

Ericsson GA628
Mobile Phone for the GSM Network
User's Manual

The **CE** symbol on our products signifies that they have been certified according to the EMC directive 89/336/EEC, the Telecommunications directive 91/263/EEC, and the Low Voltage directive 73/23/EEC when applicable. The products fulfil the requirements according to the following standards:

Cellular Phones and Accessories in Combination:

ETS 300 342-1 EMC for European digital cellular telecommunications.

Accessories Without Direct Connection to a Cellular Phone:

EN 50081 Electromagnetic compatibility, Generic Emission Standard

EN 50082 Electromagnetic compatibility, Generic Immunity Standard.

Acrobat edition (August 1997)

This manual is published by **Ericsson Mobile Communications AB**, without any warranty. Improvements and changes to this manual due to typographical errors, inaccuracies of current information, or improvements to programs and/or equipment, may be made by **Ericsson Mobile Communications AB** at any time and without notice. Such changes will, however, be incorporated into new editions of this manual.

INNOVATRON PATENTS

Congratulations...

and thank you for buying the GA628, a product specially suited for the user who wants an Ericsson mobile phone a little bit out of the ordinary but with the same reliability and high quality that all other Ericsson phones.

The GA628 comes with a wide range of front panels that makes it possible for you to match the phone to suit your different moods.

Ericsson's mobile phones are produced to meet high quality standards and are marked with the **CE** symbol.

This manual introduces you to your mobile phone and shows you how to get the most out of your new product and contains the following information:

An introduction to your phone and how to make it ready for use.

How to deal with phone calls and all the features available to you before, during and after a telephone conversation.

How to personalize and set up the phone to meet your requirements in the every day use of your phone.

An explanation of how network services can help you to always keep in touch with other people and the latest area information.

How it is possible to keep track of and restrict phone calls.

We advise you to read the safety information before you start using your phone.

Guidelines for Safe and Efficient Use

Read this information before using your portable phone

General

Since its introduction in the mid 1980s the portable phone is one of the most exciting and innovative products ever developed. With it, you can stay in contact with your office, your home, emergency services, and others.

Your telephone is a radio transmitter and receiver. When it is ON it receives and also sends out radio frequency (RF) energy. Depending upon the type of mobile phone you have purchased, it operates in different frequency ranges and employs commonly used modulation techniques. When you use your phone, the system handling your call controls the power level at which your phone transmits.

For safe and efficient operation of your phone, observe these guidelines.

Exposure to Radio Frequency Energy

The International Commission on Non-Ionizing Radiation Protection (ICNIRP), sponsored by the World Health Organization (WHO), published a statement in 1996 which sets limits for exposure to RF fields from handheld mobile phone. According to this statement, which is based on the available body of research, there is no evidence that mobile terminals meeting the recommended limits can cause any adverse health effects. All Ericsson telephones conform to the ICNIRP rec-

ommendations, and international exposure standards, such as:

- CENELEC European Pre-standard ENV50166-2
- ANSI/IEEE C95.1-1992 (USA, Asia-Pacific)

If you want to limit RF exposure even further, you may choose to control the duration of your calls and operate your phone in the most power efficient manner.

Efficient Phone Operation

How to use your phone for optimum performance with minimum power consumption:

- Hold the phone as you would any other telephone. While speaking directly into the mouthpiece, angle the antenna in a direction up and over your shoulder. If the antenna is extendable, it should be extended during a call.
- Do not hold the antenna when the phone is in use. Holding the antenna affects call quality, may cause the phone to operate at a higher power level than needed and shorten talk and standby times.

Antenna Care and Replacement

The antenna is sensitive and should not be bent since this will reduce its performance.

Do not use the phone with a damaged antenna. Replace a damaged antenna immediately. Consult your

manual to see if you may change the antenna yourself. If so, use only an Ericsson approved antenna. Otherwise, take your phone to a qualified service centre for repair.

Use only the designated Ericsson antenna. Unauthorized antennas, modifications, or attachments could damage the phone and may violate the appropriate regulations.

Do not use an antenna designed for any other type of portable telephone than the telephone you have purchased.

Driving

Check the laws and regulations on the use of telephones in the areas where you drive. Always obey them. Also, when using your phone while driving, please:

- Give full attention to driving.
- Use handsfree operation, if available.
- Pull off the road and park before making or answering a call if driving conditions so require.

RF energy may affect some electronic systems in motor vehicles. In addition, some vehicle manufacturers forbid the use of mobile phones in their vehicles. Check with your vehicle manufacturer's representative to be sure your phone will not affect the electronic systems of your vehicle.

Electronic devices

Most modern electronic equipment, for example, equipment in hospitals and cars, is shielded from RF energy. However, RF energy from telephones may affect some electronic equipment.

Turn your phone OFF in health care facilities when regulations posted in the areas instruct you to do so. Always request permission before using your phone near medical equipment.

Mobile telephones may affect the operation of some implanted cardiac pacemakers, equipment for people with hearing impairments and other medically implanted equipment. Pacemaker patients should be aware that the use of a mobile phone very close to a pacemaker may cause the device to malfunction. Avoid placing the phone over the pacemaker, i.e. in your breast pocket. When using the phone, place it at your ear opposite the pacemaker. If a distance of 15 cm is kept between the phone and the pacemaker, the risk of interference is limited. Contact your cardiologist for more information.

Aircraft

Turn your phone OFF before boarding any aircraft.

- Use it on the ground only with crew permission
- Turn off your phone before the aircraft leaves the ground. Do not use it in the air.

To prevent possible interference with aircraft systems, safety regulations require you to have permission from a crew member to use your phone while the plane is on the ground. To prevent interference with communication systems, you must not use your phone while the plane is in the air.

Power Supply

- Connect AC (Power supply) only to designated power sources as marked on the product.
- To reduce risk of damage to electric cord, remove from outlet by holding onto AC adapter rather than cord.
- Make sure the cord is located so that it will not be stepped on, tripped over or otherwise subjected to damage or stress.
- To reduce risk of electric shock, unplug unit from power source before attempting any cleaning, then use soft cloth dampened on with water.

Children

Do not allow children to play with your phone. Children could hurt themselves or others. Children could also damage the phone or make calls that increase your telephone bills.

Blasting Areas

To avoid interfering with blasting operations, turn your unit OFF when in a “blasting area” or in areas posted “turn off two-way radio”. Construction crews often use remote control RF devices to set off explosives.

Potentially Explosive Atmospheres

Turn your phone OFF when in any area with a potentially explosive atmosphere. It is rare, but your phone or its accessories could generate sparks. Sparks in such areas could cause an explosion or fire resulting in bodily injury or even death.

Areas with a potentially explosive atmosphere are often, but not always, clearly marked. They include fueling areas, such as gas stations, below deck on boats, fuel or chemical transfer or storage facilities, and areas where the air contains chemicals or particles, such as grain, dust, or metal powders.

Do not transport or store flammable gas, liquid, or explosives in the compartment of your vehicle which contains your phone and accessories.

Product care

- **Do not** expose product to water or moisture, for example: bathtub, laundry sink, wet/damp basement, swimming pools, etc.
- **Do not** expose product to extreme temperatures such as found near a hot radiator or stove, or in a car parked in the sun.
- **Do not** expose product to extreme cold temperatures such as a car parked outdoors in winter.
- **Do not** expose product to lit candles, cigarettes, cigars, open flames, etc.
- **Use only Ericsson Original accessories.** Failure to do so may result in loss of performance, fire, electric shock, or injury, and will void the warranty.

Do not attempt to disassemble the product. Doing so will void warranty. This product does not contain consumer serviceable components. Service should only be performed by Authorized Service Centres.

Your Phone

The parts list corresponds to Figures 1 and 2:

1. Antenna
2. Status light
3. Beeper
4. Earpiece
5. Display
6. Keypad
7. Microphone
8. Charging connector
9. Battery
10. SIM Card holder
11. Phone clip holder
12. External antenna connector

Figure 1. Front view of your phone.

Figure 2. Semi-back view of your phone.

Assembly Instructions

This chapter describes how you assemble the phone, what the SIM Card is, and how you handle the battery.

Assemble and Charge

- Insert the SIM Card.
- Attach the battery.
- Connect the charger to the phone.
- Connect the charger to the mains.
- Changing the front panel.

Inserting SIM Card

Insert the SIM Card into the SIM Card holder as described in Figure 3 and lock the holder.

Make sure the cut corner of the SIM Card is placed as in Figure 3.

Removing SIM Card

1. Make sure the battery is removed.
2. Lift up the SIM Card holder as described in Figure 3.
3. Pull out the SIM Card.

Figure 3. Inserting SIM Card

Attaching Battery

Place the battery on top of the phone and push until you hear a click (see Figure 4).

Removing Battery

1. Make sure the phone is turned off.
2. Press the locking catch on the bottom of the battery (see Figure 4).
3. Lift the battery up and away from the phone.

Figure 4. Attaching and removing battery.

The Charging Function

When the battery is low a warning signal will sound and the empty battery icon in the display will start to flash. The indicator light at the top of the phone will be flashing red.

The warning signal will be repeated and after a short moment the phone will be turned off.

Connecting and Disconnecting Charger

Have the battery attached to the phone and connect the charger as described in Figure 5. The flash symbol on the charger plug must be facing upwards.

To disconnect the charger lift the plug up and pull it out (see Figure 5).

Figure 5. Connecting and disconnecting charger.

Connecting Charger to Mains

Plug the charger into a mains socket. The phone now starts to charge the battery and you can see the battery meter in the display move while charging.

Charging the Battery

When you connect the charger to the phone, the battery is charged. When the battery is fully charged, the charging stops. You cannot overcharge your battery.

When you are charging the battery you can use your phone as normal; however the charging time will be longer.

- Connect the charger to the phone.
- Connect the charger to the mains.

When the phone is turned on:

The indicator will show a steady green light. To show that the battery is being charged the battery icon in the display is filled and emptied continuously.

When the battery is fully charged the battery icon in the display will show all three bars.

When the phone is turned off:

The indicator will show a steady red light.

To show that the battery is being charged the battery icon in the display is filled and emptied continuously.

When the battery is fully charged the battery icon in the display will show all three bars and the indicator will show a steady green light.

Changing the Front Panel

It is very important that the phone always is used with a front panel. This will prevent dust and dirt to get into the phone which will reduce the phone's functionality.

The Raised Front Panel Markings

The front panel has raised markings around the left/right arrows and key 5, in order to help you find the right key on the keypad when you are not able to see it.

Raised Front Panel Markings

For instance when driving. These raised markings must be facing up when you mount the front panel.

Removing the Front Panel

1. Lift the bottom of the front panel with your thumb and push it towards the display.

Be careful to not bend the front panel too much since it may break.

2. Pull out the front panel from the phone.

Mounting the Front Panel

1. Insert the top of the front panel into the two slots above the YES and NO keys. Make sure that the raised markings on the front panel are facing up.

2. Hold the phone horizontally and drop the panel onto the face of the phone.

3. Insert the pegs at the bottom of the front panel into the recess in the phone by carefully bending the front panel and pushing it towards the display. Be careful not to bend the front panel too much since it may break.

The Battery and the SIM Card

The Battery

Your phone is supplied with a Nickel Metal Hydride battery. The battery is not charged before shipment, even though there might be enough power to turn the phone on.

Remember to recycle the battery when you will not use it anymore.

The SIM Card

Before you can start using your phone, you need to or-

der a SIM Card from a GSM service provider. The SIM Card is a computer circuit that keeps track of your phone number, the services that you have ordered from the service provider, and your phone book information.

The SIM Card sometimes contains information that lets the phone automatically change the display texts into the language of the SIM Card.

Your SIM Card is supplied with a security code or PIN (Personal Identity Number) that you need to enter into the phone to gain access to the phone and network.

Turning On the Phone and General Information

This chapter describes the display information you receive from your phone when you use it.

Turning On the Phone

1. Press and hold down the **NO** key until you hear a click. The display will prompt you to enter the PIN (the security code that follows your SIM Card).

PIN:

2. Enter the PIN and press **YES**.
The PIN is indicated as **** in the display.

If you entered the PIN correctly, you will be welcomed by your phone and it then starts searching for a network.

When a network is found, the indicator light on top of the phone flashes green once every second and the standby display is shown (see Figure 6).

Figure 6. Standby display.

Turning Off the Phone

- Press and hold the **NO** key until you hear a click and the display is dark.

The Display

Your phone display will help you to:

- Verify that you are dialling correctly.
- Check your battery status.
- Check your signal strength and service availability.
- Indicate that you have received messages.

Changing Display Language

To change the display language see *Personalizing Your Phone*, p. 16.

Looking at the Display

Figure 7 shows how the display looks when the entire icon row is lit. Table 1 explains what each icon means.

Figure 7. Display with all icons lit.

Note! All icons may not be visible at all times.

Table 1. Description of icons.

Icon:	Indicates:
WORLD	Network The name and country of the network.
	Signal Strength The received signal strength in five steps, depending on the strength of the signal.
	Line Whether line 1 or 2 is active. The icon is lit when the corresponding line is activated. These icons only show when you have two lines on your SIM Card.
	Divert That the phone has a divert active. The arrows correspond to the diverted line.
	Silent Ring Signal That no ring signal will sound when the phone is ringing.
	Letter That you have received a short text message or area information.
	Phone That you are engaged in a call.
	Battery The current battery strength – more bars means more power remaining.

Making and Receiving Calls

Making a Call

1. Enter the area code and phone number. The phone number is shown in the display.

If the number is longer than 12 characters, the beginning of the number will be shown as an arrow (see Figure 8).

Figure 8. Number with more than 12 characters.

To erase a digit, press CLR. To erase the entire phone number, press and hold down CLR for a couple of seconds.

2. Press YES to make the call. The display shows **Calling**, followed by **Connecting** and the phone icon is lit.

Ending a Call

- Press NO to end the call.

Making an International Call

1. Press and hold the zero key until the international + prefix is displayed.

2. Enter the country code, area code (without any leading zero) and the phone number.
3. Press YES to make the call.

Making an Emergency Call

- Enter **112** (The international emergency number) and press YES.

The **112** emergency number can be used in any country with or without a SIM Card, provided a GSM network is within range.

Note! Some operators may require that a SIM Card has been inserted into the phone and that the PIN code has been entered.

Retry Function

If the call connection fails or if the number you are trying to reach is busy, the display shows **Retry?**. Press YES to re-dial the number, otherwise NO.

If you press YES, the number will automatically be re-dialled until the call is answered, or 10 times at the most. If you press any key, or you receive a call, the re-dialling is interrupted.

If the re-dialling is successful, the phone rings once to inform you.

Receiving a Call

When you receive a call, the phone rings and the indicator light on the top of the phone blinks green rapidly. The display shows **Answer?**

Answering a Call

- Press YES to answer the call
- When the call is finished, press NO

Note! Always answer the call before placing the earpiece to your ear. If the ring signal is loud it could damage your hearing.

Rejecting a Call

- Press NO when the phone rings.
The display now looks like this:

If the caller's network supports it, the caller will hear a busy tone.

If you have been unable to answer, or you have rejected a call, the number of the unanswered call will be shown in the **MissedCall** menu.

Putting a Call on Hold

Press YES to put a call on hold.

To put the call **off hold**, press YES again.

Useful Information while Talking

This chapter describes how you can change the volume of the ear piece, use the display as a scratch pad, send DTMF tones, check the duration of the current call, show or hide your phone number (CLI – Calling Line Identification) and handle two calls simultaneously.

Changing Volume while Talking

During a call, you can use the arrow keys to increase or decrease the ear piece volume.

Muting Microphone

- Press and hold the CLR key.

Using Phone as Scratch Pad

1. Enter a phone number on the keypad while talking. When you end the call, the number remains in the display.
2. Press YES to make the call in the display.

Sending Tone Signals

During a call you can press keys 0 – 9, * and # to send DTMF tones. For example, to perform banking by phone or to control an answering machine.

Checking Time of Calls

When you start a call (incoming or outgoing), the air-time is counted in minutes and seconds and shown on the display, like this:

1 : 34

Calling Line Identification (CLI)

The Calling Line Identification service shows the caller's phone number when you receive a call. (You may have to order this service from your network provider depending on your network contract.) If the caller's name is stored in your phone book, you will see both the name and number.

Showing Your Phone Number

If your subscription includes not showing your phone number when calling, you can chose to show the number on a particular call.

1. Enter the number you wish to call
2. Press the up arrow. The display shows **Send Id**
3. Press YES to make the call.

Hiding Your Phone Number

If your subscription includes showing your phone number when calling, you can hide your phone number on a particular call.

Note! The **Hide Id** function does not work with all networks.

1. Enter the number you wish to call.
2. Press the up arrow twice. The display shows **Hide Id?**
3. Press YES to make the call.

Handling Two Calls

Your phone can handle two calls simultaneously. This allows you to hold one call and make or receive another, then you can switch between the two calls.

To be able to receive a second call, you must activate the Call Wait function.

Activating the Call Wait Function

- Press * 43 # followed by YES.
The display will say **Please Wait** followed by ON.

Deactivating the Call Wait Function

- Press # 43 # followed by YES.
The display will say **Please Wait** followed by OFF.

Receiving a Second Call while a Call Is in Progress

When you receive a second call, you will hear a tone in the earpiece and the display shows **CallWait**.

- Press YES to answer the second call. The current call is put on hold. The display now looks like this.

1 On Hold

- To **reject** the second call, press zero followed by YES.

Switching Between Two Calls

- Press YES to switch between the two calls.

Ending the Current Call and Return to the Held Call

1. Press NO to end the current call.
The display shows **Retrieve?** and you hear two beeps.
2. Press YES within three seconds to return to the held call.
If you do not press YES within three seconds, the held call is automatically ended.

Making a Second Call while a Call Is in Progress

- Enter the second phone number and press YES. The first call is put on hold and the display looks like this:

1 On Hold

Receiving a Third Call

If you are engaged in one call and have a second one on hold, you may receive a third call. You will hear a tone in the ear piece and **CallWait** is shown in the display.

You can only have one call on hold at a time, so you need to end the first or second call before you answer the third call.

You can do one of the following:

- Press zero followed by YES to reject the third call.
- End the first call, retrieve the held call, and answer the incoming call
- End both calls. The phone rings and the question **Answer?** appears in the display. Press YES to answer the call.

Navigating the Menu System

This chapter describes how you navigate through the menu system to get maximum use of your phone.

The Menu System

You control the functions of your phone by a menu system.

Some menus have submenus that have individual settings. If the menu has submenus, three dots appear after the menu name. See the example below:

A rectangular box with a pixelated border containing the text "Settings...".

Moving Through the Menu System

Use these keys to move through the menu system and to find the different menus.

When you reach the desired menu, press YES to choose the menu. Use the \leftarrow / \rightarrow keys until you reach the function or setting you want. Then, in the same way as you chose a menu, press YES to select the setting or function.

Press this:	To:
YES	Confirm a setting or a selection.
NO	Reject a setting or a function.
CLR	Return to the standby display.
\rightarrow	Scroll to the right in the menu system.
\leftarrow	Scroll to the left in the menu system.

Glossary

These terms will be used throughout the manual.

Scroll: Pressing the left or right arrow key to move between the menus.

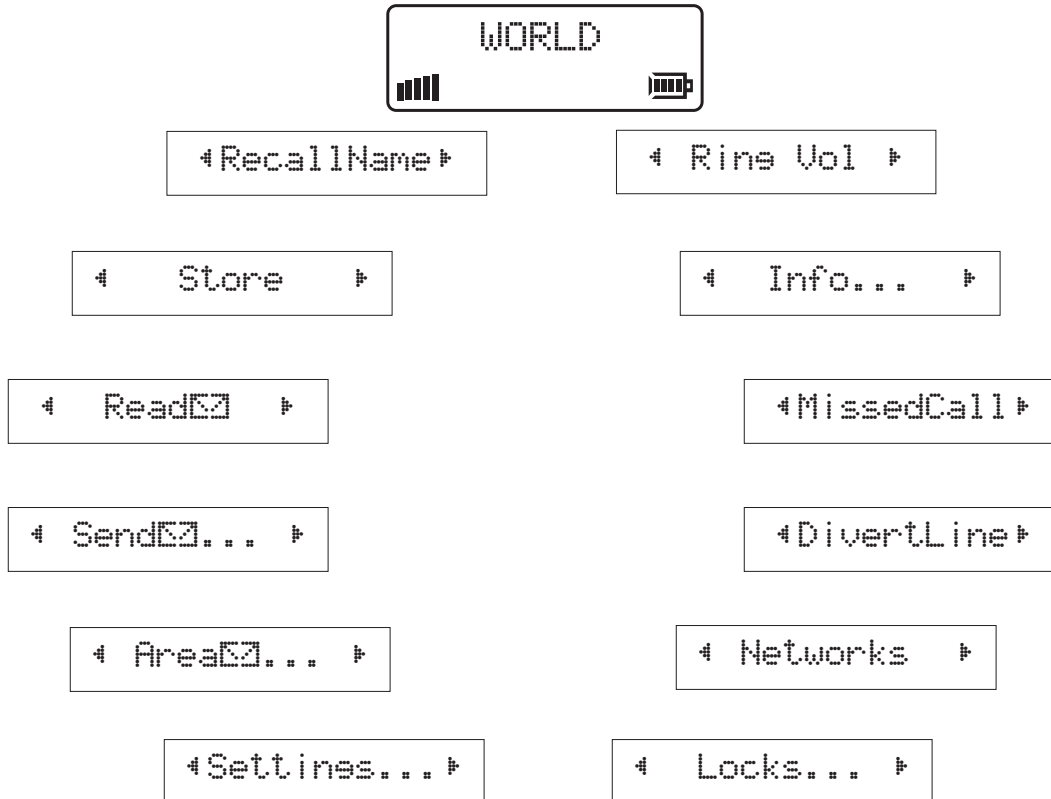

Select: Scrolling to a menu and then press YES.

Enter: Keying in letters or numbers from the keypad.

Selecting the Ring Vol(ume) Menu

1. Press CLR to clear the display.
Press the right arrow key until you reach the **Ring Vol(ume)** menu.
2. Press YES.
You are now in the **Ring Vol(ume)** menu.
3. Press the arrow keys to change the ring volume and then press YES to confirm.

Menu Overview

Creating Your Own Phone Book

This chapter describes how you can store phone numbers both on your SIM Card and in your phone's own memory.

The Phone Book

You can store phone numbers both on your SIM Card and in your phone's own memory. The difference between the two is that you can remove the SIM Card and use all those numbers in other phones, while the phone's memory always stays the same no matter which SIM Card is inserted.

You can store up to 99 phone numbers in the phone memory. The number of phone numbers you can store on your SIM Card is SIM Card dependent.

International Numbers

If you intend to use your phone book both at home and abroad, you should store all phone numbers as international phone numbers, i.e. with the international prefix + and the country code before the area code (without any leading zero) and the number.

- To enter the plus prefix, press and hold the zero until you see the plus in the display.

Speed Dialling

The phone numbers that you store in positions 1–9 on the SIM card can be called by entering the position

number and then pressing YES. You should, therefore, save positions for 1–9 for important numbers.

Storing Numbers on SIM Card

1. Enter the phone number you wish to store.
2. Press the left arrow key until **Store** is shown and press YES twice.
3. Enter the first letter of the name by pressing the appropriate numeric key as many times as required (see Table 2 for all characters). Enter the next letter when the cursor has moved to the next letter position. The number of letters the name can have is SIM card dependant.
4. Press YES when you have finished enter the name. If you want to store the phone number in the storage position suggested in the display, go directly to step 5. If you want to store the number in a different position, press CLR to erase the position number displayed and enter another number.
5. Press YES to confirm the position number. The display shows **Stored**.

If you have selected a position number that is already occupied, **Overwrite?** Is displayed. Press YES to overwrite or NO to return to the position number and change it.

Storing Numbers in Phone's Memory

Follow the same procedure as storing a phone number on the SIM card up to step 4. When you are prompted to set a storage position, press # once to enter # character (which indicates storage in phone memory) and twice to have the phone suggesting the first free storage position.

Press YES to confirm the storage.

Recalling Phone Numbers

You can recall a phone number any time from either the SIM card or the phone memory. You can recall the phone number by either the name or the storage position.

Recalling by Name

1. Press CLR to erase any digits from the display.
2. Select the RecallName menu.
You are prompted to enter a name.
3. Enter either the full name of the first letter and press YES.
The first name that matches the letter string is displayed. If needed, scroll to the name you want.
Press the * key to see the storage position.
4. Press YES to call the number.

Position Recall

Recalling by Number – Speed Dialling

1. Press CLR to erase any digits from the display.
2. Enter a position number between 1 and 9.
3. Press YES to make the call.

From SIM Card

1. Enter the position number and press #.
 2. Press YES to call the number, or scroll until you find the number you want to call and press YES.
- Press CLR or NO to return to the standby display with the number showing.

From Phone Memory

1. Press and hold # until the α symbol is shown.
2. Enter the position number.
3. Press # to recall number.

4. Press YES to call the number, or scroll until you find the number you want to call and press YES.

Deleting Storage Position

1. Select the **RecallName** menu.
2. Choose the name you want to delete, press and hold CLR.
3. Press YES at the Erase prompt.

Number of times to press the key for the required character:												
Key	1	2	3	4	5	6	7	8	9	10	11	12
1	space	-	?	!	,	.	:	“	'	()	1
2	A	B	C	Å	Ä	Æ	à	Ç	2			
3	D	E	F	è	É	3	Δ	Φ				
4	G	H	I	ì	4							
5	J	K	L	5	Λ							
6	M	N	O	Ñ	Ö	Ø	Ò	6				
7	P	Q	R	S	ß	7	Π	Σ				
8	T	U	V	Ü	Û	8						
9	W	X	Y	Z	9							
0	0	++	&	@	/	\$	%	£	θ	Ξ	Ψ	Ω
#	*	#										

Table 2. List of keypad numbers, symbols and letters. Press * to get lower-case letters. Press and hold a key to get the number directly.

Last Dialed Numbers

Your phone can store the 5 last dialed numbers.

Recalling From List of Last Dialed Numbers

1. Press CLR to erase any digits from the display.
2. Press YES. The number last called is shown.

3. Press YES to call the number or scroll to the number you want to call and then press YES.

Unanswered Calls

Sometimes you are unable to answer a call. Then the phone keeps track of your latest missed calls in the **MissedCall** menu.

Checking Unanswered Calls

Select the **MissedCall** menu. A number, a name or **Unknown** is shown.

Now do one of the following:

- Press YES to call the number.
- Press CLR to erase the call.
- Scroll between the entries.

Personalizing Your Phone

This chapter describes how you can personalize your phone to meet your own requirements.

Changing Ring Volume

1. Select the **Ring Vol** menu.
2. Scroll to the desired ring volume, press YES.

Turning Off Ring Volume

1. Select the **Ring Vol** menu.
2. Press the left arrow key until no squares are lit and press YES.

The standby display now looks like this:

Ring Type

You can choose between different types of ring signals.

Changing Ring Type

1. Select **Ring Type** in the **Settings** menu.

The display now looks like this:

2. Press the right or left arrow to listen to the different ring types.
3. Press YES to select your preferred ring type.

Display Language

Your phone has many languages that you can choose for your display texts. If your SIM Card supports the automatic function, the phone has automatically chosen the SIM Card default language.

Note! When you change language, you change all display texts immediately.

Changing Display Language

1. Select **Language** in the **Settings** menu.
2. Scroll to the language you want to have for the display texts.
3. Press YES to select the language.

Resetting Display Language to English

1. Clear the display.
2. Enter the digit string *#0000#.

Changing Key Sound

1. Select **Key Sound** in the **Settings** menu.
2. Select the key sound you want.

Diverting Calls

This chapter describes the divert function.

When supported by your service provider, you can use the **DivertLine** menu to divert (forward) your calls to another number, for example your voice mail or home phone.

Note! If your SIM Card and your service provider support two lines, you need to set each line separately. Here we assume you have one line.

The divert service lets you divert:

- **All calls:** regardless of if your telephone is turned on or off.
- **Unanswered calls:** if you do not answer within 30 seconds, if your phone is busy, turned off or out of reach of a network.

As a reminder, the display will inform you about any activated call divert each time you turn on the phone.

Note! The arrow will only be visible in the display when **ALL CALLS** is activated.

Diverting Your Calls

1. Select the **DivertLine** menu.
2. Select a divert option.
3. Chose **Activate** and press YES.

You may now do one of the following:

- Enter a number at the prompt where you want your calls to be diverted, including the area code, and press YES.
- Press the left arrow key to enter a name from your phone book and press YES.
- Use the phone number that is suggested and press YES.

You will only get a number suggested if you have activated the divert function before.

There may be a short delay before the network responds to your divert option, and your display will prompt you when the divert is active (on or off).

Your standby display looks like this when the divert is active:

Viewing Status of Call Divert

1. Select the **DivertLine** menu.
2. Select the divert option you wish to view and choose **GetStatus**.

There may be a short delay before the network responds, and your display will inform you which divert is active (on or off).

Cancelling Call Divert

1. Select the **DivertLine** menu.
2. Select the divert option you wish to cancel and choose **Cancel** and press YES.

There may be a short delay before the network responds, but you will be prompted that your divert is cancelled.

Protecting Your Keypad, Phone and SIM Card

This chapter describes the different locks that you can use to protect your phone. These are the only ways of protecting your phone in case of theft.

Locks

Your phone has three types of locks:

- Keypad lock (does not protect in case of theft)
- Card lock (comes with your subscription)
- Phone lock (a feature provided by your phone)

The card and phone locks are found in the LOCKS menu and you find the keypad lock in the SETTINGS menu.

Keypad Lock

You can lock the keypad so that unintentional key action has no effect if the phone is turned on when you are carrying it in a handbag or pocket. When activated, the keypad lock is turned on 20 seconds after the last key action. And the standby display shows ↵KeyLocked.

The keypad remains locked until you:

- answer or reject a call.
- unlock the keypad yourself.

Note! You can always make the international emergency call 112 when the keypad is locked.

Setting the Keypad Lock

1. Select **Key Lock** in the SETTINGS menu.
2. Select **Auto**.

To turn off the automatic keypad lock, select the **Off** option.

Unlocking Keypad

- Press ↵ and press YES.

Card Lock (SIM)

The card lock protects your SIM Card. When the card lock is active, you will always be prompted to enter your PIN at start-up.

PINs and PUKs

When you buy your SIM Card, you obtain a 4-to 8-digit PIN (Personal Identity Number) and a longer PUK (Personal Unblocking Key). If your SIM card allows it, you can turn off the card lock.

The PIN is the code that you enter to get access to and activate your subscription. PIN 2 is used with special functions and is provided to you by your network.

The PUK (and PUK 2 – provided to you by your network operator or service provider) is a longer code

that helps you unlock your phone when you have forgotten the PIN (PIN 2).

Changing PIN

1. Select **CardLock** in the **Locks** menu.
2. Select **NewPIN**.
3. Enter the old PIN at the prompt and press YES.
4. Enter the new PIN and press YES.
5. Repeat the new PIN at the prompt and press YES.

Unlocking with PUK

If you have entered the PIN incorrectly three times in a row, the display will read:

PUK:

1. Enter your PUK and press YES.
2. Enter a new PIN at the prompt and press YES.
3. Repeat the new PIN at the prompt and press YES.

If you entered both the PUK and the PIN correctly, the display will read:

New PIN

Phone Lock

The phone lock protects the phone against unauthorized use of the phone if it is stolen. The phone lock is not activated when you buy the phone.

These are the two types of phone locks:

Autolock:

You need to enter the phone lock code every time you change SIM card in the phone.

Full lock:

You need to enter the phone lock code every time you turn on the phone.

Changing Phone Lock Code

1. Select **Phone Lock** in the **Locks** menu.
2. Select **New Code**.
3. Enter 0000 at the prompt (the factory default code) or your own code and press YES.

4. Key in a 4 to 8 digit personal code at the prompt and press YES.
5. Repeat the new code at the prompt and press YES.

(Un)Locking Phone

1. Select **Phone Lock** in the **Locks** menu.
2. Select the desired lock option, for example **Auto Lock**.
3. Enter 0000 (the factory default code) or your own phone lock code at the prompt and press YES.

To unlock the phone, choose **Unlock** in the **LOCKS** menu.

Barring Calls – Restricting Calls

This chapter describes how you can bar (restrict) calls to and from your phone. This feature is available in your phone, but might not be supported by your subscription.

The call barring service lets you control which kind of calls can be made to or from your phone. This feature is convenient if you lend your phone to somebody else. This feature is GSM service dependent.

Barring Options

Your phone supports the following barring options (but your subscription might not support all):

- all outgoing calls
- all outgoing international calls
- all outgoing international calls except to your home country
- all incoming calls
- all incoming calls when you are abroad

Note! To activate any of the barring functions, you need a password that comes with your subscription.

Activating Call Bars for Any Call Type

1. Select **Barring** in the Settings menu.
2. Select either **Incoming** or **Outgoing**.
3. Select the barring option you want.
4. Select **Activate**.
5. Enter your password (provided with your subscription) and press YES. The password is not the same as your PIN code.

There may be a short delay before the network responds and your display will prompt you which call bars have been activated.

6. Press CLR to stop the responses from the network.

Cancelling All Call Bars

1. Select **Barring** in the SETTINGS menu.
2. Select the **Cancel All** option.
3. Enter your password at the prompt and press YES.

There may be a short delay before the network responds and your display will inform you which call bars have been cancelled.

4. Press CLR to stop the responses from the network.

Sending and Receiving Text Messages

This chapter describes SMS, what you need to do before you can send messages, how you send messages, and how you read messages. This service is network dependent.

Text Messages

The Short Message Service (SMS) function allows you to send and receive text messages that contain up to 160 characters. Text messages can be received when the phone is in standby mode, when you are engaged in a call, or when incoming calls are diverted to another phone number. Also, if you have had your phone turned off for a while the network will keep track of the message and send it to your phone as soon as it is turned on.

After a message is received, it is left in the phone's memory. The message remains in the phone's memory until you read it. You can even turn off the phone and the message will remain intact. If you, on the other hand, change SIM Card, you will lose the unread message. This is because messages should be personal.

Note! You need to set the service center number before you can send any messages. If you only want to receive messages, you do not need to do anything.

Checking Subscription

- Call your service provider to see which services your subscription supports, or check the service provider's manual.

Setting Service Centre Address

1. Check the service centre address (number) for your service provider.
2. Select **Serv Cent** in the **Send** menu.
3. Enter the service centre address with the international prefix and press YES.

Sending SMS

1. Select **New** in the **Send** menu.
2. Enter your message and press YES. You can also enter a phone number. See Table 2, p. 13, for all letters and symbols available.
3. Enter the phone number you want to send your message to and press YES.
Or press the left arrow key to enter a name you want to send to and press YES.

The display now looks like this:

Receiving a Message

When you receive a message the display looks like this:

At the same time you will hear a beep as loud as the ring signal and the green light on top of the phone will flash.

Reading an Incoming Message

1. Press YES when you have received a message. The display will show you the time of the incoming SMS, you can see the date by pressing *.
2. Press YES. The display will show you which phone number the message is sent from, or the name if stored in your phone book.

The display could now look like this:

The arrow shows that you can start scrolling through the message with the right arrow key

3. Press the right arrow key to read the message.

When you have read a message, you can do one of the following:

- Call a phone number in the message by pressing YES.
- Erase the message by pressing YES at the erase prompt.
- Store the message by pressing NO at the erase prompt (you may get a reply prompt if the sender has required a reply). Press YES at the **Store** prompt and the message is stored on the SIM Card.

Reading an Old Message

1. Select the READ menu.
2. Scroll to the message you want to read and press YES.
3. Read through the message by pressing the right arrow key.

Erasing a Message

- Press CLR any time during the message and answer YES on the question prompt.

Receiving Area Information

This chapter describes how you can make your phone available for Area Information (AI). This service is network dependent.

Area Information

While the SMS function is a personal service with messages directed to you, the Area Information is a broadcast type message that is sent to all subscribers in a certain cell, for example a section of a city, at the same time. You can set your phone to receive only those types of messages you want to listen to, e.g. the local weather forecast or the local traffic report. Each message is identified by a 3-digit code. Check with your service provider for which message types are available in your network.

When you receive AI (Area Information) the display looks like this:

The default setting for the phone is that the AI service is turned off.

At present the following message types exist:

Code	Title
000	Index
010	Flashes
020	Hospitals
022	Doctors
024	Pharmacy
030	Long-distance road reports
032	Local road reports
034	Taxis
040	Weather
050	District
052	Network information
054	Operator services
056	Directory enquiries (national)
057	Directory enquiries (international)
058	Customer care (national)
059	Customer care (international)

Activating the Area Information

- Select **On** in the **Area Info** submenu.

Adding a Code

1. Select **Edit List** in the **Area Info** submenu.
2. Press the right arrow key to find the first empty position and press YES.
3. Enter a new code and press YES.
The display could now look like this if you have added the pharmacy code to the second position:

Erasing a Code

1. Select **Edit List** in the **Area Info** submenu.
2. Scroll to the position (to the left in the display) you wish to erase and press YES.
3. Press YES at the erase prompt.

Changing a Code

1. Select **Edit List** in the **Area Info** submenu.
2. Scroll to the position (to the left in the display) you wish to change and press YES.
3. Scroll to **New Code** and press YES.
4. Enter the new code and press YES.

Other Networks

This chapter describes how you select a different network when you are out of range of your home service provider's network.

Selecting a Network

When you turn on the phone, it selects its home network. If this is not within range, you might not be able to get any reception or, if you are abroad, you can choose a different network, provided your service provider has an agreement allowing you to use the network. This is called roaming.

When you select the Networks menu, the phone automatically searches for all networks present in the area you are in. Each network that is found, has a status indication telling you whether the network is available or forbidden.

See the following list for a description of the status indication:

Display:	Meaning:
Network and #	home network
Network and *	currently used network
Network and A	other available networks
Network and S	other available networks (given priority by your home service provider)
Network and F	forbidden networks
Auto	automatic network search

Two Line Service

Two different voice lines with two different phone numbers, Line 1 and Line 2, may be assigned to your phone. The ability to receive and send text messages (SMS) is, however, only available on Line 1. The Two Line service may not be available on all networks and may require a separate subscription.

Selecting a Line

If you have the Two Line service, you can press the up arrow to reach a particular menu which lets you select Line 1 or Line 2 by pressing YES.

Note! Instead of accessing the menu system, you can press and hold down the 1 or 2 key to change line when the phone is in standby mode. Clear the display first by pressing CLR.

The selected line is indicated as L1 or L2 at the bottom of the display.

From now on, all outgoing calls are made on the selected line. You can, however, be called on both lines.

When someone calls you, the question **Answer?** is replaced by **Line1?** or **Line2?** depending on the currently selected line.

If you are already engaged in a call on one line, you must end it to answer a call on the other line.

Different Settings for Each Line

It is possible to have different settings for each line, for example, the ring signal, call diverts, call bars and call waiting function.

The call time meters in the INFO menu show the call times (call costs) for the currently selected line.

Personalizing Names for the Two Lines

In the SETTINGS menu there is a function, Line 1 Tag or Line 2 Tag, depending on the currently selected line. This function allows you to assign a name to each line. Twelve characters can be entered at the most.

The Call Time/Call Cost

This chapter describes how you can keep track of the call time and time cost.

About Duration of Calls

Your phone is capable of keeping track of the following:

Total Calls:

This feature shows the total time of all calls in hours and minutes since the meter was last set.

Outgoing Calls:

This feature tracks the time of all your outgoing calls in hours and minutes since the meter was last set.

Last Call:

This feature tracks the duration of your last call in minutes and seconds.

The duration of the call appears in the display after a call is finished. The total time of all calls is recorded in the phone and is also default.

Viewing Calling Information

There are two ways to view the calling information:

- Look at the display for the duration of your call when it is ended.
- Select the **Info** menu to view all options.

Resetting a Call Meter

1. Select the **Info** menu.
2. Scroll to the meter option you want to reset and press YES.
3. Press YES at the reset prompt.

About Call Cost

If both the network and your SIM card support it, the duration of calls can be displayed as cost instead of time. If you wish to, you can specify a price for each call unit that is received from the network while a call is in progress.

Activating the Call Cost Display

1. Select **Call Info** from the **Settings** menu.
2. At the prompt **Cost?**, press YES.

Specify the Price per Call Unit

1. Select **Set Price?** from the **Info** menu.
2. If you wish to, you can enter the currency, for example, GBP for Pounds Sterling.
 - At the prompt **Curr:** enter the currency and press YES.
 - If you do not wish to enter a currency, just press YES at the prompt **Curr:**.

3. Enter the price per call unit. To enter a decimal point, press *.
4. Press YES to finish.
5. Enter the PIN2 code and press YES.

Viewing the Call Cost

You can view the cost (or the number of call units) of the last call in the display when you end the call. To view the total cost (or the total number of call units), select the **Info** menu.

Resetting the Total Cost Meter

1. Select the **Info** menu to display the total cost and press YES.
2. At the prompt **Reset?**, press YES.
3. Enter the PIN2 code and press YES.

Cost Limit Option

If you have activated the call cost display, you can also specify a cost limit. The cost of each call will then be deducted from the specified amount. 30 seconds before the remaining amount is equal to zero, two beeps are heard as a warning.

Specifying a Cost Limit

1. Select **Credit** from the **Info** menu.
2. Select **New Credit**.
3. Enter the cost limit and press YES.

4. Enter the **PIN2** code and press YES.

Viewing the remaining amount

You can view the remaining amount of money in the display when you end the call. You can also select the

Info menu and then scroll to the **Credit** function. The word **Credit** and the remaining amount toggle in the display.

Your Phone and Accessories

This chapter describes a few of the accessories that are available for your phone.

Front Panel

You can change the front panel of your phone! This allows you to match the phone to any of your different moods.

Handsfree Equipment

If you drive and use your phone, you can connect the phone to a handsfree equipment. In some countries the

mobile phone must be connected to handsfree equipment if it is going to be used while driving.

Answering/Rejecting Calls with Handsfree

- Press any key, except NO to answer a call. NO rejects the call.

PC-Card

Your phone is capable of receiving fax and data calls through a PC-card (PCMCIA). For the best result with fax and data transmission, connect the phone to a suitable Mobile Office Kit (ask your retailer which kit suits your phone).

Note! In order to receive data/fax communication a multi-numbering scheme is required.
