

INTRODUCTION

Your 5330X-401/402 is a counter with an eight-digit LCD display. A programmable scaler and decimal point allow for display in any engineering unit.

APPLICATIONS

Certain programming and wiring choices must be made to accomplish your application. We recommend the following sequence:

1. Answer the following questions:
 - What type of sensor will be used?
 - To what engineering units should the counter be scaled?
 - How many pulses per item is the sensor providing?
 - Is a decimal point needed on the display?
2. Calculate the scale factor.

MOUNTING

PROGRAM MODE

To enter the program mode, a connection must be made between terminals 1 and 5 (see page 3).

Screens

There are four program-mode screens in the 5330X-401/402. Upon entering the setup mode, the counter will display screen 1. Press and hold the key while repeatedly pressing the key to advance to successive screens.

Programming Screens	
Screen	Function
1	Count Scale Factor
2	Count Decimal Point
3	Reset to Offset Value
4	Reset Key Enable / Disable

OPERATION

Add/Subtract Counting

There are two count input terminals on the rear of the totalizer. Count pulses entering Input A (terminal 3) cause the total to decrement (count down). Count pulses entering Input B (terminal 2) cause the total to increment (count up). The totalizer may start counting from zero, when reset, or may start from a user-programmed offset value. The offset value is a positive number and may be up to six digits.

If only one of the count inputs is used, the totalizer becomes an up counter with a range of zero to 99,999,999, or a down counter with a range of zero to -9,999,999. If both inputs are used, the totalizer displays the difference count between the two inputs - counts at Input B are added, counts at Input A are subtracted. In this mode of operation, the totalizer's range is -9,999,999 to 99,999,999. Positive numbers are not indicated with a plus sign(+). Both inputs may occur simultaneously, in which case the displayed total does not change.

Count Inputs

Model 5330X-401 has hi-speed inputs and can accept pulses from solid state, current sourcing sensors at up to 10 kHz per input. The sensor must supply at least +2.0 VDC, but not more than +24VDC to the input. Counts are entered on the positive-going edge of the pulse.

Model 5330X-402 has low speed inputs and can accept pulses from solid state, current sinking sensors or contact closures to ground at up to 20 Hz per input. These inputs are internally pulled up to +3 VDC. The sensor must be capable of sinking current from the input to bring the input voltage down to +0.4 VDC or less. Counts are entered on the negative-going edge of the pulse.

COUNT SCALER

Calculating the Count Scale Factor

The count scale factor is used to convert the incoming count pulses to the desired unit of measure to be displayed (feet, gallons, etc.) or to correct for a known amount of error (wheel wear, viscosity, etc.). This scaler has six digits available with a fixed decimal point.

Count Scaler Range: 0.0001 to 99.9999. (Setting the count scale factor to 0.0000 will allow scaling by 100 in the Courier Series).

Count Scaler (CS) Formula:

$$CS = \frac{DPF}{PPI} \quad \text{where:}$$

DPF is the decimal point factor corresponding to the desired decimal point location.

DISPLAY	DPF	DISPLAY	DPF
XXXXXX	= 1	XXX.XXX	= 1,000
XXXXX.X	= 10	XX.XXXX	= 10,000
XXXX.XX	= 100		

PPI is the number of pulses per item from the sensor.

Example 1: A sensor produces 20 pulses per inch of material travel. Calculate the count scaler required to indicate material used in whole inches (XXXXXX).

$$CS = \frac{1}{20} = 0.05000$$

Example 2: An encoder produces 120 pulses per foot. Calculate the count scaler required to indicate material usage in 1/100's of feet (XXXX.XX).

$$CS = \frac{100}{120} = 0.8333$$

(Select the XXXX.XX position on the totalizer decimal point menu).

Programming Count Scale Factor

The first screen in the program mode is used to enter the count scale factor:

The far right digit will be flashing. Press the **RST** key until reaching the desired digit value.

Note: Pressing and holding the **RST** key will cause the numbers to autoscroll.

Next press the **←** key to move the flashing digit one place to the left. Change this digit to the desired value with the **RST** key. Repeat this process until all digits are set correctly.

Programming Decimal Point

The second screen is used to enter the decimal point display on the totalizer screen. Press and hold the **←** key and then press the **RST** key to move from screen one to screen two.

Press the **RST** key to move the decimal point to the desired position.

Programming Offset Value

Programming an offset value allows the counter to reset to a value other than zero. The offset may be up to six digits. The offset cannot be a negative number.

The third screen in the program mode is used to enter the offset value.

The far right digit will be flashing. Press the **RST** key until reaching the desired digit value.

Note: Pressing and holding the **RST** key will cause the numbers to autoscroll.

Next press the **←** key to move the flashing digit one place to the left. Change this digit to the desired value with the **RST** key. Repeat this process until all digits are set correctly.

Enabling the Front Panel Reset Key

The fourth screen in the program mode allows the user to enable or disable the front panel reset key.

Press the **RST** key to choose the option you want.

Note: The reset terminal on the rear panel is still active when the front reset button is disabled.

To exit the program mode, break the connection between terminals 1 and 5.

WIRING RECOMMENDATIONS

Following these suggestions will increase noise immunity and lengthen unit life.

Cable: The connection between the count source and the ratemeter should be made with a two-conductor shielded cable. The shield should be connected to earth ground at one end only. The connecting cable should not be run in conduits with cables switching high inductive loads.

Relay Coil Suppression: If a relay contact is used as a count source, the relay coil should be suppressed. This can be accomplished with an RC network for AC coils or a diode for DC coils. The Durant RC suppressor (38091-400) may be used.

Mounting: The totalizer should not be mounted near a solenoid or other inductive devices. Enough ventilation should be supplied to keep the ratemeter operating within the temperature specifications. Do not mount this unit in a heavy vibration area.

BATTERY SAFETY

The lithium battery that powers your device contains inflammable materials such as lithium organic solvent, and other chemical ingredients. Explosion or fire may result if the battery is not handled correctly. To avoid an accident follow these guidelines:

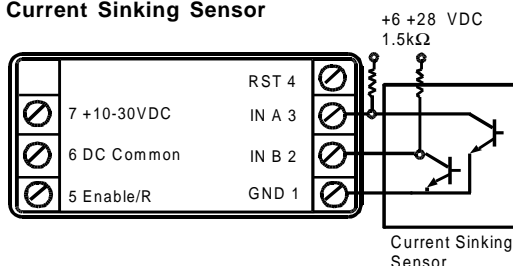

- * Do not heat batteries above 95°C
- * Do not recharge lithium batteries
- * Do not dispose of batteries in fire
- * Insert battery with correct polarity

WARRANTY: Eaton warrants all products against defects in material and workmanship for a period of one (1) year from the date of shipment to Buyer. This is a limited warranty limited to its terms. This warranty is void if the product has been altered, misused, taken apart or otherwise abused. ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, ARE EXCLUDED, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR PURPOSE.

BUYERS REMEDIES: Eaton's obligations and liabilities under the foregoing warranty are limited to repair or replacement of the product without charge. To receive the required Return Goods Authorization number (RGA), contact your local Durant distributor or call 800-410-2910. A charge is made for repairing after the expiration of the warranty. IN NO EVENT SHALL EATON BE LIABLE FOR CLAIMS BASED UPON BREACH OF EXPRESS OR IMPLIED WARRANTY OR NEGLIGENCE OR ANY OTHER DAMAGES WHETHER DIRECT, IMMEDIATE, FORESEEABLE, CONSEQUENTIAL OR SPECIAL OR FOR ANY EXPENSES INCURRED BY REASON OF THE USE OR MISUSE, SALE OR FABRICATION OF PRODUCTS WHICH DO OR DO NOT CONFORM TO THE TERMS AND CONDITIONS OF THIS CONTRACT.

INDEMNIFICATION: Buyer agrees to hold Eaton harmless from, defend, and indemnify Eaton against damages, claims and expenses arising out of subsequent sales of Durant products or products containing components manufactured by Eaton and based upon personal injuries, deaths, property damage, lost profits, and other matters for which Buyer, its employees or sub-contractors are or may be to any extent liable, including without limitation penalties imposed by the Consumer Product Safety Act (P.L.92-573) and liability imposed upon any person pursuant to the Magnuson-

Courier Models: 	53300-401	Add/Subtract Totalizer (Solid State Inputs)
	53300-402	Add/Subtract Totalizer (Contact Inputs)
	53302-401	Add/Subtract Totalizer (Solid State Inputs) w/Backlight
	53302-402	Add/Subtract Totalizer (Contact Inputs) w/Backlight

POWER

Internal Battery: 3V, Lithium.
Life expectancy: 5 years +.
Replacement Part: 36367-202.

BACKLIGHT

10-30 VDC @ 30 mA max.
(Derate operating temperature 1°C/Volt above 17VDC.)
Reverse polarity protected.

PHYSICAL

Operating Temperatures: 53300 is -20° to 70°C.
53302 is -20° to 55°C with
backlight on.
Storage Temperature: -20° to 70°C.
Operating Humidity: 60% Non-condensing.
Weight: 2.2 oz. net.
Display Size: .43" high.
Front Panel Rating: NEMA 4X when mounted with
gasket provided.
Case Material: Cycolac X-17.

TOTALIZER

Type: Up/Down Counting.
Digits: 8 digits positive/minus sign and 7 digits negative.
Scaler: 0.0001 - 100.0000.
(0.0000 scales by 100 in the Courier Series).
Decimal Point: 5 positions, programmable.

COUNT ACCURACY

100% when operated within specifications.

DC COMMON (Terminal 1)

RESET INPUT (Terminal 4)

Resets totalizer when connected to DC common.
Min. Low Time: 0.25 to 1.0 sec. (maintained).
The required pulse width varies with count speed, scale
factor and number of digits displayed.
Voltage Thresholds: Low 0 to 0.4 VDC.
High 2.0 to 28 VDC.

COUNT INPUT A (SUBTRACT); COUNT INPUT B (ADD) (TERMINALS 2 & 3)

Model -401

Inputs A & B require a voltage source, such as a current sourcing
sensor or a current sinking sensor used with the provided pull up
resistors.

Speed: 0 to 10 kHz.
Min Low Time: 80 microseconds.
Min High Time: 20 microseconds.
(These times are with a 0.0V to 5.0V swing).
Input Impedance: 2KΩ above 5 VDC.
Voltage Thresholds: Low 0 to 1.2 VDC.
High 2.0 to 28 VDC.
Max High 28 VDC.

Model - 402

Inputs A & B are designed for contact closures to DC common.
Speed; 0 to 20 Hz.
Min Low Time: 10 milliseconds.
Min High Time: 40 milliseconds.
Input Impedance: 101K½.
Voltage Thresholds: Low 0 to 0.4 VDC.
High 2.0 to 28 VDC.
Max High 28 VDC.

PROGRAM ENABLE INPUT (Terminal 5)

Operation: Level sensitive (maintained).
