## Getting to Know Your Switch

### 1.1 About the IES-2206F-II Industrial Switch

The IES-2206F-II are powerful managed industrial switches which have many features. These switches can work under wide temperature, dusty environment and humid condition. They can be managed by WEB, TELNET, Console or other third-party SNMP software as well. Besides, these switches can be managed by a Windows utility that we called Lantech-VIEW.

Lantech-VIEW is powerful network management software. With its friendly and powerful interface, you can easily configure multiple switches at the same time, and monitor switches' status. **(The free version of Lantech – View can monitor up to 10 switches)**

### 1.2 Software Features

- World's fastest Redundant Ethernet Ring (Recovery time < 10ms over 250 units connection)
- Supports Coupling Ring, Dual Homing, RSTP over X-Ring
- Supports SNMPv1/v2/v3 & RMON & Port base/802.1Q VLAN Network Management
- Event notification by Email, SNMP trap and Relay Output
- Web-based ,Telnet, Console, CLI configuration
- Enable/disable ports, MAC based port security
- Port based network access control (802.1x)
- VLAN (802.1q ) to segregate and secure network traffic
- Radius centralized password management
- SNMPv3 encrypted authentication and access security
- RSTP (802.1w)
- Quality of Service (802.1p) for real-time traffic
- VLAN (802.1q) with double tagging and GVRP supported
- IGMP Snooping for multicast filtering
- Port configuration, status, statistics, mirroring, security
- Remote Monitoring (RMON)

## 1.3 Hardware Features

- Redundant three DC power inputs ( two on terminal block & one on power jack)
- Operating Temperature: -20 to 60°C (Wide temperature model: -40 to 75 °C)
- Storage Temperature: -20 to 85 °C
- Operating Humidity: 5% to 95%, non-condensing
- Casing: IP-30
- 10/100Base-T(X) Ethernet port
- 100Base-FX Fiber port
- Console Port
- Dimensions(W x D x H) : 52 mm(W)x 106 mm( D )x 144 mm(H)

# 2

## Hardware Installation

### 2.1 Installation Switch on DIN-Rail

Each switch has a Din-Rail kit on rear panel. The Din-Rail kit helps switch to fix on the Din-Rail. It is easy to install the switch on the Din-Rail:

#### 2.1.1 Mount IES-2206F-II on DIN-Rail

Step 1: Slant the switch and mount the metal spring to Din-Rail.

Metal Spring

Step 2: Push the switch toward the Din-Rail until you heard a “click” sound.

## 2.2 Wall Mounting Installation

Each switch has another installation method for users to fix the switch. A wall mount panel can be found in the package. The following steps show how to mount the switch on the wall:

### 2.2.1 Mount IES-2206F-II on wall

Step 1: Remove Din-Rail kit.

Step 2: Use 6 screws that can be found in the package to combine the wall mount panel. Just like the picture shows below:

The screws specification shows in the following two pictures. In order to prevent switches from any damage, the screws should not larger than the size that used in IES-2206F-II switches.

Step 3: Mount the combined switch on the wall.

# 3

## Hardware Overview

### 3.1 Front Panel

The following table describes the labels that stick on the IES-2206F-II.

Port	Description
<b>10/100 RJ-45 fast Ethernet ports</b>	6 10/100Base-T(X) RJ-45 fast Ethernet ports support auto-negotiation. Default Setting : Speed: auto Duplex: auto Flow control : disable
<b>Fiber port</b>	100BaseFX for IES-2206F II Series
<b>Console</b>	Use RS-232 with RJ-45 connector to manage switch.
<b>Reset</b>	Push reset bottom 2 to 3 seconds to reset the switch. Push reset bottom 5 second to reset the switch into <b>Factory Default</b> .

IES-2206F-II

1. LED for PWR1. When the PWR1 links, the green led will be light on.
2. LED for PWR2. When the PWR2 links, the green led will be light on.
3. LED for PWR3. When the PWR3 links, the green led will be light on.
4. LED for R.M (Ring master). When the LED light on, it means that the switch is the ring master of X-Ring.
5. LED for Ring. When the led light on, it means the X-Ring is activated.
6. LED for Fault Relay. When the fault occurs, the amber LED will be light on.
7. Reset bottom. Push the bottom 3 seconds for reset; 5 seconds for factory default.
8. 10/100Base-T(X) Ethernet ports..
9. LED for Ethernet ports status.
10. 100BaseFX fiber port.
11. LED for fiber port.
12. Console port (RJ-45).
13. Model name

### 3.2 Front Panel LEDs

LED	Color	Status	Description
<b>PW1</b>	Green	On	DC power module 1 activated.
<b>PW2</b>	Green	On	DC power module 2 activated.
<b>PW3</b>	Green	On	Power jack activated.
<b>R.M</b>	Green	On	X-Ring Master.
<b>Ring</b>	Green	On	X-Ring enabled.
		Slowly blinking	X-Ring has only One link. (lack of one link to build the ring.)
		Fast blinking	X-Ring work normally.
<b>Fault</b>	Amber	On	Fault relay. Power failure or Port down/fail.
10/100Base-T(X) Fast Ethernet ports			
<b>LNK</b>	Green	On	Port link up.
<b>ACT</b>	Green	Blinking	Data transmitted.
<b>Full Duplex</b>	Amber	On	Port works under full duplex.
Fiber ports			
<b>ACT</b>	Green	Blinking	Data transmitted.
<b>LNK</b>	Amber	On	Port link up.

### 3.3 Bottom Panel

The bottom panel components of IES-2206F-II are showed as below:

1. Terminal block includes: PWR1, PWR2 (12-48V DC) and Relay output (1A@24VDC).
2. Power jack for PWR3 (12-45VDC).

PWR1, PWR2 (12-48V DC) and  
Relay output (1A@24VDC).

Power jack for PWR3 (12-45VDC)

### 3.4 Rear Panel

The rear panel components of IES-2206F-II are showed as below:

1. Screw holes for wall mount kit.
2. Din-Rail kit

# 4

## Cables

### 4.1 Ethernet Cables

The IES-2206F-II switches have standard Ethernet ports. According to the link type, the switches use CAT 3, 4, 5, 5e UTP cables to connect to any other network device (PCs, servers, switches, routers, or hubs). Please refer to the following table for cable specifications.

Cable Types and Specifications

Cable	Type	Max. Length	Connector
10BASE-T	Cat. 3, 4, 5 100-ohm	UTP 100 m (328 ft)	RJ-45
100BASE-TX	Cat. 5 100-ohm UTP	UTP 100 m (328 ft)	RJ-45

#### 4.1.1 100BASE-TX/10BASE-T Pin Assignments

With 100BASE-TX/10BASE-T cable, pins 1 and 2 are used for transmitting data, and pins 3 and 6 are used for receiving data.

RJ-45 Pin Assignments

Pin Number	Assignment
1	TD+
2	TD-
3	RD+
4	Not used
5	Not used
6	RD-
7	Not used
8	Not used

The IES-2206F-II switches support auto MDI/MDI-X operation. You can use a straight-through cable to connect PC to switch. The following table below shows the 10BASE-T/ 100BASE-TX MDI and MDI-X port pin outs.

MDI/MDI-X pins assignment

Pin Number	MDI port	MDI-X port
1	TD+(transmit)	RD+(receive)
2	TD-(transmit)	RD-(receive)
3	RD+(receive)	TD+(transmit)
4	Not used	Not used
5	Not used	Not used
6	RD-(receive)	TD-(transmit)
7	Not used	Not used
8	Not used	Not used

**Note:** "+" and "-" signs represent the polarity of the wires that make up each wire pair.

## 4.2 Fibers

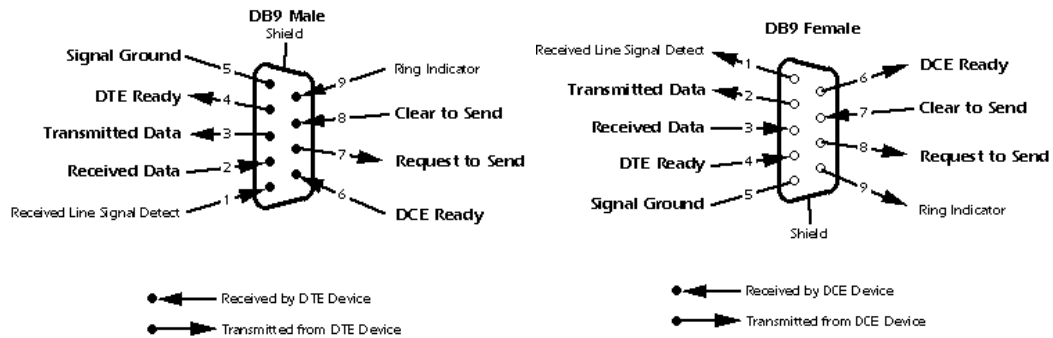

The fiber optical ports are in multi-mode (0 to 2 km, 1310 nm (50/125 μm, 62.5/125 μm) and single-mode with SC connector. Please remember that the TX port of Switch A should be connected to the RX port of Switch B.

### 4.3 Console Cable

IES-2206F II Series switches can be management by console port. The DB-9 to RJ-45 cable can be found in the package. You can connect them to PC via a RS-232 cable with DB-9 female connector and the other end (RJ-45 connector) connects to console port of switch.

PC pin out (male) assignment	RS-232 with DB9 female connector	DB9 to RJ 45
Pin #2 RD	Pin #2 TD	Pin #2
Pin #3 TD	Pin #3 RD	Pin #3
Pin #5 GD	Pin #5 GD	Pin #5

# 5

## WEB Management

### 5.1 Configuration by Web Browser

This section introduces the configuration by Web browser.

#### 5.1.1 About Web-based Management

Inside the CPU board of the switch, an embedded HTML web site resides in flash memory. It contains advanced management features and allows you to manage the switch from anywhere on the network through a standard browser such as Microsoft Internet Explorer.

The Web-Based Management supports Internet Explorer 5.0. It is based on Java Applets with an aim to reduce network bandwidth consumption, enhance access speed and present an easy viewing screen.

**Note:** By default, IE5.0 or later version does not allow Java Applets to open sockets. You need to explicitly modify the browser setting in order to enable Java Applets to use network ports.

#### Preparing for Web Management

The default value is as below:

IP Address: **192.168.10.1**

Subnet Mask: **255.255.255.0**

Default Gateway: **192.168.10.254**

User Name: **admin**

Password: **admin**

## System Login

1. Launch the Internet Explorer.
2. Type http:// and the IP address of the switch. Press “Enter”.

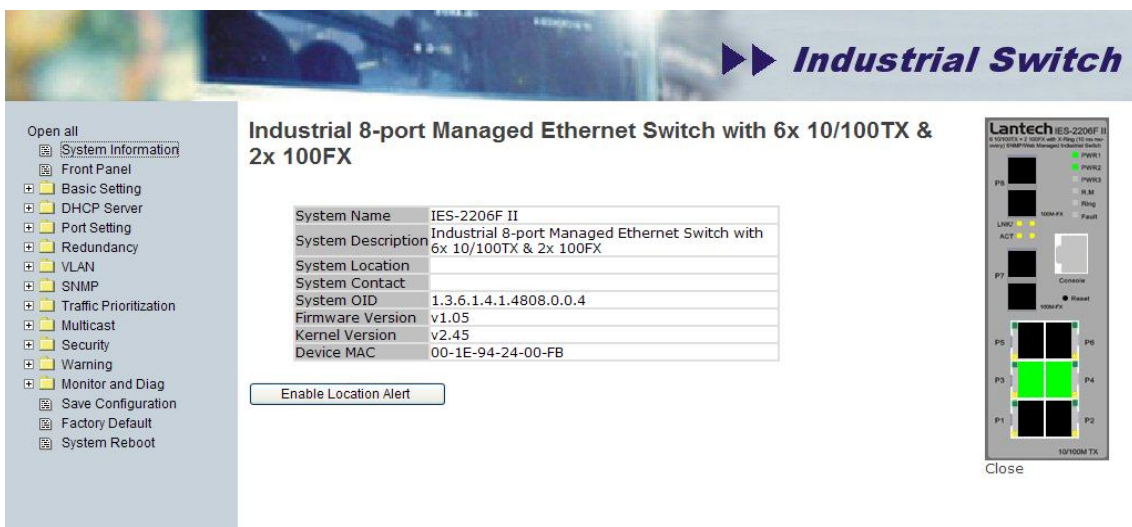

3. The login screen appears.
4. Key in the username and password. The default username and password is “admin”.
5. Click “Enter” or ”OK” button, then the main interface of the Web-based management appears.

Login screen

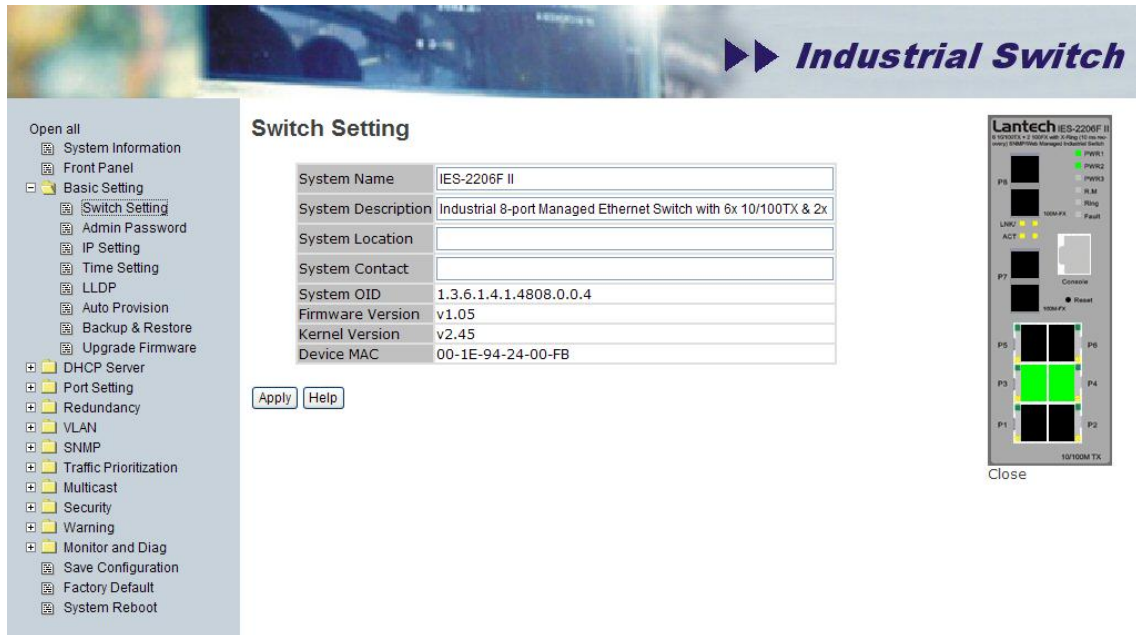

## Main Interface

Main interface

## 5.1.2 Basic Setting

### 5.1.2.1 Switch setting

Switch setting interface

The following table describes the labels in this screen.

Label	Description
<b>System Name</b>	Assign the name of switch. The maximum length is 64 bytes
<b>System Description</b>	Display the description of switch.
<b>System Location</b>	Assign the switch physical location. The maximum length is 64 bytes
<b>System Contact</b>	Enter the name of contact person or organization
<b>Firmware Version</b>	Display the switch's firmware version
<b>Kernel Version</b>	Display the kernel software version
<b>MAC Address</b>	Display the unique hardware address assigned by manufacturer (default)

### 5.1.2.2 Admin Password

Change web management login username and password for the management security issue

#### Admin Password

User Name	<input type="text" value="admin"/>
New Password	<input type="text"/>
Confirm Password	<input type="text"/>

Admin Password interface

The following table describes the labels in this screen.

Label	Description
<b>User name</b>	Key in the new username(The default is “ <b>admin</b> ”)
<b>New Password</b>	Key in the new password(The default is “ <b>admin</b> ”)
<b>Confirm password</b>	Re-type the new password.
<b>Apply</b>	Click “ <b>Apply</b> ” to set the configurations.

### 5.1.2.3 IP configuration

You can configure the IP Settings and DHCP client function through IP configuration.

#### IP Setting

**DHCP Client :**

IP Address	<input type="text" value="192.168.16.88"/>
Subnet Mask	<input type="text" value="255.255.255.0"/>
Gateway	<input type="text" value="192.168.16.254"/>
DNS1	<input type="text" value="0.0.0.0"/>
DNS2	<input type="text" value="0.0.0.0"/>

IP Configuration interface

The following table describes the labels in this screen.

Label	Description
<b>DHCP Client</b>	To enable or disable the DHCP client function. When DHCP client function is enabling, the switch will be assigned the IP address from the network DHCP server. The default IP address will be replaced by the IP address which the DHCP server has assigned. After clicking “ <b>Apply</b> ” button, a popup dialog show up up to inform the you when the DHCP client is enabling. The current IP will lose and you should find a new IP on the DHCP server.
<b>IP Address</b>	Assign the IP address that the network is using. If DHCP client function is enabling, you do not need to assign the IP address. The network DHCP server will assign the IP address for the switch and it will be display in this column. The default IP is 192.168.10.1
<b>Subnet Mask</b>	Assign the subnet mask of the IP address. If DHCP client function is enabling, you do not need to assign the subnet mask
<b>Gateway</b>	Assign the network gateway for the switch. The default gateway is 192.168.10.254
<b>DNS1</b>	Assign the primary DNS IP address
<b>DNS2</b>	Assign the secondary DNS IP address
<b>Apply</b>	Click “ <b>Apply</b> ” to set the configurations.

### 5.1.2.4 SNTP Configuration

The SNTP (Simple Network Time Protocol) settings allow you to synchronize switch clocks in the Internet.

## SNTP

**SNTP Client :**  ▾

UTC Timezone	(GMT)Greenwich Mean Time: Dublin, Edinburgh, Lisbon, London ▾
SNTP Server Address	<input type="text" value="0.0.0.0"/>
Current System Time	<input type="text"/>

**Daylight Saving Time :**  ▾

Daylight Saving Period	<input type="text" value="2010"/> ▾ / <input type="text" value="Jul"/> ▾ / <input type="text" value="28"/> ▾ <input type="text" value="07"/> ▾ ~ <input type="text" value="2010"/> ▾ / <input type="text" value="Jul"/> ▾ / <input type="text" value="28"/> ▾ <input type="text" value="07"/> ▾
Daylight Saving Offset	<input type="text" value="0"/> (hours)

SNTP Configuration interface

The following table describes the labels in this screen.

Label	Description
<b>SNTP Client</b>	Enable or disable SNTP function to get the time from the SNTP server.
<b>Daylight Saving Time</b>	Enable or disable daylight saving time function. When daylight saving time is enabling, you need to configure the daylight saving time period.
<b>UTC Time zone</b>	Set the switch location time zone. The following table lists the different location time zone for your reference.

Local Time Zone	Conversion from UTC	Time at 12:00 UTC
November Time Zone	- 1 hour	11 am
Oscar Time Zone	-2 hours	10 am
ADT - Atlantic Daylight	-3 hours	9 am
AST - Atlantic Standard EDT - Eastern Daylight	-4 hours	8 am
EST - Eastern Standard CDT - Central Daylight	-5 hours	7 am
CST - Central Standard MDT - Mountain Daylight	-6 hours	6 am
MST - Mountain Standard	-7 hours	5 am

PDT - Pacific Daylight		
PST - Pacific Standard ADT - Alaskan Daylight	-8 hours	4 am
ALA - Alaskan Standard	-9 hours	3 am
HAW - Hawaiian Standard	-10 hours	2 am
Nome, Alaska	-11 hours	1 am
CET - Central European FWT - French Winter MET - Middle European MEWT - Middle European Winter SWT - Swedish Winter	+1 hour	1 pm
EET - Eastern European, USSR Zone 1	+2 hours	2 pm
BT - Baghdad, USSR Zone 2	+3 hours	3 pm
ZP4 - USSR Zone 3	+4 hours	4 pm
ZP5 - USSR Zone 4	+5 hours	5 pm
ZP6 - USSR Zone 5	+6 hours	6 pm
WAST - West Australian Standard	+7 hours	7 pm
CCT - China Coast, USSR Zone 7	+8 hours	8 pm
JST - Japan Standard, USSR Zone 8	+9 hours	9 pm
EAST - East Australian Standard GST Guam Standard, USSR Zone 9	+10 hours	10 pm
IDLE - International Date Line NZST - New Zealand Standard NZT - New Zealand	+12 hours	Midnight

Label	Description
<b>SNTP Sever IP Address</b>	Set the SNTP server IP address.

<b>Daylight Saving Period</b>	Set up the Daylight Saving beginning time and Daylight Saving ending time. Both will be different each year.
<b>Daylight Saving Offset</b>	Set up the offset time.
<b>Switch Timer</b>	Display the switch current time.
<b>Apply</b>	Click " <b>Apply</b> " to set the configurations.

### 5.1.2.5 DHCP Server

#### DHCP Server – Setting

The system provides with DHCP server function. Enable the DHCP server function, the switch system will be a DHCP server.

### DHCP Server - Setting

DHCP Server :  ▾

Start IP Address	<input type="text" value="192.168.10.2"/>
End IP Address	<input type="text" value="192.168.10.200"/>
Subnet Mask	<input type="text" value="255.255.255.0"/>
Gateway	<input type="text" value="192.168.10.254"/>
DNS	<input type="text" value="0.0.0.0"/>
Lease Time (Hour)	<input type="text" value="168"/>

DHCP Server Setting interface

The following table describes the labels in this screen.

Label	Description
<b>DHCP Server</b>	Enable or Disable the DHCP Server function. Enable – the switch will be the DHCP server on your local network
<b>Start IP Address</b>	The dynamic IP assign range. Low IP address is the beginning of the dynamic IP assigns range. For example: dynamic IP assign range is from 192.168.1.100 to 192.168.1.200. 192.168.1.100 will be the Start IP address.
<b>End IP Address</b>	The dynamic IP assign range. High IP address is the end of the dynamic IP assigns range. For example: dynamic IP assign range is from 192.168.1.100 to 192.168.1.200. 192.168.1.200 will be the End IP address
<b>Subnet Mask</b>	The dynamic IP assign range subnet mask
<b>Gateway</b>	The gateway in your network.
<b>DNS</b>	Domain Name Server IP Address in your network.
<b>Lease Time (Hour)</b>	It is the period that system will reset the assigned dynamic IP to ensure the IP address is in used.
<b>Apply</b>	Click <b>“Apply”</b> to set the configurations.

**DHCP Server – Client List**

When the DHCP server function is activated, the system will collect the DHCP client information and display in here.

**DHCP Server - Client List**

IP Address	MAC Address	Type	Status	Lease
------------	-------------	------	--------	-------

DHCP Server Client List interface

**DHCP Server – Port and IP bindings**

You can assign the specific IP address which is in the assigned dynamic IP range to the specific port. When the device is connecting to the port and asks for dynamic IP assigning, the system will assign the IP address that has been assigned before in the connected device.

**DHCP Server - Port and IP Binding**

Port No.	IP Address
Port.01	<input type="text" value="0.0.0.0"/>
Port.02	<input type="text" value="0.0.0.0"/>
Port.03	<input type="text" value="0.0.0.0"/>
Port.04	<input type="text" value="0.0.0.0"/>
Port.05	<input type="text" value="0.0.0.0"/>
Port.06	<input type="text" value="0.0.0.0"/>
Port.07	<input type="text" value="0.0.0.0"/>
Port.08	<input type="text" value="0.0.0.0"/>

DHCP Server Port and IP Binding interface

### 5.1.2.6 Backup & Restore

You can save current EEPROM value from the switch to TFTP server, then go to the TFTP restore configuration page to restore the EEPROM value.

## Backup & Restore

### Restore Configuration From TFTP Server

TFTP Server IP Address	<input type="text" value="192.168.10.66"/>
Restore File Name	<input type="text" value="data.bin"/>
<input type="button" value="Restore"/> <input type="button" value="Help"/>	

### Backup Configuration To TFTP Server

TFTP Server IP Address	<input type="text" value="192.168.10.66"/>
Backup File Name	<input type="text" value="data.bin"/>
<input type="button" value="Backup"/> <input type="button" value="Help"/>	

Backup & Restore interface

The following table describes the labels in this screen.

Label	Description
<b>TFTP Server IP Address</b>	Fill in the TFTP server IP
<b>Restore File Name</b>	Fill the file name.
<b>Restore</b>	Click “ <b>restore</b> ” to restore the configurations.
<b>Restore File Name</b>	Fill the file name.
<b>Restore</b>	Click “ <b>restore</b> ” to restore the configurations.
<b>Backup</b>	Click “ <b>backup</b> ” to backup the configurations.

### 5.1.2.7 Upgrade Firmware

Upgrade Firmware allows you to update the switch firmware. Before updating, make sure you have your TFTP server ready and the firmware image is on the TFTP server.

#### Upgrade Firmware

TFTP Server IP	192.168.10.66
Firmware File Name	image.bin

Upgrade Firmware interface

### 5.1.2.8 Auto Provision

Auto Provision allows you to update the switch firmware automatically. You can put firmware or configuration file on TFTP server. When you reboot the switch, it will upgrade automatically. Before updating, make sure you have your TFTP server ready and the firmware image and configuration file is on the TFTP server.

#### Auto Provision

<input type="checkbox"/> Auto Install Configuration file from TFTP server?	
TFTP Server IP Address	192.168.10.66
Configuration File Name	data.bin
<input type="checkbox"/> Auto Install Firmware image file from TFTP server?	
TFTP Server IP Address	192.168.10.66
Firmware File Name	image.bin

Auto Provision interface

### 5.1.2.9 Factory Default

## Factory Default

- Keep current IP address setting?
- Keep current username & password?

Factory Default interface

Reset switch to default configuration. Click  to reset all configurations to the default value. You can select “**Keep current IP address setting**” and “**Keep current username & password**” to prevent IP and username and password from default.

### 5.1.2.10 System Reboot

## System Reboot

Please click [\[Reboot\]](#) button to restart switch device.

System Reboot interface

### 5.1.3 Port Configuration

#### 5.1.3.1 Port Control

By this function, you can set the state, speed/duplex, flow control, and security of the port.

### Port Control

Port No.	State	Speed/Duplex	Flow Control	Security
Port.01	Enable ▾	AutoNegotiation ▾	Symmetric ▾	Disable ▾
Port.02	Enable ▾	AutoNegotiation ▾	Symmetric ▾	Disable ▾
Port.03	Enable ▾	AutoNegotiation ▾	Symmetric ▾	Disable ▾
Port.04	Enable ▾	AutoNegotiation ▾	Symmetric ▾	Disable ▾
Port.05	Enable ▾	AutoNegotiation ▾	Symmetric ▾	Disable ▾
Port.06	Enable ▾	AutoNegotiation ▾	Symmetric ▾	Disable ▾
Port.07	Enable ▾	100 Full ▾	Symmetric ▾	Disable ▾
Port.08	Enable ▾	100 Full ▾	Symmetric ▾	Disable ▾

Apply Help

Port Control interface

The following table describes the labels in this screen.

Label	Description
<b>Port NO.</b>	Port number for setting.
<b>Speed/Duplex</b>	You can set Autonegotiation,100 full ,100 half,10 full,10 half mode.
<b>Flow Control</b>	Support symmetric and asymmetric mode to avoid packet loss when congestion occurred.
<b>Security</b>	Support port security function. When enable the function, the port will STOP learning MAC address dynamically.
<b>Apply</b>	Click “ <b>Apply</b> ” to set the configurations.

### 5.1.3.2 Port Status

The following information provides the current port status information

#### Port Status

Port No.	Type	Link	State	Speed/Duplex	Flow Control
Port.01	100TX	Down	Enable	N/A	N/A
Port.02	100TX	Down	Enable	N/A	N/A
Port.03	100TX	UP	Enable	100 Full	Disable
Port.04	100TX	UP	Enable	100 Full	Enable
Port.05	100TX	Down	Enable	N/A	N/A
Port.06	100TX	Down	Enable	N/A	N/A
Port.07	100FX	Down	Enable	N/A	N/A
Port.08	100FX	Down	Enable	N/A	N/A

Port Status interface

### 5.1.3.3 Rate Limit

By this function, You can limit traffic of all ports, including broadcast, multicast and flooded unicast. You can also set “Ingress” or “Egress” to limit traffic received or transmitted bandwidth.

#### Rate Limit

Port No.	Ingress Limit Frame Type	Ingress	Egress
Port.01	All	0 kbps	0 kbps
Port.02	All	0 kbps	0 kbps
Port.03	All	0 kbps	0 kbps
Port.04	All	0 kbps	0 kbps
Port.05	All	0 kbps	0 kbps
Port.06	All	0 kbps	0 kbps
Port.07	All	0 kbps	0 kbps
Port.08	All	0 kbps	0 kbps

Rate range is from 100 kbps to 102400 kbps (i.e. 100Mbps) for mega-ports, or 256000 kbps (i.e. 250Mbps) for giga-ports. Zero means no limit.

Rate Limit interface

The following table describes the labels in this screen.

Label	Description
<b>Ingress Limit Frame Type</b>	You can set “all”, “Broadcast only”, “Broadcast/Multicast”

	or "Broadcast/Multicast/Flooded Unicast" mode.
<b>Ingress</b>	The switch port received traffic.
<b>Egress</b>	The switch port transmitted traffic.
<b>Apply</b>	Click " <b>Apply</b> " to set the configurations.

### 5.1.3.4 Port Trunk

#### Port Trunk – Setting

You can select static trunk or 802.3ad LACP to combine several physical link with a logical link to increase the bandwidth.

#### Port Trunk - Setting

Port No.	Group ID	Type
Port.01	None ▼	Static ▼
Port.02	None ▼	Static ▼
Port.03	None ▼	Static ▼
Port.04	None ▼	Static ▼
Port.05	None ▼	Static ▼
Port.06	None ▼	Static ▼
Port.07	None ▼	Static ▼
Port.08	None ▼	Static ▼

Note: the types should be the same for all member ports in a group.

#### 802.3ad LACP Work Ports

Group ID	Work Ports
Trunk1	max ▼
Trunk2	max ▼
Trunk3	max ▼
Trunk4	max ▼

## 5.1.4 Redundancy

### 5.1.4.1 Pro-Ring

Pro-Ring is the most powerful Ring in the world. Pro-Ring Supports 3 Ring topology: X-Ring, Coupling Ring and Dual Homing. The recovery time of X-Ring is less than 10 ms. It can reduce unexpected damage caused by network topology change.

**NOTE: IES-2206F-II is supporting X-Ring 10ms recovery. When IES-2206F-II is set as Master connecting with IES-2206F, the X-Ring will automatically backward compatible to 300ms. Should you need IES-2206F to be set as Master, please click on “Legacy mode” for X-Ring 300ms.**

### Redundant Ring

Apply Help

Pro-Ring interface

The following table describes the labels in this screen.

Label	Description
<b>X-Ring</b>	Mark to enable Ring.
<b>Ring Master</b>	There should be one and only one Ring Master in a ring. However if there are two or more switches which set Ring Master to enable, the switch with the lowest MAC address will be the actual Ring Master and others will be Backup Masters.
<b>1<sup>st</sup> Ring Port</b>	The primary port, when this switch is Ring Master.
<b>2<sup>nd</sup> Ring Port</b>	The backup port, when this switch is Ring Master.
<b>Coupling Ring</b>	Mark to enable Coupling Ring. Coupling Ring can be used to divide a big ring into two smaller rings to avoid effecting all

	switches when network topology change. It is a good application for connecting two Rings.
<b>Coupling Port</b>	Link to Coupling Port of the switch in another ring. Coupling Ring need four switch to build an active and a backup link. Set a port as coupling port. The coupled four ports of four switches will be run at active/backup mode.
<b>Control Port</b>	Link to Control Port of the switch in the same ring. Control Port used to transmit control signals.
<b>Dual Homing</b>	Mark to enable Dual Homing. By selecting Dual Homing mode, X-Ring will be connected to normal switches through two RSTP links (ex: backbone Switch). The two links work as active/backup mode, and connect each X-Ring to the normal switches in RSTP mode.
<b>Apply</b>	Click " <b>Apply</b> " to set the configurations.

**Note: We don't suggest you to set one switch as a Ring Master and a Coupling Ring at the same time due to heavy load.**

### 5.1.4.2 RSTP

The Rapid Spanning Tree Protocol (RSTP) is an evolution of the Spanning Tree Protocol. It provides faster spanning tree convergence after a topology change. The system also supports STP and the system will auto detect the connected device that is running STP or RSTP protocol.

#### RSTP setting

You can enable/disable RSTP function, and set parameters for each port.

### RSTP Setting

RSTP Mode:

#### Bridge Setting

Priority (0-61440)	<input type="text" value="32768"/>
Max Age Time(6-40)	<input type="text" value="20"/>
Hello Time (1-10)	<input type="text" value="2"/>
Forward Delay Time (4-30)	<input type="text" value="15"/>

#### Port Setting

Port No.	Enable	Path Cost(0:auto, 1-200000000)	Priority (0-240)	P2P	Edge

Port.08	<input type="text" value="enable"/>	<input type="text" value="20000"/>	<input type="text" value="128"/>	<input type="text" value="auto"/>	<input type="text" value="true"/>

RSTP Setting interface

The following table describes the labels in this screen.

Label	Description
<b>RSTP mode</b>	You must enable or disable RSTP function before configuring the related parameters.
<b>Priority (0-61440)</b>	A value used to identify the root bridge. The bridge with the lowest value has the highest priority and is selected as the root. If the value changes, You must reboot the switch. The value must be multiple of

	4096 according to the protocol standard rule.
<b>Max Age (6-40)</b>	The number of seconds a bridge waits without receiving Spanning-tree Protocol configuration messages before attempting a reconfiguration. Enter a value between 6 through 40.
<b>Hello Time (1-10)</b>	The time that controls switch sends out the BPDU packet to check RSTP current status. Enter a value between 1 through 10.
<b>Forwarding Delay Time (4-30)</b>	The number of seconds a port waits before changing from its Rapid Spanning-Tree Protocol learning and listening states to the forwarding state. Enter a value between 4 through 30.
<b>Path Cost (1-200000000)</b>	The cost of the path to the other bridge from this transmitting bridge at the specified port. Enter a number 1 through 200000000.
<b>Priority (0-240)</b>	Decide which port should be blocked by priority in LAN. Enter a number 0 through 240. The value of priority must be the multiple of 16
<b>Admin P2P</b>	Some of the rapid state transactions that are possible within RSTP are dependent upon whether the port concerned can only be connected to exactly one other bridge (i.e. It is served by a point-to-point LAN segment), or it can be connected to two or more bridges (i.e. It is served by a shared medium LAN segment). This function allows the P2P status of the link to be manipulated administratively. True means P2P enabling. False means P2P disabling.
<b>Admin Edge</b>	The port directly connected to end stations, and it cannot create bridging loop in the network. To configure the port as an edge port, set the port to "True".
<b>Admin Non STP</b>	The port includes the STP mathematic calculation. <b>True</b> is not including STP mathematic calculation. <b>False</b> is including the STP mathematic calculation.
<b>Apply</b>	Click " <b>Apply</b> " to set the configurations.

**NOTE:** Follow the rule to configure the MAX Age, Hello Time, and Forward Delay Time.

$2 \times (\text{Forward Delay Time value} - 1) \geq \text{Max Age value} \geq 2 \times (\text{Hello Time value} + 1)$

### RSTP Information

### 5.1.4.3 MSTP (optional feature)

Multiple Spanning Tree Protocol (MSTP (optional feature)) is a standard protocol base on IEEE 802.1s. The function is that several VLANs can be mapping to a reduced number of spanning tree instances because most networks do not need more than a few logical topologies. It supports load balancing scheme and the CPU is sparer than PVST (Cisco proprietary technology).

#### MSTP Setting

<b>MSTP Enable</b>	Disable <input type="button" value="v"/>
<b>Force Version</b>	MSTP <input type="button" value="v"/>
<b>Configuration Name</b>	MSTP_SWITCH
<b>Revision Level (0-65535)</b>	0
<b>Priority (0-61440)</b>	32768
<b>Max Age Time (6-40)</b>	20
<b>Hello Time (1-10)</b>	2
<b>Forward Delay Time (4-30)</b>	15
<b>Max Hops (1-40)</b>	20

Priority must be a multiple of 4096.  
 2\*(Forward Delay Time-1) should be greater than or equal to the Max Age.  
 The Max Age should be greater than or equal to 2\*(Hello Time + 1).

MSTP (optional feature) Setting interface

The following table describes the labels in this screen.

Label	Description
<b>MSTP (optional feature) Enable</b>	You must enable or disable MSTP (optional feature) function before configuring the related parameters.
<b>Force Version</b>	The Force Version parameter can be used to force a VLAN Bridge that supports RSTP to operate in an STP-compatible manner.
<b>Configuration Name</b>	The same MST Region must have the same MST configuration name.
<b>Revision Level (0-65535)</b>	The same MST Region must have the same revision level.
<b>Priority (0-61440)</b>	A value used to identify the root bridge. The bridge with the lowest value has the highest priority and is selected as the root. If the value changes, You must reboot the switch. The value must be multiple of 4096 according to the protocol standard rule.
<b>Max Age Time(6-40)</b>	The number of seconds a bridge waits without receiving Spanning-tree Protocol configuration messages before attempting a reconfiguration. Enter a value between 6 through 40.
<b>Hello Time (1-10)</b>	The setting follow the rule below to configure the MAX Age, Hello Time, and Forward Delay Time at controlled switch sends out the BPDU packet to check RSTP current status. Enter a value between 1 through 10. <b>2 x (Forward Delay Time value -1) ≥ Max Age value ≥ 2 x (Hello Time value +1)</b>
<b>Forwarding Delay Time (4-30)</b>	The number of seconds a port waits before changing from its Rapid Spanning-Tree Protocol learning and listening states to the forwarding state. Enter a value between 4 through 30.
<b>Max Hops (1-40)</b>	This parameter is additional to those specified for RSTP. A single value applies to all Spanning Trees within an MST Region (the CIST and all MSTIs) for which the Bridge is the Regional Root.
<b>Apply</b>	Click " <b>Apply</b> " to activate the configurations.

## MSTP Port

Port No.	Priority (0-240)	Path Cost (1-200000000, 0:Auto)	Admin P2P	Admin Edge	Admin Non Stp

Port.05 <input type="button" value="v"/>		

Priority must be a multiple of 16

MSTP (optional feature) Instance Port interface

The following table describes the labels in this screen.

Label	Description
<b>Instance</b>	Set the instance's information except CIST
<b>Port</b>	Selecting the port that you want to configure.
<b>Priority (0-240)</b>	Decide which port should be blocked by priority in LAN. Enter a number 0 through 240. The value of priority must be the multiple of 16
<b>Path Cost (1-200000000)</b>	The cost of the path to the other bridge from this transmitting bridge at the specified port. Enter a number 1 through 200000000.
<b>Apply</b>	Click " <b>Apply</b> " to activate the configurations.

### 5.1.5 VLAN

A Virtual LAN (VLAN) is a logical network grouping that limits the broadcast domain, which allows you to isolate network traffic. Only the members of the VLAN will receive traffic from the same members of VLAN. Basically, creating a VLAN from a switch is logically equivalent of reconnecting a group of network devices to another Layer 2 switch. However, all the network devices are still plugged into the same switch physically.

The switch supports port-based and 802.1Q (tagged-based) VLAN. The default configuration of VLAN operation mode is at “802.1Q”.

#### 5.1.5.1 VLAN Configuration – 802.1Q

Tagged-based VLAN is an IEEE 802.1Q specification standard, and it is possible to create a VLAN across devices from different switch vendors. IEEE 802.1Q VLAN uses a technique to insert a “tag” into the Ethernet frames. Tag contains a VLAN Identifier (VID) that indicates the VLAN numbers.

You can create Tag-based VLAN, and enable or disable GVRP protocol. There are 256 VLAN groups to provide configure. Enable 802.1Q VLAN, the all ports on the switch belong to default VLAN, VID is 1. The default VLAN cannot be deleted.

GVRP allows automatic VLAN configuration between the switch and nodes. If the switch is connected to a device with GVRP enabled, you can send a GVRP request by using the VID of a VLAN defined on the switch; the switch will automatically add that device to the existing VLAN.

#### VLAN Setting

VLAN Operation Mode : 802.1Q

GVRP Mode : Disable

Management Vlan ID : 0

#### VLAN Configuration

Port No.	Link Type	Untagged VID	Tagged VIDs
Port.01	Access	1	
Port.02	Access	1	
Port.03	Access	1	
Port.04	Access	1	
Port.05	Access	1	
Port.06	Access	1	
Port.07	Access	1	
Port.08	Access	1	

Note: Use the comma to separate the multiple tagged VIDs.  
E.g., 2-4,6 means joining the Tagged VLAN 2, 3, 4 and 6.

VLAN Setting – 802.1Q interface

The following table describes the labels in this screen.

Label	Description
VLAN Operation Mode	Configure VLAN Operation Mode: disable, Port Base,802.1Q
GVRP Mode	Enable/Disable GVRP function.
<b>Management VLAN ID</b>	Management VLAN can provide network administrator a secure VLAN to management Switch. Only the devices in the management VLAN can access the switch.
<b>Link type</b>	There are 3 types of link type: <b>Access Link:</b> single switch only, allows you to group ports by setting the same VID. <b>Trunk Link:</b> extended application of <b>Access Link</b> , allows you to group ports by setting the same VID with 2 or more switches. <b>Hybrid Link:</b> Both <b>Access Link</b> and <b>Trunk Link</b> are available.
<b>Untagged VID</b>	Set the port default VLAN ID for untagged devices that connect to the port. The range is 1 to 4094.
<b>Tagged VIDs</b>	Set the tagged VIDs to carry different VLAN frames to other switch.
<b>Apply</b>	Click " <b>Apply</b> " to set the configurations.

### 5.1.5.2 VLAN Configuration – Port Based

Packets can go among only members of the same VLAN group. Note all unselected ports are treated as belonging to another single VLAN. If the port-based VLAN enabled, the VLAN-tagging is ignored.

### 5.1.5.3 QinQ (Double Tag VLAN) configuration

Double Tag VLAN is another mechanism employed in a Metro LAN in which it can save IP v4 address by residing groups of sub-VLANs (customer port) in a VLAN(Host) and utilizing the default gateway IP address of Double Tag VLAN sharing the same IP subnet mask. Double Tag VLAN in L2 provides enhances security between customer (each home), by dis-communication between the sub-VLANs, even they are located in the same LAN and have the same IP subnet mask. Better yet, the configuration is simple than assigning each VLAN as per port based VLAN to customer (each home).

**Please select Hybrid VLAN in Port VLAN to enable QinQ (Double Tag VLAN) function.**

The following table describes the labels in this screen.

Label	Description
<b>QOS policy</b>	<ul style="list-style-type: none"> <li>■ <b>Using the 8,4,2,1 weight fair queue scheme:</b> the output queues will follow 8:4:2:1 ratio to transmit packets from the highest to lowest queue. For example: 8 high queue packets, 4 middle queue packets, 2 low queue packets, and the one lowest queue packets are transmitted in one turn.</li> <li>■ <b>Use the strict priority scheme:</b> always the packets in higher queue will be transmitted first until higher queue is empty.</li> </ul>
<b>Priority Type</b>	<ul style="list-style-type: none"> <li>■ <b>Port-base:</b> the output priority is determined by ingress port.</li> <li>■ <b>COS only:</b> the output priority is determined by COS only.</li> <li>■ <b>TOS only:</b> the output priority is determined by TOS only.</li> <li>■ <b>COS first:</b> the output priority is determined by COS and TOS, but COS first.</li> <li>■ <b>TOS first:</b> the output priority is determined by COS and TOS, but TOS first.</li> </ul>
<b>Port base Priority</b>	Assign Port with a priority queue. 4 priority queues can be assigned: High, Middle, Low, and Lowest.
<b>COS/802.1p</b>	COS (Class Of Service) is well known as 802.1p. It describes that the output priority of a packet is determined by user priority field in 802.1Q VLAN tag. The priority value is supported 0to7.COS value map to 4 priority queues: High, Middle, Low, and Lowest.
<b>COS Port Default</b>	When an ingress packet has not VLAN tag, a default priority value is considered and determined by ingress port.
<b>TOS/DSCP</b>	TOS (Type of Service) is a field in IP header of a packet. This TOS field is also used by Differentiated Services and is called the Differentiated Services Code Point (DSCP). The output priority of a packet can be determined by this field and the priority value is supported 0to63. DSCP value map to 4 priority queues: High, Middle, Low, and Lowest.
<b>Apply</b>	Click " <b>Apply</b> " to set the configurations.
<b>Help</b>	Show help file.

### 5.1.7 IGMP Snooping

Internet Group Management Protocol (IGMP) is used by IP hosts to register their dynamic multicast group membership. IGMP has 3 versions, IGMP v1, v2 and v3. Please refer to RFC 1112, 2236 and 3376. IGMP Snooping improves the performance of networks that carry multicast traffic. It provides the ability to prune multicast traffic so that it travels only to those end destinations that require that traffic and reduces the amount of traffic on the Ethernet LAN.

#### IGMP Snooping

IGMP Snooping :  ▾

IGMP Query Mode:  ▾

#### IGMP Snooping Table

IP Address	VLAN ID	Member Port

IGMP Snooping interface

The following table describes the labels in this screen.

Label	Description
<b>IGMP Snooping</b>	Enable/Disable IGMP snooping.
<b>IGMP Query Mode</b>	Switch will be IGMP querier or not. There should exist one and only one IGMP querier in an IGMP application. The "Auto" mode means that the querier is the one with lower IP address.
<b>IGMP Snooping Table</b>	Show current IP multicast list
<b>Apply</b>	Click " <b>Apply</b> " to set the configurations.
<b>Help</b>	Show help file.

## 5.1.8 SNMP Configuration

Simple Network Management Protocol (SNMP) is the protocol developed to manage nodes (servers, workstations, routers, switches and hubs etc.) on an IP network. SNMP enables network administrators to manage network performance, find and solve network problems, and plan for network growth. Network management systems learn of problems by receiving traps or change notices from network devices implementing SNMP.

### 5.1.8.1 SNMP –Agent Setting

You can set SNMP agent related information by Agent Setting Function.

#### SNMP - Agent Setting

SNMP Agent Version:

**SNMP Community**

Community String	Privilege
<input type="text" value="public"/>	<input type="text" value="Read Only"/>
<input type="text" value="private"/>	<input type="text" value="Read and Write"/>
<input type="text"/>	<input type="text" value="Read Only"/>
<input type="text"/>	<input type="text" value="Read Only"/>

SNMP Agent Setting interface

The following table describes the labels in this screen.

Label	Description
<b>SNMP agent Version</b>	Three SNMP versions are supported such as SNMP V1/SNMP V2c, and SNMP V3. SNMP V1/SNMP V2c agent use a community string match for authentication, that means SNMP servers access objects with read-only or read/write permissions with the community default string public/private. SNMP V3 requires an authentication level of MD5 or DES to encrypt data to enhance data security.
<b>SNMP V1/V2c Community</b>	SNMP Community should be set for SNMP V1/V2c. Four sets of "Community String/Privilege" are supported. Each Community String is maximum 32 characters. Keep empty to remove this Community string.
<b>SNMPv3User</b>	If SNMP V3 agent is selected, the SNMPv3 you profiled should

	<p>be set for authentication. The Username is necessary. The Auth Password is encrypted by MD5 and the Privacy Password which is encrypted by DES. There are maximum 8 sets of SNMPv3 User and maximum 16 characters in username, and password.</p> <p>When SNMP V3 agent is selected, you can:</p> <ol style="list-style-type: none"> <li>1. Input SNMPv3 username only.</li> <li>2. Input SNMPv3 username and Auth Password.</li> <li>3. Input SNMPv3 username, Auth Password and Privacy Password, which can be different with Auth Password.</li> </ol> <p>To remove a current user profile:</p> <ol style="list-style-type: none"> <li>1. Input SNMPv3 user name you want to remove.</li> <li>2. Click "<b>Remove</b>" button</li> </ol>
<p><b>Current SNMPv3 User Profile</b></p>	<p>Show all SNMPv3 user profiles.</p>
<p><b>Apply</b></p>	<p>Click "<b>Apply</b>" to set the configurations.</p>
<p><b>Help</b></p>	<p>Show help file.</p>

### 5.1.8.2 SNMP –Trap Setting

A trap manager is a management station that receives traps, the system alerts generated by the switch. If no trap manager is defined, no traps will issue. Create a trap manager by entering the IP address of the station and a community string. To define management stations as trap manager and enter SNMP community strings and selects the SNMP version.

## SNMP - Trap Setting

The screenshot displays the 'SNMP - Trap Setting' interface. It is divided into two main sections: 'Trap Server Setting' and 'Trap Server Profile'.

**Trap Server Setting:** This section contains three input fields: 'Server IP', 'Community', and 'Trap Version'. The 'Trap Version' field has two radio button options: 'V1' (which is selected) and 'V2c'. An 'Add' button is located to the right of these fields.

**Trap Server Profile:** This section features a table with three columns: 'Server IP', 'Community', and 'Trap Version'. The table is currently empty. Below the table are two buttons: 'Remove' and 'Help'.

SNMP Trap Setting interface

The following table describes the labels in this screen.

Label	Description
<b>Server IP</b>	The server IP address to receive Trap
<b>Community</b>	Community for authentication
<b>Trap Version</b>	Trap Version supports V1 and V2c.
<b>Add</b>	Add trap server profile.
<b>Remove</b>	Remove trap server profile.
<b>Help</b>	Show help file.

### 5.1.8.3 SNMP –SNMP v3 Configuration

#### SNMP - SNMPv3 Configuration

SNMPv3 Engine ID: c812000003001e942400fb

**Context Table**

<b>Context Name :</b>	lantech	<input type="button" value="Apply"/>
-----------------------	---------	--------------------------------------

		<b>Group Name:</b>	<input type="text"/>
		<b>Security Level:</b>	<input type="radio"/> NoAuthNoPriv. <input type="radio"/> AuthNoPriv. <input type="radio"/> AuthPriv.
		<b>Context Match Rule</b>	<input type="radio"/> Exact <input type="radio"/> Prefix
		<b>Read View Name:</b>	<input type="text"/>
		<b>Write View Name:</b>	<input type="text"/>
		<b>Notify View Name:</b>	<input type="text"/>

**MIBView Table**

<b>Current MIBTables :</b>	<input type="button" value="Remove"/>	<b>New MIBView Table :</b>	<input type="button" value="Add"/>
lantech 1 Included		<b>View Name:</b>	<input type="text"/>
		<b>SubOid-Tree:</b>	<input type="text"/>
		<b>Type:</b>	<input type="radio"/> Excluded <input type="radio"/> Included

**Note:**  
 Any modification of SNMPv3 tables might cause MIB accessing rejection. Please take notice of the causality between the tables before you modify these tables.

SNMP v3 Configuration interface

## 5.1.9 Security

Five useful functions can enhance security of switch: IP Security, Port Security, MAC Blacklist, and MAC address Aging and 802.1x protocol.

### 5.1.9.1 IP Security

Only IP in the Secure IP List can manage the switch through your defined management mode. (WEB, Telnet, SNMP)

## IP Security

IP Security Mode:

- Enable WEB Management
- Enable Telnet Management
- Enable SNMP Management

### Secure IP List

Secure IP1	<input type="text" value="0.0.0.0"/>
Secure IP2	<input type="text" value="0.0.0.0"/>
Secure IP3	<input type="text" value="0.0.0.0"/>
Secure IP4	<input type="text" value="0.0.0.0"/>
Secure IP5	<input type="text" value="0.0.0.0"/>
Secure IP6	<input type="text" value="0.0.0.0"/>
Secure IP7	<input type="text" value="0.0.0.0"/>
Secure IP8	<input type="text" value="0.0.0.0"/>
Secure IP9	<input type="text" value="0.0.0.0"/>
Secure IP10	<input type="text" value="0.0.0.0"/>

IP Security interface

The following table describes the labels in this screen.

Label	Description
<b>IP security MODE</b>	Enable/Disable the IP security function.
<b>Enable WEB Management</b>	Mark the blank to enable WEB Management.
<b>Enable Telnet Management</b>	Mark the blank to enable Telnet Management.
<b>Enable SNMP Management</b>	Mark the blank to enable MPSN Management.

<b>Apply</b>	Click " <b>Apply</b> " to set the configurations.
<b>Help</b>	Show help file.

### 5.1.9.2 Port Security

Port security is to add static MAC addresses to hardware forwarding database. If port security is enabled at **Port Control** page, only the frames with MAC addresses in this list will be forwarded, otherwise will be discarded.

#### Port Security

MAC Address

Port No.

#### Port Security List

MAC Address	Port

Port Security interface

The following table describes the labels in this screen.

Label	Description
<b>MAC Address</b>	Input MAC Address to a specific port.
<b>Port NO.</b>	Select port of switch.
<b>Add</b>	Add an entry of MAC and port information.
<b>Delete</b>	Delete the entry.
<b>Help</b>	Show help file.

### 5.1.9.3 MAC Blacklist

MAC Blacklist can eliminate the traffic forwarding to specific MAC addresses in list. Any frames forwarding to MAC addresses in this list will be discarded. Thus the target device will never receive any frame.

#### MAC Blacklist

MAC Address

#### MAC Blacklist

MAC Address

--

MAC Blacklist interface

Label	Description
<b>MAC Address</b>	Input MAC Address to add to MAC Blacklist.
<b>Port NO.</b>	Select port of switch.
<b>Add</b>	Add an entry to Blacklist table.
<b>Delete</b>	Delete the entry.
<b>Help</b>	Show help file.

### 5.1.9.4 MAC Address Aging

You can set MAC Address aging timer, as time expired, the unused MAC will be cleared from MAC table. IES-2206F-II also support Auto Flush MAC Address Table When ports Link Down.

#### MAC Address Aging

MAC Address Table Aging Time: (0~3825)  secs

Auto Flush MAC Address Table When Ports Link Down

MAC Address Aging interface

The following table describes the labels in this screen.

Label	Description
<b>MAC Address Table</b> <b>Aging Time: (0to3825)</b>	Set the timer.
<b>Auto Flush MAC Address Table When ports Link Down.</b>	Mark the blank to enable the function,
<b>Apply</b>	Click " <b>Apply</b> " to set the configurations.
<b>Help</b>	Show help file.

### 5.1.9.5 802.1x

#### 802.1x - Radius Server

802.1x makes the use of the physical access characteristics of IEEE802 LAN infrastructures in order to provide a authenticated and authorized devices attached to a LAN port. Please refer to IEEE 802.1X - Port Based Network Access Control.

### 802.1x - Radius Server

#### Radius Server Setting

802.1x Protocol	Disable <input type="button" value="v"/>
Radius Server IP	192.168.16.3
Server Port	1812
Accounting Port	1813
Shared Key	12345678
NAS, Identifier	NAS_L2_SWITCH

#### Advanced Setting

Quiet Period	60
TX Period	30
Supplicant Timeout	30
Server Timeout	30
Max Requests	2
Re-Auth Period	3600

802.1x Radius Server interface

The following table describes the labels in this screen.

Label	Description
<b>Radius Server Setting</b>	

<b>Radius Server IP</b>	The IP address of the authentication server.
<b>Server port</b>	Set the UDP port number used by the authentication server to authenticate.
<b>Account port</b>	Set the UDP destination port for accounting requests to the specified Radius Server.
<b>Shared Key</b>	A key shared between this switch and authentication server.
<b>NAS, Identifier</b>	A string used to identify this switch.
<b>Advanced Setting</b>	
<b>Quiet Period</b>	Set the time interval between authentication failure and the start of a new authentication attempt.
<b>Tx Period</b>	Set the time that the switch can wait for response to an EAP request/identity frame from the client before resending the request.
<b>Supplicant Timeout</b>	Set the period of time the switch waits for a supplicant response to an EAP request.
<b>Server Timeout</b>	Set the period of time the switch waits for a Radius server response to an authentication request.
<b>Max Requests</b>	Set the maximum number of times to retry sending packets to the supplicant.
<b>Re-Auth Period</b>	Set the period of time after which clients connected must be re-authenticated.
<b>Apply</b>	Click “ <b>Apply</b> ” to set the configurations.
<b>Help</b>	Show help file.

**802.1x-Port Authorized Mode**

Set the 802.1x authorized mode of each port.

**802.1x - Port Authorize Mode**

Port No.	Port Authorize Mode
Port.01	Accept <input type="button" value="v"/>
Port.02	Accept <input type="button" value="v"/>
Port.03	Accept <input type="button" value="v"/>
Port.04	Accept <input type="button" value="v"/>
Port.05	Accept <input type="button" value="v"/>
Port.06	Accept <input type="button" value="v"/>
Port.07	Accept <input type="button" value="v"/>
Port.08	Accept <input type="button" value="v"/>

802.1x Port Authorize interface

The following table describes the labels in this screen.

Label	Description
<b>Port Authorized Mode</b>	<ul style="list-style-type: none"> <li>■ <b>Reject:</b> force this port to be unauthorized.</li> <li>■ <b>Accept:</b> force this port to be authorized.</li> <li>■ <b>Authorize:</b> the state of this port was determined by the outcome of the 802.1x authentication.</li> <li>■ <b>Disable:</b> this port will not participate in 802.1x.</li> </ul>
<b>Apply</b>	Click " <b>Apply</b> " to set the configurations.
<b>Help</b>	Show help file.

Port.06	Accept
Port.07	Accept
Port.08	Accept

802.1x Port Authorize State interface

### 5.1.10 Warning

Warning function is very important for managing switch. You can manage switch by SYSLOG, E-MAIL, and Fault Relay. It helps you to monitor the switch status on remote site. When events occurred, the warning message will send to your appointed server, E-MAIL, or relay fault to switch panel.

#### 5.1.10.1 Fault Alarm

When any selected fault event is happened, the Fault LED in switch panel will light up and the electric relay will signal at the same time.

Fault Alarm interface

The following table describes the labels in this screen.

Label	Description
<b>Power Failure</b>	Mark the blank of PWR 1 or PWR 2 to monitor.
<b>Port Link Down/Broken</b>	Mark the blank of port 1 to port 8 to monitor.
<b>Apply</b>	Click “ <b>Apply</b> ” to set the configurations.
<b>Help</b>	Show help file.

#### 5.1.10.2 System Alarm

System alarm support two warning mode: 1. SYSLOG. 2. E-MAIL. You can monitor switch through selected system events.

##### System Warning – SYSLOG Setting

The SYSLOG is a protocol to transmit event notification messages across networks. Please refer to RFC 3164 - The BSD SYSLOG Protocol

### System Warning - SYSLOG Setting

SYSLOG Mode	Disable <input type="button" value="v"/>
SYSLOG Server IP Address	0.0.0.0

System Warning – SYSLOG Setting interface

The following table describes the labels in this screen.

Label	Description
<b>SYSLOG Mode</b>	<ul style="list-style-type: none"> <li>■ <b>Disable:</b> disable SYSLOG.</li> <li>■ <b>Client Only:</b> log to local system.</li> <li>■ <b>Server Only:</b> log to a remote SYSLOG server.</li> <li>■ <b>Both:</b> log to both of local and remote server.</li> </ul>
<b>SYSLOG Server IP Address</b>	The remote SYSLOG Server IP address.
<b>Apply</b>	Click " <b>Apply</b> " to set the configurations.
<b>Help</b>	Show help file.

### System Warning – SMTP Setting.

The SMTP is Short for Simple Mail Transfer Protocol. It is a protocol for e-mail transmission across the Internet. Please refer to RFC 821 - Simple Mail Transfer Protocol.

### System Warning - SMTP Setting

**E-mail Alert :**

SMTP Server Address	0.0.0.0
Sender E-mail Address	administrator
Mail Subject	Automated Email Alert
<input type="checkbox"/> Authentication	
Recipient E-mail Address 1	
Recipient E-mail Address 2	
Recipient E-mail Address 3	
Recipient E-mail Address 4	
Recipient E-mail Address 5	
Recipient E-mail Address 6	

System Warning – SMTP Setting interface

The following table describes the labels in this screen.

Label	Description
<b>E-mail Alarm</b>	Enable/Disable transmission system warning events by e-mail.
<b>Sender E-mail Address</b>	The SMTP server IP address
<b>Mail Subject</b>	The Subject of the mail
<b>Authentication</b>	<ul style="list-style-type: none"> <li>■ <b>Username:</b> the authentication username.</li> <li>■ <b>Password:</b> the authentication password.</li> <li>■ <b>Confirm Password:</b> re-enter password.</li> </ul>
<b>Recipient E-mail Address</b>	The recipient's E-mail address. It supports 6 recipients for a mail.
<b>Apply</b>	Click " <b>Apply</b> " to set the configurations.
<b>Help</b>	Show help file.

### System Warning – Event Selection

SYSLOG and SMTP are the two warning methods that supported by the system. Check the corresponding box to enable system event warning method you wish to choose. Please note that the checkbox can not be checked when SYSLOG or SMTP is disabled.

## System Warning - Event Selection

### System Event

Event	SYSLOG	SMTP
System Cold Start	<input type="checkbox"/>	<input type="checkbox"/>
Power Status	<input type="checkbox"/>	<input type="checkbox"/>
SNMP Authentication Failure	<input type="checkbox"/>	<input type="checkbox"/>
Redundant Ring Topology Change	<input type="checkbox"/>	<input type="checkbox"/>

### Port Event

Port.08	Disable <input type="button" value="v"/>	Disable <input type="button" value="v"/>

System Warning – Event Selection interface

The following table describes the labels in this screen.

Label	Description
<b>System Event</b>	
<b>System Cold Start</b>	Alert when system restart
<b>Power Status</b>	Alert when a power up or down
<b>SNMP Authentication Failure</b>	Alert when SNMP authentication failure.
<b>X-Ring Topology Change</b>	Alert when X-Ring topology changes.
<b>Port Event</b>	<ul style="list-style-type: none"> <li>■ <b>Disable</b></li> <li>■ <b>Link Up</b></li> <li>■ <b>Link Down</b></li> <li>■ <b>Link Up &amp; Link Down</b></li> </ul>
<b>Apply</b>	Click " <b>Apply</b> " to set the configurations.
<b>Help</b>	Show help file.

## 5.1.11 Monitor and Diag

### 5.1.11.1 MAC Address Table

Refer to IEEE 802.1 D Sections 7.9. The MAC Address Table, that is Filtering Database, supports queries by the Forwarding Process, as to whether a frame received by a given port with a given destination MAC address is to be forwarded through a given potential transmission port.

#### MAC Address Table

Port No :

Current MAC Address

--

Dynamic Address Count : 0  
Static Address Count : 0

MAC Address Table interface

The following table describes the labels in this screen.

Label	Description
Port NO. :	Show all MAC addresses mapping to a selected port in table.
Clear MAC Table	Clear all MAC addresses in table
Help	Show help file.

### 5.1.11.2 Port Statistics

Port statistics show several statistics counters for all ports

#### Port Statistics

Port	Type	Link	State	TX Good Packet	TX Bad Packet	RX Good Packet	RX Bad Packet	TX Abort Packet	Packet Collision
Port.01	100TX	Down	Enable	0	0	0	0	0	0
Port.02	100TX	Down	Enable	81654	0	90928	0	0	0
Port.03	100TX	Up	Enable	509651	0	439104	0	0	0
Port.04	100TX	Up	Enable	504926	0	490084	0	0	0
Port.05	100TX	Down	Enable	15573	0	16671	0	0	0
Port.06	100TX	Down	Enable	8531	0	12681150	0	0	0
Port.07	100FX	Down	Enable	0	0	0	0	0	0
Port.08	100FX	Down	Enable	0	0	0	0	0	0

Port Statistics interface

The following table describes the labels in this screen.

Label	Description
<b>Type</b>	Show port speed and media type.
<b>Link</b>	Show port link status.
<b>State</b>	Show ports enable or disable.
<b>TX GOOD Packet</b>	The number of good packets sent by this port.
<b>TX Bad Packet</b>	The number of bad packets sent by this port.
<b>RX GOOD Packet</b>	The number of good packets received by this port.
<b>RX Bad Packet</b>	The number of bad packets received by this port.
<b>TX Abort Packet</b>	The number of packets aborted by this port.
<b>Packet Collision</b>	The number of times a collision detected by this port.
<b>Clear</b>	Clear all counters.
<b>Help</b>	Show help file.

### 5.1.11.3 Port Monitoring

Port monitoring supports TX (egress) only, RX (ingress) only, and TX/RX monitoring. TX monitoring sends any data that egress out checked TX source ports to a selected TX destination port as well. RX monitoring sends any data that ingress in checked RX source ports out to a selected RX destination port as well as sending the frame where it normally would have gone. Note that keep all source ports unchecked in order to disable port monitoring.

#### Port Monitoring

Port	Destination Port		Source Port	
	RX	TX	RX	TX
Port.01	<input checked="" type="radio"/>	<input checked="" type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>
Port.02	<input type="radio"/>	<input type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>
Port.03	<input type="radio"/>	<input type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>
Port.04	<input type="radio"/>	<input type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>
Port.05	<input type="radio"/>	<input type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>
Port.06	<input type="radio"/>	<input type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>
Port.07	<input type="radio"/>	<input type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>
Port.08	<input type="radio"/>	<input type="radio"/>	<input type="checkbox"/>	<input type="checkbox"/>

Port monitoring interface

The following table describes the labels in this screen.

Label	Description
<b>Destination Port</b>	The port will receive a copied frame from source port for

	monitoring purpose.
<b>Source Port</b>	The port will be monitored. Mark the blank of TX or RX to be monitored.
<b>TX</b>	The frames come into switch port.
<b>RX</b>	The frames receive by switch port.
<b>Apply</b>	Click " <b>Apply</b> " to set the configurations.
<b>Clear</b>	Clear all marked blank.(disable the function)
<b>Help</b>	Show help file.

#### 5.1.11.4 System Event Log

If system log client is enabled, the system event logs will show in this table.

#### System Event Log

System event log interface

The following table describes the labels in this screen.

Label	Description
<b>Page</b>	Select LOG page.
<b>Reload</b>	To get the newest event logs and refresh this page.
<b>Clear</b>	Clear log.
<b>Help</b>	Show help file.

### 5.1.12 Front Panel

Show IES-2206F-II panel. Click **“Close”** to close panel on web.

Front Panel interface

### 5.1.13 Save Configuration

If any configuration changed, **“Save Configuration”** should be clicked to save current configuration data to the permanent flash memory. Otherwise, the current configuration will be lost when power off or system reset.

## Save Configuration

System Configuration interface

The following table describes the labels in this screen.

Label	Description
<b>Save</b>	Save all configurations.
<b>Help</b>	Show help file.

# 6

## Command Line Interface Management

### Configuration by Command Line Interface (CLI).

#### 6.1 About CLI Management

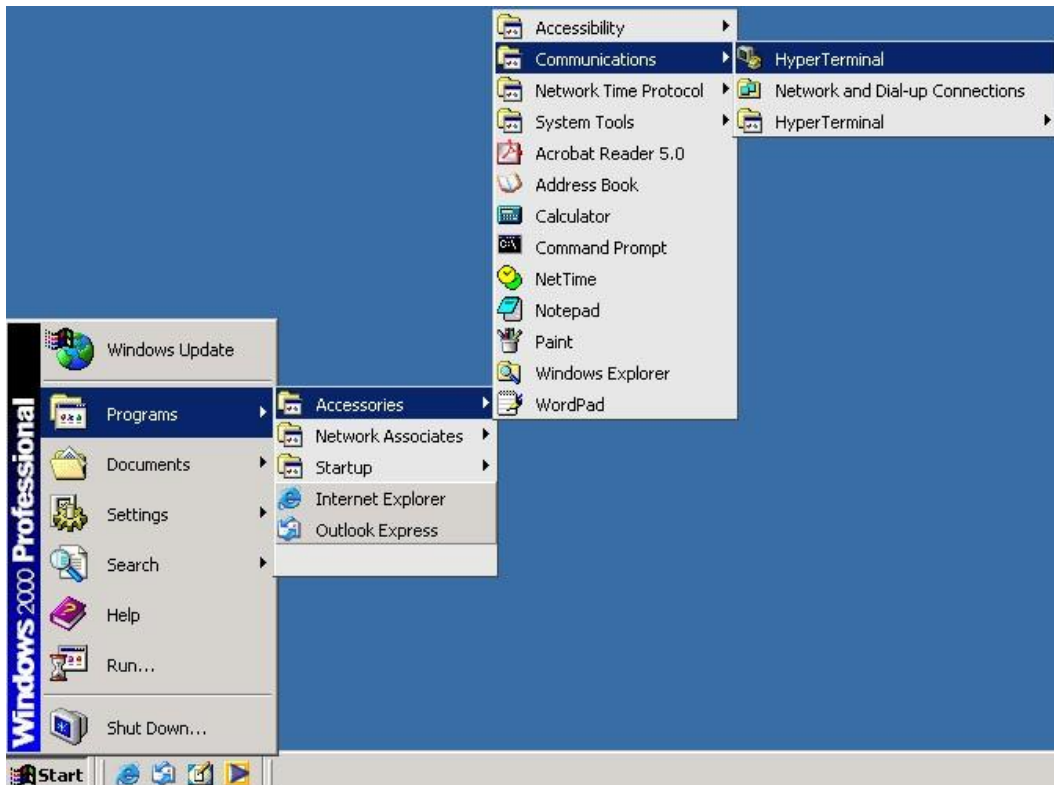

Besides WEB-base management, IES-2206F-II also support CLI management. You can use console or telnet to management switch by CLI.

##### CLI Management by RS-232 Serial Console (9600, 8, none, 1, none)

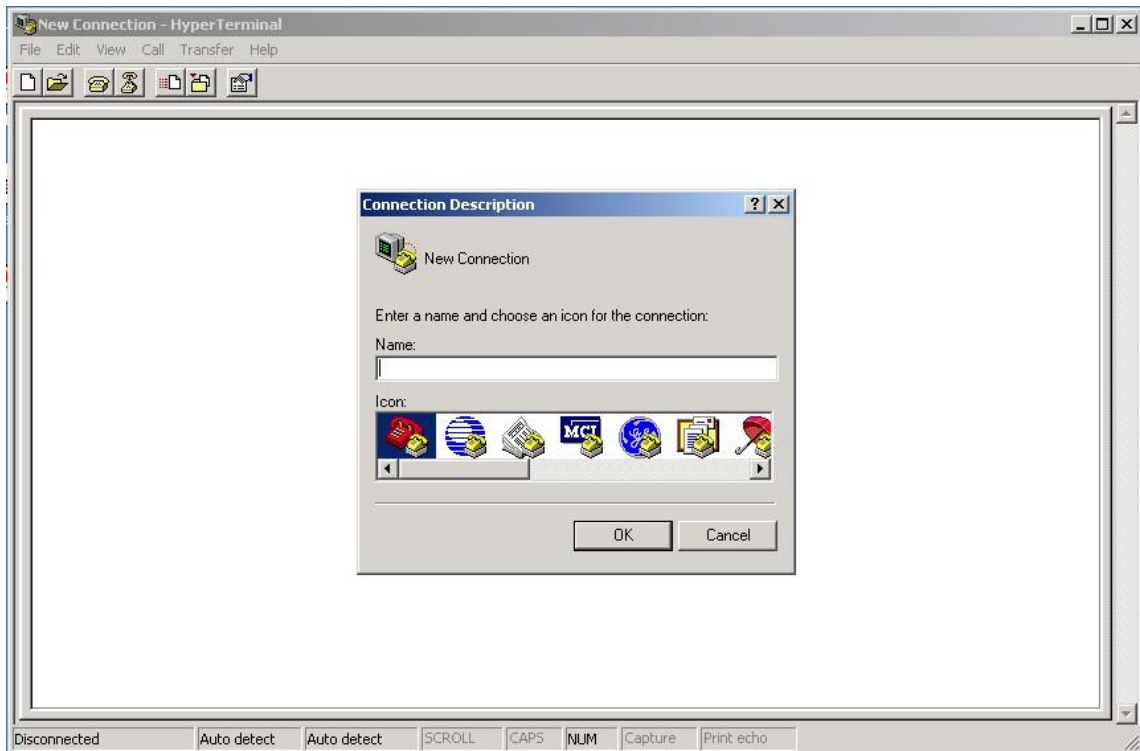

Before Configuring by RS-232 serial console, use an RJ45 to DB9-F cable to connect the Switches' RS-232 Console port to your PC's COM port.

Follow the steps below to access the console via RS-232 serial cable.

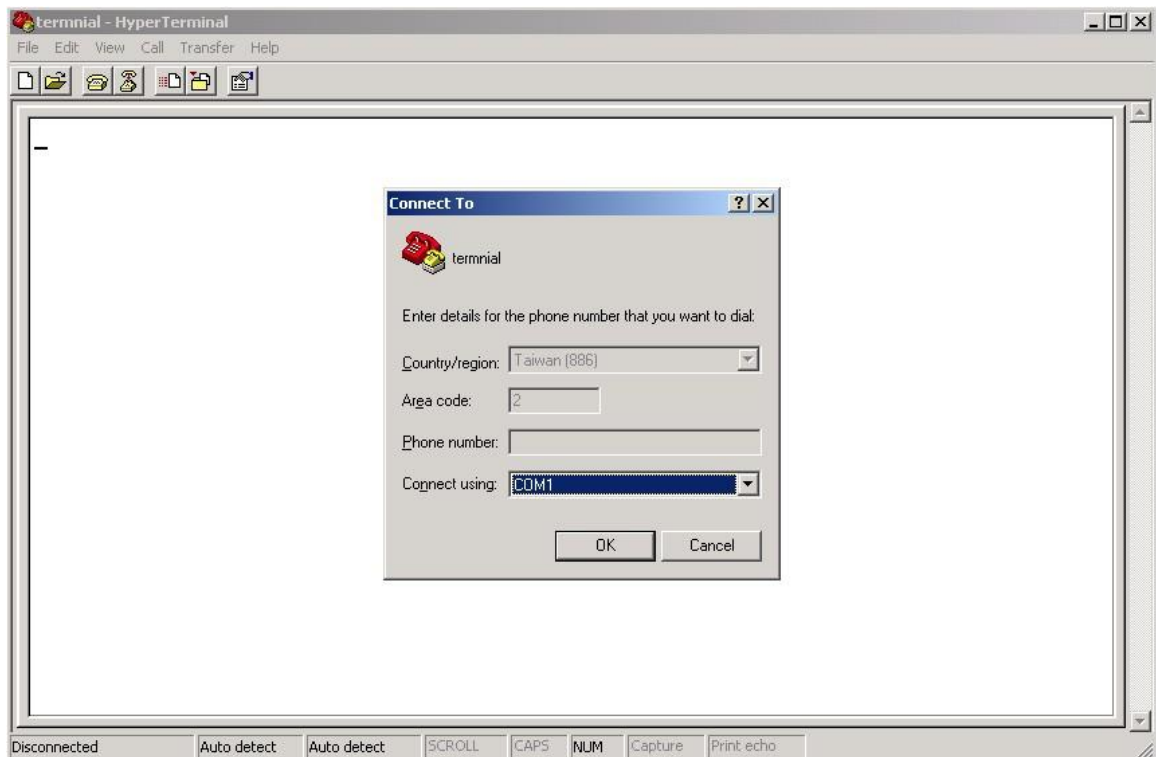

- (1) From the Windows desktop, click on Start -> Programs -> Accessories -> Communications -> Hyper Terminal

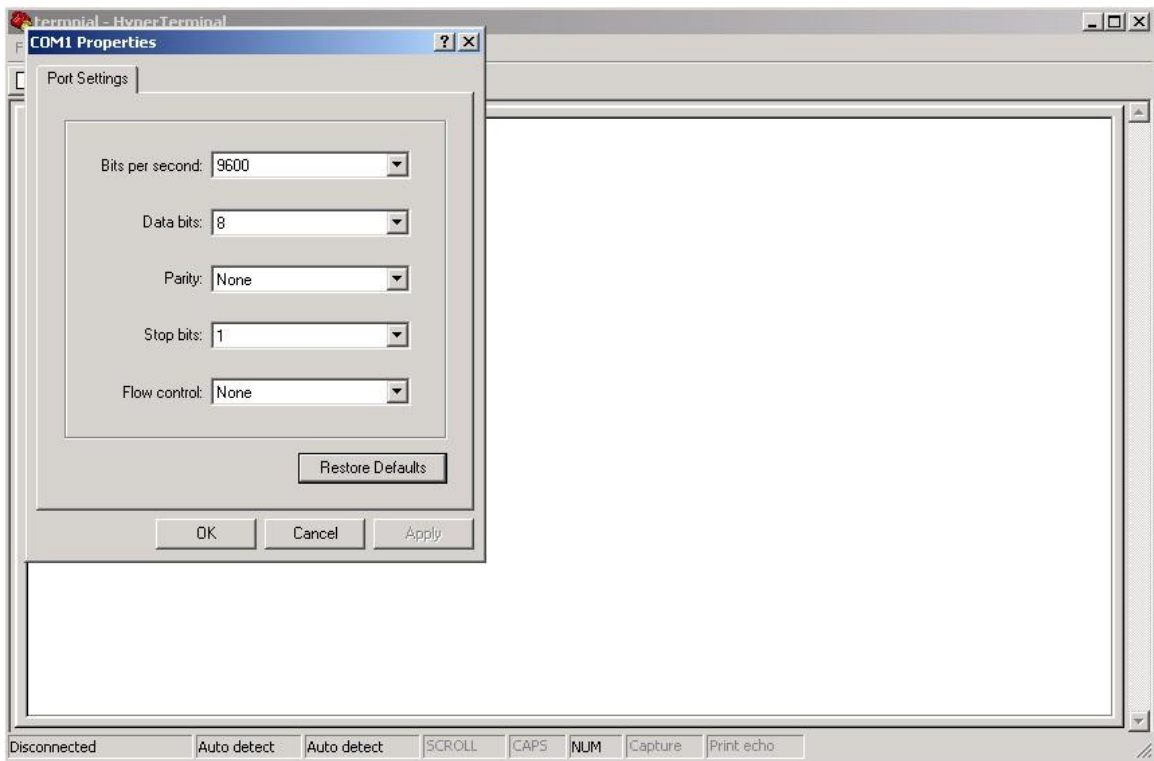

(2) Input a name for new connection

(3) Select to use COM port number

(4) The COM port properties setting, 9600 for Bits per second, 8 for Data bits, None for Parity, 1 for Stop bits and none for Flow control.

(5) The Console login screen will appear. Use the keyboard enter the Console Username and Password that is same as the Web Browser password), and then press "Enter".

**CLI Management by Telnet.**

Users can use telnet to configure the switches.

The default value is as below:

IP Address: **192.168.10.1**

Subnet Mask: **255.255.255.0**

Default Gateway: **192.168.10.254**

User Name: **admin**

Password: **admin**

Follow the steps below to access the console via Telnet.

- (1) Telnet to the IP address of the switch from the Windows “Run” command (or from the MS-DOS prompt).

- (2) The Console login screen will appear. Use the keyboard enter the Console Username and Password that is same as the Web Browser password), and then press “Enter”

Commands Level

Modes	Access Method	Prompt	Exit Method	About This Model
User EXEC	Begin a session with your switch.	switch>	Enter <b>logout</b> or <b>quit</b> .	The user command available at the level of user is the subset of those available at the privileged level. Use this mode to <ul style="list-style-type: none"> <li>• Enter menu mode.</li> <li>• Display system information.</li> </ul>
Privileged EXEC	Enter the <b>enable</b> command while in user EXEC mode.	switch#	Enter <b>disable</b> to exit.	The privileged command is advance mode Privileged this mode to <ul style="list-style-type: none"> <li>• Display advance function status</li> <li>• save configures</li> </ul>
Global configuration	Enter the <b>configure</b> command while in privileged EXEC mode.	switch(conf ig)#	To exit to privileged EXEC mode, enter <b>exit</b> or <b>end</b>	Use this mode to configure parameters that apply to your Switch as a whole.
VLAN database	Enter the <b>vlan database</b> command while in privileged EXEC mode.	switch(vlan )#	To exit to user EXEC mode, enter <b>exit</b> .	Use this mode to configure VLAN-specific parameters.
Interface configuration	Enter the <b>interface</b> command (with a specific interface)while in global configuration mode	switch(conf ig-if)#	To exit to global configuration mode, enter <b>exit</b> . To exist privileged EXEC mode or <b>end</b> .	Use this mode to configure parameters for the switch and Ethernet ports.

## Symbol of Command Level.

Mode	Symbol of Command Level
User EXEC	E
Privileged EXEC	P
Global configuration	G
VLAN database	V
Interface configuration	I

## 6.2 Commands Set List—System Commands Set

IES-2206F-II Commands	Level	Description	Example
<b>show config</b>	E	Show switch configuration	switch>show config
<b>show terminal</b>	P	Show console information	switch#show terminal
<b>menu</b>	E	Enter MENU mode	switch>menu
<b>write memory</b>	P	Save your configuration into permanent memory (flash rom)	switch#write memory
<b>system name</b> [System Name]	G	Configure system name	switch(config)#system name xxx
<b>system location</b> [System Location]	G	Set switch system location string	switch(config)#system location xxx
<b>system description</b> [System Description]	G	Set switch system description string	switch(config)#system description xxx
<b>system contact</b> [System Contact]	G	Set switch system contact window string	switch(config)#system contact xxx
<b>show system-info</b>	E	Show system information	switch>show system-info
<b>ip address</b> [ip-address] [Subnet-mask] [Gateway]	G	Configure the IP address of switch	switch(config)#ip address 192.168.1.1 255.255.255.0 192.168.1.254
<b>ip dhcp</b>	G	Enable DHCP client function of switch	switch(config)#ip dhcp
<b>show ip</b>	P	Show IP information of switch	switch#show ip

<b>no ip dhcp</b>	<b>G</b>	Disable DHCP client function of switch	switch(config)#no ip dhcp
<b>reload</b>	<b>G</b>	Halt and perform a cold restart	switch(config)#reload
<b>default</b>	<b>G</b>	Restore to default	Switch(config)#default
<b>admin username</b> [Username]	<b>G</b>	Changes a login username. (maximum 10 words)	switch(config)#admin username xxxxxx
<b>admin password</b> [Password]	<b>G</b>	Specifies a password (maximum 10 words)	switch(config)#admin password xxxxxx
<b>show admin</b>	<b>P</b>	Show administrator information	switch#show admin
<b>dhcpserver enable</b>	<b>G</b>	Enable DHCP Server	switch(config)#dhcpserver enable
<b>dhcpserver lowip</b> [Low IP]	<b>G</b>	Configure low IP address for IP pool	switch(config)# dhcpserver lowip 192.168.1.1
<b>dhcpserver highip</b> [High IP]	<b>G</b>	Configure high IP address for IP pool	switch(config)# dhcpserver highip 192.168.1.50
<b>dhcpserver subnetmask</b> [Subnet mask]	<b>G</b>	Configure subnet mask for DHCP clients	switch(config)#dhcpserver subnetmask 255.255.255.0
<b>dhcpserver gateway</b> [Gateway]	<b>G</b>	Configure gateway for DHCP clients	switch(config)#dhcpserver gateway 192.168.1.254
<b>dhcpserver dnsip</b> [DNS IP]	<b>G</b>	Configure DNS IP for DHCP clients	switch(config)# dhcpserver dnsip 192.168.1.1
<b>dhcpserver leasetime</b> [Hours]	<b>G</b>	Configure lease time (in hour)	switch(config)#dhcpserver leasetime 1
<b>dhcpserver ipbinding</b> [IP address]	<b>I</b>	Set static IP for DHCP clients by port	switch(config)#interface fastEthernet 2 switch(config-if)#dhcpserver ipbinding 192.168.1.1
<b>show dhcpserver configuration</b>	<b>P</b>	Show configuration of DHCP server	switch#show dhcpserver configuration
<b>show dhcpserver clients</b>	<b>P</b>	Show client entries of DHCP server	switch#show dhcpserver clinets
<b>show dhcpserver ip-binding</b>	<b>P</b>	Show IP-Binding information of DHCP server	switch#show dhcpserver ip-binding
<b>no dhcpserver</b>	<b>G</b>	Disable DHCP server function	switch(config)#no dhcpserver

<b>security enable</b>	<b>G</b>	Enable IP security function	switch(config)#security enable
<b>security http</b>	<b>G</b>	Enable IP security of HTTP server	switch(config)#security http
<b>security telnet</b>	<b>G</b>	Enable IP security of telnet server	switch(config)#security telnet
<b>security ip</b> [Index(1..10)] [IP Address]	<b>G</b>	Set the IP security list	switch(config)#security ip 1 192.168.1.55
<b>show security</b>	<b>P</b>	Show the information of IP security	switch#show security
<b>no security</b>	<b>G</b>	Disable IP security function	switch(config)#no security
<b>no security http</b>	<b>G</b>	Disable IP security of HTTP server	switch(config)#no security http
<b>no security telnet</b>	<b>G</b>	Disable IP security of telnet server	switch(config)#no security telnet

### 6.3 Commands Set List—Port Commands Set

IES-2206F-II Commands	Level	Description	Example
<b>interface fastEthernet</b> [Portid]	<b>G</b>	Choose the port for modification.	switch(config)#interface fastEthernet 2
<b>duplex</b> [full   half]	<b>I</b>	Use the duplex configuration command to specify the duplex mode of operation for Fast Ethernet.	switch(config)#interface fastEthernet 2 switch(config-if)#duplex full
<b>speed</b> [10 100 1000 auto]	<b>I</b>	Use the speed configuration command to specify the speed mode of operation for Fast Ethernet., the speed can't be set to 1000 if the port isn't a giga port..	switch(config)#interface fastEthernet 2 switch(config-if)#speed 100
<b>flowcontrol mode</b> [Symmetric Asymmetric]	<b>I</b>	Use the flowcontrol configuration command on Ethernet ports to control traffic rates during congestion.	switch(config)#interface fastEthernet 2 switch(config-if)#flowcontrol mode Asymmetric

<b>no flowcontrol</b>	I	Disable flow control of interface	switch(config-if)#no flowcontrol
<b>security enable</b>	I	Enable security of interface	switch(config)#interface fastEthernet 2 switch(config-if)#security enable
<b>no security</b>	I	Disable security of interface	switch(config)#interface fastEthernet 2 switch(config-if)#no security
<b>bandwidth type all</b>	I	Set interface ingress limit frame type to “accept all frame”	switch(config)#interface fastEthernet 2 switch(config-if)#bandwidth type all
<b>bandwidth type broadcast-multicast-flooded-unicast</b>	I	Set interface ingress limit frame type to “accept broadcast, multicast, and flooded unicast frame”	switch(config)#interface fastEthernet 2 switch(config-if)#bandwidth type broadcast-multicast-flooded-unicast
<b>bandwidth type broadcast-multicast</b>	I	Set interface ingress limit frame type to “accept broadcast and multicast frame”	switch(config)#interface fastEthernet 2 switch(config-if)#bandwidth type broadcast-multicast
<b>bandwidth type broadcast-only</b>	I	Set interface ingress limit frame type to “only accept broadcast frame”	switch(config)#interface fastEthernet 2 switch(config-if)#bandwidth type broadcast-only
<b>bandwidth in [Value]</b>	I	Set interface input	switch(config)#interface fastEthernet 2

		bandwidth. Rate Range is from 100 kbps to 102400 kbps or to 256000 kbps for giga ports, and zero means no limit.	switch(config-if)#bandwidth in 100
<b>bandwidth out</b> [Value]		Set interface output bandwidth. Rate Range is from 100 kbps to 102400 kbps or to 256000 kbps for giga ports, and zero means no limit.	switch(config)#interface fastEthernet 2 switch(config-if)#bandwidth out 100
<b>show bandwidth</b>	<b>I</b>	Show interfaces bandwidth control	switch(config)#interface fastEthernet 2 switch(config-if)#show bandwidth
<b>state</b> [Enable   Disable]	<b>I</b>	Use the state interface configuration command to specify the state mode of operation for Ethernet ports. Use the disable	switch(config)#interface fastEthernet 2 switch(config-if)#state Disable

		form of this command to disable the port.	
<b>show interface configuration</b>	I	show interface configuration status	switch(config)#interface fastEthernet 2 switch(config-if)#show interface configuration
<b>show interface status</b>	I	show interface actual status	switch(config)#interface fastEthernet 2 switch(config-if)#show interface status
<b>show interface accounting</b>	I	show interface statistic counter	switch(config)#interface fastEthernet 2 switch(config-if)#show interface accounting
<b>no accounting</b>	I	Clear interface accounting information	switch(config)#interface fastEthernet 2 switch(config-if)#no accounting

## 6.4 Commands Set List—Trunk command set

IES-2206F-II Commands	Level	Description	Example
<b>aggregator priority</b> [1to65535]	<b>G</b>	Set port group system priority	switch(config)#aggregator priority 22
<b>aggregator activityport</b> [Port Numbers]	<b>G</b>	Set activity port	switch(config)#aggregator activityport 2
<b>aggregator group</b> [GroupID] [Port-list] <b>lACP</b> <b>workp</b> [Workport]	<b>G</b>	Assign a trunk group with LACP active. [GroupID] :1to3 [Port-list]:Member port list, This parameter could be a port range(ex.1-4) or a port list separate by a comma(ex.2, 3, 6) [Workport]: The amount of work ports, this value could not be less than zero or be large than the amount of member ports.	switch(config)#aggregator group 1 1-4 lACP workp 2 or switch(config)#aggregator group 2 1,4,3 lACP workp 3
<b>aggregator group</b> [GroupID] [Port-list] <b>nolACP</b>	<b>G</b>	Assign a static trunk group. [GroupID] :1to3 [Port-list]:Member port list, This parameter could be a port range(ex.1-4) or a port list separate by a comma(ex.2, 3, 6)	switch(config)#aggregator group 1 2-4 nolACP or switch(config)#aggregator group 1 3,1,2 nolACP
<b>show aggregator</b>	<b>P</b>	Show the information of trunk group	switch#show aggregator
<b>no aggregator lACP</b> [GroupID]	<b>G</b>	Disable the LACP function of trunk group	switch(config)#no aggregator lACP 1
<b>no aggregator group</b> [GroupID]	<b>G</b>	Remove a trunk group	switch(config)#no aggregator group 2

## 6.5 Commands Set List—VLAN command set

IES-2206F-II Commands	Level	Description	Example
<b>vlan database</b>	<b>P</b>	Enter VLAN configure mode	switch#vlan database
<b>vlan</b> <b>[8021q   gvrp]</b>	<b>V</b>	To set switch VLAN mode.	switch(vlan)# vlanmode 8021q or switch(vlan)# vlanmode gvrp
<b>no vlan</b> <b>[VID]</b>	<b>V</b>	Disable vlan group(by VID)	switch(vlan)#no vlan 2
<b>no gvrp</b>	<b>V</b>	Disable GVRP	switch(vlan)#no gvrp
<b>IEEE 802.1Q VLAN</b>			
<b>vlan 8021q port</b> <b>[PortNumber]</b> <b>access-link untag</b> <b>[UntaggedVID]</b>	<b>V</b>	Assign a access link for VLAN by port, if the port belong to a trunk group, this command can't be applied.	switch(vlan)#vlan 8021q port 3 access-link untag 33
<b>vlan 8021q port</b> <b>[PortNumber]</b> <b>trunk-link tag</b> <b>[TaggedVID List]</b>	<b>V</b>	Assign a trunk link for VLAN by port, if the port belong to a trunk group, this command can't be applied.	switch(vlan)#vlan 8021q port 3 trunk-link tag 2,3,6,99 or switch(vlan)#vlan 8021q port 3 trunk-link tag 3-20
<b>vlan 8021q port</b> <b>[PortNumber]</b> <b>hybrid-link untag</b> <b>[UntaggedVID]</b> <b>tag</b> <b>[TaggedVID List]</b>	<b>V</b>	Assign a hybrid link for VLAN by port, if the port belong to a trunk group, this command can't be applied.	switch(vlan)# vlan 8021q port 3 hybrid-link untag 4 tag 3,6,8 or switch(vlan)# vlan 8021q port 3 hybrid-link untag 5 tag 6-8
<b>vlan 8021q aggreator</b> <b>[TrunkID]</b> <b>access-link untag</b> <b>[UntaggedVID]</b>	<b>V</b>	Assign a access link for VLAN by trunk group	switch(vlan)#vlan 8021q aggreator 3 access-link untag 33
<b>vlan 8021q aggreator</b> <b>[TrunkID]</b> <b>trunk-link tag</b> <b>[TaggedVID List]</b>	<b>V</b>	Assign a trunk link for VLAN by trunk group	switch(vlan)#vlan 8021q aggreator 3 trunk-link tag 2,3,6,99 or switch(vlan)#vlan 8021q aggreator 3 trunk-link tag 3-20
<b>vlan 8021q aggreator</b> <b>[PortNumber]</b>	<b>V</b>	Assign a hybrid link for VLAN by trunk group	switch(vlan)# vlan 8021q aggreator 3 hybrid-link untag 4 tag 3,6,8

<p><b>hybrid-link untag</b> [UntaggedVID] <b>tag</b> [TaggedVID List]</p>			<p>or switch(vlan)# vlan 8021q aggregator 3 hybrid-link untag 5 tag 6-8</p>
<p><b>show vlan</b> [VID] or <b>show vlan</b></p>	<p><b>V</b></p>	<p>Show VLAN information</p>	<p>switch(vlan)#show vlan 23</p>

## 6.6 Commands Set List—Spanning Tree command set

IES-2206F-II Commands	Level	Description	Example
<b>spanning-tree enable</b>	<b>G</b>	Enable spanning tree	switch(config)#spanning-tree enable
<b>spanning-tree priority</b> [0to61440]	<b>G</b>	Configure spanning tree priority parameter	switch(config)#spanning-tree priority 32767
<b>spanning-tree max-age</b> [seconds]	<b>G</b>	Use the spanning-tree max-age global configuration command to change the interval between messages the spanning tree receives from the root switch. If a switch does not receive a bridge protocol data unit (BPDU) message from the root switch within this interval, it recomputed the Spanning Tree Protocol (STP) topology.	switch(config)# spanning-tree max-age 15
<b>spanning-tree hello-time</b> [seconds]	<b>G</b>	Use the spanning-tree hello-time global configuration command to specify the interval between hello bridge protocol data units (BPDUs).	switch(config)#spanning-tree hello-time 3
<b>spanning-tree forward-time</b> [seconds]	<b>G</b>	Use the spanning-tree forward-time global configuration command to set the forwarding-time for the specified	switch(config)# spanning-tree forward-time 20

		spanning-tree instances. The forwarding time determines how long each of the listening and learning states last before the port begins forwarding.	
<b>stp-path-cost</b> [1to200000000]	I	Use the spanning-tree cost interface configuration command to set the path cost for Spanning Tree Protocol (STP) calculations. In the event of a loop, spanning tree considers the path cost when selecting an interface to place into the forwarding state.	switch(config)#interface fastEthernet 2 switch(config-if)#stp-path-cost 20
<b>stp-path-priority</b> [Port Priority]	I	Use the spanning-tree port-priority interface configuration command to configure a port priority that is used when two switches tie for position as the root switch.	switch(config)#interface fastEthernet 2 switch(config-if)# stp-path-priority 127
<b>stp-admin-p2p</b> [Auto True False]	I	Admin P2P of STP priority on this interface.	switch(config)#interface fastEthernet 2 switch(config-if)# stp-admin-p2p Auto
<b>stp-admin-edge</b> [True False]	I	Admin Edge of STP priority on this	switch(config)#interface fastEthernet 2

		interface.	switch(config-if)# stp-admin-edge True
<b>stp-admin-non-stp</b> [True False]	<b>I</b>	Admin NonSTP of STP priority on this interface.	switch(config)#interface fastEthernet 2 switch(config-if)# stp-admin-non-stp False
<b>Show spanning-tree</b>	<b>E</b>	Display a summary of the spanning-tree states.	switch>show spanning-tree
<b>no spanning-tree</b>	<b>G</b>	Disable spanning-tree.	switch(config)#no spanning-tree

## 6.7 Commands Set List—QoS command set

IES-2206F-II Commands	Level	Description	Example
<b>qos policy</b> [weighted-fair strict]	<b>G</b>	Select QoS policy scheduling	switch(config)#qos policy weighted-fair
<b>qos prioritytype</b> [port-based cos-only tos-only cos-first tos-first]	<b>G</b>	Setting of QoS priority type	switch(config)#qos prioritytype
<b>qos priority portbased</b> [Port] [lowest low middle high]	<b>G</b>	Configure Port-based Priority	switch(config)#qos priority portbased 1 low
<b>qos priority cos</b> [Priority][lowest low middle high]	<b>G</b>	Configure COS Priority	switch(config)#qos priority cos 22 middle
<b>qos priority tos</b> [Priority][lowest low middle high]	<b>G</b>	Configure TOS Priority	switch(config)#qos priority tos 3 high
<b>show qos</b>	<b>P</b>	Display the information of QoS configuration	switch>show qos
<b>no qos</b>	<b>G</b>	Disable QoS function	switch(config)#no qos

## 6.8 Commands Set List—IGMP command set

IES-2206F-II Commands	Level	Description	Example
<b>igmp enable</b>	<b>G</b>	Enable IGMP snooping function	switch(config)#igmp enable
<b>igmp-query auto</b>	<b>G</b>	Set IGMP query to auto mode	switch(config)#igmp-query auto
<b>igmp-query force</b>	<b>G</b>	Set IGMP query to force mode	switch(config)#igmp-query force
<b>show igmp configuration</b>	<b>P</b>	Displays the details of an IGMP configuration.	switch#show igmp configuration
<b>show igmp multi</b>	<b>P</b>	Displays the details of an IGMP snooping entries.	switch#show igmp multi
<b>no igmp</b>	<b>G</b>	Disable IGMP snooping function	switch(config)#no igmp
<b>no igmp-query</b>	<b>G</b>	Disable IGMP query	switch#no igmp-query

## 6.9 Commands Set List—MAC/Filter Table command set

IES-2206F-II Commands	Level	Description	Example
<b>mac-address-table static hwaddr</b> [MAC]	<b>I</b>	Configure MAC address table of interface (static).	switch(config)#interface fastEthernet 2 switch(config-if)#mac-address-table static hwaddr 000012345678
<b>mac-address-table filter hwaddr</b> [MAC]	<b>G</b>	Configure MAC address table(filter)	switch(config)#mac-address-table filter hwaddr 000012348678
<b>show mac-address-table</b>	<b>P</b>	Show all MAC address table	switch#show mac-address-table
<b>show mac-address-table static</b>	<b>P</b>	Show static MAC address table	switch#show mac-address-table static
<b>show mac-address-table filter</b>	<b>P</b>	Show filter MAC address table.	switch#show mac-address-table filter
<b>no mac-address-table static hwaddr</b> [MAC]	<b>I</b>	Remove an entry of MAC address table of interface (static)	switch(config)#interface fastEthernet 2 switch(config-if)#no mac-address-table static hwaddr 000012345678
<b>no mac-address-table filter hwaddr</b> [MAC]	<b>G</b>	Remove an entry of MAC address table (filter)	switch(config)#no mac-address-table filter hwaddr 000012348678
<b>no mac-address-table</b>	<b>G</b>	Remove dynamic entry of MAC address table	switch(config)#no mac-address-table

## 6.10 Commands Set List—SNMP command set

IES-2206F-II Commands	Level	Description	Example
<b>snmp agent-mode</b> [v1v2c   v3]	<b>G</b>	Select the agent mode of SNMP	switch(config)#snmp agent-mode v1v2c
<b>snmp-server host</b> [IP address] <b>community</b> [Community-string] <b>trap-version</b> [v1 v2c]	<b>G</b>	Configure SNMP server host information and community string	switch(config)#snmp-server host 192.168.10.50 community public trap-version v1 (remove) Switch(config)# no snmp-server host 192.168.10.50
<b>snmp community-strings</b> [Community-string] <b>right</b> [RO RW]	<b>G</b>	Configure the community string right	switch(config)#snmp community-strings public right RO or switch(config)#snmp community-strings public right RW
<b>snmp snmpv3-user</b> [User Name] <b>password</b> [Authentication Password] [Privacy Password]	<b>G</b>	Configure the userprofile for SNMPV3 agent. Privacy password could be empty.	switch(config)#snmp snmpv3-user test01 password AuthPW PrivPW
<b>show snmp</b>	<b>P</b>	Show SNMP configuration	switch#show snmp
<b>show snmp-server</b>	<b>P</b>	Show specified trap server information	switch#show snmp-server
<b>no snmp community-strings</b> [Community]	<b>G</b>	Remove the specified community.	switch(config)#no snmp community-strings public
<b>no snmp snmpv3-user</b> [User Name] <b>password</b> [Authentication Password] [Privacy Password]	<b>G</b>	Remove specified user of SNMPv3 agent. Privacy password could be empty.	switch(config)# no snmp snmpv3-user test01 password AuthPW PrivPW
<b>no snmp-server host</b> [Host-address]	<b>G</b>	Remove the SNMP server host.	switch(config)#no snmp-server 192.168.10.50

## 6.11 Commands Set List—Port Mirroring command set

IES-2206F-II Commands	Level	Description	Example
<b>monitor rx</b>	<b>G</b>	Set RX destination port of monitor function	switch(config)#monitor rx
<b>monitor tx</b>	<b>G</b>	Set TX destination port of monitor function	switch(config)#monitor tx
<b>show monitor</b>	<b>P</b>	Show port monitor information	switch#show monitor
<b>monitor</b> [RX TX Both]	<b>I</b>	Configure source port of monitor function	switch(config)#interface fastEthernet 2 switch(config-if)#monitor RX
<b>show monitor</b>	<b>I</b>	Show port monitor information	switch(config)#interface fastEthernet 2 switch(config-if)#show monitor
<b>no monitor</b>	<b>I</b>	Disable source port of monitor function	switch(config)#interface fastEthernet 2 switch(config-if)#no monitor

## 6.12 Commands Set List—802.1x command set

IES-2206F-II Commands	Level	Description	Example
<b>8021x enable</b>	<b>G</b>	Use the 802.1x global configuration command to enable 802.1x protocols.	switch(config)# 8021x enable
<b>8021x system radiousip</b> [IP address]	<b>G</b>	Use the 802.1x system radious IP global configuration command to change the radious server IP.	switch(config)# 8021x system radiousip 192.168.1.1
<b>8021x system serverport</b> [port ID]	<b>G</b>	Use the 802.1x system server port global configuration command to change the radious server port	switch(config)# 8021x system serverport 1815
<b>8021x system accountport</b> [port ID]	<b>G</b>	Use the 802.1x system account port global configuration command to change the accounting port	switch(config)# 8021x system accountport 1816
<b>8021x system sharekey</b> [ID]	<b>G</b>	Use the 802.1x system share key global configuration command to change the shared key value.	switch(config)# 8021x system sharekey 123456
<b>8021x system nasid</b> [words]	<b>G</b>	Use the 802.1x system nasid global configuration command to change the NAS ID	switch(config)# 8021x system nasid test1
<b>8021x misc quietperiod</b> [sec.]	<b>G</b>	Use the 802.1x misc quiet period global configuration command to specify the quiet period value of the switch.	switch(config)# 8021x misc quietperiod 10
<b>8021x misc txperiod</b> [sec.]	<b>G</b>	Use the 802.1x misc TX period global configuration command to set the TX period.	switch(config)# 8021x misc txperiod 5

<b>8021x misc supporttimeout</b> [sec.]	<b>G</b>	Use the 802.1x misc supp timeout global configuration command to set the supplicant timeout.	switch(config)# 8021x misc supporttimeout 20
<b>8021x misc servertimeout</b> [sec.]	<b>G</b>	Use the 802.1x misc server timeout global configuration command to set the server timeout.	switch(config)#8021x misc servertimeout 20
<b>8021x misc maxrequest</b> [number]	<b>G</b>	Use the 802.1x misc max request global configuration command to set the MAX requests.	switch(config)# 8021x misc maxrequest 3
<b>8021x misc reauthperiod</b> [sec.]	<b>G</b>	Use the 802.1x misc reauth period global configuration command to set the reauth period.	switch(config)# 8021x misc reauthperiod 3000
<b>8021x portstate</b> [disable   reject   accept   authorize]	<b>I</b>	Use the 802.1x port state interface configuration command to set the state of the selected port.	switch(config)#interface fastethernet 3 switch(config-if)#8021x portstate accept
<b>show 8021x</b>	<b>E</b>	Display a summary of the 802.1x properties and also the port sates.	switch>show 8021x
<b>no 8021x</b>	<b>G</b>	Disable 802.1x function	switch(config)#no 8021x

### 6.13 Commands Set List—TFTP command set

IES-2206F-II Commands	Level	Description	Defaults Example
<a href="#">backup flash:backup_cfg</a>	<b>G</b>	Save configuration to TFTP and need to specify the IP of TFTP server and the file name of image.	switch(config)#backup flash:backup_cfg
<a href="#">restore flash:restore_cfg</a>	<b>G</b>	Get configuration from TFTP server and need to specify the IP of TFTP server and the file name of image.	switch(config)#restore flash:restore_cfg
<a href="#">upgrade flash:upgrade_fw</a>	<b>G</b>	Upgrade firmware by TFTP and need to specify the IP of TFTP server and the file name of image.	switch(config)#upgrade lash:upgrade_fw

## 6.14 Commands Set List—SYSLOG, SMTP, EVENT command set

IES-2206F-II Commands	Level	Description	Example
<b>systemlog ip</b> [IP address]	<b>G</b>	Set System log server IP address.	switch(config)# systemlog ip 192.168.1.100
<b>systemlog mode</b> [client server both]	<b>G</b>	Specified the log mode	switch(config)# systemlog mode both
<b>show systemlog</b>	<b>E</b>	Display system log.	Switch>show systemlog
<b>show systemlog</b>	<b>P</b>	Show system log client & server information	switch#show systemlog
<b>no systemlog</b>	<b>G</b>	Disable systemlog function	switch(config)#no systemlog
<b>smtp enable</b>	<b>G</b>	Enable SMTP function	switch(config)#smtp enable
<b>smtp serverip</b> [IP address]	<b>G</b>	Configure SMTP server IP	switch(config)#smtp serverip 192.168.1.5
<b>smtp authentication</b>	<b>G</b>	Enable SMTP authentication	switch(config)#smtp authentication
<b>smtp account</b> [account]	<b>G</b>	Configure authentication account	switch(config)#smtp account User
<b>smtp password</b> [password]	<b>G</b>	Configure authentication password	switch(config)#smtp password
<b>smtp rcptemail</b> [Index] [Email address]	<b>G</b>	Configure Rcpt e-mail Address	switch(config)#smtp rcptemail 1 <a href="mailto:Alert@test.com">Alert@test.com</a>
<b>show smtp</b>	<b>P</b>	Show the information of SMTP	switch#show smtp
<b>no smtp</b>	<b>G</b>	Disable SMTP function	switch(config)#no smtp
<b>event device-cold-start</b> [Systemlog SMTP Both]	<b>G</b>	Set cold start event type	switch(config)#event device-cold-start both
<b>event authentication-failure</b> [Systemlog SMTP Both]	<b>G</b>	Set Authentication failure event type	switch(config)#event authentication-failure both
<b>event X-Ring-topology-change</b> [Systemlog SMTP Both]	<b>G</b>	Set s ring topology changed event type	switch(config)#event X-Ring-topology-change both
<b>event systemlog</b>	<b>I</b>	Set port event for	switch(config)#interface fastethernet

[Link-UP Link-Down Both]		system log	3 switch(config-if)#event systemlog both
<b>event smtp</b> [Link-UP Link-Down Both]	<b>I</b>	Set port event for SMTP	switch(config)#interface fastethernet 3 switch(config-if)#event smtp both
<b>show event</b>	<b>P</b>	Show event selection	switch#show event
<b>no event device-cold-start</b>	<b>G</b>	Disable cold start event type	switch(config)#no event device-cold-start
<b>no event authentication-failure</b>	<b>G</b>	Disable Authentication failure event typ	switch(config)#no event authentication-failure
<b>no event X-Ring-topology-change</b>	<b>G</b>	Disable X-Ring topology changed event type	switch(config)#no event X-Ring-topology-change
<b>no event systemlog</b>	<b>I</b>	Disable port event for system log	switch(config)#interface fastethernet 3 switch(config-if)#no event systemlog
<b>no event smpt</b>	<b>I</b>	Disable port event for SMTP	switch(config)#interface fastethernet 3 switch(config-if)#no event smpt
<b>show systemlog</b>	<b>P</b>	Show system log client & server information	switch#show systemlog

## 6.15 Commands Set List—SNTP command set

IES-2206F-II Commands	Level	Description	Example
<b>sntp enable</b>	<b>G</b>	Enable SNTP function	switch(config)#sntp enable
<b>sntp daylight</b>	<b>G</b>	Enable daylight saving time, if SNTP function is inactive, this command can't be applied.	switch(config)#sntp daylight
<b>sntp daylight-period</b> [Start time] [End time]	<b>G</b>	Set period of daylight saving time, if SNTP function is inactive, this command can't be applied. Parameter format: [yyyymmdd-hh:mm]	switch(config)# sntp daylight-period 20060101-01:01 20060202-01-01
<b>sntp daylight-offset</b> [Minute]	<b>G</b>	Set offset of daylight saving time, if SNTP function is inactive, this command can't be applied.	switch(config)#sntp daylight-offset 3
<b>sntp ip</b> [IP]	<b>G</b>	Set SNTP server IP, if SNTP function is inactive, this command can't be applied.	switch(config)#sntp ip 192.169.1.1
<b>sntp timezone</b> [Timezone]	<b>G</b>	Set timezone index, use "show sntp timezone" command to get more information of index number	switch(config)#sntp timezone 22
<b>show sntp</b>	<b>P</b>	Show SNTP information	switch#show sntp
<b>show sntp timezone</b>	<b>P</b>	Show index number of time zone list	switch#show sntp timezone
<b>no sntp</b>	<b>G</b>	Disable SNTP function	switch(config)#no sntp
<b>no sntp daylight</b>	<b>G</b>	Disable daylight saving time	switch(config)#no sntp daylight

## 6.16 Commands Set List—Pro-Ring command set

IES-2206F-II Commands	Level	Description	Example
<b>Ring enable</b>	<b>G</b>	Enable X-Ring	switch(config)# X-Ring enable
<b>Ring master</b>	<b>G</b>	Enable ring master	switch(config)# X-Ring master
<b>Ring couplering</b>	<b>G</b>	Enable couple ring	switch(config)# X-Ring couplering
<b>Ring dualhoming</b>	<b>G</b>	Enable dual homing	switch(config)# X-Ring dualhoming
<b>Ring ringport</b> [1st Ring Port] [2nd Ring Port]	<b>G</b>	Configure 1st/2nd Ring Port	switch(config)# X-Ring ringport 7 8
<b>Ring couplingport</b> [Coupling Port]	<b>G</b>	Configure Coupling Port	switch(config)# X-Ring couplingport 1
<b>Ring controlport</b> [Control Port]	<b>G</b>	Configure Control Port	switch(config)# X-Ring controlport 2
<b>Ring homingport</b> [Dual Homing Port]	<b>G</b>	Configure Dual Homing Port	switch(config)# X-Ring homingport 3
<b>show Ring</b>	<b>P</b>	Show the information of X-Ring	switch#show X-Ring
<b>no Ring</b>	<b>G</b>	Disable X-Ring	switch(config)#no X-Ring
<b>no Ring master</b>	<b>G</b>	Disable ring master	switch(config)# no X-Ring master
<b>no Ring couplering</b>	<b>G</b>	Disable couple ring	switch(config)# no X-Ring couplering
<b>no Ring dualhoming</b>	<b>G</b>	Disable dual homing	switch(config)# no X-Ring dualhoming

# 7

## Technical Specifications

<b>Technology</b>	
Ethernet Standards	802.3-10BaseT, 802.3u-100BaseTX, 100BaseFX, 802.3x- 802.3z-1000BaseLX, 802.3ab-1000BaseTX, 802.3ad-, 802.1d-MAC Bridges, 802.1d-, 802.1p-Class of Service, 802.1q-, 802.1w-Rapid Spanning Tree Protocol, 802.1x-Port Based Network Access Control, 802.1s – MSTP (optional feature)
MAC addresses	8192
Priority Queues	4
Flow Control	IEEE 802.3x Flow Control and Back-pressure
Processing	Store-and-Forward
<b>Interface</b>	
RJ45 Ports	6 x 10/100Base-T(X), Auto MDI/MDI-X
Fiber Ports	2 x 100 Base-FX(SC Connector) Multi-Mode: Up to 2 km, 1310 nm (50/125 µm to 62.5/125 µm) Single-Mode: Up to 30 km, 1310 nm (9/125µm)
LED Indicators	Per Unit : Power x 3(Green) RJ45 Ports: Per Port : Link/Activity(Green/Blinking Green), Full duplex(Amber) Fiber Ports: Per Port : Activity(Green),Link (Amber)
<b>Power Requirements</b>	
Power Input Voltage	PWR1/2: 12 to 48VDC in 7-pin Terminal Block PWR3: 12 to 45VDC in Power Jack
Reverse Polarity	Present

Protection	
Power Consumption	10 Watts Max
<b>Environmental</b>	
Operating Temperature	-20 to 60 °C (Wide temperature model -40 to 75°C)
Storage Temperature	-20 to 85 °C
Operating Humidity	5% to 95%, non-condensing
<b>Mechanical</b>	
Dimensions(W x D x H)	52 mm(W)x 106 mm( D )x 144 mm(H)
Casing	IP-30 protection
<b>Regulatory Approvals</b>	
Regulatory Approvals	CE class A RoHS
EMS	EN61000-4-2 (ESD), EN61000-4-3 (RS), EN61000-4-4 (EFT), EN61000-4-5 (Surge), Level 3, EN61000-4-6 (CS), Level 3
Shock	IEC60068-2-27
Free Fall	IEC 60068-2-32
Vibration	IEC 60068-2-6
