VPNX Quick Start Guide

VPNX is an easy-to-use VPN solution. It can help you convert Internet to a LAN/Intranet. You can use it to do all LAN/Intranet tasks around internet.

Server Usage

Precondition:
Before installing VPNX Server, you should make sure you have a public IP address.
Configuration:
1) Map/forward UDP 25000 port to Internet on your router/ADSL device. If your machine is on the internet, you can skip this step. If you can't understand Port Mapping/Forwarding, here are some useful links:

http://portforward.com/routers.htm
http://en.wikipedia.org/wiki/Port_forwarding
http://www.portforward.com/help/pfprogression.htm

2) Create VPN account in user management panel on VPNX server

Client Usage

Precondition:
Before installing VPNX Client, you should make sure you can access the internet.
Configuration:
    1) Input VPNX server public IP address or DNS/DDNS name.
    2) Input user name and password created by VPNX server administrator.
    3) Click login. You need not change any other setting on the login dialog.

VPNX User Manual

Please download VPNX user manual here. You can also visit http://www.birdssoft.com for more information.
