The Optoma logo consists of a red swoosh above the word "Optoma" in a white, sans-serif font.

Optoma

HD23

- Fantastic Full HD 1080P image quality
- Lights-on viewing with an Astonishing 2500 ANSI Lumens
- Fluid motion with 1080p24 - 24 frames per second operation
- Connect to all your HD Sources 2x HDMI v1.3 inputs

Product Aim

Typical Home cinema projectors are designed to be used in a dark environment - this gives great image quality, but is not always practical...

...so we have introduced the HD23 for those who want Full HD 1080p with the lights on...

(Copy from Brochure)

**The HD23 will project you straight into the front row;
Life-size movie, sports and gaming characters engulf your senses and immerse you in the action.**

Utilising the latest DLP® technology, the Optoma HD23 delivers exceptional quality Full HD viewing without dimming the lights.

With 2500 ANSI Lumens you can invite all your friends round any time of day to watch the big match; enjoy your favourite movies or action-packed games, for the ultimate home entertainment experience. Alternatively, use the extra brightness for an extra-large screen for the true cinema experience, right in your own home.

The Optoma HD23 is the ultimate Full HD projector!

Cable

Input / output connections

◆ 2x HDMI v1.3

◆ Composite video input

◆ Component (3x RCA) input
(capability up to 1080p)

◆ VGA Input

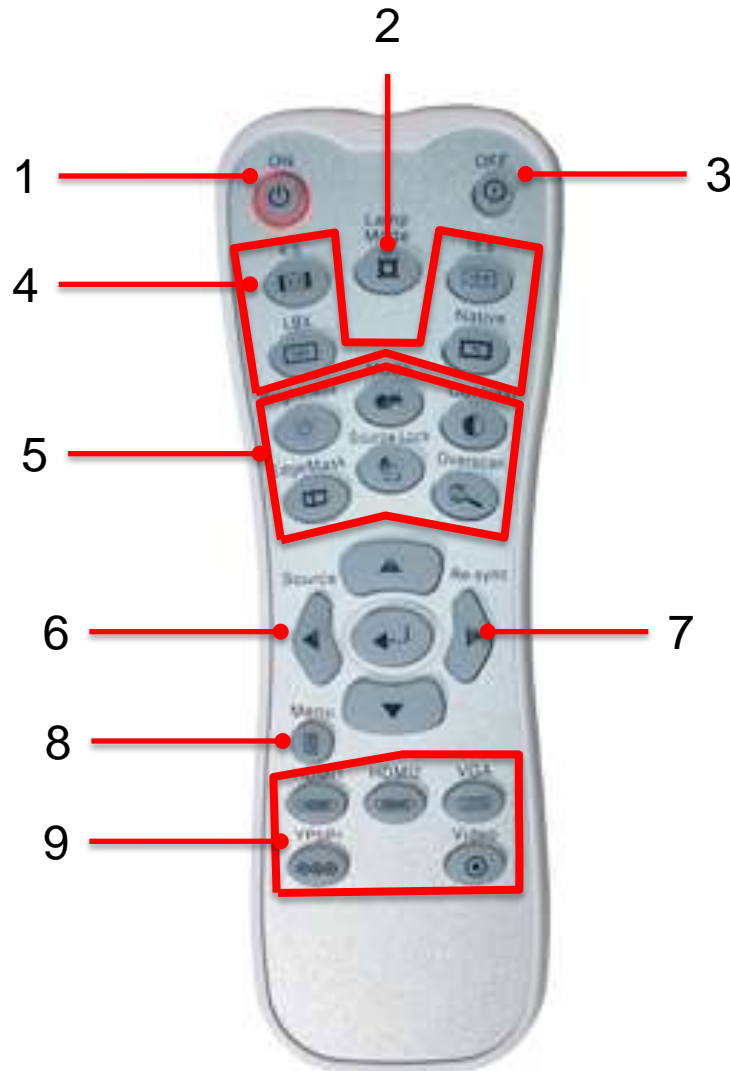

Supports Analog RGB (PC), SCART & Component (Via adaptor)

◆ +12V trigger

◆ AC Power

Backlit IR Remote (Blue LEDs)

- 1. Power ON
- 2. Lamp mode
- 3. Power Off
- 4. Aspect ratio
- 5. Image controls
- 6. Source
- 7. Re-sync
- 8. Menu
- 9. Direct source select

Image Quality

Full HD 1080p resolution

Using the latest **0.65" DMD** the HD23 can show:
1920 X 1080 = 2,073,600 pixels.

Giving you more than 2.25 X the detail of a 720p projector

H : 1920 pixels

1080P DLP: 1920 X 1080

Total pixels=2,073,600

720p DLP: 1280 X 720

Total pixels=921,600

H : 1280 pixels

Ps:(HDTV480p)'s resolution is 854X 480 .Total pixels=409,920.Therefore 1080p is 5x resolution of 480p

Dynamic Contrast (Full-on / Full-off) is the industry standard way of measuring the maximum difference between white and black shades that can be achieved by a projector.

Many believe that “**Dynamic**” contrast values may not depict “real world” **performance** and may not offer the relevant information needed to determine how a projector will look when you are watching movies in your home.

500:1 ANSI
5000:1 (Peak)

250:1 ANSI
5000:1 (Peak)

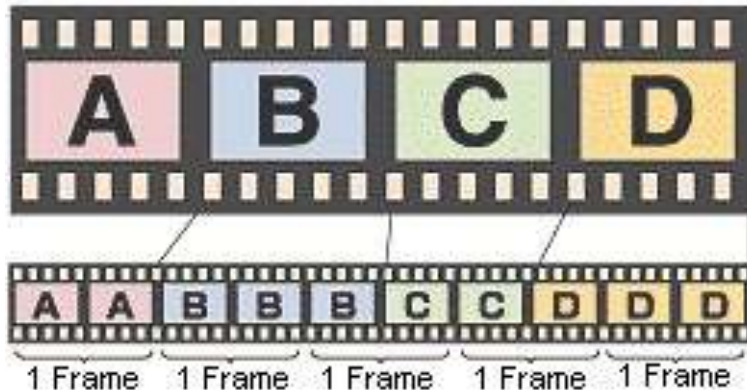

Don't be misled by contrast ratio specs - they are typically measured using a “Full On, Full Off” (Dynamic) technique. This involves measuring the projector performance when displaying a pure black screen and then a pure white screen.

The ANSI Contrast measurement technique uses a reproducible procedure involving both black & White on the screen at the same time.

To accurately compare projector contrast specifications look for the ANSI contrast specification.

24fps (frames per second)

3:2 pull-down:

Most video display devices **cannot** display content @24fps – they must first convert it to 50/60fps using a technique called 3:2 pull-down, which artificially repeats frames in an uneven way.

3:2 pull-down reduces image quality and increases motion judder.

Most movies are shot @24 frames per second.

To preserve the purity of the original image the **HD23 can accept High Definition sources at 24 frames per second** and so display movies exactly as the director intended.

The HD23 has a 6 segment colour wheel comprised solely of primary and secondary colours, giving you:

- **Best in class colour saturation**
- **stunningly bright images**
- **smooth video playback**

Also...

The addition of secondary colours allows the HD23 to take advantage of “Brilliantcolor™” Technology:

- **Increases the number of usable colours**
- **Widens the colour gamut**
- **Improves light and shade detail**

Lamp pulsing – “Unishape” technology

With Unishape™ (pulse over red)

Without Unishape™

1. Brighter and more vivid **Red**
2. Improved **Yellow** at same time
3. Hold back on **Green** (typically bright using UHP lamps)

Optoma

Pixelworks PW392 Image processing

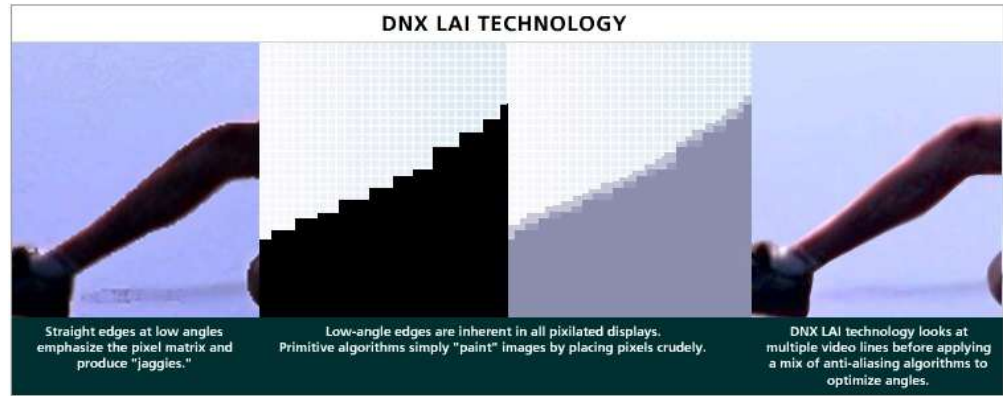

Built-in powerful De-interlacing for video and TV image sources creates smoother motion and improved resolution of interlaced sources eg. Sky+HD (1080i)

DNX DEINTERLACING TECHNOLOGY

	ODD FIELD	EVEN FIELD	COMBINED FIELDS	
				
<p>Traditional interlaced video sends odd/even fields separately for higher resolution with lower bandwidth.</p>			<p>Still images and moving images need to be processed differently to avoid a combing affect.</p>	<p>This DNX technology looks ahead several frames, projects the movement of objects, then applies different image algorithms to moving and still objects.</p>

1) LAI processing will smooth edges providing a more natural image

2) Rich Color 10-bit processing reduces contouring by increasing available colours to over 1 billion

Extra Features

+12v Trigger

HD23 has 1x +12V trigger (on /off selectable)

- (i) "On" is normal 12V trigger that be able to control electric screen or light in cinema room with 12V trigger link cable.
- (ii) "Off", 12V trigger won't send the 12V power - the user can then send command when they choose to.

normal 12V trigger

Superwide mode for 2.35:1 and 16x9 image on a 2.0:1 screen

When superwide is set to "AUTO" and image is 2.35:1 film source, HD23 can automatically zoom out the image to display a little bigger in 2.0:1 screen.

When superwide is "AUTO" and image is 16:9 source, HD23 can automatically blank the black bar in top and bottom to keep image in 2.0:1 screen via using 16x9 DMD.

Black and White Extension (B/W Extension) can stretch the black and white levels to automatically increase the contrast of input image.

Note: B/W extension function doesn't support HDMI source – it is intended for older input sources with limited native contrast
