

HDRI Workshop Day

During the day I am happy to address any photography subject or image processing questions you may have. This is a fun learning day and I am totally committed to helping you get the most out of it.

We start by reviewing what is required to capture HDR image sets. Next we set up your camera and tripod to practice shooting HDR sequences. When everyone is happy with the procedure, you can head off in your own direction to capture some images, I will wander round to each of you in turn helping make sure you are able to capture some good image sets.

After lunch we will use the meeting room to process your images. I will process one set from each participant and answer all questions. I will be demonstrating my technique using Photoshop CC and PhotoMatix. I have NIK HDR Efex Pro, Unified Color 32 Float and Oloneo HDRengine which I'm also happy to demonstrate. I will use a digital projector and screen for everyone to see easily.

The workshop fee is due at the time of booking and holding your workshop date. A refund will be given if a cancellation is received up to two weeks before the workshop (only later if I manage to find a replacement for you in the workshop). There is normally a 10% non-refundable booking fee.

Breakfast, lunch and dinner are your choice. Many local options are available--pub, café, restaurant, fish & chip shops, take-away places, supermarkets – or even BYO.

Food and drink, along with entrance fees (if relevant) are the responsibility of each individual and are not included in the workshop cost.

Recommendations:

It would be best if you could bring a digital camera that allows manual settings and shooting images in RAW. Also, please bring the user manual for your camera if you have it to hand. A wide angle lens will help you get the best out of the day. A tripod, remote release and a spirit level will be needed for capturing images, and a kneeling pad or something similar may also be helpful.

I am happy to loan you a tripod, but please reserve that in advance. I have a selection of Canon lenses (including TS-E's), polarisers, neutral density filters and 'big stoppers' for you to try.

Please note any equipment you bring is totally at your own risk as it is not insured by me. Leaving items of value in parked cars is not usually advisable in some locations.

You are welcome to bring your own computer if you like; I can help you do the processing on your own laptop if that will be helpful to you.

You may bring drinks and/or a flask of coffee/ tea, whatever you require. If you would like your own packed lunch or snacks, please feel free to bring them too.
