Software for Waveform Measurement on a PC Software for Remotely Controlling the DL Series

The Wirepuller software program displays a screen image of the DL's front panel on your PC so that you can monitor waveform signals. In addition, you can use the PC's mouse and keyboard to control the DL. The DL can be controlled via an Ethernet, USB, or GP-IB.

This software program can be downloaded from the following URL (requires registration):

http://www.yokogawa.com/tm/Bu/DLsoft/wire/ Further details are available at the YOKOGAWA web site.

Software for Using Your PC to Check Waveform Data Captured in Long Memory Waveform Viewer for DL Series

The Waveform Viewer software program lets you view waveform signals on your PC just as they appear on the DL screen. This includes zoom display, X-Y display and the history memory thumbnail displays. In addition, data can be converted to CSV format for use in programs like Excel.

A trial version of this software program can be downloaded from the following URL:

Smoothing Filter	Apply moving average to smooth stair step shaped waveforms.
(moving average)	Moving average constant is specified from 0.2 ms to 1000 msec (moving average constant=specified time +40 μ s) This reduces jitter and increases the resolution.
Pulse Average Function	Measure the specified number of pulses at once, and specify 1 to
-	4096 pulses for the average value output mode. This has the exact
	same effect as the smoothing filter, but averaging can be performed at the pulse interval. Even if encoder gaps are unequal, you can
	measure pulses together and average them.
Deceleration Prediction	A measuring function that automatically compensates for the lack of
(Braking Applications)	encoder pulse information during deceleration and hypothesizes a
	deceleration curve.
	Predicts stop from a specified time after pulse stop

1. Under reference operating conditions (ambient temp. of 23°C ±5°C, ambient humidity of 55% ±10%RH, after 30-minute warmup period and calibration).
 2. Does not include reference junction/temperature compensation accuracy.
 3. Since the input connecter is of a binding post type, it is possible to touch the metal part of the connector.
 Therefore, for safety reasons, the maximum value is 42 V (DC+ACpeak).
