## **Section 1 : General Description**

Due to the advance of mobile phone technology, mobile trading becomes the trend in finance business. A mobile trading platform, Horizon Mobile Platform has been launched. It allows users trade with mobile phone connected to Internet.

Horizon Mobile supports Opera Mini or Opera Mobile web browser. Opera is the most well known free mobile web browser that support large number of mobile phone model. Users can download Opera from <http://m.opera.com>. Other mobile web browsers may able to execute Horizon Mobile, but the result cannot be guarantee. So it is strongly suggest users to use Opera as web browser.

Horizon Mobile can be considered as a slim mobile web version. It provides all necessary features enough for trading. Only one new concept “Maximum Deviation” has been introduced and explained in Section 2.

The interface and functions are briefly described as follows diagram:

## **Section 2 Maximum Deviation**

As web page connection may be slow or unstable, the price of open or closed positions may become outdated when it passed to Horizon System Server. System will not allow outdated price order. User may difficult to place order if their connection is bad. So Maximum Deviation is introduced to allow user to accept slippage but easier to place order.

Maximum Deviation is a price range input from 0 to 10 pips. User accepts the slippage within the price range. For example, user open buy 1 log of CL0111 with open price 89.14 and maximum deviation 0.05. If the ask price is between 89.09 and 89.19 when server receive the order, the requested order will added. Otherwise, user would fail to place the order.

## Section 3 User Login
