1. About this manual (Supplementary remarks)

This manual is intended for customers who specialize in the assembly of build-to-order (BTO) PCs and other PCs.

If you are an end user, give great attention to the following items when using this product & manual.

- **Thoroughly read the manuals of your PC and its motherboard.**
- **Before mounting the product in your PC, be sure to turn off the power to the PC and remove the PC's power cord from the wall outlet. (Recent PCs still remain internally live even after terminating Windows.)**
- **When connecting the USB cable supplied with this product to the motherboard, firstly read the manual for the motherboard to learn the position and pin configuration of the USB connector.**

Connecting the USB cable to a non-USB connector or to a wrong USB connector position may result in a serious breakdown of not only this product but also other equipment and the PC.

2. Overview

The Internal 6 in 1 Drive combines a USB (Universal Serial Bus)-compliant card reader/writers for SmartMedia, MemoryStick, SDMemoryCard, MultiMediaCard, Microdrive and CompactFlash cards. The card reader/writers are to be connected to the USB port of the PC. To use the Internal 6 in 1 Drive, the following requirements must be met: your PC is equipped with the USB port; the OS installed in the PC supports USB; and the driver software for the Internal 6 in 1 Drive is installed in the PC.

3. Features of the Internal 6 in 1 Drive

NOTE:

- 1) In this manual, the above six types of media are generically called memory cards.
- 2) When using a Microdrive, do not use other memory cards at the same time because of its large power consumption.
- 3) Memory Sticks, MultiMediaCards, and SD Memory Cards use the same slot, so you cannot use them at the same time.
- 4) Only DOS format is supported. Memory cards formatted not in DOS format are not available.
