

Vera3

Quick Start Guide

Setup is quick and easy.

Using the Vera3 along with your existing Wi-Fi router.

Step 1

Use the supplied network (Ethernet) cable to connect to the WAN port of your Vera3; then connect the other end of the cable to an available Ethernet port on your modem, Internet gateway, router, or switch.

Step 2

Connect the Vera3 power adapter into the 12V power receptacle, and then plug into an AC electrical outlet.

Step 3

While your Controller powers up, the Vera software will be updated to the latest version. This process can take up to 15 minutes depending on the speed of your internet connection. When the LED indicators for Power, WAN, and Z-Wave are lit and not blinking, your Controller is ready for the next step.

Step 4

Create an account at <http://home.getvera.com>. Once you've created and authenticated your account, the software will 'find' your Vera3 automatically and take you to the Vera3 Dashboard.

If you'd like to use Vera3 to provide your primary Wi-Fi network please go to <http://www.getvera.com/setup/> for easy, step by step instructions on Wi-Fi setup.
