2 Before use

2.1 The name and illustration of each part

2.1.1 Technical parameter

Host

Mode

Dimension (length×width×thickness)

105.5mm ×50.5mm ×16mm

Weight about 140g (with 1800mAh battery)

Lithium battery

Mode

Voltage 3.7V

Charge voltage limited 4.2V

Rating capacity 1800mAh

Continual standby time about 50 to 150 hours

Continual call time about 3 to 5 hours

Portable charger

Mode

Input

100~240V 50~60Hz 450mA

2.1.2 Icon

Under standby interface, small icon may appear, specified as the following:

| icon | illustration |
|---|--|
|  | Intensity of network signal |
|  | Available to use GPRS service |
|  | Start vibrator |
|  | Receive new message |
|  | Receive new multimedia message |
|  | Alarm clock has been enacted and started |
|  | Symbol of inserting earphone |
|  | Start call divert function |
|  | Keyboard locked |
|  | Lock keyboard |
|  | Display battery capacity |
|  | Show missed call |
|  | Start chat function |

| | |
|---|--|
|  | Start multi-direction stopwatch function |
|  | Receive new service message |
|  | Open Bluetooth headset |
|  | Bluetooth headset match successfully |

2.2 Keystroke illustration

1. Navigation key

(1) Up direction key: press up direction key when compiling; press this key to setup music player.

(2) Down direction key: press down direction key when compiling; press this key to alarm clock.

(3) Left direction key: press left direction key when compiling; press this key to user profile.

(4) Right direction key: press right direction key when compiling; press this key to setup the ring setup.

(5) OK key: generally, select menu and press confirmation key; press it to enter into main menu; press it to start or pause capturing picture and video when entering camera interface.

2. Number key

Input number and character; you can setup any number from 2 to 9 as quick dial.

3. Dial Key G1

Dial and receive incoming call by using card A; draw out dialed record in standby state.

4. Dial Key G2

Dial and receive incoming call by using card B; draw out dialed record in standby state.

5. Dial key TV

Press it to enter into quick TV display interface in standby state.

6. Left soft key

Execute the functions displayed in the inducting symbol at the left corner, and press it to enter into main menu in standby interface.

7. Right soft key

Execute the functions displayed in the inducting symbol at the right corner, and press it to enter phone book in standby interface.

8. Ring off key

Close talk or reject incoming call; press this key to return to standby state in other situation.

8. *Key

Input all special symbols, Chinese punctuation; press it continually to enter +, P,W.

9. # key

Press # key momentarily to switch input mode; and continually press to switch between mute mode and common mode.

Note: “Press certain key” under the manual means immediately release after pressing; “press certain key continually” means keeping for 2 or 3 seconds after pressing.

2.3 Introduction of touch-sensitive screen's function

This mobile phone possesses perfect touch-sensitive functions.

1. The functions of the four pictures in the touch screen counting from left are detailed as follows:

Touch the first icon to enter main menu.

Touch the second icon to enter message.

Touch the third icon to enter phone book.

Touch the fourth icon to enter key dial function.

2. The functions of the five pictures in the touch silk-screen counting from left are detailed as follows:

Touch the first icon to enter main menu.

Touch the second icon to enter write message.

Touch the third icon to enter phone book.

Touch the fourth icon to enter key dial function.

Touch the fifth icon to enter music player.

2.4 Battery

The battery can run immediately after taken apart for it has charged for about 50% volume; In order to reach the optimum operation, please make use under the situation of fully charging after complete consumption.

Disassembly and installation for battery

- Please draw out the battery under the following directions: 1. unbolt the back cover 2. withdraw when uplifting from the back
- Install under the following directions: 1. Insert from the left of battery downwards 2. Shut the back cover of mobile phone.

2.5 Charging

- Connect the charger to power supply
- Insert the connector of the charger to the right flank (with the side of arrowhead upward)
- The indicator at the right- up will bicker circularly; the symbol of charging will occur to show charging just in execution under power off state. The symbol of charging will occur after a while if the phone is overspent when it is in serious lack.
- Charging has been finished when the indicating symbol at the right-up corner is in full state and without twinkling .The picture will display in the screen when charging completed if charging under power off state. This process usually takes about 3~4 hours. It's normal if battery, mobile phone and charger get hot during charging.
- Cut off the power supply and make mobile phone and charger disconnected.

Notes:

- Please charge with the charger supplied by manufacturer at the temperature range from 5°C to 40°C in the ventilative place. The use of non-rated charger will induce both danger and disobey of certification and repair guaranteed terms.
- Please charge promptly when mobile phone automatically powers off or shows the warning “battery is running out”.
- The standby and talk time provided by manufacturer is based on ideal situation. Practical working time will change with network status, operation environment and operation manner.
- The right installation of battery should be insured before charging, in

which it can't be drawn out.

- The charger must be disconnected from mobile phone and power supply after charging completely.
- Charging will re-start when the volume has consumed to some extent after about 5 to 8 hours if charger doesn't disconnect from phone and power supply. We strongly advice you not to do so for the performance and life span of your battery.

2.6 Connect network

2.6.1 SIM card

Before using mobile phone, you must insert the valid SIM card, which is the key to digital GSM network.

All the information related to network connection and your initialization record, as well as stored & received names, phone numbers and short messages in the SIM phone book are recorded in the metal plane area. SIM card can be withdrawn form your phone to insert to any GSM mobile phone for use (new mobile phone will automatically reads SIM card).

Please don't touch metal plane area and keep it far away from electricity and magnetism to protect from loss and break of the SIM card. Its damage will cause failure to entering GSM card.

Warning: Mobile phone must be powered off before withdrawal of SIM card. It's absolutely prohibited to insert or withdraw SIM card when the phone is connecting to power supply, otherwise, SIM card may be broken.

2.6.2 Insert and withdraw the SIM card

Please withdraw the SIM card carefully from a card before installation.

- Power off mobile phone and remove battery and other exterior power supply.
- This mobile phone support dual SIM cards mode, the position for SIM cards A and B will be decided by the option setting (Please refer to "dual card setting" in "setting"), please insert SIM card into SIM seat shown in the graph.
- Please firstly power off, draw out the battery then withdraw SIM card if need.

2.6.3 Power on/off

Press the hang key for a while to switch on/off the mobile phone, which will give you a cue to insert SIM card if it hasn't been done after the phone has been on. Then the mobile phone will automatically examine SIM card after inserting SIM card.

Then cues will occur on the screen ordinarily detailed as follows:

Input PIN1 if SIM card password has been set.

Input mobile phone password if phone unlock password has been set.

Search network. The phone will search it until finding available network. (Usually the master card firstly hunts for network, then automatically start subordinate card)

2.6.4 Unlock SIM card

PIN1 (private identification number) is encrypted to prevent from unlawful use. If so, you must input your PIN1 code to unlock your SIM card, then send or receive calling. Users can eliminate SIM card protection (please refer to chapter 3.10.6 for "security setting"). Under this instance, SIM card can't protect from unlawful use.

- Press hang off key to switch phone
- Input PIN1, eliminate errors with right soft key, then press "enter" key.
For example, you will input **1 2 3 4**

if PIN1 is set initially as 1 2 3 4 .

Your SIM card will be locked by network if input is not correct for three times continually, then the phone will inquiry you the PUK1 code, please don't input if you don't know it, but go to network operator for help. Please refer to "security setting" in chapter 3.10.6.

Note: Please modify the standard PIN1 code set by your network supplier (4

to 8 bytes) to your private password immediately. Please refer to “security setting” in chapter 3.10.6 for concrete operation.

2.6.5 Unlock phone

Mobile phone password id can be setup to prevent from unlawful use. If so, you must input your PIN1 code, next input your mobile phone password to unlock your SIM card, then send or receive calling. Users can eliminate mobile phone password protection (please refer to “security setup” in chapter 3.10.6), under this instance, phone can't protect from unlawful use.

Input mobile phone password, eliminate errors with right soft key, then press “enter” key. For example, you will input **1 1 2 2** if mobile phone password is **set initially as 1 1 2 2**.

Please contact promptly retailer or local authorized maintain service center to unlock your mobile phone password if you have forgot your mobile phone password.

2.6.6 Connect network

Mobile phone will automatically search available network (searching network shown on the screen) after successfully decoding. The name of network supplier will occur at the middle of the screen after getting in contact.

Remarks: You are beyond normal network coverage if “EMERGENCY” only displayed in the screen, but you can still send emergency call according to intensity of network.

2.6.7 Dial

You can dial or receive call if the symbol of network supplier is displayed on the screen (intensity of network signal shown at left_up corner).

Move in small region may improve calling effect, which is has too much with the barrier.

2.6.8 Dial domestic call

Press number key to input phone number, and then press dial key to make call. Please use right soft key to back delete number if modification is needed. The picture of dialing will occur on the screen during dialing, then call status information will occur after the pick up of phone, additionally together with a alert sound (network support needed) if it is opened.

| Region no | Phone no | Dial key |
|-----------|----------|----------|
|-----------|----------|----------|

2.6.9 Dial fixed branch phone

You should firstly dial telephone exchange, then branch for some branch phones can't be got through directly. The phone will click * key (now "p" displaying on screen) for you if pulse character "p" is entered between host and branch number when dialing.

Region no Host no Branch no Dial key

Demonstration for pulse character

You may dial as the following means if you own a voicemail system through dialing with box number 6666 and password 8888:

8880000 P 6666 P 8888

The first section numbers are used for dialogue voicemail system to dial.

Please send 6666 to choose box after phone answered.

The second pulse character "p" will defer for 5 seconds (the first "p" means waiting to get through, the second means 5 seconds' delay) before sending password 8888.

2.6.10 Dial international call

Please press * key until prefix "+" of international call occur on the screen, which will allow you to dial to any country without knowing of the local international call prefix (for instance, 00 for china).

Firstly enter prefix, then the country area number and complete phone numbers. The country area number is in accordance with general routine, such as 49 for Germany, 44 for UK, 46 for Sweden.

Please delete "0" before city number, which is the same as dialing international call.

For example, please dial service phone of other countries as: +86 21

114

+ Country code integrated no dialing key

2.6.11 Dial numbers in list

Each dialed and received call is stored in the list in your phone, with the recent calls at the top side (Please refer to “call record” in chapter 3.9). All numbers have been classified into dialed, received and non-received for your convenient check. The old numbers will be deleted automatically after full storage. Please operate as the follows when checking list:

- Press dial key to check dialed call
- All numbers in list can be directly dialed by pressing dialing call.

For phone no list, you may press “enter” key to check detail, enter “option” and then press “save” to store the number into phone book directly.

2.6.12 Emergency call

You are able to make emergency call in the range covered by network (please refer to signal intensity displayed in left up corner). Emergency call only will be shown on the screen if your network supplier doesn't provide ramble function. Emergency call can be made without SIM card if you are in the network range.

2.6.13 Answer

You will press dial key or left soft key, then re-press left soft key to receive call, unless you set any key to receive. You may use the key in the earphone to receive calls if it has been connected. Under the premise of earphone connected, call will be got through automatically in 5 seconds of vibrating-ringing and vibrating for your convenience if you have set “ auto receive” .

2.6.14 Call record

The latest call record and all call time since the first use will be stored by your phone (please refer “call record” at chapter 3.9).

2.6.15 Call menu

Under call mode, press “H-F” key to enter hand-free function, and press “option” to enter call option, which is operated the same as function menu.

The calling menu can be shown only during calling. Furthermore, call wait, call forward and multi-talk etc need network support from your network supplier.

You can operate as the follows in the calling option menu: (note: for

multi-party meeting, card B can't support this function.)

- **Pause**
Keep current call or recover call kept.
- **End**
End current call
- **New call**
- **Phone book**
Enter phone book browsing mode
- **Short message**
Edit and send a piece of short message
- **Record**
Transcribe call voice
- **Mute/ recover**
Not send (send) local tone
- **Dual tones and multi-frequency**
Press left soft key to switch on or off dual tones and multi-frequency

(Note: above operation for card B can't support pause/new call/record functions.)

➤ You can operate as below when dual cards call simultaneously

- Receiving card A and refusing card B
Only receiving card A and hand up card B
- Receiving card B and refusing card A
Only receiving card B and hand up card A
- Receiving both
Receiving two calls simultaneously

➤ You can operate as below when dual cards call simultaneously

- End one line
End current selected call
- End two lines
End both two calls

3 Function menu

3.1 Use of function menu

Search selection function by rolling

- Press touch-sensitive screen to enter main menu under

standby state

- Press touch-sensitive screen to reach functions needed, then enter or exit menu according to alert under all main and sub-menu.

Exit menu

Generally, you can either press “right soft key” or touch the small icon by touch-sensitive pen at the down- right corner to exit certain menu; press “hang key” to return to standby interface.

3.2 Function menu configuration

Function menu default configuration shows as below after inserting SIM card under power-on state.

1. phone book
