## User Menu Guide

### Dialing of Z31

#### 1.1 Click “i-Phone”

icon to enter the menu. Click

“Function Settings”,

changes to

, this indicates Z31 is powered

on, and is ready to make a call or receive a call.

**Click “Dial Pad” and “Function Settings” back and forth to switchover and refresh, you can quickly reach the “Enabled” status.**

Call quality is largely affected by obstacles, so to move around in small areas can improve signal strength effectively.

Note: in any country that uses digital GSM networks, call function can be used whenever you are within the networks.

You can get the strength of the network signals by checking

the indicator strip on top of mobile’s screen, card 1 and card 2 on the indicator strip can automatically switch to display.

#### 1.2 Making Calls

##### 1. Direct Dial

Click “Peel Phone” icon, and then click “Dial Pad”  icon, this way you can enter phone numbers directly on the keypad and pick card 1 or card 2 to “call”. If there’s error in entering

numbers, please press “” icon to delete.

##### 2. Dial by “Contacts”

Click “Contacts”  icon to get to “All contacts” list, and select the contact you want to call from the contact list. Click

the contact and click the phone number, then you can select to use SIM1 or SIM2 to make the call or send SMS.

### 3. Dial by "Call History":

Click "Call History"  icon to get to "Call History", select contact or phone number from "Call History" List, and you can select to use SIM1 or SIM2 to make the call or send SMS.

### 4. Dial from "Favorites"

Click "Favorites"  icon, "Favorites" can be easily found, and then you can click to make the call or send SMS.

### 5. Answering the Call

5.1. If there's inbound call, inbound call screen shows, together with contact information, specified ring or vibration.

5.2. When there's inbound call; it will first vibrate and then ring. You can answer the call in two methods. Method 1: In the inbound call screen, touch to answer the call; Method 2:

press the green key  on the bottom left of Z31 to answer the call.

5.3. Click "Mute", caller cannot hear your voice and you can hear the caller's voice. Click "Mute" again, the caller can hear

your voice again. You can also press the green key  on the bottom left of Z31, it will also be muted, and press again to get back.

5.4. Click Keypad and "Call Pad" to return operation screen.

5.5. Click "Increase Volume" to increase volume of receiver (the side volume key of iPhone4 cannot be used).

5.6. Click "Decrease Volume" to decrease volume of receiver (the side volume key of iPhone4 cannot be used).

5.7. If it is supported by the network, you can click "Hold" to hold the current session.

5.8. To hang off, you can click "End the Call".

5.9. **It's useless to click "Hands-free Call", as this function is disabled by the system.**

6. Function Settings: is divided to "Basic Settings", "Ring Settings" and "Phonebook Settings".

#### 6.1: Basic Settings

6.1.1:  indicates Z31 is powered on.

6.1.2: Mode Selection: Dual SIM can be set as "Enabled" and "Disabled", or set to use only SIM1 or SIM2.

6.1.3: SIM Card: indicates the label of SIM recognition.

6.1.4: Charge Switch: When this switch is on, Z31 charges iPhone4 (i.e. "Mobile Power" function).

6.1.5: GPRS: Not available, and waits software updates.

6.1.6: iPhone4 Power-saving Mode: When this function is enabled, your iPhone4 can totally be in Sleep status.

6.1.7: Register: Z31 can only be used normally if you register with the IMEI provided by Peel Operators.

#### 6.2: Ring Settings

6.2.1 Ring Volume: Rings of Z31 synchronize with iPhone4, adjustment for ring volume of Z31 can be achieved by directly press the side key of iPhone4.

6.2.2: Vibration Switch: This switch is used to enable and disable the vibration of Z31.

6.2.3: Ring Switch: This switch is used to enable and disable the rings of Z31.

6.2.4: Inbound Ring: There are 22 polyphony rings, so you can set different inbound rings for SIM1 and SIM2.

6.2.5: SMS Ring: There are 24 polyphony rings, so you can set different SMS rings for SIM1 and SIM2.

6.2.6: Restore Peel Factory Defaults: cClick this function and you can restore Z31 to factory defaults.

#### 6.3: Phonebook Settings:

6.3.1: Import Contacts: Contacts on the SIM card of Z31 can be imported into iPhone4 contacts. The importing process will take some time in case of importing numerous contacts. You should not conduct any other operations on iPhone4 during this period, so as to avoid incomplete importing. If you need to

re-import the contacts after the import succeeds, you need to power off and then power on Z31 again before you can conduct normal operations.

6.3.2: Delete Imported Contacts: You can only delete the phonebook imported to iPhone4 from Z31. The SIM card will be disabled when using this function. You need to manually enable SIM card and the “Enable” function can be found in “Mode Selection”.

6.3.3: Safe Mode Description: Z31 can’t answer or make calls in case of any iPhone4 abnormal conditions. The most common abnormal condition is that, the time-showing place on iPhone4 screen would display English characters like “if safe mode”. In this case, you need to reboot iPhone4.

6.3.4: Daemon Background: You can enable or disable the dialing software of Z31. No dialing is allowed when the software is disabled and out of service. You can conduct normal operations when the software is enabled, so please be cautious.

6.3.5: Version Information: You can check the software version number in the screen containing information about mobile version, dialing version, SMS version and mobile IMEI number. If the dialing version is not the latest, you can have a one-click upgrade by clicking “Upgrade the dialing software to Version XX”

## **SMS of Z31**

Click  icon to enter this function and you can easily reply and check SMS. The numbers of unread SMS will be shown on the main screen and lock screen. You can read the SMS by clicking “SMS” icon.
