

HOW IT WORKS

MINIMATE generates an electrostatic ion wind that charges floating particles in the breathing zone. The charged particles are then repelled away from the wearer creating a breathing zone that is free of toxins like allergens, smoke, dust, viruses and bacteria. Studies have confirmed that the MINIMATE technology is effective in significantly reducing breathable particles between .04 and 3 microns, a range that represents most viruses and bacteria. MINIMATE also minimizes perfumes and odors.

For more information see www.GreenTechEnv.com/MINIMATEGT

DISCLAIMER

MINIMATE is not a medical device. Do not reduce or eliminate any therapies or drugs prescribed by a physician while using MINIMATE. Although MINIMATE does not treat or cure any sickness or disease, it does reduce the risks associated with the inhalation of airborne viruses and bacteria much like a surgical mask. Combining the MINIMATE with a mask has been proven to dramatically enhance the effectiveness of particle exclusion. However, neither MINIMATE nor any surgical or respirator mask (or the combination of) can offer 100% protection against viral or bacterial infections.

Infectious agents can enter the body by routes other than inhalation including skin contact and oral/food ingestion. Public health authorities recommend frequent and thorough hand washing.

Persons should consult a doctor before use if under treatment for any ailments or disease. Not for use by children under 4 years old. Not for use by pacemaker patients.

WARNINGS

- Do not attempt to charge the battery. It is not rechargeable.
- Do not immerse in liquids or allow fluids to enter unit.
- Do not open or attempt to repair the inside of the unit. There are no user serviceable parts inside.

HOW TO USE

1. Refer to the REPLACING THE BATTERY section for initial installment of the battery.
2. Find the switch located on the side of your MINIMATE and slide it up into the “ON” position. The indicator light located under the grill will blink when MINIMATE is on.
3. Use the included necklace to hang your MINIMATE around your neck or use the clip to clasp it to a shirt pocket. Your MINIMATE should be located about 6 to 8 inches beneath your nose and the metal grill should be facing upward.
4. With your MINIMATE turned on and in the proper position, you will feel the purified breeze wafting upward as you inhale.

NOTE: This is not a fan or mechanical blower. The airflow is limited so that sensitive mucous membranes are not affected.

NOTE: MINIMATE has limited effectiveness in windy conditions.

5. When not in use, turn off your MINIMATE by sliding the switch down into the “OFF” position.

TROUBLESHOOTING

- If the indicator light does not come on, the battery needs to be replaced.
- If there is no breeze or airflow when you turn your MINIMATE on, the battery needs to be replaced.
- If you are in a heavily polluted environment and your MINIMATE makes a hissing sound, blow gently into the top of the grill to dislodge dust build up.

TIP: When using your MINIMATE in a heavily polluted environment, bend your head forward to draw in more ionized air.

REPLACING THE BATTERY

1. Slide the battery access door, located on the side, all the way off exposing the used battery.
2. Place your finger against the positive side of the battery, push towards the negative side and swing the positive side out.
3. Replace with new battery by inserting positive (+) end first (match positive (+) and negative (-) markings on the battery with like markings in battery compartment) and push negative (-) end onto its metal contact.
4. Using the grooved rails, slide the battery access door back on so it clicks into place.

SPECIFICATIONS

Dimensions: 2.625" x 1.625" x 1.125"

Weight: 1.5 oz.

Color:Black

Solid Platinum Emitter

Electroplated Gold Grid

Battery: Lithium CR123A (1) included

Battery Life:Approximately 50 Hours

Accessory:Neck Strap

Ion Density:Greater than 1.5 million ions/cc

Ozone output:Less than .028 ppm
