SIEMENS 7866

Compact universal controllers

RWF50...

The RWF50 is used mainly for controlling the temperature or pressure in oil- or gas-fired heating plants.

If the relevant parameters are set, the RWF50 can be switched to cooling mode and then controls in reverse operation.

The RWF50 and this Data Sheet are intended for use by OEMs which integrate the controllers in their products!

Use

The RWF50 is used either as a 3-position controller without angular positioning feedback or a continuous controller with analog output depending on the version. An external switch can be used to change to a 2-position controller for controlling 2-stage burners. The integrated thermostat function switches the burner on and off.

LED symbols on the front indicate the following operating states:

- Burner release
- Control pulses OPEN or CLOSED for driving the burner's air damper when using a modulating burner control, or stage I / stage II when using 2-stage burner control
- 2-stage operation

During operation, the digital displays above the keys shows the setpoint (green), the actual value (red) and – when making parameter settings – the relevant parameters.

User Manual RWF50	U7866
Environmental Declaration RWF50	E7866

Warning notes

To avoid injury to persons, damage to property or the environment, the following warning notes must be observed!

Do not open, interfere with or modify the unit!

- All activities (mounting, installation and service work, etc.) must be performed by qualified staff
- Before making any wiring changes in the connection area, completely isolate the
 plant from mains supply (all-polar disconnection). Ensure that the plant cannot be
 inadvertently switched on again and that it is indeed dead. If not observed, there is
 a risk of electric shock hazard
- Ensure protection against electric shock hazard by providing adequate protection for the connection terminals
- When selecting the cable material, during installation and when creating the electrical connections, observe the regulations of VDE 0100 Erection of power installations with rated voltages below AC 1000 V and the relevant national regulations
- Disconnect the device from the mains supply if there is a risk of touching live parts while work is carried out
- Each time work has been carried out (mounting, installation, service work, etc.), check to ensure that wiring is in an orderly state
- Fall or shock can adversely affect the safety functions. Such units must not be put into operation, even if they do not exhibit any damage.

Caution!

The safety, warning and technical notes given in the User Manual on the RWF50 (U7866) apply fully to the present document also!

Mounting notes

Ensure that the relevant national safety regulations are complied with.

Standards and certificates

Conformity to EEC directives

- Electromagnetic compatibility EMC (immunity)
- Low-voltage directive, to DIN EN 60730-1

2004/108/EC 2006/95/EC

ISO 9001: 2008 Cert. 00739

ISO 14001: 2004 Cert. 38233

Service notes

- For service purposes, the controller can be removed from its housing. This can however lead to damage of the housing
- The electrical connections are made via the fixing terminals on the rear of the housing

Disposal notes

The unit contains electrical and electronic components and must not be disposed of together with domestic waste.

Local and currently valid legislation must be observed.

The following functions are included in the RWF50:

- **Digital PID controller** with a 3-position or analog output of the calculated output level
- The controller can be switched to a 2-position controller for controlling 2-stage burners
- Automatic **thermostat (or pressure controller) function** in low-fire operation
- Minimum limiter and maximum limiter for the boiler temperature or boiler pressure
- Manual operating mode
- Self-setting function
- Parameterization and visualization via USB interface and PC software ACS411
- Ramp functions (cold start/thermal shock protection)
- Heating/cooling

Block structure

Function of the controller when used for burner control

Low-fire operation Low-fire operation means the

Low-fire operation means that only small amounts of energy are drawn from the boiler. With the relay 1 burner release, the 2-position controller controls the set setpoint by switching the burner on and off like a thermostat. An adjustable switching differential ensures that the burner's switching frequency can be selected to help protect the material.

High-fire operation

High-fire operation means that large amounts of energy are drawn from the boiler with the burner running continuously. The RWF50 controls the required output using the 3-position or analog output.

Operation

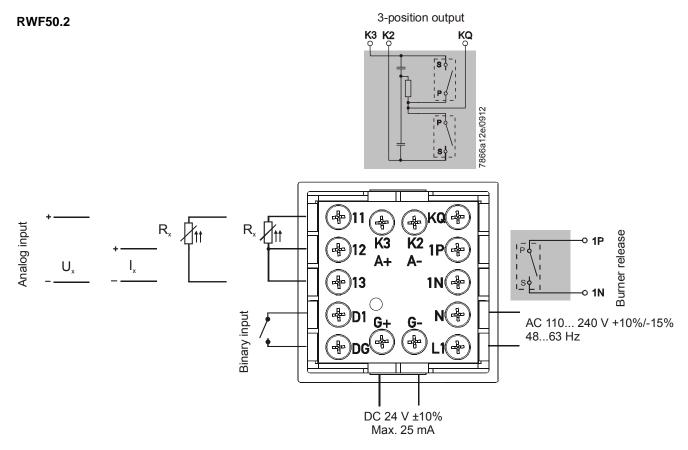

The RWF50 is operated and programmed with 4 buttons on the front of the unit. During operation and programming, the 7-segment displays show the parameter value and parameter name.

Analog input

To acquire the actual value, a number of sensors can be connected to the RWF50.
