Table of Contents

1. Introduction

This IBM PC/AT compatible panel computer incorporates a touch panel and uses the Ultra Low Voltage Intel(R) Celeron(R) Processor 400MHz CPU for low power consumption. The computer is aimed at industrial applications and can operate using natural ventilation only (without a fan).

Equipped with assorted interfaces such as the USB, 100BASE-TX, and RS-232C ports, the IPC-PT/x620x(PCW) can serve for a wide range of applications as an information terminal based on an OS for general-purpose PCs. Through careful selection of components including adopting an embedded-type CPU and chipset, the computer has an excellent level of resistance to environmental conditions and is suitable for long-term operation. This makes it a safe choice for use in rugged environments such as FA applications.

The PANECON-PC 620 series is available in the following four models:

Base Model

    IPC-PT/L620S(PCW)C   (TFT color 12.1 inch type)

    IPC-PT/H620X(PCW)C   (TFT color 15 inch type)

Model with Expansion Slot

    IPC-PT/L620S(PCW)CP   (TFT color 12.1 inch type)

    IPC-PT/H620X(PCW)CP   (TFT color 15 inch type)

Features
- Equipped with the Ultra Low Voltage Intel(R) Celeron(R) Processor 400MHz (FSB 100MHz) CPU and memory conforming 256MB as standard
- Fan-less operation achieved by natural air-cooling
- High reliability and completely silent running (when fitted with the silicon disk from CONTEC)
- Long, reliable supply (The CPU and chip set are embedded versions.)
- Adoption of BIOS (Phoenix Technologies, Ltd.) customized by CONTEC to support the BIOS level
- Other than the conforming PC I/F, equipped with the PCMCIA (for CardBus), Audio (AC97 conforming), 100BASE-TX and RAS I/F as a standard
- Equipped with a secondary-IDE connector to allow an optional external CD-ROM to be connected
- Capable of starting up, even with the battery dead, using CMOS data retained by EEPROM
- Front part is the ingress protection for IP65 performance

Compatible Operating Systems
- Windows 2000 Professional
- Windows NT Workstation 4.0(SP6a)
- Windows XP Embedded
- Windows NT Embedded 4.0

Customer Support

CONTEC provides the following support services for you to use CONTEC products more efficiently and comfortably. No driver software is provided with this module. Please download the latest drivers from the CONTEC web site. Documents including important notes on the use of the module are also posted on the web site. Please visit the CONTEC web site before using the module.

Chinese   http://www.contec.com.cn/

Latest product information

CONTEC provides up-to-date information on products.

CONTEC also provides product manuals and various technical documents in the PDF.

Free download

You can download updated driver software and differential files as well as sample programs available in several languages.

Note! For product information

Contact your retailer if you have any technical question about a CONTEC product or need its price, delivery time, or estimate information.

Limited One-Year Warranty

CONTEC Products are warranted by CONTEC CO., LTD. to be free from defects in material and workmanship for up to one year from the date of purchase by the original purchaser.

Repair will be free of charge only when this device is returned freight prepaid with a copy of the original invoice and a Return Merchandise Authorization to the distributor or the CONTEC group office, from which it was purchased.

This warranty is not applicable for scratches or normal wear, but only for the electronic circuitry and original products. The warranty is not applicable if the device has been tampered with or damaged through abuse, mistreatment, neglect, or unreasonable use, or if the original invoice is not included, in which case repairs will be considered beyond the warranty policy.

How to Obtain Service

For replacement or repair, return the device freight prepaid, with a copy of the original invoice. Please obtain a Return Merchandise Authorization Number (RMA) from the CONTEC group office where you purchased before returning any product.

*No product will be accepted by CONTEC group without the RMA number.

Liability

The obligation of the warrantor is solely to repair or replace the product. In no event will the warrantor be liable for any incidental or consequential damages due to such defect or consequences that arise from inexperienced usage, misuse, or malfunction of this device.

Safety Precautions

Understand the following definitions and precautions to use the product safely.

Safety Information

This document provides safety information using the following symbols to prevent accidents resulting in injury or death and the destruction of equipment and resources. Understand the meanings of these labels to operate the equipment safely.

⚠ DANGER	DANGER indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.
⚠ WARNING	WARNING indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.
⚠ CAUTION	CAUTION indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury or in property damage.

Handling Precautions

⚠ WARNING

- Always check that the power supply is turned off before connecting or disconnecting power cables.

- Do not use the touch panel to control operations that have the potential to cause serious injury or death.

- Do not modify the product.

- Always turn off the power before inserting or removing circuit boards or cables.

- This product is not intended for use in aerospace, space, nuclear power, medical equipment, or other applications that require a very high level of reliability. Do not use the product in such applications.

- If using this product in applications where safety is critical such as in railways, automotive, or disaster prevention or security systems, please consult with your sales agent or CONTEC information service.

- Do not attempt to replace the battery as inappropriate battery replacement poses a risk of explosion.

- For battery replacement, contact your retailer as it must be performed as a process of repair.

- When disposing of a used battery, follow the disposal procedures stipulated under the relevant laws and municipal ordinances.

⚠ CAUTION

- Do not use or store the product in a location such as extremely high or low temperature, rapid temperature changes, and the place which receives a strong ultraviolet ray.
  Example: - Exposure to direct sun
                      - In the vicinity of a heat source

- Do not use the product in extremely humid or dusty locations. It is extremely dangerous to use the product with its interior penetrated by water or any other fluid or conductive dust. If the product must be used in such an environment, install it on a dust-proof control panel, for example.

- Avoid using or storing the device in locations subject to shock or vibration.

- Do not use the product in the vicinity of devices that generate strong magnetic force or noise. Such devices will cause this device to malfunction.

- Do not use or store the product in the presence of chemicals.

- The lower center of the left face (seen from the connector's front surface) may become hot. To avoid being burned, do not touch that section while the product is in operation or immediately after turning off the power. Avoid installation in a location where people may come into contact with that section.

- To clean the PANECON-PC, wipe it gently with a soft cloth dampened with either water or mild detergent. Do not use chemicals or a volatile solvent, such as benzene or thinner, to prevent pealing or discoloration of the paint.

- 2.5 inches hard disk drive (HDD) of our company has not guaranteed use by continuation and continuation power for 24 hours. When it is used by continuation operation and continuation power a life fails extremely. In the case of a 24-hours operation system, use of our company silicon disk drive (SDD) is recommended.

- Before installing or uninstalling an expansion board (the P model) or connecting or disconnecting a connector, be sure to unplug the power cable from the wall outlet.

- CONTEC reserves the right to refuse to service a product modified by the user.

- In the event of failure or abnormality (foul smells or excessive heat generation), unplug the power cord immediately and contact the sales representative you purchased the product from or the CONTEC Information Center.

- Use an AC cable that is compatible with both the rated supply voltage and the receptacle. (The cable provided with the product is for 125VAC.)

- Do not use any sharp-pointed object such as a mechanical pencil to touch the touch panel. Doing so may scratch the touch panel, resulting in malfunctions.

- Do not subject the touch panel to shock as doing so may break it.

- When the surface or frame of the touch panel has become dirty, wipe it with neutral detergent. Do not wipe the touch panel with thinner, alcohol, ammonia, or a strong chlorinated solvent. Use a protective sheet (available as an option) if the touch panel is used where it can easily collect dust and dirt.

- A characteristic of analog touch panels is that the detected position may vary due to changes in the ambient environment (temperature and humidity) and changes in resistance values over time. In such cases, the touch panel should be recalibrated and the calibration data updated.

- To connect with peripherals, use a grounded, shielded cable.

- Hard disks have a limited life span. Please perform systematic backup and maintenance.

- CONTEC does not provide any guarantee for the integrity of data on hard disks.

- To prevent corruption of files, always shutdown the OS before turning off the PANECON-PC.

- LCD displays may develop small regions that are always illuminated or always dark. Also, color irregularities may be apparent from certain viewing angles. However, these are due to the nature of the LCD display and do not represent a fault.

Burn-in on TFT Display

- "Burn-in" may occur if the same display is retained for a long time. Avoid this by periodically switching the display so that the same display is not maintained for a long time.

   * Burn-In: Phenomenon characterized by a TFT display as a result of long-time display of the same screen where a shadow-like trace persists because electric charge remains in the LCD element even after the patterns are changed.

Component Life

   1. Power supply--- Estimated life is about 10 years based on continual operation at 40°C (horizontal installation). However, (higher) operating temperatures will result in shorter life.

   2. Battery---   The internal calendar clock and CMOS RAM are backed by a Lithium primary battery. The backup time at a temperature of 25°C with the power disconnected is 10 years or more.

   3. LCD backlight--- Display brightness decreases over time with use.
   The operating lifetime of the backlight is as follows (the time until the brightness is lowered to 50% of the initial value):

            - IPC-PT/L620S(PCW)   : 50,000 hours

            - IPC-PT/H620X(PCW)   : 25,000 hours

   4. Touch panel--- The operating lifetime of the touch panel is at least 1 million touches (as tested by mechanical touching under 300 g of force at a rate of two presses per second).

- *   Replacement of expendables is handled as a repair (there will be a charge).

- Regarding "VCCI Class A, FCC PART 15 Class A and EMC Instruction Class A Notice"

   The ferrite core must be installed in the following each cable so that this product (IPC-PT/L620S(PCW)C, IPC-PT/L620S(PCW)CP only) may suit the above-mentioned standard.

   - Speaker connection cable
      Optional Ferrite Core (FRC2009A-6) or SEIWA E04SR200935A (or an equivalent product)
   Open the ferrite core case and wind the cable around it once near the connector and close it.

- Image diagram

Ferrite core
Moreover, the screw to install "AC cord metal brace" (Refer to P.22) should be grounded as countermeasure against static electricity.

FCC PART 15 Class A Notice (IPC-PT/L620S(PCW)C, IPC-PT/L620S(PCW)CP only)

<u>NOTE</u>

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference at his own expense.

<u>WARNING TO USER</u>

Change or modifications not expressly approved the manufacturer can void the user's authority to operate this equipment.

Waterproofing, dustproofing	IP65, front			
Weight	Approx. 6.6kg	Approx. 7.5kg	Approx. 7.6kg	Approx. 8.5kg

*1   A 256 MB memory module is plugged in one socket.

*2   Using the DVI-analog RGB adapter (accessory bundled), one more unit of an ordinary analog RGB input display can be added. Note that Panel Link input displays cannot be connected.

*3   The following signals cannot be used on ISA bus slots.
   -5V, IOCHK, REFRESH, MASTER

The PCI bus slots comply with the 32-bit specification. Use of combined 32/64-bit boards has not been verified.

Table 2.2. Installation Environment Requirements

	Parameter		Requirement description
USB I/F	2ch (USB 1.1)		
Keyboard I/F	PS/2-type keyboard-compatible (6pin, MINI DIN connector)		
Mouse I/F	PS/2-type mouse-compatible (6pin MINI DIN connector)		
RAS function	WDT: 1sec to 255sec (RESET or external output is allowed at time expiration) Remote reset: External input signal		
Power supply specifications	Allowable instantaneous		Less than 20ms
	Power outage		One minute each for 3.0 kVAC (input-output), 2.0 kVAC (input-FG), and 0.5 kVAC (output-FG)
	Dielectric strength		50MΩ (500VDC)
Ambient specifications	Operating temperature		0 - 50°C(SDD in use) 5 - 45°C(HDD in use) 5 - 45°C(FDD in use)
	Storage temperature		-10 - 60ºC
	Humidity *1		10 - 90%RH(No condensation)
	Floating dust particles		Not to be excessive
	Corrosive gases		None
	Line-noise resistance	Line noise	AC line/±2kV, Signal line/±1kV (IEC1000-4-4Level 3, EN61000-4-4Level 3)
		Static electricity resistance	Contact discharge/±4kV (IEC1000-4-2Level 2, EN61000-4-2Level 2) Atmospheric discharge/±8kV (IEC1000-4-2Level 3, EN61000-4-2Level 3)
	Vibration resistance *2	Sweep resistance	10 - 57Hz/semi-amplitude 0.15mm 57 - 150Hz/2.0G 80 min. each in x, y, and z directions (JIS C0040-compliant, IEC68-2-6-compliant)
	Impact resistance *2		10G, half-sine shock for 11 ms in x, y, and z directions (JIS C0041-compliant, IEC68-2-27-compliant)
	Grounding		Class D grounding (previous class 3 grounding)

*1   When a floppy disk is not in use.

*2   When the HDD and FDD are not in use.

Display Optical Specifications

Table 2.3. IPC-PT/L620S(PCW)C, IPC-PT/L620S(PCW)CP

Parameter	Condition			Min.	Typical
View angle (Vertical)	CR≥10	φ = 180°	Display. Monochrome	35deg	45deg
		φ = 0°		45deg	55deg
View angle (Horizontal)		φ = +90°		50deg	60deg
		φ= -90°		50deg	60deg
Contrast	Display. Monochrome			150	-
Brightness (at center)	Display. White			240cd/m²	300cd/m²

Table 2.4. IPC-PT/H620X(PCW)C, IPC-PT/H620X(PCW)CP

Parameter	Condition			Min.	Typical
View angle (Vertical)	CR≥10	φ = 180°	Display. Monochrome	-	45deg
		φ = 0°		-	55deg
View angle (Horizontal)		φ = +90°		-	60deg
		φ= -90°		-	60deg
Contrast	Display. Monochrome			200	350
Brightness (at center)	Display. White			200cd/m²	250cd/m²

3. Hardware Setup

Before Using the PANECON-PC for the First Time

Follow the next steps to set up the PANECON-PC:

STEP1   Install the hard disk and expansion main memory (DIMM) and set jumper switches.
         By referring to the information in this chapter, set the PANECON-PC.

STEP2   Connect cables.
         Connect necessary external devices, such as a printer and a CRT, to the PANECON-PC
         using appropriate cables.

STEP3   Turn on the power.
         After verifying that you have correctly followed steps 1 and 2, turn on the power. If you
         feel something is wrong after turning on the power, turn off the power immediately and
         check to see if the PANECON-PC has been set up correctly.

STEP4   Set up BIOS.
         By referring to Chapter 4, set up BIOS. This setup requires a keyboard and a display.

         * Before using the PANECON-PC, be sure to execute " LOAD SETUP DEFAULTS" to
            initialize the BIOS settings to their default values.
            (See Chapter 4, "Main Menu.")

⚠ CAUTION ───
   If your PANECON-PC is an OS preinstalled model, be sure to connect the keyboard and mouse to it
   before turning the power on for the first time.

Hardware Setup

Removing the Top Cover and HDD Bracket

- Before you start, be sure that the power is turned off.

- Remove only those screws that are explained. Do not move any other screw.

(1) Remove the top cover.
Figure 3.1. Removing the Top Cover

(2) Remove the hard disk bracket.
Figure 3.2. Removing the HDD Bracket

Locations and Settings of Internal Connectors and Jumpers

When you remove the top cover and hard disk bracket, the connectors, jumpers, and switches are laid out as shown in the figure below:

IPC-PT/L620S(PCW)C,
IPC-PT/L620S(PCW)CP

IPC-PT/H620X(PCW)C,
IPC-PT/H620X(PCW)CP
**Figure 3.3. Locations and Settings of Jumpers, Connectors, and Switches inside the Top Cover
(IPC-PT/L620S(PCW)C, IPC-PT/L620S(PCW)CP,
IPC-PT/H620X(PCW)C, IPC-PT/H620X(PCW)CP)**

Table 3.1. Jumper List

No.	Function	Factory setting		Reference Page	Remarks
		IPC-PT/L620S(PCW)C IPC-PT/L620S(PCW)CP	IPC-PT/H620XS(PCW)C IPC-PT/H620X(PCW)CP		
JP1	Clear CMOS.	1 - 2 shorted	1 - 2 shorted	----	Short 2-3 to clear CMOS.
JP3	Sets RS-485 termination	2 - 3 shorted	2 - 3 shorted	45	
S1	Used by the system	2,3,4,5,6 OFF 1,7,8 ON	1,2,3,4,5,6,7 OFF 8 ON	67	Leave this jumper as factory-set.

Table 3.2. Internal Connector List

Name	v	Reference page
CN15	Primary IDE connector (44pin, pin header)	68
M1	Expansion memory set (3.3V, 144pin SO-DIMM)	20
CN20	Printer Connector	57
CN14	RAS Connector	58

Installing the Hard Disk

(1) Connect the provided HDD cable to the hard disk (silicon disk).

⚠ CAUTION
Connect the HDD cable in alignment with pins from the left end of the connector on the HDD side.

Four master/slave setting pins are left unconnected on the right side. Be aware that connecting the power with the connector misaligned will damage the cable.

(2) By threading the cable through the hole on the base of the hard disk bracket, fasten the disk to its bracket using four screws.
- Fasten the disk using the outer or inner hole depending on the model you are using. (The figure below shows an example that uses the inner screw hole.)

⚠ CAUTION
When installing two drives in the HDD bracket, you can place either the hard disk drive (HDD) or silicon disk drive (SDD) in the upper position and only the SDD in the lower position. If you install two disk drives, set their jumpers according to the instructions in their manuals to assign them as the master and slave devices.
Figure 3.4. Installing the Hard Disk

(3) Connect the HDD cable to CN6 on the unit and fasten the hard disk bracket to the unit using four screws.

(4) Close the top cover and secure it with screws.

Installing the Main Memory (DIMM)

Compatible DIMM Types

Obtain the following special option products.

-	Package type	:	144pin Small Outline DIMM
-	Specifications	:	3.3V, PC133/CL3
-	Capacity	:	256MB
-	Type	:	SDRAM
-	Optional memories *	:	PC-MSD256-144V

-	Package type	:	144pin Small Outline DIMM
-	Specifications	:	3.3V, PC100/CL2
-	Capacity	:	128MB
-	Type	:	SDRAM
-	Optional memories * :		PC-MSD128-144H

    *Operation is not guaranteed if memory parts other than CONTEC option products are used.

Main Memory (DIMM) Installation Procedure

The mounted SO-DIMM sockets vary depending on the type of the circuit board used.

<Board type with single sockets on its front and back>
This type of circuit board has single sockets on its front and back. The socket on the back is equipped with standard memory. To add more memory, install it to the socket on the front of the board.

Follow the next steps to fit the memory into the SO-DIMM socket:

(1) Insert the DIMM into its socket with the notch positioned on the right side. (See the note.)

(Note) Insert SO-DIMMs at an angle of about 30 degrees.
An attempt to insert them at inappropriate angles as
marked with X above may break the SO-DIMM sockets.

◎ CONTEC
User's Manual
(2) Press in the direction indicated by the arrow. You hear a click as the memory fits into the socket.
Figure 3.5. Installing the SO DIMM

<Board type with a double socket on its front>

This product has a double socket on the front of its circuit board. Standard memory is installed in the lower socket. To add more memory, install it to the upper socket.

SO-DIMM Disconnection Procedure

Open the levers on both sides slightly to the left and right. You should be able to remove the DIMM.

Lever
Figure 3.6. Uninstalling the SO-DIMM

⚠ CAUTION

The SO DIMM socket plugging/unplugging life is 30 times. The operation of an SO DIMM socket is not guaranteed once an SO DIMM has been plugged and unplugged more than 30 times.

Fastening the Power Cable

Removing the Screw on the Metal Brace to Keep the AC Cord in Place

In order to install the metal brace, temporarily remove the machine screw on the front left end.
Figure 3.7. Removing the Screw

Installing the AC Cord Metal Brace and the Clamp

Insert the AC cord all the way into the inlet. Fasten the AC cord metal brace using the screw you removed earlier. Attach the clamp to an appropriate location on the metal brace to clamp the cord. The "AC cord metal brace" is attached to the main case.
Figure 3.8. Installing the AC Cord Metal Brace and the Clamp
Figure 3.9. Installing the Metal Brace and the Clamp

Installation Procedure

(1) Cut a panel in the following dimensions for installing the main unit.

IPC-PT/L620S(PCW)C, CP   IPC-PT/H620X(PCW)C, CP

[mm]
Figure 3.10. Panel Opening Dimensions

(2) Insert the supplied gasket between the panel and display and fasten them together with M4 nuts as shown below.
Figure 3.11. Assembling Method

Installation Requirements

To restrict overheating, always mount the unit vertically. Similarly, to maintain the ambient temperature within the range specified in the specifications, ensure a clearance between the unit and surrounding equipment of at least 100mm for the top and rear and 50mm for the bottom and sides.

Side view — Panel

100mm (above)

50mm or more (bottom)

100mm or more (back)

Bottom view

50mm or more (side)

Connector

Panel
Figure 3.12. Distances between the PANECON-PC and Its Vicinity

4. BIOS Setup

BIOS setup sets various settings during startup. When using the system for the first time, be sure to run BIOS setup. Once set up, the specified details will be backed up.

Starting the Setup Screen

When you turn on the system power supply, the PANECON-PC displays the following initial screen as long as the system is normal. Press the <F2> key at the keyboard.

```

Keystrokes

The following is a list of major key functions you can use during BIOS setup:

Table 4.1. Key Function List

Key to press	Function
→, ←	Moves the main menu.
↑, ↓	Moves between items to be set.
<Tab>	Moves within items to be set.
<Shift>+<Tab>	Moves in the direction opposite to <Tab>.
<Spacebar>	Changes details to be set.
+	Functions the same as <Spacebar>.
-	Changes in the direction opposite to the + key.
<Enter>	Opens submenus.
<Esc>	Moves to the Exit window.
<F9>	Resets all to defaults.
<F10>	Saves set values and exits setup.

Figure 4.2. Main Window (Factory Settings)

System Time	:	Sets the time on the equipment calendar clock.
System date	:	Sets the date on the equipment calendar clock.
Legacy Diskette A	:	Specify the type of FDD to be used as drive A. If you are not using the FDD, set to "Disabled." Select: Disabled / 360K, 5.25in. / 1.2M, 5.25in. / 720K, 3.5in. /1.44M, 3.5in / 2.88M, 3.5in.
Primary Master	:	Set the type of HDD(SDD) to be used as the first drive. Selecting this field changes the screen to the submenu for manually setting drive configuration data such as the number of cylinders. This field is set to [Auto] by default. You can leave it intact for normal use.
Primary Slave	:	Set the type of HDD(SDD) to be used as the second drive. Selecting this field changes the screen to the submenu for manually setting drive configuration data such as the number of cylinders. This field is set to [Auto] by default. You can leave it intact for normal use.
Secondary Master	:	Normally, connection is not allowed. Set this field if you have connected a CD-ROM drive to the secondary IDE connector.
Secondary Slave	:	Connection not allowed. Set to "None."
Boot Features	:	This field launches the Boot Features submenu to enable or disable the options for checking the floppy disk drive and keyboard upon system boot. (See Boot Features Windows.)
System Memory	:	Displays the detected amount of memory installed on the system.
Extended Memory	:	Displays the detected amount of memory installed on the system.

```

Figure 4.4. Advanced Window (Factory Settings)

Reset Configuration Data : Resets the system configuration data stored in BIOS ROM. The data will be reset by setting this field to [Yes] and exiting BIOS Setup while saving the changes you made. This field reverts to [No] automatically the next time you invoke BIOS Setup. Before reinstalling the OS, be sure to set the field to [Yes].

Installed OS : Normally, set to "Other."

PCI IRQ : Displays the PCI IRQ setup submenu. You can assign IRQs to individual PCI slots. All PCI slots are connected to IRQ10 by default.

PCI/PNP ISA UMB Region Exclusion

: Start PCI/PNP ISA UMB Region Exclusion as shown above. You can reserve UMB areas for devices. All UMB areas are unallocated by default. Up to 32 kilobytes from addresses D0000 - D7FFFH can be allocated.

PCI/PNP ISA DMA Resource Exclusion

: Start PCI/PNP ISA DMA Resource Exclusion as shown above. You can reserve DMA channels for devices. All UMB areas are unallocated by default.

I/O Device Configuration : Start I/O Device Configuration as shown above. You can configure serial and parallel ports. (See I/O Device Configuration Window.)

ISA Bridge   Sets up ISA bus expansion slots.

Legacy USB Support   :   Emulates the USB keyboard, mouse, and FDD as legacy devices. Set this field to [Enabled] before installing the OS using the USB keyboard. Once the OS gets up and running, the keyboard is controlled by the OS's driver and this field need not be set to [Enabled]. Leave the field set to [Disabled] for normal use.

Audio Device   :   Enable or disable the AC97 device.

Large Disk Access Mode :   Normally, set to " DOS."

Local Bus IDE adapter   :   Specify whether to enable or disable IDE device.

PCMCIA ATA DISK   :   Setting for the ATA CARD booting. Use it the [Disabled] in the default.

WDT Output to PO2   :   Set the watchdog timer output to PO2.

WDT Power-on State   :   With the watchdog timer output to PO2 enabled, set the output status in the power-on state.

WDT Time-up State   :   With the watchdog timer output to PO2 enabled, set the output status in the Time-up state.

PCIC Irq Mode   :   Set to " Continous ".

BIOS DDC   :   Specify whether to enable or disable DDC. Please set to [Enabled].

Start Wait   :   Sets the wait time for the startup of BIOS and enables timing adjustment for devices connected to the main unit. [Disabled], [5sec], [10sec], [15sec], [20sec], [25sec], or [30sec] can be selected. When [Disabled] is selected, there is no wait time. (It means the same as "0sec".)
Select [Disabled] under normal conditions, which is the default setting.

Figure 4.5. I/O Device Configuration Window (Factory Settings)

Serial port A   : This setting is for SERIAL1 on the equipment connector plane.

Serial port B   : This setting is for SERIAL2 on the equipment connector plane.

Serial port C   : This setting is for serial communication of the touch panel.

Serial port D   : This setting is for RS-422/485 in the RAS connector on the equipment
                          connector plane or for SERIAL4 on the equipment connector plane.

Parallel port   : This setting is for PRINTER on the equipment connector plane.

Fields available with Parallel port set to [Enabled]

                 Base I/O address   : Set to base I/O address.

                 Interrupt   : Set to IRQ.

                 Mode   : Set to parallel port's operating mode.

                 DMA channel   : This is the DMA channel setting used when
                                            ECP is selected during parallel-port mode setting.

Floppy disk controller : Enable or disable the on-board floppy disk controller.
                          Normally, set to default.

PCMCIA interrupt   : Used to set the interrupt used by the PCMCIA controller.
                          The default is IRQ10.
                          Change this in cases such as when an ISA board uses IRQ10.

SERIAL2	Serial port 2 connector (9pin, male D-SUB)
FD	Floppy disk drive connector (26pin, half-pitch connector)
USB	USB port connector
UTP	Ethernet connector (RJ-45)
PCMCIA	PCMCIA card slot
DVI*1	DVI connector (29pin, DVI-I)
PRINTER	Parallel port connector (25pin, female D-SUB)
RAS	RAS function and RS-485 connector (15pin, female D-SUB)
RESET	Hard reset push button
Expansion Slot	PCI expansion board slot x 2 <CP model>
POWER	Power ON indicator
HDD	Internal hard disk access lamp
POWER SW	Power switch
AC INLET	AC power supply input connector
SECONDARY IDE	Secondary IDE connector (dedicated 40pin half-pitch connector)

*1: Using the DVI-analog RGB adapter (accessory bundled) allows an analog RGB monitor to be connected to the IPC-PT/x620x(PCW).

Line in Interface

A line input connector is provided, named LINE IN (3.5-mm stereo mini jack). You can connect the audio output, for example, of a CD player to this connector to record data from the CD or to play it through LINE OUT.

Line out Interface

A line output connector is provided, named LINE OUT (3.5-mm stereo mini jack). You can plug a headphone or amplifier-integrated speakers into this connector.

MIC input Interface

A MIC input connector is provided, named MIC (3.5-mm stereo mini jack). You can plug a microphone to this connector for sound input.

Audio driver

The audio driver is required to use the line input, line output, and microphone input interfaces.

Visit the CONTEC web site to download the audio driver

(IPC-SLIB-01) for the OS running on your PANECON-PC.

For the download, see Chapter 7 "List of Options".

Keyboard Interface

The PANECON-PC is equipped with a keyboard connector named KB (MINI-DIN 6P).

Table 5.2. Keyboard Connector

Connector type	Equivalent to the MD-DS12300-14S-14 (JST)		
Pin No.	Signal	Pin No.	Signal
1	+KBD DATA	5	+KBD CLK
2	N.C.	6	N.C.
3	GND	SHIELD	GND
4	+5.0V DC	---	

Mouse Interface

The PANECON-PC is equipped with a mouse connector named MOUSE (MINI-DIN 6P).

Table 5.3. Mouse Connector

Connector type	Equivalent to the MD-DS12300-14S-14 (JST)		
Pin No.	Signal	Pin No.	Signal
1	+MOUSE DATA	5	+MOUSE CLK
2	N.C.	6	N.C.
3	GND	SHIELD	GND
4	+5.0V DC	---	

Serial Port Interface

Serial port A and B(RS-232C Ports)

The PANECON-PC is equipped with two RS-232C-compliant serial port connectors (SERIAL1: Serial port A and SERIAL2: Serial port B). You can use BIOS Setup (described in Chapter 3) to configure an I/O address, interrupt and unused state for each of the ports independently. (The same I/O address and IRQ cannot be shared with any other device.)

Table 5.4. SERIAL A and B I/O Addresses and Interrupts
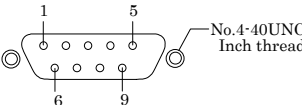

COM	I/O address	Interrupt
1	3F8h - 3FFh	
2	2F8h - 2FFh	IRQ 3
3	3E8h - 3EFh	IRQ 4
4	2E8h - 2EFh	

The BIOS defaults to the following factory settings:

```
Serial port A: COM1(3F8h-3FFh),IRQ4
Serial port B: COM2(2F8h-2FFh),IRQ3
```

Table 5.5. Serial Port Connector

Connector used on the unit	9-socket D-SUB (MALE)

No.4-40UNC
Inch thread

Pin No.	Signal	Meaning	Direction
1	CD	Carrier detect	Input
2	RD	Received data	Input
3	TD	Transmitted data	Output
4	DTR	Data terminal ready	Output
5	GND	Signal ground	-----
6	DSR	Data set ready	Input
7	RTS	Request to send	Output
8	CTS	Clear to send	Input
9	RI	Ring indicator	Input

Serial port C(touch panel)

One channel of serial port is provided for use as a touch panel connector.

You can use BIOS Setup (described in Chapter 3) to configure an I/O address, interrupt and unused state for this port. (The same I/O address and IRQ cannot be shared with any other device.)

Table 5.6. Serial port C I/O Addresses and Interrupts

COM	I/O address	Interrupt
1	3F8h - 3FFh	IRQ 3 IRQ 4
2	2F8h - 2FFh	IRQ 5 IRQ 7
3	3E8h - 3EFh	IRQ 9 IRQ 10
4	2E8h - 2EFh	IRQ 11 IRQ 15

The BIOS defaults to the following factory settings:

```
Serial port C: COM3(3E8h-3EFh),IRQ5
```

Serial port D (RS-422/485 port)

One channel of serial port is provided for use as a RS-422/485 port.

You can use BIOS Setup (described in Chapter 3) to configure an I/O address, interrupt and unused state for this port. (The same I/O address and IRQ cannot be shared with any other device.)

Table 5.7. Serial port D I/O Addresses and Interrupts

COM	I/O address	Interrupt
1	3F8h - 3FFh	IRQ 3 IRQ 4
2	2F8h - 2FFh	IRQ 5 IRQ 7
3	3E8h - 3EFh	IRQ 9 IRQ 10
4	2E8h - 2EFh	IRQ 11 IRQ 15

The BIOS defaults to the following factory settings:

```
Serial port D: COM4(2E8h-2EFh),IRQ11
```

Output connector with the RS-422/RS-485 mounted (factory default)

Table 5.8. Output connector with the RS-422/RS-485 mounted (RAS Connector)

Pin No.	Signal	Meaning
2	TX +	Transmitted data +
10	TX -	Transmitted data
3	RX +	Received data +
11	RX -	Received data -

Reference

    For more information on the RAS connector see Table 5.20, "RAS connector."

RS-422/RS-485 Specifications

- Transmission method   : RS-422/RS-485-compliant, asynchronous, serial transmission, half
                                        duplex/full duplex
- Baud rate   : 50 - 19,200bps (programmable)
- Signal extension distance   : 1.2km Max.

Terminal Resistor when RS-485 is in Use

Set with JP4 inside the top cover. The factory setting is " terminal resistor not available."

3 2 1   3 2 1

2 and 3 shorted   1 and 2 shorted
Receiver terminal   Receiver terminal
resistor not available resistor available

Figure 5.2. Terminal Resistor Settings

Control of Transmitted Data in Half-Duplex Mode

In half-duplex mode, the transmission buffer needs to be controlled in order to prevent collision of transmitted data. The PANECON-PC uses RTS and controls the buffer with modem control register's bit 1. Transmission and reception gate control by the register setting of port address 4006h and 4007h is allowed only for the RS-422/485 (Serial port D). For more information see section, "General-purpose I/O and Remote Reset" in Chapter 5.

Modem control register
(Set I/O address +4H) bit 1:   0 … RTS is High. (Disable transmission)
                                 1 … RTS is Low. (Enable transmission)

I/O Addresses and Instructions

The I/O addresses and instructions of COM1 are shown next.

Table 5.9. I/O Addresses

I/O address	DLAB	Read/Write	Register	
03F8H	0	W	Transmitter holding register	THR

1 : 1.5 STOP bits at 5-bit length
2 STOP bits at 6-, 7-, or 8-bit length

0 : Disable parity
1 : Enable parity

0 : Odd parity
1 : Even parity

0 : Disable stick parity
1 : Enable stick parity

0 : Break signal off
1 : Send break signal

DLAB (Divisor Latch Access Bit)
In order to access the divisor latch register, you need to set the bit to 1. To access another register, set the bit to 0.

Table 5.10. Function of Each Register *< 3 / 4 >*

I/O address	Description
03FCH	MCR: Modem Control Register
	D7 D6 D5 D4 D3 D2 D1 D0
	0 0 0 Loop IRQ X RTS DTR
	DTR 0 : Inactive [HIGH] 1 : Active [LOW]
	RTS 0 : Inactive [HIGH] 1 : Active [LOW]
	Interrupt control bit 0 : Disable 1 : Enable
	Diagnostic local loop-back test 0 : Disable 1 : Enable
03FDH	LSR: Line Status Regester
	D7 D6 D5 D4 D3 D2 D1 D0
	0 TEMT THRE BI FE PE OE DR
	Data ready (1 for existence of received data)
	Overrun error (1 for occurrence of an error)
	Parity error (1 for occurrence of an error)
	Framing error (1 for occurrence of an error)
	Break interrupt (1 for detection of break state)
	Transmitter holding register empty (1 for transmission buffer being empty)
	Transmitter empty (Set to 1 when both transmitter holding register and transmitter shift register are empty.)

Table 5.10. Function of Each Register *< 4 / 4 >*

I/O address	Description
03FEH	MSR : Modem Status Register D7 D6 D5 D4 D3 D2 D1 D0 | DCD | RI | DSR | CTS | DDCD | TERI | DDSR | DCTS | Delta CTS Delta DSR Trailing edge RI Delta data carrier detect CTS DSR RI DCD Since these statuses are not used with RS-485, data is not valid.
03FFH	SCR : Scratchpad Register This is an 8-bit, readable/writable register which is available to the user to allow data to be saved temporarily.

Baud Rate Settings

A baud rate is set by software by dividing the clock input (1.8432MHz). The baud rate in terms of hardware can be set to a maximum of 115,200 bps. The baud rates available in practice depend on the operating environment (cable, software, etc.). The table below lists typical baud rates and their respective values to be written to the divisor latch register (LSB, MSB).

Table 5.11. Baud Rate Settings

Baud rate to be set	Value to be set in the divisor register	Setting error (%)
50	2304	---
75	1536	---
110	1047	0.026
134.5	857	0.058
150	768	---
300	384	---
600	192	---
1200	96	---
1800	64	---
2000	58	0.69
2400	48	---
3600	32	---
4800	24	---
7200	16	---
9600	12	---
19200	6	---

Example: To set 9,600 bps, write "00" to the (MSB) divisor latch register
and "12 (decimal)" to the (LSB) divisor latch register.

Floppy Disk Interface

The PANECON-PC is equipped with a FD controller to allow one FD drive to be connected to the FD connector named FD on the front end. Use the FD drive that is available as a dedicated option.

Table 5.12. FD Connector

Connector in use	26-socket, half-pitch connector, Equivalent to the DX10G1M-26SE				

Pin No.	Signal	Direction	Pin No.	Signal	Direction
1	HDSEL	Output	2	WRTPRT	Input

```
Figure 5.3. Slot Numbers and Locations

⚠ CAUTION

A type III card should be inserted into slot 2.

Attaching the Metal Brace to Keep the Card in Place

Get the
tips caught
Figure 5.4. Attaching the Metal Brace to Keep the Card in Place

Power Supply to the Card

The voltage that can be used and the current capacity of each slot are as shown below:

Table 5.15. Power Supply to the Card

Voltage	Current capacity (Max.)
+5V	1A/Slot
+3.3V	1A/Slot
+12V	Not supplied.

DVI Interface

A DVI interface is provided. Using the bundled DVI-analog RGB adapter allows a display monitor with DB-15 connector to be connected to the IPC-PT/x620x(PCW). The connector is named DVI (DVI-I 29-pin connector).

Table 5.16. DVI Connector

DVI Connector		DVI-I 29 pin			
Pin No.	Signal	Pin No.	Signal	Pin No.	Signal
1	N.C.	13	N.C.	C1	RED

4	N.C.	12	DDC DATA
5	GND	13	HSYNC
6	GND	14	VSYNC
7	GND	15	DDC CLK
8	GND		

Display Driver

Visit the CONTEC web site to download the Display driver (IPC-SLIB-01) for the OS running on your PANECON-PC.

For the download, see Chapter 7 "List of Options".

Printer Port Interface

A printer port is provided. You can use BIOS Setup to configure an operation mode, I/O address, interrupt, DMA channel and unused state for this port. The connector is named PRINTER.
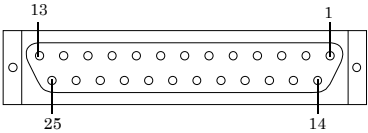

Table 5.18. Printer Ports and I/O Addresses

I/O address	Interrupt
3BCh to 3BFh	IRQ 5
378h to 37Fh	IRQ 7
278h to 27Fh	

The BIOS defaults to the following factory settings:

```
Parallel port: ECP,378h - 37Fh,IRQ7,DMA3,
```

Table 5.19. Printer Port Connector

Connector used on the unit	25pin D-SUB (FEMALE)

Pin No.	Signal	Meaning	Direction	Pin No.	Signal	Meaning	Direction
1	-STRB	Enable data	Output	14	-AFEED	Automatic feed	Output

Fastening screw: No. 4-40 UNC inch thread

RAS Functions

A RAS port is provided. This port offers watchdog timer, remote reset, and general-purpose I/O RAS functions.

Table 5.20. RAS Connector

Connector type	15pin D-SUB(FEMALE) (DALC-J15SAF-20L9) JAE

Pin No.	Signal	Function
1	SPK	External speaker signal
9	GND	External speaker ground
2	TX +	RS-485 transmitting line
10	TX -	
3	RX +	RS-485 receiving line
11	RX -	
4	NCOM	Minus common dedicated to PO2
12	PO2/WDT	General-purpose output or watchdog timer alarm output
5	PO0	General-purpose output
13	PO1	
6	NCOM	General-purpose output minus common
7	PI1	General-purpose input
14	PI2/IRQ	General-purpose input or interrupt input
8	PCOM	General-purpose input plus common
15	PI0	General-purpose input

*Fastening screw: No. 4-40UNC inch thread

port address: 4000h - 4007h

⚠ CAUTION

Pin 4 NCOM (minus common dedicated to PO2) and pin 6 NCOM (minus common shared by PO0 and PO1) are electrically separated from each other.

Watchdog Timer

The watchdog timer is started by output of A5 to I/O port address 4002h. A second output of A5 to the same port within the specified expiration time once again triggers the watchdog timer. If a time-out occurs, a reset or an interrupt is generated according to the 4004h port setting or an alarm is output according to the 4004h port setting.

The time-out period can be set between 1 and 255 seconds depending on the timer value setting for the WDT counter port (4003h).

The watchdog timer stops by reading port 4002h. The alarm-out output is cancelled at the same time.

The alarm out is output from the RAS connector's PO2/WDT (pin 12) and cancelled when reset.

The alarm-out output can be set to BIOS startup by BIOS setup (see Chapter 4), watchdog timer startup, or watchdog timer time-up.

Specifications

-	Time to be set	:	1sec - 255sec
-	Interrupt or reset	:	Resets or generates an interrupt at time-up (Port setting).
-	External alarm output	:	Optocoupler isolated open-collector output (the output status is set by software). For more information, see the general-purpose I/O specifications.
-	I/O addresses	:	4000h - 4007h (RAS port)

——	——	——	——	——	——	——	WDT

R (Default: XXXXXXX0b)

Figure 5.10 RAS Status Port (4005h)

R : RAS status port

WDT : WDT status

This is the WDT status bit. This bit is cleared when the WDT stops (read port 4002h).

0 : The WDT is either stopped or counting.

1 : The time set on the WDT expired.

General-purpose I/O and Remote Reset

The PANECON-PC is equipped with three general-purpose isolated signals each for input and output. The input signals can also be used for interrupt input or remote reset input.

Specifications

[Input]

- Input specifications : Current-driven input by Optocoupler isolation.

- Input resistance : 4.7kΩ

- Input signal count : 3 [One of them can be used for remote reset and interrupt input. (bit2<fixed>)]

- Input protection circuit : Equipped with a reverse-connection protection diode

- Input response time : Less than 100μsec

- External circuit power supply : 12 - 24VDC (±10%)

[Output]

- Output specifications : Open-collector output by Optocoupler isolation.

- Output rating : Max. 30VDC, 100mA

- Output signal count : 3 [One of them can be used for WDT alarm output. (bit2<fixed>)]

- Output response time : Less than 300μsec

[Common]

- I/O addresses 4000h and 4001h

Reset Switch

The PANECON-PC is equipped with a hardware reset switch. To prevent it from being pressed by mistake, the switch is designed to be difficult to press. Use a pointed object to push the switch with.

IDE Interface

Connector for the Internal Drive (Primary IDE Connector)

The PANECON-PC is equipped with an E-IDE controller to allow a 2.5inch IDE hard disk to be connected to connector CN1 on the board.
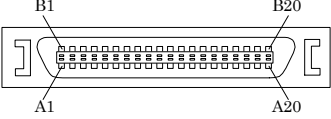

Table 5.26. Primary IDE Connector (CN15)

Connector in use	44-socket header type (2mm pitch)

Expansion Slots (CP Model)

The CP model has two PCI/ISA bus expansion slots able to mount both PCI bus and ISA bus boards.
Board Dimensions Allowed

Figure 5.21. Expansion Board Dimensions

⚠ CAUTION

- A board that uses the back of the board edge connector (the shaded area in the figure) may not be mounted.

- The following signals cannot be used on ISA bus slots.
  -5V, IOCHK, REFRESH, MASTER

- The PCI bus conforms to the 32-bit specification. The operation of dual 64-bit/32-bit boards such as the ADAPTEC 39160SCSI board or Intel Pro1000/MT network board has not been verified.

Power Supply to Expansion Slots

The following table lists the voltage that can be supplied to a board in an expansion slot and the total current capacity of all slot:

Table 5.28. Expansion Slots

| Voltage	Current capacity (Max.)
+5V	2A
+12V	0.3A
-12V	80mA
-5V	Not supplied

⚠ CAUTION

Make sure that the total current consumption by the boards installed in the expansion slots does not exceed the above current capacity.

Board Installation Procedure

(1) Be sure the power is turned off.

(2) Remove the top cover.

Figure 5.22. Removing the Top Cover

(3) Remove the brace that holds the printed circuit board (PCB) down. Remove the screws on the brace.
    The brace will separate toward you.
Figure 5.23. Removing the PCB Brace 2

(4) Insert the board into the slot and fasten it with screws.

Figure 5.24. Installation of an Expansion Board

(5) Install the PCB brace. It can hold down a board if its height is at least 68mm.

Figure 5.25. Attaching the PCB Brace
(6) Replace the expansion slot cover.

Figure 5.26. Replacing the Top Cover

User's Manual

6. Touch Panel

The PANECON-PC is equipped with an analog touch panel which enables keyboard-less, mouse-less operations.

Table 6.1. Touch panel specifications

Model	IPC-PT/L620S(PCW)C IPC-PT/L620S(PCW)CP	IPC-PT/H620X(PCW)C IPC-PT/H620X(PCW)CP
Detection method	Analog resistive	
Active area	246 x 184.5mm	304.1 x 228.1mm
Surface treatment	Nonglare	
Resolution	4096 x 4096 (emulated in 800 x 600 mode)	4096 x 4096 (emulated in 1024 x 768 mode)
Operating lifetime	1 million touches minimum (as tested by mechanical touching under 300g of force at a rate of two presses per second)	

Touch panel serial interface

The PANECON-PC uses a serial port (SERIAL 3) for communication with the touch panel. You can use BIOS Setup (described in Chapter 4) to assign I/O addresses and an IRQ or to disable it. (The I/O addresses or IRQ cannot be shared with any other device.)

Visit the CONTEC web site to download the touch panel driver (IPC-SLIB-01) for the OS running on your PANECON-PC.

For the download, see Chapter 7 "List of Options".

Table 6.2. SERIAL3 I/O address, interrupt

COM	I/O address	Interrupt
1	3F8h - 3FFh	IRQ 3
2	2F8h - 2FFh	IRQ 4
3	3E8h - 3EFh	IRQ 5
4	2E8h - 2EFh	IRQ 7
		IRQ 9
		IRQ 10
		IRQ 11
		IRQ 15

BIOS Default Factory Settings

```
Serial port C: COM3 (3E8h – 3EFh), IRQ 5
```

Points to note when installing the touch panel driver

1. Which Windows COM port number is allocated to the serial port used as the communication interface to the touch panel (Serial Port C)? (The standard setting is COM3.)

2. Has the display driver been installed and the LCD screen set to the maximum size? (Is the screen size set to 1024x768 for the IPC-PT/H620X(PCW) or 800x600 for the IPC-PT/L620S(PCW)?)

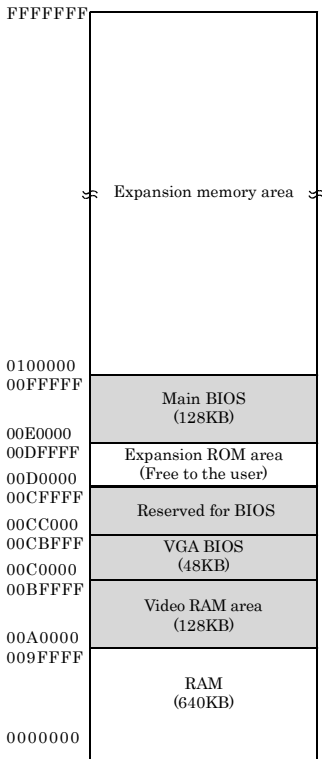

Figure 7.1. Memory Map

I/O Port Addresses

Table 7.1. I/O Port Addresses *< 1 / 2 >*

ADDRESS(HEX)	Description	Remark
000-00F	DMA controller 1 (slave)	ch0 - 3 (8-bit transfer)
010-01F	Reserved for system	
020-03F	Interrupt controller 1 (master)	
040-05F	Timer	
060-06F	Keyboard controller	
070-07F	RTC, NMI mask	
080-09F	DMA page register	
0A0-0BF	Interrupt controller 2 (slave)	
0C0-0DF	DMA controller 2 (master)	ch5 - 7 (16-bit transfer)
0E0-0FF	Reserved for system	
100-12F	Available to user	
140-16F	Available to user	
170-17F	IDE hard disk controller	Secondary
180-18F	Reserved for system	
190-1DF	Available to user	
1E8-1EF	Reserved for system	
1F0-1FF	IDE hard disk controller	Primary
200-277	Available to user	
278-27F	Reserved for parallel port	LPT2
280-2E7	Available to user	
2E8-2EF	Reserved for serial port	COM4(RS485, factory setting)
2F0-2F7	Available to user	
2F8-2EF	Serial port	COM2
300-35F	Available to user	
370-375	Reserved for system	
376-377	IDE hard disk controller	Secondary
378-3AF	Reserved for parallel port	LPT1 (factory setting)
3B0-3BB	Reserved for system	
3BC-3BF	Reserved for parallel port	LPT3
3C0-3DF	Reserved for system	
3E0-3E7	PCMCIA	
3E8-3EF	Serial port	COM3(Touch panel, factory setting)
3F0-3F7	FD controller	
3F8-3FF	Serial port	COM1
4D0-4DF	Reserved for system	

Table 7.1. I/O Port Addresses *< 2 / 2 >*

ADDRESS(HEX)	Description	Remark
CF0-CFF	Reserved for system	
4000-4007	RAS functions	
4008-400F	Reserved for system	
46E8	Reserved for system	
83D0-B3D3	Reserved for system	

Interrupt Level List

Table 7.2. Hardware Interrupt Levels (Factory Settings)

Type	8259	Priority	Description	Vector	Remarks
NMI		High	-I/O CH CK	02H	
IRQ0	MASTER	↑	Timer 0	08H	
IRQ1	MASTER	|	Keyboard	09H	
IRQ2	MASTER	|	Interrupt controller 2 (slave)	0AH	
IRQ8	SLAVE	|	Real-time clock	70H	
IRQ9	SLAVE	|	Reserved for PCI device	71H	
IRQ10	SLAVE	|	Not in use	72H	Available to user
IRQ11	SLAVE	|	Serial port D (COM4)	73H	RS-485(factory setting)
IRQ12	SLAVE	|	Reserved for PS/2 mouse	74H	
IRQ13	SLAVE	|	Reserved for coprocessor	75H	
IRQ14	SLAVE	|	Reserved for hard disk	76H	Primary
IRQ15	SLAVE	|	Reserved for optional CD-ROM	77H	Secondary
IRQ3	MASTER	|	Serial port B (COM2)	0BH	
IRQ4	MASTER	|	Serial port A (COM1)	0CH	
IRQ5	MASTER	|	Serial port C (COM3)	0DH	Touch panel (Default factory setting)
IRQ6	MASTER	↓	Reserved for floppy disk	0EH	
IRQ7	MASTER	Low	Parallel port	0FH	

User's Manual

8. List of Options

Memory for extension (144pin SO-DIMM)

- PC-MSD128-144H   128MB SD memory module

- PC-MSD256-144V   256MB SD memory module

Silicon disk drive for extension (IDE 2.5inch)

[PCI Board Type]

                For IPC-PT/L620S(PCW)CP, IPC-PT/H620X(PCW)CP

- PC-RSD1000-PCI   1GB silicon disk drive

- PC-RSD2000-PCI   2GB silicon disk drive

- PC-RSD4000-PCI   4GB silicon disk drive

- PC-RSD8000-PCI   8GB silicon disk drive

Hard disk drive (IDE 2.5inch)

- PC-HDD40G   40GB hard disk drive

Silicon disk drive (IDE 2.5inch)

- PC-ESD500-A   512MB silicon disk drive

- PC-ESD1000-A   1GB silicon disk drive

- PC-ESD2000-A   2GB silicon disk drive

- PC-ESD4000-A   4GB silicon disk drive

- PC-ESD8000-A   8GB silicon disk drive

- PC-ESD500   512MB silicon disk drive

- PC-ESD1000   1GB silicon disk drive

- PC-ESD2000   2GB silicon disk drive

- PC-ESD4000   4GB silicon disk drive

- PC-ESD8000   8GB silicon disk drive

Floppy disk drive

- PC-FDD25BH   3.5inch floppy disk drive (comes with a cable)

Terminal block

- IPC-PSD-20   Terminal block for general-purpose I/O (with cable)

TFT color liquid-crystal display

<Analog RGB types>

- FPD-H21XT-AC   (15 inch 1024 x 768 dots, Panel mounted type)

- FPD-L21ST-AC   (12.1 inch 800 x 600 dots, Panel mounted type)

- FPD-M21VT-AC   (10.4 inch 640 x 480 dots, Panel mounted type)

CD-ROM/DVD-ROM drive

- IPC-CDD-03   CD-ROM/DVD-ROM Drive Unit *3

- IPC-CDC-03   CD-ROM/DVD-ROM Drive cable

Double-sided screen protective sheets

- IPC-CV12   (12-inch screen protective sheets: 10 sheets)

- IPC-CV15   (15-inch screen protective sheets: 10 sheets)

Driver

- IPC-SLIB-01   Driver & Utility Soft Set(CD-ROM version) *1*2

Ferrite Core

- FRC2009A-6   Ferrite Core 20/09mm (6 pieces)

*1 If your PANECON-PC is an OS preinstalled model, the driver is supplied with the OS or already installed on the PC.

*2 You can download the driver from the Download Library (http://www.contec.com/download) on the CONTEC web site. If you need IPC-SLIB-01 (CD-ROM version), it is available as a separately priced option.

*3 Please Purchase an optional cable for connection [IPC-CDC-03].

* Check the CONTEC's Web site for the latest information on these options.
