HOW TO ORDER REPLACEMENT PARTS

To order replacement parts, contact the ICON Health & Fitness Ltd. office, or write:

ICON Health & Fitness Ltd.
Unit 4
Revie Road Industrial Estate
Revie Road
Beeston
Leeds, LS118JG
UK

Tel: Country Code:

08457-089009

Outside the UK: 0 (044) 113 387 7133
Fax: 0 (044) 113-387 7125

To help us assist you, please be prepared to give the following information:

• The MODEL NUMBER of the product (HETL09910).

• The NAME of the product (HealthRider® SOFTSTRIDER S300i treadmill).

• The SERIAL NUMBER of the product (see the front cover of this manual).

• The KEY NUMBER and DESCRIPTION of the replacement part(s) (see the PART LIST on pages 26 and 27 and the EXPLODED DRAWING attached in the centre of this manual).

Fitness HC Class Product
® **HEALTHRIDER**

IMPORTANT PRECAUTIONS

⚠ **WARNING:** To reduce the risk of burns, fire, electric shock, or injury to persons, read the following important precautions and information before operating the treadmill.

1. It is the responsibility of the owner to ensure that all users of this treadmill are adequately informed of all warnings and precautions.

2. Use the treadmill only as described in this manual.

3. Place the treadmill on a level surface, with 2.5 m (8 ft.) of clearance behind it. Do not place the treadmill on any surface that blocks air openings. To protect the floor or carpet from damage, place a mat under the treadmill.

4. When choosing a location for the treadmill, make sure that the location and position permit access to a plug.

5. Keep the treadmill indoors, away from moisture and dust. Do not put the treadmill in a garage or covered patio, or near water.

6. Do not operate the treadmill where aerosol products are used or where oxygen is being administered.

7. Keep children under the age of 12 and pets away from the treadmill at all times.

8. The treadmill should not be used by persons weighing more than 115 kg (250 lbs.). Never allow more than one person on the treadmill at a time.

9. Wear appropriate exercise clothing when using the treadmill. Do not wear loose clothing that could become caught in the treadmill. Athletic support clothes are recommended for both men and women. Always wear athletic shoes. Never use the treadmill with bare feet, wearing only stockings, or in sandals.

10. When connecting the power cord (see page 8), plug the power cord into an earthed circuit. No other appliance should be on the same circuit. When replacing the fuse, an ASTA approved BS1362 type should be fitted to the fuse carrier. A 13 amp fuse should be used.

11. If an extension cord is needed, use only a 3-conductor, 1mm² (14-gauge) cord that is no longer than 1.5 m (5 ft.).

12. Keep the power cord and the surge protector away from heated surfaces.

13. Never move the walking belt whilst the power is turned off. Do not operate the treadmill if the power cord or plug is damaged, or if the treadmill is not working properly. (See BEFORE YOU BEGIN on page 5 if the treadmill is not working properly.)

14. Never start the treadmill whilst you are standing on the walking belt. Always hold the handrails whilst using the treadmill.

15. The treadmill is capable of high speeds. Adjust the speed in small increments to avoid sudden jumps in speed.

16. Do not use the hand weights at speeds higher than a walk. Using hand weights and not holding the handrails may compromise your ability to maintain your balance. Exercises using hand weights should be attempted only by experienced users.

17. The chest pulse sensor is not a medical device. Various factors, including your movement, may affect the accuracy of heart rate readings. The sensor is intended only as an exercise aid in determining heart rate trends in general.

18. Never leave the treadmill unattended whilst it is running. Always remove the key, unplug the power cord and move the on/off switch to the off position when the treadmill is not in use. (See the drawing on page 5 for the location of the on/off switch.)

19. Do not attempt to raise, lower, or move the treadmill until it is properly assembled. (See ASSEMBLY on page 6, and HOW TO FOLD AND MOVE THE TREADMILL on page 22.) You must be able to safely lift 20 kg (45 lbs.) in order to raise, lower, or move the treadmill.

20. When folding or moving the treadmill, make sure that the storage latch is fully closed.

21. Inspect and tighten all parts of the treadmill every three months.

22. Never drop or insert any object into any opening.

23. **DANGER:** Always unplug the power cord immediately after use, before cleaning the treadmill, and before performing the maintenance and adjustment procedures described in this manual. Never remove the motor hood unless instructed to do so by an authorised service representative. Servicing other than the procedures in this manual should be performed by an authorised service representative only.

24. When using iFIT.com CD's and videos, an electronic "chirping" sound will alert you when the speed and/or incline of the treadmill is about to change. Always listen for the "chirp" and be prepared for speed and/or in-

cline changes. In some instances, the speed and/or incline may change before the personal trainer describes the change.

25. When using iFIT.com CD's and videos, you can manually override the speed and incline settings at any time by pressing the speed and incline buttons. However, when the next "chirp" is heard, the speed and/or incline will change to the next settings of the CD or video program.

26. Always remove iFIT.com CD's and videos from your CD player or VCR when you are not using them.

27. The treadmill is intended for in-home use only. Do not use the treadmill in any commercial, rental, or institutional setting.

⚠ **WARNING:** Before beginning this or any exercise program, consult your physician. This is especially important for persons over the age of 35 or persons with pre-existing health problems. Read all instructions before using. ICON assumes no responsibility for personal injury or property damage sustained by or through the use of this product.

SAVE THESE INSTRUCTIONS

The decals shown below have been placed on your treadmill. If a decal is missing, or if it is not legible, please call our Customer Service Department at 08457-089009 to order a free replacement decal. Apply the decal in the location shown. Note: The large decal is shown at 38% of actual size.

⚠**WARNING**
• Keep hands and feet clear of this area while operating or folding treadmill.
⚠**WARNING:** Protect yourself and others from risk of serious injury. Read the user's manual and:

- Fully engage storage latch before treadmill is moved or stored.
- Reduce incline to lowest level before folding treadmill into storage position.
- Stand only on side rails when starting or stopping treadmill.
- Change speed in small increments.
- Hold handrails to prevent falling, and always wear the safety clip while operating treadmill.
- Stop if you feel faint, dizzy, or short of breath.
- Never allow children on or around treadmill.
- Remove key when not in use.
- Keep clothing, fingers, and hair away from moving belt.
- Never try to adjust or fix the belt while it is moving.
- Always wear athletic shoes while operating treadmill.

CONDITIONING GUIDELINES

⚠**WARNING:** Before beginning this or any exercise program, consult your physician. This is especially important for individuals over the age of 35 or individuals with pre-existing health problems.

The chest pulse sensor is not a medical device. Various factors, including your movement, may affect the accuracy of heart rate readings. The sensor is intended only as an exercise aid in determining heart rate trends in general.

The following guidelines will help you to plan your exercise program. For more detailed exercise information, obtain a reputable book or consult your physician.

EXERCISE INTENSITY

Whether your goal is to burn fat or to strengthen your cardiovascular system, the key to achieving the desired results is to exercise with the proper intensity. The proper intensity level can be found by using your heart rate as a guide. The chart below shows recommended heart rates for fat burning and aerobic exercise.

HEART RATE TRAINING ZONES							
AEROBIC	165	155	145	140	130	125	115
MAX FAT BURN	145	138	130	125	118	110	103
FAT BURN	125	120	115	110	105	95	90
Age	20	30	40	50	60	70	80

To find the proper heart rate for you, first find your age near the bottom of the chart (ages are rounded off to the nearest ten years). Next, find the three numbers above your age. The three numbers define your "training zone." The lower two numbers are recommended heart rates for fat burning; the higher number is the recommended heart rate for aerobic exercise.

Fat Burning

To burn fat effectively, you must exercise at a relatively low intensity level for a sustained period of time. During the first few minutes of exercise, your body uses easily accessible carbohydrate calories for en-

ergy. Only after the first few minutes does your body begin to use stored fat calories for energy. If your goal is to burn fat, adjust the speed and incline of the treadmill until your heart rate is near the lowest number in your training zone.

For maximum fat burning, adjust the speed and incline of the treadmill until your heart rate is near the middle number in your training zone.

Aerobic Exercise

If your goal is to strengthen your cardiovascular system, your exercise must be "aerobic." Aerobic exercise is activity that requires large amounts of oxygen for prolonged periods of time. This increases the demand on the heart to pump blood to the muscles, and on the lungs to oxygenate the blood. For aerobic exercise, adjust the speed and incline of the treadmill until your heart rate is near the highest number in your training zone.

WORKOUT GUIDELINES

Each workout should include the following three parts:

A Warm-up—Start each workout with 5 to 10 minutes of stretching and light exercise. A proper warm-up increases your body temperature, heart rate and circulation in preparation for exercise.

Training Zone Exercise—After warming up, increase the intensity of your exercise until your pulse is in your training zone for 20 to 60 minutes. (During the first few weeks of your exercise program, do not keep your pulse in your training zone for longer than 20 minutes.) Breathe regularly and deeply as you exercise—never hold your breath.

A Cool-down—Finish each workout with 5 to 10 minutes of stretching to cool down. This will increase the flexibility of your muscles and will help prevent post-exercise problems.

EXERCISE FREQUENCY

To maintain or improve your condition, complete three workouts each week, with at least one day of rest between workouts. After a few months, you may complete up to five workouts each week if desired. The key to success is to make exercise a regular and enjoyable part of your everyday life.
PROBLEM	SOLUTION

**4. The walking belt is off-centre or slips when walked on**

a. **If the walking belt has shifted to the left,** first remove the key and **UNPLUG THE POWER CORD**. Using the allen wrench, turn the left rear roller adjustment bolt clockwise, and the right bolt counter-clockwise, 1/4 of a turn each. Be careful not to overtighten the walking belt. Plug in the power cord, insert the key and run the treadmill for a few minutes. Repeat until the walking belt is centred.
b. **If the walking belt has shifted to the right,** first remove the key and **UNPLUG THE POWER CORD**. Using the allen wrench, turn the left rear roller adjustment bolt counterclockwise, and the right bolt clockwise, 1/4 of a turn each. Be careful not to overtighten the walking belt. Plug in the power cord, insert the key and run the treadmill for a few minutes. Repeat until the walking belt is centred.

c. **If the walking belt slips when walked on,** first remove the key and **UNPLUG THE POWER CORD**. Using the allen wrench, turn both rear roller adjustment bolts clockwise, 1/4 of a turn. When the walking belt is correctly tightened, you should be able to lift **the edges** of the walking belt 7 to 10 cm (3 to 4 in.) off the walking platform. Be careful to keep the walking belt centred. Plug in the power cord, insert the key and run the treadmill for a few minutes. Repeat until the walking belt is properly tightened.
5. The displays of the console do not function properly

a. Remove the key from the console and **UN-PLUG THE POWER CORD.** Next, remove the screws from the hood and carefully re-move the hood. Locate the Reed Switch (26) and the Magnet (85) on the left side of the Pulley (28). Turn the Pulley until the Magnet is aligned with the Reed Switch. **Make sure that the gap between the Magnet and the Reed Switch is about 3 mm (1/8 in.).** If necessary, loosen the Reed Switch Screw (20) and move the Reed Switch slightly. Retighten the Screw. Re-attach the hood, and run the treadmill for a few minutes to check for a correct speed reading.

**6. Bubbles form in the walking belt**

a. Due to variations in humidity and temperature, there is a possibility that bubbles may form in the walking belt. Although the bubbles will disappear with time, you may unplug the power cord, carefully insert a needle into the bubbles, and push the air out of the bubbles.

BEFORE YOU BEGIN

Congratulations for purchasing the SOFTSTRIDER S300i™ treadmill by HealthRider®. The SOFTSTRIDER S300i offers an impressive array of features to help you achieve your fitness goals in the convenience of your home. From the advanced console to the cush-ioned walking belt, the SOFTSTRIDER S300i is de-signed to make each workout more effective and en-joyable. And when you're not exercising, the SOFT-STRIDER S300i can be folded away, taking less than half the floor space of conventional treadmills.

For your benefit, read this manual carefully before using the treadmill. If you have additional questions, please call our our Customer Service Department at **08457-089009**. To help us assist you, please note the product model number and serial number before call-ing. The model number is HETL09910. The serial number can be found on a decal attached to the tread-mill (see the front cover of this manual for the location).

Before reading further, please familiarise yourself with the parts that are labelled in the drawing below.

Hand Weights
Chest Pulse Sensor Holder
Water Bottle Holder*
Book Holder
Console
Handrail
Key/Clip
Lock Knob
RIGHT SIDE
Walking Belt
On/Off Switch
Circuit Breaker
Foot Rail
Power Cord
BACK
Cushioned Walking Platform
Rear Roller Adjustment Bolts

*Water bottle is not included.

ASSEMBLY

Assembly requires two people. Place the treadmill in a cleared area and remove all packing materials. Do not dispose of the packing materials until the treadmill is assembled. **No tools are required.**

Note: The underside of the treadmill walking belt is coated with high-performance lubricant. During shipping, a small amount of lubricant may be transferred to the top of the walking belt, the sides of the walking platform, or the shipping carton. This does not affect treadmill performance. If there is lubricant on top of the walking belt or on the sides of the walking platform, wipe off the lubricant with a soft cloth and a mild, non-abrasive cleaner.

If you have additional questions, please call our our Customer Service Department at **08457-089009**.

1. **With the help of a second person,** carefully raise the Uprights (103) until the Base Wheels (99) are resting on the floor as shown.
2. Next, make sure that the Lock Knob Sleeve (68) is fully inserted into the left Upright (103).

   Remove the Lock Knob (67) from the Lock Pin (72). Make sure that the Lock Pin Collar (70) and the Lock Spring (69) are on the Lock Pin. (Note: If there are two Lock Pin Collars, place one on each side of the Spring.) Insert the Lock Pin into the left Upright (103) and tighten the Lock Knob onto it.
3. **Make sure that all parts are tightened before you use the treadmill. Place a mat beneath the treadmill to protect the floor or carpet.** For your benefit, we recommend that you familiarise yourself with the TROUBLE-SHOOTING AND MAINTENANCE section on pages 23 and 24.

TROUBLE-SHOOTING AND MAINTENANCE

Most treadmill problems can be solved by following the instructions below. If further assistance is needed, please call our Customer Service Department at 08457-089009.

PROBLEM	SOLUTION
1. The power does not turn on	a. Make sure that the power cord is plugged into a properly earthed outlet. (See HOW TO PLUG IN THE POWER CORD on page 8.) If an extension cord is needed, use only a 3-conductor, 1mm² (14-gauge) cord that is no longer than 1.5 m (5 ft.). Important: The treadmill is not compatible with GFCI-equipped outlets.
	b. Make sure that the key is fully inserted into the console.
	c. Check the circuit breaker located on the frame near the power cord. If the switch protrudes as shown, the circuit breaker has tripped. To reset the circuit breaker, wait for five minutes and then press the switch back in.
	d. Check the on/off switch located on the frame near the power cord. The switch must be in the on position.
2. The power turns off during use	a. Check the circuit breaker and reset it if necessary (see 1. c. above).
	b. Make sure that the power cord is plugged in.
	c. Remove the key from the console and then reinsert it.
	d. Make sure that the on/off switch is in the on position (see 1. d. above).
3. The walking belt slows when walked on	a. If an extension cord is needed, use only a 3-conductor, 1mm² (14-gauge) cord that is no longer than 1,5 m (5 ft.).
	b. If the walking belt is overtightened, treadmill performance may decrease and the walking belt may be permanently damaged. Remove the key and **UN-PLUG THE POWER CORD**. Using the included allen wrench, turn both rear roller adjustment bolts counterclockwise 1/4 of a turn. When the walking belt is properly tightened, you should be able to lift **the edges** of the walking belt 7 to 10 cm (3 to 4 in.) off the walking platform. Be careful to keep the walking belt centred. Plug in the power cord, insert the key and run the treadmill for a few minutes. Repeat until the walking belt is properly tightened.

HOW TO FOLD AND MOVE THE TREADMILL

HOW TO FOLD THE TREADMILL FOR STORAGE

Before folding the treadmill, adjust the incline to the lowest position. If this is not done, the treadmill may be permanently damaged. Next, unplug the power cord. Caution: You must be able to safely lift 20 kg (45 lbs.) in order to raise, lower, or move the treadmill.

1. Hold the treadmill in the locations shown at the right. **To decrease the possibility of injury, bend your legs and keep your back straight. As you raise the treadmill, make sure to lift with your legs rather than your back.** Raise the treadmill about halfway to the vertical position.

2. Move your right hand to the position shown and hold the treadmill firmly. Using your left hand, pull the lock knob to the left and hold it. Raise the treadmill until all parts of the treadmill are past the latch pin. Release the lock knob. **Make sure that the lock knob is fully released so the latch pin is securely holding the catch.**

   To protect the floor or carpet from damage, place a mat under the treadmill. Keep the treadmill out of direct sunlight. Do not leave the treadmill in the storage position in temperatures above 30°C (85°F).

HOW TO MOVE THE TREADMILL

Before moving the treadmill, convert the treadmill to the storage position as described above. **Make sure that the latch pin is securely holding the catch.**

1. Hold the handrails and place one foot on the base.

2. Tilt the treadmill back until it rolls freely on the wheels. Carefully move the treadmill to the desired location. **To reduce the risk of injury, use extreme caution whilst moving the treadmill. Do not attempt to move the treadmill over an uneven surface.**

3. Place one foot on the base, and carefully lower the treadmill until it is resting in the storage position.

HOW TO LOWER THE TREADMILL FOR USE

1. Refer to drawing 2 above. Hold the treadmill with your right hand as shown. Using your left hand, pull the lock knob to the left and hold it. Pivot the treadmill down until all parts of the treadmill are past the pin. Slowly release the lock knob.

2. Refer to drawing 1 above. Hold the treadmill firmly with both hands, and lower the treadmill to the floor. **To decrease the possibility of injury, bend your legs and keep your back straight.**

HOW TO USE THE CHEST PULSE SENSOR

HOW TO PUT ON THE CHEST PULSE SENSOR

The chest pulse sensor consists of two components: the chest strap and the sensor unit (see the drawing below). Insert the tab on one end of the chest strap through the hole in one end of the sensor unit. Press the end of the sensor unit under the buckle on the chest strap. The tab should be almost flush with the front of the sensor unit.
Next, wrap the chest pulse sensor around your chest and attach the other end of the chest strap to the sensor unit. Adjust the length of the chest strap, if necessary. The chest pulse sensor should be under your clothing, tight against your skin, and as high under the pectoral muscles or breasts as is comfortable. Make sure that the logo on the sensor unit is facing forward and is right-side-up.
Pull the sensor unit away from your body a few inches and locate the two electrode areas on the inner side. The electrode areas are the areas covered by shallow ridges. Using saline solution such as saliva or contact lens solution, wet both electrode areas. Return the sensor unit to a position against your chest.

CHEST PULSE SENSOR CARE AND MAINTENANCE

• Thoroughly dry the chest pulse sensor after each use. The chest pulse sensor is activated when the electrode areas are wetted and the chest pulse sensor is put on; the chest pulse sensor shuts off when it is removed and the electrode areas are dried. If the chest pulse sensor is not dried after each use, it may remain activated longer than necessary, draining the battery prematurely.

• Store the chest pulse sensor in a warm, dry place. Do not store the chest pulse sensor in a plastic bag or other container that may trap moisture.

• Do not expose the chest pulse sensor to direct sunlight for extended periods of time; do not expose it to temperatures above 50° C (122° F) or below -10° C (14° F).

• Do not excessively bend or stretch the sensor unit when using or storing the chest pulse sensor.

• Clean the sensor unit using a damp cloth—never use alcohol, abrasives, or chemicals. The chest strap may be hand washed and air dried.

CHEST PULSE SENSOR TROUBLE-SHOOTING

The instructions on the following pages explain how the chest pulse sensor is used with the console. If the chest pulse sensor does not function properly, try the steps below.

• Make sure that the chest pulse sensor is worn as described at the left. Note: If the chest pulse sensor does not function when positioned as described, try moving it slightly lower or higher on your chest.

• Use saline solution such as saliva or contact lens solution to wet the two electrode areas on the sensor unit. If heart rate readings do not appear until you begin perspiring, re-wet the electrode areas.

• As you walk or run on the treadmill, position yourself near the centre of the walking belt. **For the console to display heart rate readings, the user must be within arm's length of the console.**

• The chest pulse sensor is designed to work with people who have normal heart rhythms. Heart rate reading problems may be caused by medical conditions such as premature ventricular contractions (pvcs), tachycardia bursts, and arrhythmia.

• The operation of the chest pulse sensor can be affected by magnetic interference caused by high power lines or other sources. If it is suspected that this is a problem, try relocating the treadmill.

- The CR2032 battery may need to be replaced. Follow the steps below to replace the battery.

Locate the battery cover on the back of the sensor unit. Insert a coin into the slot in the cover and turn the cover counterclockwise to the "open" position. Remove the cover.
Next, remove the old battery from the sensor unit. Insert a new **CR 2032 battery**, making sure that the writing is on top. In addition, make sure that the rubber gasket is in place in the sensor unit. Replace the battery cover and turn it to the closed position.

Battery Cover

CR2032 Battery

Rubber Gasket
OPERATION AND ADJUSTMENT

THE PERFORMANT LUBE™ WALKING BELT

Your treadmill features a walking belt coated with PERFORMANT LUBE™, a high-performance lubricant. **IMPORTANT: Never apply silicone spray or other substances to the walking belt or the walking platform. They will deteriorate the walking belt and cause excessive wear.**

HOW TO PLUG IN THE POWER CORD

This product must be earthed. If it should malfunction or break down, earthing provides a path of least resistance for electric current to reduce the risk of electric shock. This product is equipped with a cord having an equipment-earthing conductor and a earthing plug.

Two power cords are included. Select the one that will fit your outlet. Refer to drawing 1, and plug the indicated end of the power cord into the socket on the treadmill. Refer to drawing 2. Plug the power cord into an appropriate outlet that is properly installed and earthed in accordance with all local codes and ordinances. Note: In Italy, an adaptor (not included) must be used between the power cord and the outlet. Important: The treadmill is not compatible with GFCI-equipped outlets.

1
Socket on treadmill

2
Outlet

⚠ **DANGER:** **Improper connection of the equipment-earthing conductor can result in an increased risk of electric shock. Check with a qualified electrician or serviceman if you are in doubt as to whether the product is properly earthed. Do not modify the plug provided with the product—if it will not fit the outlet, have a proper outlet installed by a qualified electrician.**
THE INFORMATION MODE/DEMO MODE

The console features an information mode that keeps track of the total number of hours that the treadmill has been operated and the total number of miles that the walking belt has moved. The information mode also allows you to switch the console from miles per hour to kilometres per hour. In addition, the information mode allows you to turn on and turn off the demo mode.

To select the information mode, hold down one of the Stop buttons whilst inserting the key into the console. When the information mode is selected, the following information will be shown:
The Time/Segment Time display will show the total number of hours that the treadmill has been used.

68

Cross
The Distance/Incline display will show the total number of miles that the walking belt has moved.

203
An "E," for English miles, or an "M," for metric kilometres, will appear in the Speed display. Press the Speed △ button to change the unit of measurement.

E

IMPORTANT: The Calories/Watts/Pulse display should be blank. If a "d" appears in the display, the console is in the "demo" mode. This mode is intended to be used only

d

WATTS

when a treadmill is displayed in a store. When the console is in the demo mode, the power cord can be plugged in, the key can be removed from the console, and the displays and indicators on the console will automatically light in a preset sequence, although the buttons on the console will not operate. **If a "d" appears in the Calories/Watts/Pulse display when the information mode is selected, press the Speed ▽ button so the Calories/Watts/Pulse display is blank.**
To exit the information mode, remove the key from the console.

Our new internet site at www.iFIT.com allows you to access a selection of programs that interactively control your treadmill to help you achieve your specific exercise goals. In addition, you can play iFIT.com audio and video programs directly from the internet.

To use programs from our internet site, the treadmill must be connected to your home computer. See HOW TO CONNECT YOUR COMPUTER on page 17. In addition, you must have an internet connection and an internet service provider. A list of specific system requirements will be found on our internet site.

Follow the steps below to use a program from our internet site.

1 Insert the key into the console.

See HOW TO TURN ON THE POWER on page 11.

2 Select the iFIT.com mode.

When the key is inserted, the manual mode will be selected and the M–indicator will light. To use a program from our internet site, press the Program Select button repeatedly until the iFIT.com indicator lights.
3 Go to your computer and start an internet connection.

4 Start your web browser, if necessary, and go to our internet site at www.iFIT.com.

5 Follow the desired links on our internet site to select a program.

Read and follow the on-line instructions for using a program.

6 Follow the on-line instructions to start the program.

When you start the program, an on-screen countdown will begin.

7 Return to the treadmill and stand on the foot rails. Find the clip attached to the key and slide the key onto the waistband of your clothing.

When the on-screen countdown ends, the program will begin and the walking belt will begin to move. Hold the handrails, step onto the walking belt, and begin walking.

During the program, an electronic "chirping" sound will alert you when the speed and/or incline of the treadmill is about to change. **CAUTION: Always listen for the "chirp" and be prepared for speed and/or incline changes.**

If the speed or incline settings are too high or too low, you can manually override the settings at any time by pressing the Speed or Incline buttons on the console. **However, when the next "chirp" is heard, the speed and/or incline will change to the next settings of the program.**

To stop the walking belt at any time, press a Stop button on the console. The Time/Segment Time display will begin to flash. To restart the program, press the Start button. After a moment, the walking belt will begin to move at 1.0 mph. **When the next "chirp" is heard, the speed and incline will change to the next settings of the program.**

When the program is completed, the walking belt will stop and the Time/Segment Time display will begin to flash. Note: To use another program, press a Stop button and go to step 5.
Note: If the speed or incline of the treadmill does not change when a "chirp" is heard, make sure that the iFIT.com indicator is lit and that the Time/Segment Time display is not flashing. In addition, make sure that the audio cable is properly connected, that it is fully plugged in, and that it is not wrapped around a power cord.

8 Follow your progress with the four displays.

See step 5 on page 12.

9 When the program has ended, remove the key.

See step 6 on page 12.

Note: If there is a thin sheet of clear plastic on the face of the console, remove it.

FEATURES OF THE CONSOLE

The treadmill console offers an impressive selection of features to help you get the most from your exercise.

When the console is in the manual mode, the speed and incline of the treadmill can be changed with a touch of a button. As you exercise, the four displays will show your workout time, the number of calories you have burned, your power output in watts, the distance you have walked, the incline level of the treadmill, and the speed of the walking belt. When you wear the chest pulse sensor, the console will also show your heart rate.

The console also offers four preset workout programs. Each program automatically controls the speed and incline of the treadmill as it guides you through an effective workout. The included hand weights can be used for upper body exercise as well. In addition, the console features two pulse programs. Each program controls the speed and incline of the treadmill to keep your heart rate within a preset range during your workouts.

The console also features advanced iFIT.com technology. IFIT.com technology is like having a personal trainer right in your home. Using the included audio cable, you can connect the treadmill to your home stereo, portable stereo, or computer and play special iFIT.com CD programs (CD's are available separately).

iFIT.com CD programs automatically control the speed and incline of the treadmill as a personal trainer guides you through every step of your workout. High-energy music provides added motivation. Each CD features two programs designed by certified personal trainers.

In addition, you can connect the treadmill to your VCR and TV and play iFIT.com video programs (videocassettes are available separately). Video programs offer the same benefits as iFIT.com CD programs, but add the excitement of working out with a class and an instructor—the hottest new trend at health clubs.

With the treadmill connected to your computer, you can also go to our new internet site at www.iFIT.com and access basic programs that interactively control the speed and incline of your treadmill to help you achieve your specific exercise goals. Or, use iFIT.com audio and video programs directly from our internet site. Visit www.iFIT.com for complete details.

To purchase iFIT.com CD's, iFIT.com videocassettes, call 08457-089009.

To use the manual mode of the console, follow the steps beginning on page 11. **To use a preset program,** see page 13. **To use a pulse program**, see page 14. **To use iFIT.com CD or video programs**, see page 18. **To use iFIT.com programs directly from our internet site**, see page 20.

DESCRIPTION OF THE CONSOLE

Refer to the drawing on page 9 to identify the features described below.

A. Water bottle holder—This holder keeps your water bottle handy during your workouts (no water bottle is included).

B. Hand weight holder—These compartments hold the included hand weights.

C. Book holder—This holder allows you to read a good book or enjoy your favourite magazine whilst you get in shape.

D. Incline buttons—These buttons control the incline of the treadmill. The incline range is 1.5% to 10%.

E. Speed buttons—These buttons control the speed of the walking belt. The speed range is 0.5 mph to 10 mph.

F. Stop buttons—These buttons are used to stop the walking belt. Note: Pressing either button will stop the walking belt.

G. Start button—This button is used to start the walking belt.

H. Waistband clip—This clip is designed to be worn on the waistband of your clothes. If the key is pulled from the console, the walking belt will automatically stop.

I. Key—This key turns the console on and off.

J. Time/Segment Time display—When the manual mode or an iFIT.com program is selected, this display will show the elapsed time. When a preset program or a pulse program is selected, the display will show both the time remaining in the program and the time remaining in the current segment of the program. The display will alternate between one number and the other every seven seconds.

K. Cross Training indicator—During preset programs 2 and 4, this indicator will periodically flash. The included hand weights can be used whilst the indicator is flashing to add upper body exercise to your workouts.

L. Calories/Watts/Pulse display—This display shows the approximate number of calories you have burned and your current power output in watts. When the chest pulse sensor is worn, the display will also show your heart rate. The display will alternate from one number to the next every seven seconds.

M. Distance/Incline display—This display shows the distance you have walked and the incline level of the treadmill. The display will alternate between one number and the other every seven seconds. Note: Each time the Incline buttons are pressed, the display will change to show the incline setting.

N. Speed display—This display shows the speed of the walking belt.

O. Enter button and △ and ▽ buttons—These buttons are used to enter your age when pulse programs are used.

P. Select Workout button—This button is used to select the manual mode, the four preset programs, the two pulse programs, and iFIT.com programs. Note: If the walking belt is moving when the Select Workout button is pressed, the walking belt will slow to a stop and the displays will be reset.

Q. Mode indicators—These indicators show whether the manual mode, a preset program, a pulse program, or an iFIT.com program is selected.

R. Program profiles—These profiles show how the target heart rate will change during pulse programs and how the speed and incline of the treadmill will change during preset programs.

Note: The console can display exercise feedback in either miles or kilometres (see Speed Display on page 12). For simplicity, all instructions in this section refer to miles.

During the CD or video program, an electronic "chirping" sound will alert you when the speed and/or incline of the treadmill is about to change. **CAUTION: Always listen for the "chirp" and be prepared for speed and/or incline changes. In some instances, the speed and/or incline may change before the personal trainer describes the change.**

If the speed or incline settings are too high or too low, you can manually override the settings at any time by pressing the Speed or Incline buttons on the console. However, **when the next "chirp" is heard, the speed and/or incline will change to the next settings of the CD or video program.**

To stop the walking belt at any time, press a Stop button on the console. The Time/Segment Time display will begin to flash. To restart the program, press the Start button. After a moment, the walking belt will begin to move at 1.0 mph. **When the next "chirp" is heard, the speed and incline will change to the next settings of the CD or video program**. The program can also be stopped by pressing the Stop button on your CD player or VCR.

When the CD or video program is completed, the walking belt will stop and the Time/Segment Time display will begin to flash. Note: To use another CD or video program, press a Stop button or remove the key and go to step 1 on page 18.

Note: If the speed or incline of the treadmill does not change when a "chirp" is heard:

• **Make sure that the iFIT.com indicator is lit and that the Time/Segment Time display is not flashing. If the Time/Segment Time display is flashing, press the Start button or The Speed △ button on the console.**

• **Adjust the volume of your CD player or VCR. If the volume is too high or too low, the console may not detect the program signals.**

• **Make sure that the audio cable is properly connected, that it is fully plugged in, and that it is not wrapped around a power cord.**

• **if you are using your portable CD player and the CD skips, set the CD player on the floor or another flat surface instead of on the console.**

5 Follow your progress with the four displays.

See step 5 on page 12.

6 When the program is completed, remove the key.

See step 6 on page 12.

CAUTION: Always remove iFIT.com CD's and videocassettes from your CD player or VCR when you are finished using them.
HOW TO CONNECT YOUR VCR

Note: If your VCR has an unused AUDIO OUT jack, see instruction A below. If the AUDIO OUT jack is being used, see instruction B. If you have a TV with a built-in VCR, see instruction B. If your VCR is connected to your home stereo, see HOW TO CONNECT YOUR HOME STEREO on page 17.

A. Plug one end of the audio cable into the jack on the front of the treadmill near the power cord. Plug the other end of the cable into the adaptor. Plug the adaptor into the AUDIO OUT jack on your VCR.
B. Plug one end of the audio cable into the jack on the front of the treadmill near the power cord. Plug the other end of the cable into the adaptor. Plug the adaptor into an RCA adaptor (available at electronics stores). Next, remove the wire that is currently plugged into the AUDIO OUT jack on your VCR and plug the wire into the unused side of the RCA adaptor. Plug the RCA adaptor into the AUDIO OUT jack on your VCR.

HOW TO USE IFIT.COM CD AND VIDEO PROGRAMS

To use iFIT.com CD's or videocassettes, the treadmill must be connected to your portable CD player, portable stereo, home stereo, computer with CD player, or VCR. See HOW TO CONNECT THE TREADMILL TO YOUR CD PLAYER, VCR, OR COMPUTER on page 16. Note: To purchase iFIT.com CD's or iFIT.com videocassettes, call 08457-089009.

Follow the steps below to use an iFIT.com CD or video program.

1 Insert the key into the console.

See HOW TO TURN ON THE POWER on page 11.

2 Select the iFIT.com mode.

When the key is inserted, the manual mode will be selected and the manual indicator will light. To use iFIT.com CD's or videocassettes, press the Select Workout button repeatedly until the iFIT.com indicator lights.
3 Insert the iFIT.com CD or videocassette.

If you are using an iFIT.com CD, insert the CD into your CD player. If you are using an iFIT.com videocassette, insert the videocassette into your VCR.

4 Press the PLAY button on your CD player or VCR.

A moment after the button is pressed, your personal trainer will begin guiding you through your workout. Simply follow your personal trainer's instructions. Note: If the Time/Segment Time display is flashing, press the Start button or the Speed △ button on the console. The treadmill will not respond to a CD or video program whilst the Time/Segment Time display is flashing.

⚠ WARNING: To reduce the risk of serious injury, read the following precautions before operating the console.

• **Do not stand on the walking belt when turning on the power or starting the walking belt.**

• **Always attach the clip (see "H" on page 10) to your waistband when using the treadmill. If the key is pulled from the console, the walking belt will stop.**

• **The treadmill is capable of high speeds. Adjust the speed in small increments.**

• **To reduce the risk of electric shock, keep liquids away from the console and place only a sealed water bottle in the console.**

• **Do not use the hand weights at speeds higher than a walk. Using hand weights and not holding the handrails may compromise your ability to maintain your balance. Exercises using hand weights should be attempted only by experienced users.**

• **If you have heart problems, or if you are over 60 years of age and have been inactive, do not use the pulse programs. If you are taking medication regularly, consult your physician to find whether the medication will affect your exercise heart rate.**
HOW TO TURN ON THE POWER

1 Plug in the power cord (see HOW TO PLUG IN THE POWER CORD on page 8).

2 Locate the on/off switch on the front of the treadmill near the power cord. Make sure that the on/off switch is in the on position.
3 Stand on the foot rails of the treadmill. Find the clip attached to the key and slide the clip onto the waistband of your clothing. Next, insert the key into the console. After a moment, the four displays and various indicators will light.

HOW TO USE THE MANUAL MODE

1 Insert the key into the console.

See HOW TO TURN ON THE POWER at the left.

2 Select the manual mode.

When the key is inserted, the manual mode will be selected and the M indicator will light. If a program has been selected, press the Select Workout button repeatedly to select the manual mode.

3 Press the Start button or the Speed △ button to start the walking belt.

A moment after the button is pressed, the walking belt will begin to move at 1 mph. Hold the handrails and begin walking.

As you exercise, adjust the speed of the walking belt as desired by pressing the Speed buttons. Each time one of the buttons is pressed, the speed will change by 0.1 mph. If one of the buttons is held down, the speed will change in increments of 0.5 mph.
To stop the walking belt, press either of the Stop buttons. The four displays will pause and the Time/Segment Time display will begin to flash. To restart the walking belt, press the Start button or the Speed △ button. To stop the walking belt and reset the displays, press a Stop button, remove the key, and then reinsert the key.

4 Adjust the incline of the treadmill.

To vary the intensity of your exercise, adjust the incline of the treadmill as desired with the Incline buttons. Each time one of the buttons is pressed, the incline will change by 0.5%. Note: After the buttons are pressed, it may take a moment for the treadmill to reach the selected incline setting.
5 **Follow your progress with the four displays.**

Time/Segment Time display—When the manual mode or an iFIT.com program is selected, this display will show the elapsed time. When a preset program or a pulse program is selected, the display will show both the time remaining in the program and the time remaining in the current segment of the program. The display will alternate between one number and the other every seven seconds.
Note: The Cross Training indicator below the display will periodically flash during preset programs 2 and 4. Whilst the indicator is flashing, the included hand weights can be used for upper body exercise as you walk on the treadmill.

Calories/Watts/Pulse display—This display shows the approximate number of calories you have burned and your current power output in watts. (The console estimates watts by multiplying the number of calories you are burning per minute by an efficiency factor of 25%.) When the chest pulse sensor is worn, the display will also show your heart rate. The display will alternate from one number to the next every seven seconds.
Distance/Incline display—This display shows the distance you have walked and the incline level of the treadmill. The display will alternate between one number and the other every seven seconds. Note: Each time the Incline buttons are pressed, the display will change to show the incline setting.
Speed display—This display shows the speed of the walking belt. Note: The speed can be displayed in either miles per hour (mph) or kilometres per hour (kph). To see which unit of measurement is selected, first hold down one of the Stop buttons whilst inserting the key into the console. The Speed display will show an "E" for English miles or an "M" for metric kilometres. Press the Speed △ button to change the unit of measurement. When the desired unit of measurement is selected, remove and then reinsert the key.
**6** **When you are finished exercising, stop the walking belt and remove the key.**

Step onto the foot rails, press one of the Stop buttons, and adjust the incline of the treadmill to the minimum setting. **The incline must be at the minimum setting when the treadmill is raised to the storage position or the treadmill will be damaged.** Next, remove the key from the console and put it in a safe place. **Note: If the displays and indicators on the console remain lit after the key is removed, the console is in the "demo" mode. Refer to page 21 and turn off the demo mode.**

When you are finished using the treadmill, move the on/off switch near the power cord to the off position and unplug the power cord.

HOW TO CONNECT YOUR HOME STEREO

Note: If your stereo has an unused LINE OUT jack, see instruction A below. If the LINE OUT jack is being used, see instruction B.

A. Plug one end of the audio cable into the jack on the front of the treadmill near the power cord. Plug the other end of the cable into the adaptor. Plug the adaptor into the LINE OUT jack on your stereo.

B. Plug one end of the audio cable into the jack on the front of the treadmill near the power cord. Plug the other end of the cable into the adaptor. Plug the adaptor into an RCA adaptor (available at electronics stores). Next, remove the wire that is currently plugged into the LINE OUT jack on your stereo and plug the wire into the unused side of the RCA adaptor. Plug the RCA adaptor into the LINE OUT jack on your stereo.

HOW TO CONNECT YOUR COMPUTER

Note: If your computer has a 3.5mm LINE OUT jack, see instruction A. If your computer has only a PHONES jack, see instruction B.

A. Plug one end of the audio cable into the jack on the front of the treadmill near the power cord. Plug the other end of the cable into the LINE OUT jack on your computer.

B. Plug one end of the audio cable into the jack on the front of the treadmill near the power cord. Plug the other end of the cable into the splitter. Plug the splitter into the PHONES jack on your computer. Plug your headphones or speakers into the other side of the splitter.

HOW TO CONNECT THE TREADMILL TO YOUR CD PLAYER, VCR, OR COMPUTER

To use iFIT.com CD's, the treadmill must be connected to your portable CD player, portable stereo, home stereo, or computer with CD player. See pages 16 and 17 for connecting instructions. **To use iFIT.com videocassettes,** the treadmill must be connected to your VCR. See page 18 for connecting instructions. **To use iFIT.com programs directly from our internet site,** the treadmill must be connected to your home computer. See page 17 for connecting instructions.

HOW TO CONNECT YOUR PORTABLE CD PLAYER

Note: If your CD player has separate LINE OUT and PHONES jacks, see instruction A below. If your CD player has only one jack, see instruction B.

A. Plug one end of the audio cable into the jack on the front of the treadmill near the power cord. Plug the other end of the cable into the LINE OUT jack on your CD player. Plug your headphones into the PHONES jack.

B. Plug one end of the audio cable into the jack on the front of the treadmill near the power cord. Plug the other end of the cable into the splitter. Plug the splitter into the PHONES jack on your CD player. Plug your headphones into the other side of the splitter.

HOW TO CONNECT YOUR PORTABLE STEREO

Note: If your stereo has an RCA-type AUDIO OUT jack, see instruction A below. If your stereo has a 3.5mm LINE OUT jack, see instruction B. If your stereo has only a PHONES jack, see instruction C.

A. Plug one end of the audio cable into the jack on the front of the treadmill near the power cord. Plug the other end of the cable into the adaptor. Plug the adaptor into an AUDIO OUT jack on your stereo.

B. Plug one end of the audio cable into the jack on the front of the treadmill near the power cord. Plug the other end of the cable into the LINE OUT jack on your stereo.
C. Plug one end of the audio cable into the jack on the front of the treadmill near the power cord. Plug the other end of the cable into the splitter. Plug the splitter into the PHONES jack on your stereo. Plug your headphones into the other side of the splitter.

HOW TO USE THE PRESET PROGRAMS

1 **Insert the key into the console.**

See HOW TO TURN ON THE POWER on page 11.

2 **Select one of the four preset programs.**

When the key is inserted, the manual mode will be selected and the M indicator will light. To select one of the preset programs, press the Select Workout button repeatedly until one of the four preset program indicators lights.

The profiles on the console show how the speed and incline of the treadmill will change during the preset programs—the white profiles show speed settings and the green lines show incline settings. The numbers at the left ends of the profiles show the speed and incline ranges for the programs. For example, during preset program 1, the speed of the walking belt will be from 2 mph to 4 mph and the incline will be from 1.5% to 6%. The Time/Segment Time display will show how long the selected program will last.

3 **Press the Start button or the Speed △ button to start the program.**

A moment after the button is pressed, the treadmill will automatically adjust to the first speed and incline settings for the program. Hold the handrails and begin walking.

Each program is divided into several time segments of different lengths. The Time/Segment Time display will show both the time remaining in the program and the time remaining in the current segment. One speed setting and one incline setting are programmed for each segment. When only three seconds remain in the first segment of the program, a series of tones will sound and the treadmill will automatically adjust to the speed and incline settings for the second segment.

The program will continue in this way until the Time/Segment Time display counts down to zero. The walking belt will then slow to a stop.

If the speed or incline setting for the current segment is too high or too low, you can manually override the setting by pressing the Speed or Incline buttons on the console. **However, when the next segment begins, the treadmill will automatically adjust to the speed and incline settings for the next segment.**

To stop the program temporarily, press one of the Stop buttons. All displays will pause and the Time/Segment Time display will begin to flash. To restart the program, press the Start button or the Speed △ button. To end the program, press a Stop button, remove the key, and then reinsert the key.

4 **Use the hand weights, if desired.**

If you have selected preset program 2 or 4, the Cross Training Indicator in the Time/Segment Time display will periodically flash. Whilst the indicator is flashing, use the included hand weights for upper body exercise as you walk on the treadmill.
5 **Follow your progress with the four displays.**

Refer to step 5 on page 12.

6 **When the program has ended, remove the key.**

Refer to step 6 on page 12.

HOW TO USE THE PULSE PROGRAMS

Note: The pulse programs can be used only when the chest pulse sensor is worn.

1 **Insert the key into the console.**

See HOW TO TURN ON THE POWER on page 11.

2 **Put on the chest pulse sensor.**

You must wear the chest pulse sensor in order to use a pulse program. To put on the chest pulse sensor, follow the instructions on page 7.

3 **Select one of the two pulse programs.**

When the key is inserted, the manual mode will be selected and the M indicator will light. To select one of the pulse programs, press the Select Workout button repeatedly until one of the two pulse program indicators lights.
The profiles on the console show how the target heart rate will change during the programs. The Time/Segment Time display will show how long the selected program will last.

4 **Enter your age.**

When a pulse program is selected, an age setting will begin to flash in the Calories/Watts/ Pulse display. If you have already entered your age, simply press the Enter button. To enter your age, press the △ and ▽ buttons. The buttons can be held down to enter your age quickly. When your age is shown, press the Enter button.
5 **Enter a maximum heart rate setting.**

After you have entered your age, another number will begin to flash in the Calories/
Watts/Pulse display. This number is the maximum heart rate setting for the program. If pulse program 1 is selected, the maximum heart rate setting can be from 65% to 85% of your maximum possible heart rate (your maximum possible heart rate is 220 minus your age); if pulse program 2 is selected, the maximum heart rate setting can be from 65% to 80% of your maximum possible heart rate. Note: Your maximum possible heart rate is an estimate only.

For example, if you are 30 years old, your maximum possible heart rate is 190 (220 minus 30 equals 190). Therefore, if Pulse program 1 is selected, the maximum heart rate setting can be from 123 to 161 (65% of 190 is 123; 85% of 190 is 161).

If you want to change the maximum heart rate setting, press the △ and ▽ buttons. The buttons can be held down to change the setting quickly. When the desired setting is shown, press the Enter button.

6 **Press the Start button or the Speed △ button to start the program.**

A moment after the button is pressed, the treadmill will automatically adjust to the first speed and incline settings for the program. Hold the handrails and begin walking.

Each program is divided into several time segments of different lengths. The Time/ Segment Time display will show both the time remaining in the program and the time remaining in the current segment. One target heart rate setting is programmed for each segment. When only three seconds remain in the first segment of the program, a series of tones will sound and the next segment will begin. As you exercise, the speed and/or incline of the treadmill will automatically change as needed to keep your heart rate near the current target heart rate setting.

The program will continue until the Time/Segment Time display counts down to zero. The walking belt will then slow to a stop.

If your heart rate is not detected during the program, the speed and incline of the treadmill may automatically decrease until your heart rate is detected. If this happens, see CHEST PULSE SENSOR TROUBLE-SHOOTING on page 7.

If the speed or incline setting for the current segment is too high or too low, you can adjust the setting with the Speed or Incline buttons. However, if you decrease the speed, the incline will automatically increase; if you increase the speed, the incline will decrease. If you increase the incline, the speed will decrease; if you decrease the incline, the speed will increase. The treadmill will always attempt to keep your heart rate near the target heart rate setting for the current segment. Note: When the incline reaches the lowest setting, the speed cannot be increased any further. When the incline reaches the highest setting, the speed cannot be decreased any further.
To stop the program at any time, press one of the Stop buttons. Pulse programs should not be stopped temporarily and then restarted. To use a pulse program again, reselect the program and start it at the beginning.

7 **Follow your progress with the four displays.**

Refer to step 5 on page 12.

8 **When the program has ended, remove the key.**

See step 6 on page 12.

R0601A

REMOVE AND SAVE THIS EXPLODED DRAWING FOR FUTURE REFERENCE.

To identify the parts shown on this exploded drawing, refer to the PART LIST on pages 26 and 27 of the USER'S MANUAL.
