Drive^{IT} Low Voltage AC Drives

Quick Start Guide ACS550-U1 Drives (1...150 HP)

Overview

The installation of the ACS550 adjustable speed AC drive follows the outline below.

Application

This guide provides a guick reference for installing ACS550-U1 drives having a standard enclosure.

Note! This guide does not provide detailed installation, safety or operational instructions. See the ACS550 User's Manual for complete information.

Prepare for Installation

Warning! The ACS550 should ONLY be installed by a qualified electrician.

Check

- Motor compatibility Motor type, nominal current, frequency, and voltage range must match drive specifications.
- Suitable environment Drive requires heated, indoor controlled environment that is suitable for the selected enclosure.
- Wiring Follow local codes for wiring and fusing requirements.

Refer to User's manual and confirm that all preparations are complete.

Tools Required

Screwdrivers, wire stripper, tape measure, mounting screws or bolts, and drill.

Drive Identification

Use the following chart to interpret the type code found on the drive label.

ACCEEN 114 00A0 4

AC3330-C	71-00A0-4+
AC, Standard Drive – 550 series	
Construction (region specific)]
U1 = Setup/parts for US instal./complian	ce
01 = Setup/parts for IEC instal./complian	nce
Output current rating	
See Ratings chart in User's Manual for d	etails
Voltage rating	
Voltage rating —————	
2 = 208240 VAC	
4 = 380 480 VAC	

Enclosure protection class -

No specification = IP 21 / UL type 1 / NEMA 1 B056 = IP 54 / UL type 12 / NEMA 12

Collect Motor Data

Collect the following data from the motor nameplate plate for later use in the ACS550 startup:

Voltage	
Nominal motor current	
Nominal frequency	
Nominal speed	
Nominal power	

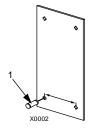

Unpack the Drive

Note! Lift ACS550 by its chassis and not by its

- 1. Unpack the drive.
- 2. Check for any damage.
- 3. Check the contents against the order / shipping label.

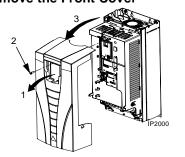

Prepare the Mounting Location

The drive requires a smooth, vertical, solid surface, free from heat and moisture, with free space for air flow -200 mm (8 in) above and below, and 25 mm (1 in) around the sides of the drive.

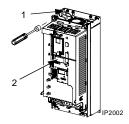

- 1. Mark the mounting points.
- 2. Drill the mounting holes.

Remove the Front Cover

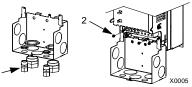

- 1. Remove the control panel, if attached.
- 2. Loosen the captive screw at the top.
- 3. Pull near the top to remove the cover.

Mount the Drive

- 1. Position the ACS550 and use screws or bolts to securely tighten all four corners.
- 2. Attach a warning sticker in the appropriate language on the inside plastic shell.

Install the Wiring

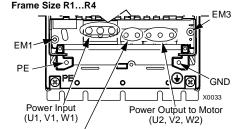

- 1. Install thin-wall conduit clamps (not supplied) in the conduit/gland box.
- 2. Install conduit/gland box.

Wiring Power

- 1. Connect conduit runs to box.
- 2. Route input power and motor wiring through conduits.
- 3. Strip wires.

Ontional Braking

4. Connect power. motor, and ground wires to the drive terminals. For details, see "Power Connections" in the User's Manual.

Frame Size	Terminal Labels	Brake Options
R1, R2	BRK+, BRK-	Brake resistor
R3, R4	UDC+, UDC-	 Braking unit
		 Chopper and resistor

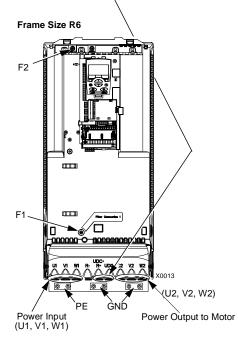

Warning! For floating networks remove screws at EM1 and EM3 on Frame sizes R1...R4.

Frame Size R5

Optional E	sraking	
Frame Size	Terminal Labels	Brake Options
R5, R6	UDC+, UDC-	 Braking unit
		 Chopper and resistor

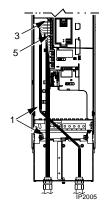

Warning! For floating networks remove screws at F1 and F2 on Frame sizes R5 or R6.

Wiring the Controls

- Route the control cable(s) through the conduit.
- 2. Strip the control cable sheathing and twist the copper screen into a pig-tail.
- Connect the copper screen pig-tail for digital and analog I/O cables at X1-1.
- 4. Connect the ground screen pig-tail for RS485 cables at X1-28 or X1-32.

 Strip and connect the individual control wires to the drive terminals. The following shows the default configuration. For details, or other configurations, see "Control Connections" in the User's Manual.

X1 _	1	SCR	Signal cable shield
$-\Box$	2	Al1	Ext. freq. ref. 1: 010 V
┌╩╫┼	3	AGND	Analog input com.
	4	10V	Ref. voltage 10 VDC
	5	Al2	Not used
	6	AGND	Analog input com.
r OH +	7	AO1	Output freq.: 020 mA
- OH +	8	AO2	Output current: 020 mA
-	9	AGND	Analog output com
	10	24V	Aux. volt. output +24 VDC
	11	GND	Aux. volt. common
	12	DCOM	Digital input com. for all
<u> </u>	13	DI1	Start/Stop: Active = start
<u> </u>	14	DI2	Fwd/Rev: Active = rev. dir.
	15	DI3	Constant speed sel. ²
/	16	DI4	Constant speed sel. ²
	17	DI5	Ramp pair: Active = 2 nd pair
	18	DI6	Not used
		2010	!
	19	RO1C	Relay output 1
	20	RO1A	Default operation:
	21	RO1B	→ Ready = 19/21 connected
	22	RO2C	Relay output 2
	23	RO2A	Default operation:
	24	RO2B	☐ Run'g = 22/24 connected
	25	RO3C	Relay output 3
	26	RO3A	Default operation:

27 RO3B - Fault(-1) =25/27 connected

(Fault => 25/26 connected)

Note 2. Code: 0 = open, 1 = connected

DI3	DI4	Output
0		Reference through AI1
1	0	CONSTANT SPEED 1 (1202)
0		CONSTANT SPEED 2 (1203)
1	1	CONSTANT SPEED 3 (1204)

Install the conduit/gland box cover (1 screw).

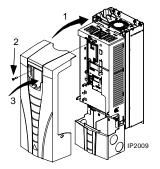

Check Installation

Before applying power, perform the following checks.

~	Check
	Environment conforms to specifications.
	The drive is mounted securely.
	Proper cooling space around the drive.
	Motor and driven equipment are ready for start.
	Floating networks: Internal RFI filter disconnected.
	Drive is properly grounded.
	Input power (mains) voltage matches the drive nominal input voltage.
	The input power (mains) terminals, U1, V1, W1, are connected and tightened as specified.
	The input power (mains) fuses / mains switch installed.
	The motor terminals, U2, V2, W2, are connected and tightened as specified.
	Motor cable is routed away from other cables.
	NO power factor compensation capacitors are connected to the motor cable.
	Control terminals are wired and tightened as specified.
	NO tools or foreign objects (such as drill shavings) are inside the drive.
	NO alternate power source for the motor is connected – no input voltage is applied to the output of the drive.

Re-install the Cover

- Align the cover and slide it on.
- 2. Tighten the captive screw.
- 3. Re-install the control panel.

Apply Power

Always re-install the front cover before turning power on.

Warning! The ACS550 will start up automatically upon power up, if the external run command is on.

1. Apply input power.

When power is applied to the ACS550, the green LED comes on.

Note! Before increasing motor speed, check that the motor is running in the desired direction.

Start-up

In Start-up, enter motor data (collected earlier) and, if needed, edit parameters that define how the drive operates and communicates.

Assistant Control Panel

The Start-up Assistant steps through typical start-up selections, and runs automatically upon the initial power up. At other times, use the steps below to run the Start-up Assistant.

- 1. Use the MENU key to access the Menu list.
- 2. Select Assistants.
- Select Start-up Assistant.
- 4. Follow the screen instructions to configure the system.

Note! For common parameters and menu items, use the Help key

? to display descriptions.

If you encounter Alarms or Faults, use the Help key or refer to the Diagnostic section of the User's Manual.

Basic Control Panel

The Basic Control Panel does not include a Start-up Assistant. Edit parameters manually. Refer to the Start-up Section of the User's Manual.
