## Safety advice

### WARNING:

PLEASE NOTE THE FOLLOWING ADVICES TO AVOID SHOCKS OR DAMAGES ON THE PRODUCT:

- DON'T USE THE PRODUCT WHEN RAINING, OR AT WET PLACES
  - KEEP THE DEVICE AWAY FROM WATER
  - ONLY USE ORIGINAL SPARE PARTS
- DO NOT DISMANTLE THE DEVICE. INSIDE ARE NO PARTS THAT CAN BE REPAIRED BY THE USER. THE SERVICE SHALL BE PERFORMED BY THE SUPPLIER OR PRODUCER.

## Information on the contained LiPo- Battery

### Attention

If a battery is incorrectly replaced, there is danger of explosion.

Replace the battery only with the same manufacturer's recommended battery or an equivalent type. Dispose of used batteries according to the manufacturer's instructions.

Risk of fire, explosions and burns. Do not dismantle the battery. Do not exceed the below quoted temperature and do not burn the battery.

**LiPo-Battery <50°C**

### CE Declaration

We hereby declare that this model meets the essential requirements and other relevant provisions of Directive 2004/108/EC. A copy of the Declaration of Conformity can be obtained at the above address.

**WEEE Reg. Nr.: DE64989527**

### Information for Users on Disposal of electrical and electronic equipment

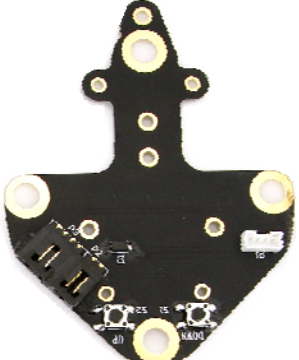

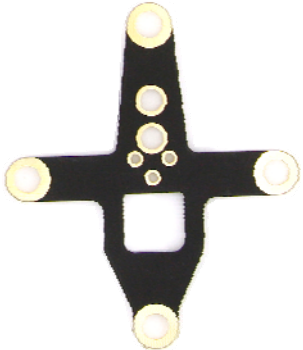

According to the company principles of ACME the game company GmbH high-quality reusable components have been installed in this product. This symbol on the products and / or accompanying documents means that the product must be disposed of separately at the end of life from household waste. Bring these products, even the battery for proper and environmentally friendly disposal of your nearest collection (or recycling).

This product contains a LiPo- battery. Bring used batteries to a designated collection point..

# Content

Please check the completeness before using the product!

Gimbal	Camerabail 2x	Small parts, screws etc.
		
Connection cables 2x	Mountingbail	Bellows 8x
		
Retaining bracket 2x	Mounting plate big	Mounting plate small
		

## Required tool

Allen 1,5 + 2,0mm Screwdriver

### Important note!

More information, adjustments and tips are available On the CamOneTec webpage (<http://www.CamOneTec.com>).

Please strictly follow this manual to mount this device!

## **Disclaimer and warnings**

Read these instructions before commissioning and use of the article and its components!  
With the start of the article, you agree to the terms of the disclaimer and agree to the instructions.

Assemble the items according to the instructions. Any changes to this or uses of third-party products / spare parts can cause damage.

This excludes the acquisition of warranty claims!

The article is already in a functional state after delivery. Take your time before you start.

There is no responsibility for damage or injury from the manufacturer, importer or distributor acquired, resulting from the use of the product.

Make sure prior to attachment to your flight model which can optionally consist requirements and recommendations of the manufacturer for the use of gimbal system.

**Operating voltage 7.0V -17.0V (2-3S LiPo recommended)**

**Use only with inserted camera!**

**Outer influences while operation may damage the Gimbal!**

**Please note that the flight time of your model decreases as soon as you connect a Gimbal and further FPV- equipment!**

**When using video transmitters, make sure that its connection cables do not interfere the Gimbal.**

## Connection / Mounting advice

## Mounting

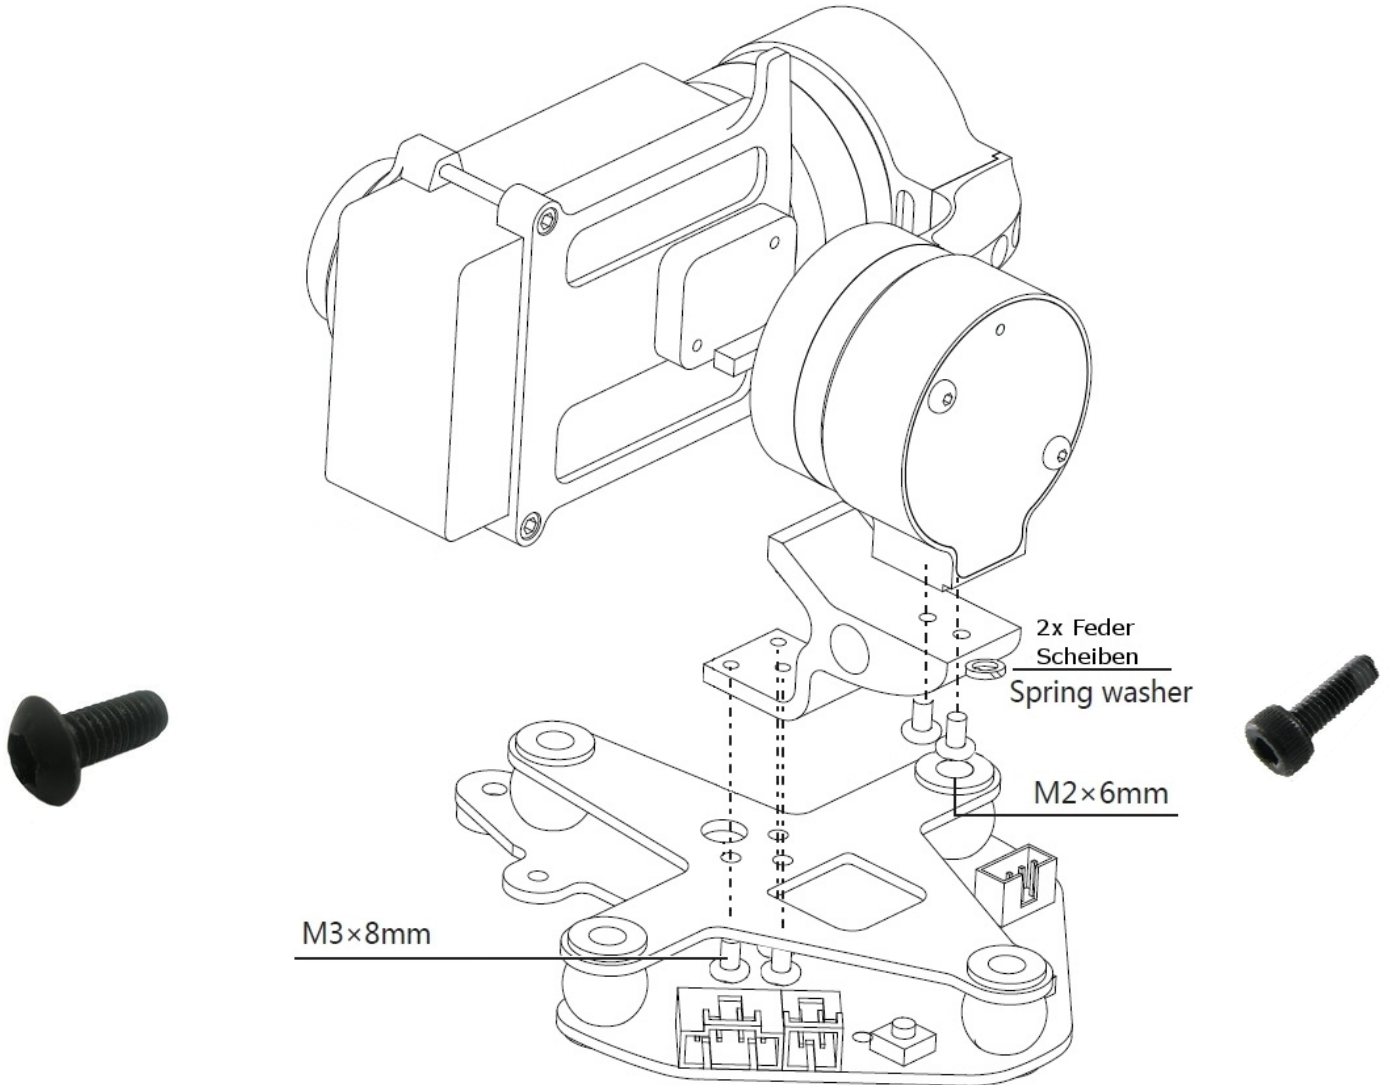

Use the supplied screws to mount the unit.

If there are no matching holes inside your RC models fuselage, please contact your supplier for further advice.

Make sure that the screws are tightened before every flight. The Gimbal needs to be mounted downwards.

## 1. Gimbal Mounting

Screw the Mountingbail with 2 screws (M2x6mm) and spring washers with the Gimbal-System. The tabs shall point in direction of the camera holder. Use a 1.5mm Allen screwdriver to perform this work.

Attach the mounting bracket with three screws (M3x8mm) on the small plate. Insert the screws through the plate and fasten them to the mounting bracket.

## 2. Bellows and mounting on the RC- Model

Push the bellows into the 4 holes on the big mounting plate (see picture). Make sure that these are mounted firmly and even.

Screw the big mounting plate onto your model.

Use the matching screws according to your model. If needed, you can also use the small white plates to avoid a direct contact between main board and RC fuselage.

Please note, that the side with the connection ports of the main board shall be visible from below.

The big mounting plate already has some holes that you can use to mount it on your RC model.

Now place the pre-mounted plate with the Gimbal on the big mounting plate with the bellows. Push the bellows into the plate.

When the bottom part of the Gimbal is completely mounted and screwed, insert the mounted bellows into the bigger plate. Make sure, that the side with the ports points to the lower plate.

This work requires some patience.

If this has been successful, connect the fixed cable from the Gimbal (white/wide plug) with the matching port P1 on the bigger plate.

### **3. Camerabail**

You will find 2 bails for the following camera models inside this content:

-CamOne infinity

-GoPro Hero 3 / 3plus Series

Choose the matching one for your camera. Make sure that you tighten the bail safely.

## **Cable connection**

**The operation voltage is between 7.0V and 17.0V**

The supply of the Gimbal is made via the port P2 on the bigger plate.

It comes with two connection cables.

One with an open end and one with a connection to the balancer port of a 3S LiPo batteries.

Select a cable and plug it into the port P2. Make sure that the cable is fixed firmly and secure.

The power is supplied via the operating voltage of the model. The easiest way is to connect it to the balancer port of the battery. Make sure that this cable is not pinched.

Take the Gimbal into service only when a camera is inserted!

## **First use**

All parts have been mounted by you according to the instructions of this manual. The Gimbal shall absolutely not have any contact to the ground, the landing gears of your model shall always be longer!

Power up your model before you power the Gimbal.

Place the model on an even surface and do not move it until the Gimbal has been adjusted.

After connecting to a power source, the blue LED of the Gimbal will start flashing. The Gimbal will adjust itself within a few seconds.

**DO NOT MOVE THE GIMBAL BY HAND DURING THIS PERFORMANCE!**

**Take the gimbal into service only when a camera is inserted!**

Test the function of the Gimbal via manual movements of the flight model. Pan the model for example by hand from right to left and check the always straight alignment of the Gimbal.

## Setting the Tilt Position

On the big plate there are two buttons (S1/Down and S2/Up). With these, you can fix the camera orientation in the tilt position.

This position can be fixed as following:

Keep pressed both buttons for 5 seconds and then set the requested position through the particular button.

You can reset this setting as following:

Keep pressed both buttons for 5 seconds, release and push them again for 5 seconds.

The Tilt Position can also be controlled through a free channel on your RC system by using a rotary switch. To do this, use the supplied RC- Cable and connect it to port P3 on the Gimbal. When connected, the buttons S1 and S2 are automatically deactivated.

Example on the DJI Naza system:

>Connection with white plug  
on the F1 port

>Connection with black/red plug  
on the F2 port

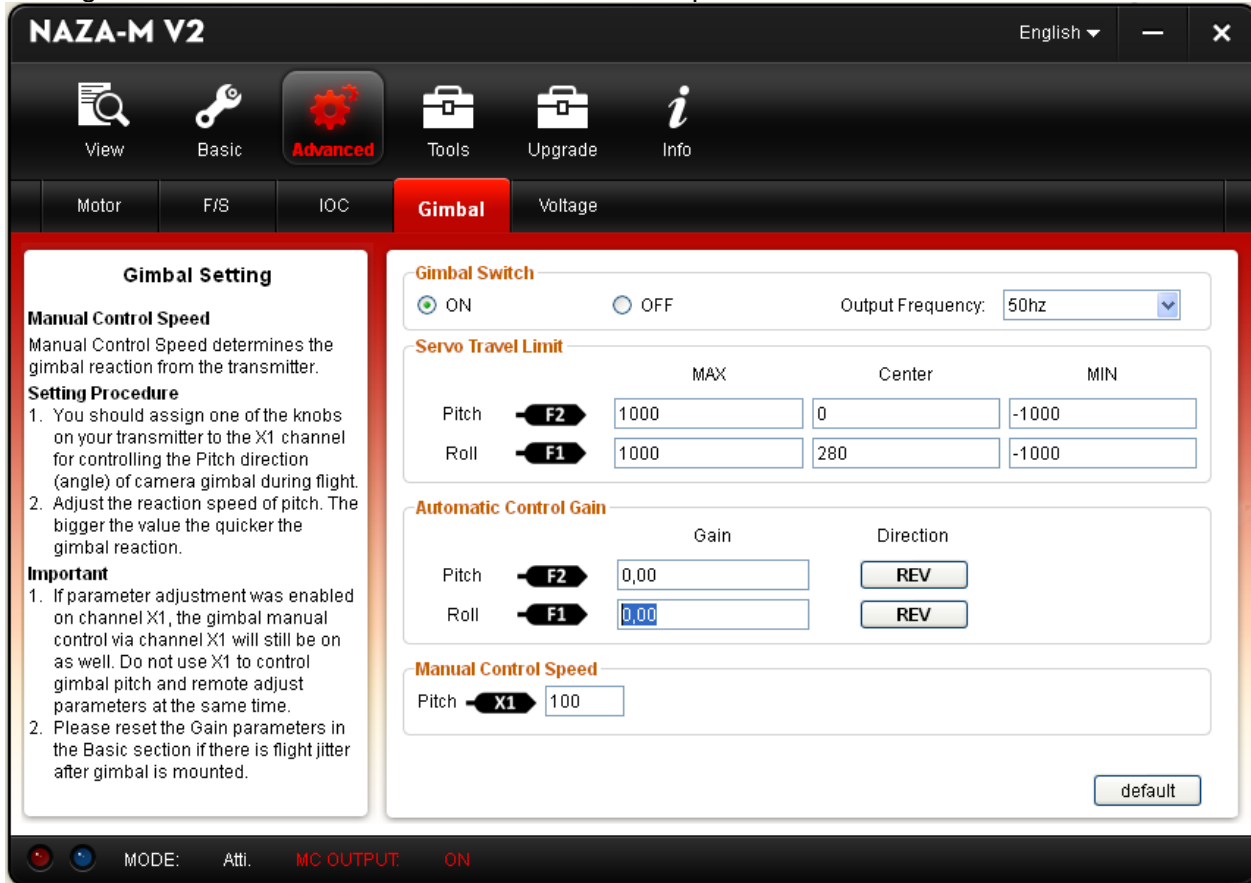

To have access on the ports, you need to disassemble the model.

Settings on the DJI Naza-M V2 Software as an example:

You can align the tilt position of the camera on the Gimbal via the rear X1-channel on the DJI Phantom Remote Control.

**Technical Details:**

- Operating temperature 0°C ~ 50°C
- Weight 170g
- Size 90x80x90mm

	Min. Spannung / min working vol.	Std. Spannung / std. working vol.	Max. Spannung / max. working vol	Hinweis/ Advice

## **Guarantee**

The consumer is without prejudice to any claim against the seller a  
Manufacturer's Guarantee under the conditions set out below :

» New devices and their components , or arising from manufacturing and /  
Material faults within 24 months of purchase develop a fault , are of  
ACME the game company GmbH exchanged at its option against a prior -art device to the original purchaser  
or repaired free of charge .

For wear parts , this warranty is valid for 3 months from purchase.

" This warranty does not apply if the device defect is attributable to improper treatment  
and / or non-observance of the information presented is based .

" This warranty does not extend to self- paid by the customer services  
(eg conversions)

»Warranty claims are to be claimed at once , to the knowledge of the warranty claim .

" Ownership of devices or components that are returned to ACME the game company GmbH in the framework  
of exchange, become the property  
ACME the game company GmbH .

» By services rendered under warranty , the warranty period is not extended

" Insofar as no Guarantee default exists, ACME the game company GmbH reserves the right to charge the  
customer for replacement, repair , or shipping costs. The customer will be informed in advance .
