's main menu will appear. Type C for C)onfig, then E for E)thernet to display the unit's IP Address, Subnet Mask, Gateway and MAC Address. (**Note:** The MAC Address cannot be changed.)

```

NG216-G3 v1.0H.0045
(c)2009 DPS Telecom, Inc.

C)onfig P)ing D)ebug e(X)it ? C
E)thernet S)tats n(V)ram re(B)oot (ESC) ? E
Unit IP      : 192.168.1.100  (192.168.1.100)
Subnet Mask  : 255.255.192.0  (255.255.192.0)
Gateway     : 255.255.255.255 (255.255.255.255)
Unit MAC    : 00.10.81.00.45.8F

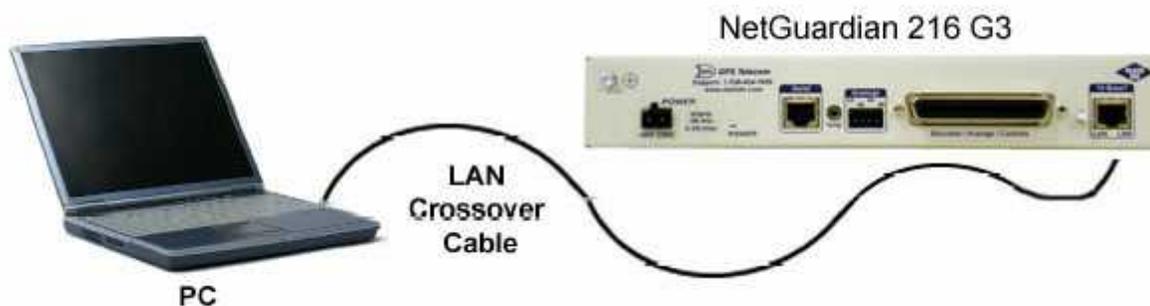

U)nit Addr S)ubnet G)ateway (ESC) ? U
Unit IP : 126.10.230.121

```

8. To change the IP address, Subnet Mask or Gateway, see Section 7.3, "Configure Ethernet Settings".

Be sure to change the IP of your computer back to one that operates on your network. **Now you're ready** to do the rest of your configuration via LAN. Plug your LAN cable into the NetGuardian 216 G3 and see Section 9, "Logging On to the NetGuardian 216 G3" to continue databasing using the Web Browser.

7.2 ...Connect via LAN

Connection through Ethernet port

To connect to the NetGuardian 216 G3 via LAN, all you need is the unit's IP address (Default IP address is **10.0.6.100**).

If you **DON'T** have LAN, but **DO** have physical access to the NetGuardian 216 G3, connect using a LAN crossover cable. **NOTE:** Newer PCs should be able to use a standard straight-through LAN cable and handle the crossover for you. To do this, you will temporarily change your PC's IP address and subnet mask to match the NetGuardian's factory default IP settings. Follow these steps:

1. Get a LAN crossover cable and plug it directly into the NetGuardian 216 G3's LAN port.
2. Look up your PC's current IP address and subnet mask, and write this information down.
3. Reset your PC's IP address to **10.0.6.100**. Contact your IT department if you are unsure how to do this.
4. Reset your PC's subnet mask to **255.255.192.0**. You may have to reboot your PC to apply your changes.
5. Once the IP address and subnet mask of your computer coincide with the unit, you can access the

NetGuardian 216 G3 via a Telnet session or via Web browser by using the unit's default IP address of **10.0.6.100**.

6. Provision the NetGuardian 216 G3 with the appropriate information, then **change your computer's IP address and subnet mask back to their original settings**.

Now you're ready to do the rest of your configuration via LAN. Plug your LAN cable into the NetGuardian 216 G3 and see Section 9, "Logging On to the NetGuardian 216 G3" to continue databasing using the Web Browser.

7.3 ...Configure Ethernet Settings

```

Linked      : No
DHCP       : Disabled
Host Name   :
Unit IP     : 126.10.230.127 (126.10.230.127)
Subnet Mask : 255.255.192.0 (255.255.192.0)
Gateway    : 126.10.255.23 (255.255.255.255)
Unit MAC    : 00.10.81.00.53.33 (00.10.81.00.53.33)

U)nit Addr S)ubnet G)ateway D)HCP H)ost (ESC) ? <--
E)thernet S)tats n(V)ram re(B)oot (ESC) ?
Do you want to save changes (y/N) : _

```

To connect to the NetGuardian 216 G3 via Ethernet, you need to configure the unit's IP address, Subnet Mask, and Gateway.

1. From the main menu, type C for C)Config.
2. In the config menu type E for Ethernet.
3. To change the IP address, type U, and then type in the new IP address (Example: 123.123.123.123) and press enter.
4. To change the Subnet Mask type S and then type in the new Subnet Mask and press enter.
5. To change the Gateway, type G and then type in the new Gateway Address and press enter. Then press Escape twice to get back to the main menu.
6. You should see a "Do you want to save changes (y/N) :" prompt. **Make sure to type Y at this prompt, otherwise changes will not be saved.**
7. If done correctly you should see "Write. . . complete<--" text appear.
8. Reboot the NetGuardian 216 G3 by typing B to save its new configuration.

7.4 ...Enable Cellular Polling

To enable DNP3 polling of the CTMS over the cellular link, use the following steps:

1. In the web, click on the "Cellular" edit menu (see section 10.4). Under "Cellular Mode" check the box that says "Enabled". Click "Save".
2. In the web, click on the "DNP3" edit menu (see section 10.3). Under "DNP3 Mode of Operation" check the box that says "Cellular". Click "Save".
3. Reboot the NetGuardian. This can be done by clicking "Reboot" in the web interface. "Reboot" can be found in the lower left-hand corner of the web interface.
4. To make sure the cellular polling is enabled, give the NetGuardian a few minutes to boot up and establish a cellular connection. After 3-5 minutes, go to the web interface and click on the "Cellular" edit menu. The option that says "Cellular IP (readonly)" should NO LONGER say "0.0.0.0" and should instead show the Cellular IP address of the NetGuardian that was retrieved from the cellular provider. Note that this Cellular IP address will be different from the Ethernet IP address that you use to navigate to the device's web page.

8 TTY Interface

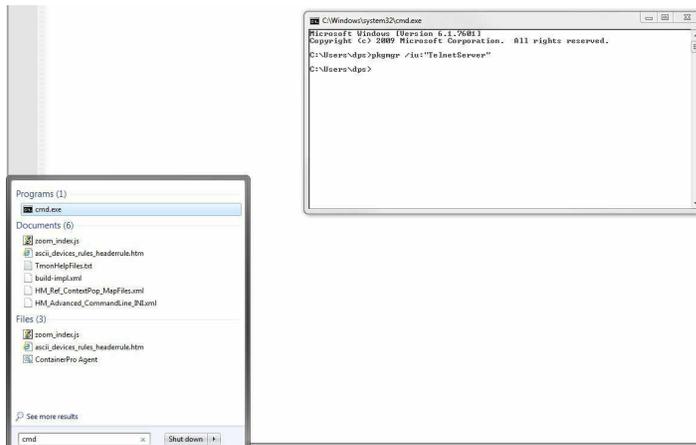

The TTY interface is the NetGuardian's built-in interface for basic configuration. From the TTY interface, you can:

- Edit the IPA, subnet, and gateway
- Set DNP3 Parameters
- Set unit back to factory defaults
- Configure data ports
- Ping other devices on the network
- Debug and troubleshoot

For more advanced configuration tools, please use the Web Browser Interface.

For Telnet, connect to the IP address at port 23 to access the configuration menus after initial LAN/WAN setup. **Telnet sessions are established at port 23, not the standard Telnet port** as an added security measure.

If you're using Windows 7, then you'll need to install telnet before you can use the TTY interface. To install telnet, open up your command line (type "cmd" into the search bar in the **Start Menu**). Select **cmd.exe** to run the command line.

From the command line, type in **pkmgr /iu:"TelnetServer"** then press **enter**. When the command prompt appears again, the installation is complete.

Menu Shortcut Keys

The letters before or enclosed in parentheses () are menu shortcut keys. Press the shortcut key to access that option. Pressing the ESC key will always bring you back to the previous level. Entries are not case sensitive.

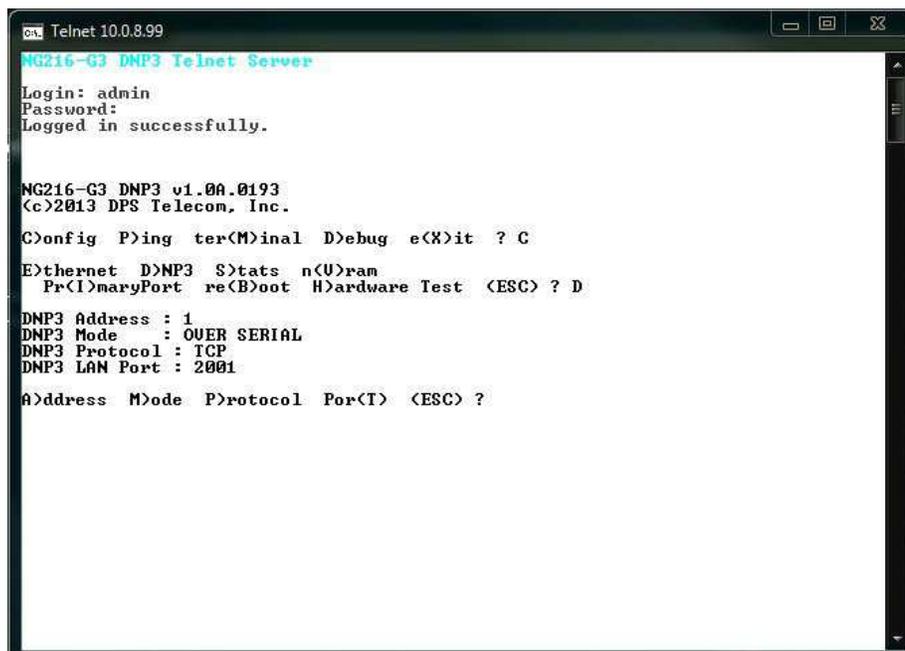

8.1 Set DNP3 Parameters

To set DNP3 Parameters:

1. Login to the TTY Interface.
2. Select C)onfig.
3. Select D)NP3.

From the DNP3 menu, you have the option to configure:

- **Address**
- **Mode** (LAN, Serial, Cellular)
- **Protocol** (TCP or VDP)
- **LAN Port**

```

9 NetGuardian 216 G3 Web Browser

The Utility Shutdown System features a built-in Web Browser Interface that allows you to manage alarms and configure the unit through the Internet or your Intranet. You can quickly set up alarm point descriptions, view alarm status, issue controls, and configure paging information, and more using most commonly used browsers.

NOTE: Max # of users allowed to simultaneously access the CTMS via the Web is 4.

9.1 Logging on to the Utility Shutdown System

For Web Interface functionality, the unit must first be configured with some basic network information. If this step has not been done, refer to the section "Quick Start: How to Connect to the NetGuardian 216 G3" for instructions on initial configuration setup.

1. To connect to the NetGuardian 216 G3 from your Web browser, enter its IP address in the address bar of your web browser. It may be helpful to bookmark the logon page to avoid entering this each time.
2. After connecting to the unit's IP address, enter your login information and click OK. **NOTE:** The factory default username is "**admin**" and the password is "**dpstelecom**".
3. In the left frame you will see the **Monitor** menu (blue) and **Edit** menu (green) The Monitor menu links are used to view the current status of alarms. The Edit menu is used to change the unit's configuration settings. All the software configuration will occur in the **Edit** menu. The following sections provide detailed information regarding these functions.

1. Enter your password to enter the NetGuardian 216 G3 Web Browser Interface

9.1.1 Changing the Default Password

The password can be configured from the **Edit > System** screen. The minimum password length is four characters; however, DPS recommends setting the minimum password length to at least five characters.

Use the following steps to change the logon password:

1. From the **Edit** menu select **System**.
2. Enter the new user name in the **User** field.
3. Enter the new password in the **Password** field.
4. Click the **Save** button.

<input type="button" value="Reset"/> <input type="button" value="Save"/>	

The Edit > Ethernet menu

Ethernet Settings	
Unit MAC	Hardware address of the NetGuardian 216 G3. (Not editable - For reference only.)
Host Name	Used only for web browsing. Example: If you don't want to remember this NetGuardian's IP address, you can type in a name in this field, such as NG216G3. Once you save and reboot the unit, you can now browse to it locally by simply typing in "NG216G3" in the address bar. (no "http://" needed).
Enable DHCP	Used to turn on Dynamic Host Connection Protocol. NOT recommended, because the unit is assigned an IP address from your DHCP server. The IP you've already assigned to the unit becomes inactive. Using DHCP means the unit will NOT operate in a T/Mon environment.
Unit IP	IP address of the NetGuardian 216 G3.
Subnet Mask	A road sign to the NetGuardian 216 G3, telling it whether your packets should stay on your local network or be forwarded somewhere else on a wide-area network.
Gateway	An important parameter if you are connected to a wide-area network. It tells the NetGuardian which machine is the gateway out of your local network. Set to 255.255.255.255 if not using. Contact your network administrator for this info.
Ethernet Settings	
DNS Server 1	Primary IP address of the domain name server. Set to 255.255.255.255 if not using.
DNS Server 2	Secondary IP address of the domain name server. Set to 255.255.255.255 if not using.

10.3 Cellular Settings

Cellular Configuration

Cellular Settings

Cellular Mode:	<input type="radio"/> Enabled <input checked="" type="radio"/> Disabled
Idle Socket Timeout:	<input type="text" value="120"/> (5 - 65535 seconds)
Cellular IP (readonly)	<input type="text" value="0.0.0.0"/>

Make sure that the cellular radio is already provisioned before attempting to change any of the Cellular settings, see "Wireless Modem Activation section."

Cellular Settings	
Enabled	Select this to enable cellular notifications. Make sure that cellular is selected under the DNP3 Edit menu.
Idle Socket Timeout	How long an idle socket is left open before being closed by the NetGuardian.
Cellular IP (read only)	The IP of the NetGuardian over the cellular link. If 0.0.0.0, then the device is still establishing a cellular connection or no connection is established.

Note: Make sure to reboot the NetGuardian 216 G3 in order to apply any changes made to the Cellular Configuration.

10.4 DNP3

DNP3 Configuration

Outstation Settings DNP3 Points	
DNP3 Mode of Operation:	<input type="radio"/> LAN <input type="radio"/> Cellular Primary Serial <input checked="" type="radio"/> Disabled
Station Address	<input type="text" value="1"/>
DNP3 Network	Primary Port: <input type="text" value="20000"/> Protocol: <input type="text" value="TCP"/>
DNP3 Serial	Configure Primary Serial Port

DNP3 Configuration

Outstation Settings DNP3 Points	
DNP3 Mode of Operation:	<input type="radio"/> LAN <input checked="" type="radio"/> Cellular Primary Serial <input type="radio"/> Disabled
Station Address	<input type="text" value="1"/>
DNP3 Network	Primary Port: <input type="text" value="20000"/> Protocol: <input type="text" value="TCP"/>
	Additional Port: <input type="text" value="20001"/> (Not Configurable. Set to Primary Port+1)
DNP3 Serial	Configure Primary Serial Port

DNP3 Configuration	
DNP3 Mode of Operation	The DNP3 polling transport mode: Disabled - No DNP3 polling Primary Serial - DNP3 polling is enabled over the Primary Serial port, located on the back of the NetGuardian. Cellular - DNP3 polling is enabled over the Cellular connection. Note this option is only available if Cellular is enabled in the "Cellular" edit menu. LAN - DNP3 polling is enabled over the LAN connection.
Station Address	This is the DNP3 polling address of the NetGuardian. This value can range from 0 - 65519. The default is 1.
DNP3 Network	This option allows you to select the primary port and protocol for DNP3 polling over LAN or Cellular. This option is only available if "DNP3 Mode of Operation" is set to "LAN" or "Cellular". *Note: An additional port is available for use if "DNP3 mode of Operation" is set to "Primary Serial".
DNP3 Serial	This option allows you to select the serial port properties of the Primary Serial port. This is only necessary if "DNP3 Mode of Operation" is set to "Primary Serial".

10.6 Serial Ports

The **Edit > Serial Port** menu allows you to change settings depending on the port type of your NetGuardian. From this menu, you can select a mode of operation, tune the 202 modem, and enable reach-through serial port functionality.

Primary Serial Port Configuration	
Location	Port Configuration
Primary port located in the back of the unit.	Port Type: <input type="text" value="232"/> Baud: <input type="text" value="115200"/> Parity: <input type="text" value="8-bit data, no parity"/> Stop Bits: <input type="text" value="1"/> RTS head: <input type="text" value="0"/> RTS tail: <input type="text" value="0"/> Flow Control: <input type="text" value="None"/>
<input type="button" value="Reset"/> <input type="button" value="Save"/>	

The Edit > Serial Ports menu

Location	
A reminder that your primary serial port is located on the back of the NetGuardian 216 G3 chassis.	
Port Configuration	
Port Type	Select the serial port for your build of the NetGuardian. Choose from 232, 485...
Baud, Parity, Stop Bits, and Flow Control	Select the appropriate settings from the drop-down menu.
RTS Head	Only used if your NetGuardian was built with a 202 modem. The most commonly used value is 30.
RTS Tail	Only used if your NetGuardian was built with a 202 modem. The most commonly used value is 10.
Flow Control

2	<input type="text"/>	1s	<input type="checkbox"/>							

Control 2 Automation Settings

Control 2 will follow master trigger control automatically. If master trigger is latched, control 2 will auto latch after "Latch Delay" time. If master trigger is released, control 2 will be auto released immediately.

Latch Delay (0s - 15m)

Fail Safe Automation Settings

After Control 2 is latched the "Release Delay" will start the delay. After "Release Delay" time, Control 2 will be released automatically.

Release Delay (15m - 60m)

"Release Delay" is only used in USS-MR firmware. See "Automation Algorithm" section.

The Edit > Date and Time menu

Time Settings	
Date	Select the current month, day, and year from the drop-down menus.
Time	Select the current hour, minutes, and time of day fro the drop-down menus.
Automatic Time Adjustment (NTP)	
Enable NTP	Check this box to enable Network Time Protocol.
NTP Server Address or Host Name	Enter the NTP server's IP address or host name, then click Sync. Example: north-america.pool.ntp.org
Time Zone	Select your time zone from the drop-down menu.
Adjust Clock for Daylight Savings Time (DST)	
Enable DST	Check this box to have the NetGuardian 216 G3 observe Daylight Savings.
Start Day	Select the month, weekday, and time when Daylight Savings will begin.
End Day	Select the month, weekday, and time when Daylight Savings will end.

10.13 Timers

The screenshot shows the web interface for the NetGuardian-216 G3 DNP3 device. The top navigation bar includes the DPS Telecom logo, the device name, and links for Upload, Logout, and MyDPS. On the left, there are two menu sections: 'Monitor Menus' (Base Alarms, System Alarms, Controls, Analogs, Heater, Event Log) and 'Edit Menus' (System, Ethernet, DNP3, Heater Automation, Serial Port, Notifications, Base Alarms, System Alarms, Controls, Analogs, Date and Time, Timers, Reboot). The 'Timers' page is displayed, featuring a table with the following data:

Description	Timer Value
Web Refresh (100ms-60s): How often web browser is refreshed when in monitor mode.	1s
Timed Tick (0s-60m): This is a 'heartbeat' function that can be used by masters who don't perform integrity checks.	0s
Sound on time (0s-10m): How long the NetGuardian's speaker will sound when reportable alarm occurs or clears.	0s
DNP3 inactive timeout (0-120m): Set system alarm if NetGuardian does not receive a DNP3 poll within this timeout duration.	5m

At the bottom of the table, there are 'Reset' and 'Save' buttons.

The Edit > Timers menu

10.14 Reboot

Click on the **Reboot** link from the **Edit** menu will reboot the NetGuardian 216 G3 after writing all changes to NVRAM.

The Edit > Reboot confirmation popup

LED	Status	Description
PWR	Solid Green	Power supply OK
	Off	No voltage or +24V and GND leads reversed

14 Reference Section

14.1 DNP3 Device Profile

The following table provides a "Device Profile Document" in the standard format defined in the DNP 3.0 Subset Definitions Document. While it is referred to in the DNP 3.0 Subset Definitions as a "Document," it is in fact a table, and only a component of a total interoperability guide.

DNP V3.0 DEVICE PROFILE DOCUMENT (Also see the DNP 3.0 Implementation Table in Section 2)	
Vendor Name: DPS Telecom Inc.	
Device Name: NetGuardian 216 G3 DNP3 USS	
Highest DNP Level Supported: For Requests: Level 3 For Responses: Level 3	Device Function: Master Slave
Notable objects, functions, and/or qualifiers supported in addition to the Highest DNP Levels Supported (the complete list is described in the attached table): The read function code for Object 50 (Time and Date), variation 1, is supported.	
Maximum Data Link Frame Size (octets): Transmitted: 128 Received: 128	Maximum Application Fragment Size (octets): Transmitted: 128 Received: 128
Maximum Data Link Re-tries: None Fixed (3)	Maximum Application Layer Re-tries: None Configurable
Requires Data Link Layer Confirmation: Never Always Sometimes	
Requires Application Layer Confirmation: Never Always When reporting Event Data (Slave devices only) When sending multi-fragment responses (Slave devices only) Sometimes

DNP V3.0 Implementation Table

The following table identifies which object variations, function codes, and qualifiers the NetGuardian 216 G3 DNP3 supports in both request messages and in response messages. For static (non-change-event) objects, request send with qualifiers 00, 01, 06, 07, or 08 will be responded with qualifiers 00 or 01.

OBJECT			REQUEST (Library will parse)		RESPONSE (Library will respond with)	
Object Number	Variation Number	Description	Function Codes (dec)	Qualifiers Codes (hex)	Function Codes (dec)	Qualifiers Codes (hex)
1	1	Binary Input	1 (read)	00, 01 (start-stop) 06 (no range, or all)	129 (response)	00, 01 (start-stop)
10	2	Binary Output Status	1 (read)	00, 01 (start-stop) 06 (no range, or all)	129 (response)	00, 01 (start-stop)
12	1	Control Relay Output Block	5 (direct op) 6 (dir. op, noack)	17, 28 (index)	129 (response)	echo of request
30	3	32-Bit Analog Input Without Flag	1 (read)	00, 01 (start-stop) 06 (no range, or all)	129 (response)	00, 01 (start-stop)
50	1	Time and Date	1 (read)	07 (limited qty = 1)	129 (response)	07 (limited qty = 1)
			2 (write)	07 (limited qty = 1)		
60	1	Class 0 Data	1 (read)	06 (no range, or all)		
60	2	Class 1 Data	1 (read)	06 (no range, or all)		
60	3	Class 2 Data	1 (read)	06 (no range, or all)		
60	4	Class 3 Data	1 (read)	06 (no range, or all)		

DNP V3.0 Point List

The tables below identify all the default data points provided by the NetGuardian 216 G3 DNP3.

Binary Input Points

Binary Input Points		
Static Variation: Obj 01 Var 01 - Binary Input w/o status		
Request function codes supported: 1 (read)		
Point Index	Description	Class
0-9	Discrete Alarms	1
10	Surge Protector Tripped	1
11	Low Battery Warning	1
12	Battery Mode	1
13	Battery Charging	1
14	Control 1 Echo	1
15	Control 2 Echo	1
16	Default Configuration	1
17	DNP3 Poller Inactive	1
18	MAC Address not set	1
19	IP not set	1
20	LAN hardware error	1
21	SNMP processing error	1
22	SNMP community error	1
23	LAN TX packet drop	1
24	Notification 1 failed	1
25	Notification 2 failed	1
26	Notification 3 failed	1
27	Notification 4 failed	1
28	Notification 5 failed	1
29	Notification 6 failed	1
30	Notification 7 failed	1
31	Notification 8 failed	1
32	NTP failed	1
33	Time Tick	1

34	Serial 1 receive queue full	1
35	Dynamic memory full	1
36	Unit reset	1
37	Cellular: Modem Not Responding	1
38	Cellular: No Signal	1
39	Analog 4: Minor Under Threshold	1
40	Analog 4: Minor Over Threshold	1
41	Analog 4: Major Under Threshold	1
42	Analog 4: Major Over Threshold	1
43	Battery A: Minor Under Threshold	1
44	Battery A: Minor Over Threshold	1
45	Battery A: Major Under Threshold	1
46	Battery A: Major Over Threshold	1
47	Battery B: Minor Under Threshold	1
48	Battery B: Minor Over Threshold	1
49	Battery B: Major Under Threshold	1
50	Battery B: Major Over Threshold	1
51	Internal Temperature: Minor Under Threshold	1
52	Internal Temperature: Minor Over Threshold	1
53	Internal Temperature: Major Under Threshold	1
54	Internal Temperature: Major Over Threshold	1
55	External Temperature: Minor Under Threshold	1
56	External Temperature: Minor Over Threshold	1
57	External Temperature: Major Under Threshold	1
58	External Temperature: Major Over Threshold	1

Binary Output Status Points and Control Relay Output Blocks

The following table lists both the Binary Output Status Points (Object 10) and the Control relay Output Blocks (Object 12).

Binary Output Status Points

Static Variation: Obj 10 Var 02 - Binary Output Status

Control Variation: Obj 12 Var 01 - Control Relay Output Block

Request function codes supported: 3 (select), 4 (operate)

Supported relay output: Latch on, Latch off.

Point ID	Description	Class
0	Master Trigger Control	2
1	Device Reset Control	2

Analog Inputs

The following table lists Analog Inputs (Object 30). It is important to note that Analog Inputs, Analog Output Control Blocks, and Analog Output Statuses are transmitted through DNP as signed numbers.

Analog Inputs Static Variation: Obj 30 Var 03 - 32-Bit analog w/o flag Request function codes supported: 1 (read)			
Point ID	Description	Default Unit	Class
0	Base analog 1	Voltage (VDC)	3
1	Base analog 2	Voltage (VDC)	3
2	Base analog 3	Voltage (VDC)	3
3	Base analog 4	Voltage (VDC)	3
4	Battery Monitor A	Voltage (VDC)	3
5	Battery Monitor B	Voltage (VDC)	3
6	Internal Temperature	Temperature (F)	3
7	External Temperature (NOTE: used to monitor internal heater)	Temperature (F)	3
8	Nexus 1262 ALg0	N/A	3
9	Nexus 1262 ALg1	N/A	3
10	Nexus 1262 ALg2	N/A	3
11	Nexus 1262 ALg3	N/A	3
12	Nexus 1262 ALg4	N/A	3
13	Nexus 1262 ALg5	N/A	3

15 Frequently Asked Questions

Here are answers to some common questions from NetGuardian 216 G3 users. The latest FAQs can be found on the NetGuardian 216 G3 support web page, <http://www.dpstele.com>.

If you have a question about the NetGuardian 216 G3, please call us at **(559) 454-1600** or e-mail us at support@dpstele.com

15.1 General FAQs

Q. How do I connect my NetGuardian 216 G3 to the LAN?

A. To connect your NetGuardian 216 G3 to your LAN, you need to configure the unit IP address, the subnet mask and the default gateway. A sample configuration could look like this:

Unit Address: 10.0.6.100

subnet mask: 255.255.192.0

Save your changes by writing to NVRAM and reboot. Any change to the unit's IP configuration requires a reboot.

Q. When I connect to the NetGuardian 216 G3 through the craft port on the front panel it either doesn't work right or it doesn't work at all. What's going on?

A. Make sure your using the right COM port settings. Your COM port settings should read:

Bits per second: 9600 (9600 baud)

Data bits: 8

Parity: None

Stop bits: 1

Flow control: None

Important! Flow control **must** be set to **none**. Flow control normally defaults to hardware in most terminal programs, and this will not work correctly with the NetGuardian 216 G3.

Q. What characteristics of an alarm point can be configured through software? For instance, can point 4 be used to sense an active-low signal, or point 5 to sense a level or an edge?

A. The unit's standard configuration is for all alarm points to be level-sensed. You **cannot** use configuration software to convert alarm points to TTL (edge-sensed) operation. TTL alarm points are a hardware option that must be specified when you order your NetGuardian 216 G3. Ordering TTL points for your NetGuardian 216 G3 does not add to the cost of the unit. What you can do with the configuration software is change any alarm point from "Normal" to "Reversed" operation. Switching to Reversed operation has different effects, depending on the kind of input connected to the alarm point:

- **If the alarm input generates an active-high signal**, switching to Reversed operation means the NetGuardian 216 G3 will declare an alarm in the absence of the active-high signal, creating the practical equivalent of an active-low alarm.
- **If the alarm input generates an active-low signal**, switching to Reversed operation means the NetGuardian 216 G3 will declare an alarm in the absence of the active-low signal, creating the practical equivalent of an active-high alarm.
- **If the alarm input is normally open**, switching to Reversed operation converts it to a normally closed alarm point.
- **If the alarm input is normally closed**, switching to Reversed operation converts it to a normally open alarm point.

16 Technical Support

DPS Telecom products are backed by our courteous, friendly Technical Support representatives, who will give you the best in fast and accurate customer service. To help us help you better, please take the following steps before calling Technical Support:

1. Check the DPS Telecom website.

You will find answers to many common questions on the DPS Telecom website, at <http://www.dpstele.com/support/>. Look here first for a fast solution to your problem.

2. Prepare relevant information.

Having important information about your DPS Telecom product in hand when you call will greatly reduce the time it takes to answer your questions. If you do not have all of the information when you call, our Technical Support representatives can assist you in gathering it. Please write the information down for easy access. Please have your user manual and hardware serial number ready.

3. Have access to troubled equipment.

Please be at or near your equipment when you call DPS Telecom Technical Support. This will help us solve your problem more efficiently.

4. Call during Customer Support hours.

Customer support hours are Monday through Friday, from 7 A.M. to 6 P.M., Pacific time. The DPS Telecom Technical Support phone number is **(559) 454-1600**.

Emergency Assistance: *Emergency assistance is available 24 hours a day, 7 days a week. For emergency assistance after hours, allow the phone to ring until it is answered with a paging message. You will be asked to enter your phone number. An on-call technical support representative will return your call as soon as possible.*

17 End User License Agreement

All Software and firmware used in, for, or in connection with the Product, parts, subsystems, or derivatives thereof, in whatever form, including, without limitation, source code, object code and microcode, including any computer programs and any documentation relating to or describing such Software is furnished to the End User only under a non-exclusive perpetual license solely for End User's use with the Product.

The Software may not be copied or modified, in whole or in part, for any purpose whatsoever. The Software may not be reverse engineered, compiled, or disassembled. No title to or ownership of the Software or any of its parts is transferred to the End User. Title to all patents, copyrights, trade secrets, and any other applicable rights shall remain with the DPS Telecom.

DPS Telecom's warranty and limitation on its liability for the Software is as described in the warranty information provided to End User in the Product Manual.

End User shall indemnify DPS Telecom and hold it harmless for and against any and all claims, damages, losses, costs, expenses, obligations, liabilities, fees and costs and all amounts paid in settlement of any claim, action or suit which may be asserted against DPS Telecom which arise out of or are related to the non-fulfillment of any covenant or obligation of End User in connection with this Agreement.

This Agreement shall be construed and enforced in accordance with the laws of the State of California, without regard to choice of law principles and excluding the provisions of the UN Convention on Contracts for the International Sale of Goods. Any dispute arising out of the Agreement shall be commenced and maintained only in Fresno County, California. In the event suit is brought or an attorney is retained by any party to this Agreement to seek interpretation or construction of any term or provision of this Agreement, to enforce the terms of this Agreement, to collect any money due, or to obtain any money damages or equitable relief for breach, the prevailing party shall be entitled to recover, in addition to any other available remedy, reimbursement for reasonable attorneys' fees, court costs, costs of investigation, and other related expenses.

Notes

Warranty

DPS Telecom warrants, to the original purchaser only, that its products a) substantially conform to DPS' published specifications and b) are substantially free from defects in material and workmanship. This warranty expires two years from the date of product delivery with respect to hardware and ninety days from the date of product delivery with respect to software. If the purchaser discovers within these periods a failure of the product to substantially conform to the specifications or that the product is not substantially free from defects in material and workmanship, the purchaser must promptly notify DPS. Within reasonable time after notification, DPS will endeavor to correct any substantial non-conformance with the specifications or substantial defects in material and workmanship, with new or used replacement parts. All warranty service will be performed at the company's office in Fresno, California, at no charge to the purchaser, other than the cost of shipping to and from DPS, which shall be the responsibility of the purchaser. If DPS is unable to repair the product to conform to the warranty, DPS will provide at its option one of the following: a replacement product or a refund of the purchase price for the non-conforming product. These remedies are the purchaser's only remedies for breach of warranty. Prior to initial use the purchaser shall have determined the suitability of the product for its intended use. DPS does not warrant a) any product, components or parts not manufactured by DPS, b) defects caused by the purchaser's failure to provide a suitable installation environment for the product, c) damage caused by use of the product for purposes other than those for which it was designed, d) damage caused by disasters such as fire, flood, wind or lightning unless and to the extent that the product specification provides for resistance to a defined disaster, e) damage caused by unauthorized attachments or modifications, f) damage during shipment from the purchaser to DPS, or g) any abuse or misuse by the purchaser.

THE FOREGOING WARRANTIES ARE IN LIEU OF ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

In no event will DPS be liable for any special, incidental, or consequential damages based on breach of warranty, breach of contract, negligence, strict tort, or any other legal theory. Damages that DPS will not be responsible for include but are not limited to, loss of profits; loss of savings or revenue; loss of use of the product or any associated equipment; cost of capital; cost of any substitute equipment, facilities or services; downtime; claims of third parties including customers; and injury to property.

The purchaser shall fill out the requested information on the Product Warranty Card and mail the card to DPS. This card provides information that helps DPS make product improvements and develop new products.

For an additional fee DPS may, at its option, make available by written agreement only an extended warranty providing an additional period of time for the applicability of the standard warranty.

Technical Support

If a purchaser believes that a product is not operating in substantial conformance with DPS' published specifications or there appear to be defects in material and workmanship, the purchaser should contact our technical support representatives. If the problem cannot be corrected over the telephone and the product and problem are covered by the warranty, the technical support representative will authorize the return of the product for service and provide shipping information. If the product is out of warranty, repair charges will be quoted. All non-warranty repairs receive a 90-day warranty.

Network Alarm Monitoring Fundamentals
Alarm Monitoring — Where Do You Start?

You've just been put in charge of purchasing, selecting or recommending a new network alarm system for your company. Where do you start? What alarm equipment do you need? What monitoring features are essential, and which can you live without? How can you make sure your network is fully protected, without spending too much on equipment you won't use?

This White Paper is a quick guide to how you can answer these questions for yourself. This paper will NOT tell you, "Just buy this system and everything will be fine." Every network is different. A one-size fits-all system won't provide the specific coverage you need and may cost more money than you really need to spend.
