

Preface

Thank you for choosing DELTA's high-performance VFD-VE Series. The VFD-VE Series is manufactured with high-quality components and materials and incorporate the latest microprocessor technology available.

Getting Started

This quick start will be helpful in the installation and parameter setting of the AC motor drives. To guarantee safe operation of the equipment, read the following safety guidelines before connecting power to the AC motor drives. For detail information, refer to the VFD-VE User Manual on the CD supplied with the drive.

-
1. AC input power must be disconnected before any wiring to the AC motor drive is made.
 2. A charge may still remain in the DC-link capacitors with hazardous voltages, even if the power has been turned off. To prevent personal injury, please ensure that power has turned off before opening the AC motor drive and wait ten minutes for the capacitors to discharge to safe voltage levels.
 3. Never reassemble internal components or wiring.
 4. The AC motor drive may be destroyed beyond repair if incorrect cables are connected to the input/output terminals. Never connect the AC motor drive output terminals U/T1, V/T2, and W/T3 directly to the AC mains circuit power supply.
 5. Ground the VFD-VE using the ground terminal. The grounding method must comply with the laws of the country where the AC motor drive is to be installed. Refer to the Basic Wiring Diagram.
 6. VFD-VE series is used only to control variable speed of 3-phase induction motors, NOT for 1-phase motors or other purpose.
 7. VFD-VE series is the specific drive for the elevator door and other automatic door control, NOT for those devices that may cause personal injury, such as life support equipment or any life safety situation.
 8. To prevent drive damage, the RFI jumper connected to ground shall be cut off if the AC motor drive is installed on an ungrounded power system or a high resistance-grounded (over 30 ohms) power system or a corner grounded TN system.

-
1. DO NOT use Hi-pot test for internal components. The semi-conductor used in AC motor drive easily damage by high-pressure.
 2. There are highly sensitive MOS components on the printed circuit boards. These components are especially sensitive to static electricity. To prevent damage to these components, do not touch these components or the circuit boards with metal objects or your bare hands.
 3. Only quality person is allowed to install, wire and maintain AC motor drive.

-
1. Some parameters settings can cause the motor to run immediately after applying power.
 2. DO NOT install the AC motor drive in a place subjected to high temperature, direct sunlight, high humidity, excessive vibration, corrosive gases or liquids, or airborne dust or metallic particles. Only use AC motor drives within specification. Failure to comply may result in fire, explosion or electric shock. To prevent personal injury, please keep children and unqualified people away from the equipment.
 3. When the motor cable between AC motor drive and motor is too long, the layer insulation of the motor may be damaged. Please use a frequency inverter duty motor or add an AC output reactor to prevent damage to the motor. Refer to user manual for details.
 4. The rated voltage for AC motor drive must be $\leq 240V$ ($\leq 480V$ for 460V models) and the mains supply current capacity must be $\leq 5000A$ RMS ($\leq 10000A$ RMS for the $\geq 40hp$ (30kW) models).

General Specifications

Control Characteristics	Control System	1 V/f curve; 2 V/f+PG; 3 SVC; 4 FOC+PG; 5 TQR+PG											
	Start Torque	Starting torque is 150% at 0.5Hz and 0Hz with FOC + PG control mode											
	Speed Control Range	1:100 Sensorless vector (up to 1:1000 when using PG card)											
	Speed Control Resolution	± 0.5% Sensorless vector (up to ± 0.02% when using PG card)											
	Speed Response Ability	5Hz (up to 30Hz for vector control)											
	Max. Output Frequency	0.00 to 600.00Hz											
	Output Frequency Accuracy	Digital command ± 0.005%, analog command ± 0.5%											
	Frequency Setting Resolution	Digital command ± 0.01Hz, analog command: 1/4096(12-bit) of the max. output frequency											
	Torque Limit	Max. is 200% torque current											
	Torque Accuracy	± 5%											
	Accel/Decel Time	0.00 to 600.00/0.0 to 6000.0 seconds											
	V/f Curve	Adjustable V/f curve using 4 independent points and square curve											
	Frequency Setting Signal	± 10V, 4~20mA, pulse input											
Brake Torque	About 20%												
Motor Protection	Electronic thermal relay protection												

General Specifications		
	Over-current Protection	The current forces 220% of the over-current protection and 300% of the rated current
	Ground Leakage Current Protection	Higher than 50% X rated current
	Overload Ability	Constant torque: 150% for 60 seconds, variable torque: 200% for 3 seconds
	Over-voltage Protection	Over-voltage level: Vdc > 400/800V; low-voltage level: Vdc < 200/400V
	Over-voltage Protection for the Input Power	Varistor (MOV)
	Over-temperature Protection	Built-in temperature sensor
	Compensation for the Momentary Power Loss	Up to 5 seconds for parameter setting
Environmental Conditions	Protection Level	NEMA 1/IP21
	Operation Temperature	-10°C to 40°C
	Storage Temperature	-20 °C to 60 °C
	Ambient Humidity	Below 90% RH (non-condensing)
	Vibration	9.80665m/s ² (1G) less than 20Hz, 5.88m/s ² (0.6G) at 20 to 50Hz
	Installation Location	Altitude 1,000 m or lower, keep from corrosive gasses, liquid and dust
