	Plug in your headphones when.
	Activate call forwarding function.
	Keyboard lock unopened.

	Lock keyboard.
	Show battery power.
	Showing not take the call.
	Chat function.
	Stopwatch to launch multi-functional.
	Received new information services.
	Open Bluetooth headset.
	Bluetooth headset pairing success.

2.2 key note

1. Joystick

- (1) the direction of bond: Editor, according to the direction of bond; standby mode, this button to enter the music player.
- (2) under the direction of bond: Editor, under the direction of the bond; standby mode, this button to enter the alarm.
- (3) direction left: according to the editorial direction left; standby mode, this button to enter the scenarios.
- (4) right direction: to the editor by right-direction; standby mode, this button to enter the ring set up.
- (5) OK button: usually, select menu after the confirmation button; standby interface, the key to achieving this into the main menu interface, camera, video frame interface, were key

to achieving this photo, video or suspension function.

2. Number keys:

Enter figures and characters; 2-9 figures can be set to speed dial shortcuts.

3. Dial-up button:

A way to call card number; receive cards A and B card calls; standby, has been out of telephone records.

4. The right softkey:

Implementation guide at the bottom right corner of the screen display.

5. Left softkey:

Implementation guide at the bottom left corner of the screen display; dial-up interface card means B Call the phone number.

6. Onhook key:

End the call or reject incoming calls in other circumstances, this button to return to normal standby status.

7. * Key:

In the edit screen, this key input all special symbols, Chinese punctuation; standby interface, long to achieve this key to switch +, P, W character input.

8. # Key:

Click in the edit screen button, switch the input method, and this long under the standby interface in the silent mode button and switch between normal mode. Touch screen, dial-up button interface, under the # key is to achieve this feature.

Note: This manual, "according to a key" refers to press the button after the release, "according to a long bond" refers to press the button and maintain two seconds or two seconds more.

The above description as well as some of the key functions may be based on specific models.

2.3 touch screen Features

The phone supports touch-screen functions.

Silk screen displayed on the touch panel of five pictures from the left side of the function were as follows:

Touch the first images into view telephone directories.

Touch the second picture into the video player.

Touch the third write messages into the picture.

Touch the fourth picture into the music player.

Touch the fifth picture into the main menu.

2.4 Battery

The initial state of battery charge by about 50 percent of the electricity, to use after the break. Please complete the three previous charge, after the full use of depleted so easy to

achieve the best use of battery status.

The demolition and installation of battery

demolition, v the following steps: ① phone will open the rear cover; ② the battery to be removed from the side lifted.

installation by following these steps: ① v from the battery on the side of the card; ② the back of the phone.

2.5 rechargeable battery

charger to plug in the power. v

the joints will v be inserted in the phone charger to the right side (note with the arrow facing).

At this time, the screen and the power instruction symbols flashing cycle v if charging has been turned off, will appear on the screen instructions charging the screen, said batteries in. If the phone when the electricity is still less than the excessive use, charging the start may take a while to appear on the screen charge instruction symbols.

When the upper right corner of the v screen instructions symbol of electricity for the whole show, and no longer flashing, that charge has been completed. If the charge is turned off, the screen will show the end of charging the screen. This process usually takes three to four hours. During the battery charging, cell phone and charger will become hot, this is normal.

charge after the completion of disconnect AC v power outlet and connect the phone and charger.

Note:

must be placed v in charge when the temperature is $+5\text{ }^{\circ}\text{C} \sim +40\text{ }^{\circ}\text{C}$ ventilation, and must use the charger provided by the manufacturers. Unauthorized use of chargers could be dangerous, and violations of the phone's recognition and warranty.

When v the phone automatically shut down or display of electricity shortage warning "battery will be exhausted", should be timely to charge the battery. If the battery has not run out before charging the phone, it automatically reduce the charge time.

phone manufacturers to provide standby and talk time is based v on the ideal working environment. In actual use, the working hours of battery status with the network, working environment and the use of different methods vary.

make sure the battery charging is installed, remove the battery v should not be in charge.

charge after the end of your cell phone and v charger and power supply disconnected.

If you do not have the charger and v power and disconnect the phone, after quite a long time after (about five to eight hours), battery power loss to a certain extent, the phone started

charging. We recommend that you do not do so, because this will be your performance and battery life to a certain extent.

2.6 connected network

2.6.1 SIM cards

The use of the phone before you must first insert in the phone's SIM card effectively. SIM card is your access to the digital GSM network key.

And the establishment of networks linking all the relevant information and call records to initialize your record on the SIM card of the metal plane, with records of the card is also available on the SIM card in your phone book in the store and receive the name, phone number And the text message. SIM card from your phone to retrieve, Add to arbitrary use of a GSM phone (new mobile phone SIM card reader automatically).

In order to prevent loss and damage to the information in the card, should avoid touching the metal plane, and on the SIM card away from the electric and magnetic place. Once the damage to the SIM card, you will not be able to enter the GSM network.

Warning: Remove the SIM card to the phone before a certain shutdown. The absolute prohibition of the external power supply connected to the case insert or remove the SIM card, or SIM card may be damaged.

2.6.2 SIM card inserted and removed

SIM cards generally on a card, in the assembly, must be carefully removed.

turn offv the phone, remove the batteries and other external power.

The phonev supports dual-card mode, the left side of the card is A, the right side of the card is B (See "set" of "dual-card set").

When you need to remove the SIMv card, the first shutdown, Quidiao battery, and then removed from the SIM SIM card deck

2.6.3 phone switch

To open the phone to hang up the long bond; off the phone, please hang up under the bond.

If you first open the phone, but did not insert the SIM card, the phone will prompt you to insert the SIM card. Insert SIM card, then automatically the opportunity to test the SIM card is available.

Then on the screen will prompt the following order:

Enter PIN1 - If you set a SIM card password.

Enter the phone password - If you set the phone lock password.

Find network - the phone will search until found

Suitable network connection.

2.6.4 SIM card to lock

In order to prevent the illegal use, SIM card used PIN1 (personal identification number) code encryption protection. This feature has elected, every time you boot PIN1 must enter a code, so you can unlock the SIM card, and then send or receive calls. Users can remove the SIM card protection (see 3.10.5 of the "security settings"), in which case, SIM card can not prevent the illegal use.

v according to hang up keys open the phone;

enter PIN1 yards, with the rightv softkey remove erroneous input, according to confirm the end. For example, if PIN1 is set to 1234, to enter the following:

1 2 3 4

If three consecutive input error, your SIM card will be locked networks, mobile phones will be asked PUK 1 code, if you do not know PUK1 code, do not enter their own, should pay SIM card network operators to handle. See section 3.10.5 of the "security settings."

Note: Your network providers for your SIM card to set a standard of PIN1 (4 到 8-bit), you should be changed as soon as possible for your PIN. Specific operations see 3.10.5 of the "security settings."

2.6.5 unlock the phone

In order to prevent the illegal use of your mobile phone can set up password-protected. This feature has elected, every time you boot the importation of PIN1 code (if you already have a PIN code protection), you must enter a cell phone password, so you can unlock the phone and then send or receive calls. Users can remove the phone password (see 3.10.5 of the "security settings"), in such circumstances, can not prevent the illegal use of the phone.

enter your password, with the right softkey eliminate entry errors, v according to confirm the end. For example, if the phone password is set to 1122, to enter the following:

1 1 2 2

If you have forgotten your phone password, you must contact your local retailer or authorized service centres, to unlock your phone password.

2.6.6 connected to the network

SIM cardv declassified successful, the phone automatically search for available networks (displayed on the screen to find network). Once contacted, the network provider's name will appear on the screen of the Central.

Note: If on the screen suggested that "only emergency calls (EMERGENCY)", means that you have in the normal network

coverage (services), but you can still based on the strength of signals sent an emergency call.

2.6.7 Call

When the network provider logo on the screen appears, you can call or answer the phone. The upper left corner of the screen shows the information network signal strength.

Call quality by the impact of relatively large obstacles, in a small range of movement can effectively improve call quality.

2.6.8 domestic phone call

Using the number keys to enter your phone number, then press the start button dial-up call. If you need to change telephone numbers, An You softkey to delete characters. Dial-up call when the screen will display animation. The other pick will be displayed on the screen after the call status information, if open access Voice, there will be out Voice (is network support). After the call please hang up button to hang up.

Code keys to dial phone numbers

2.6.9 fixed telephone call ext.

Some fixed telephone extensions can not be directly connected, you need to dial switchboard, dial extension. If you enter a phone number, the switchboard number and extension number insert symbol suspended between characters "P", the machine will be for you to complete all dial-up, automatic dial-up ext. Enter "P" approach is under the * key (this will be displayed on the screen symbols "P")

Code switchboard number P-dial keys, ext.

Suspended the use of characters Example:

For example, if you have a number to 8.88 million dial-up use of the voice mail system, mail, for the 6666, the password is 8888. Then you can dial-up as follows:

8880000 P 6666 P 8888

The first part of this number for the number of dial-up voice mail system.

Telephone response was, and then sent 6666 to select Mail. In 8888 issued a password before the second suspension of symbols will have five seconds of delay (a P said that waiting for the call is connected, said after the five second delay P).

2.6.10 dial international calls

To make an international call, in the standby under the * key, until the screen appear on the international

long-distance telephone prefix symbol "+", which will allow you to do not know the local international telephone prefix (for example, in China is 00) from the arbitrary A national call.

Enter prefix number, then enter your area code to call the country and the integrity of the telephone number. Country code in accordance with normal practice, Germany 49, Britain 44, Sweden 46, and so on.

And often make international calls, dial-up should be removed from in front of the Code "0."

For example, from other countries call hotline, should be allocated:

+86 21 114

+ Country code integrity of the keys to dial phone numbers

2.6.11 call list of telephone

You make and receive telephone numbers for each phone exist in a table, the last call and receive phone number listed in the top of the table (see section 3.9.1 "phone records"). Each number has been allocated by telephone, and the phone has not classified the phone, mobile phones also provide all the items for you to see all the phone records. When the phone, save for a stopwatch, the old numbers automatically be deleted. To see the list to the following keys:

check for phone records, accordingv to-dial keys

appear in the list of all telephone numbers can be passed byv direct-dial keys for.

When a list of telephone numbers, see the details can be sure to enter the option and then click Save directly to the numbers stored in the telephone directory.

2.6.12 emergency call

If you're in the network coverage (check the phone can display the network signal strength in the upper left corner of the instructions that), you should be able to call emergency services. If your network provider in the region not to provide roaming service, will be displayed on the screen, "only emergency calls (EMERGENCY)", can only tell you to such calls. If you're in the network coverage, even without the SIM card can also carry out an emergency call.

2.6.13 to answer the call

If you set the Anykey answer for the set, according to arbitrary button to answer the call, dial keys or otherwise subject to the left softkey access to answer, and then left softkey can call. If the plug in headphones already, you can also use the

headphone button on the phone. If you inconvenient button, can set up automatic answering to open, and has plug in headphones, the ringing or vibration in five seconds, the phone automatically connected.

2.6.14 call records

Your phone can store your last call records and the use of the time since all the calls (see section 3.9.1 "phone records").

Call menu 2.6.15

In the call state, according to hands-free access to hands-free, and the option to enter the call options. Call options with the operation of the same menu operation.

Call the menu only in the course of the call can be seen, and call waiting, call forwarding, call multi-functional needs of network support, please contact your network vendor.
