# 1 Quick start

### 1.1 Product Brief Introduction

USR-R16 -TSeries is remote control device based on Ethernet . Direct Connect Control, Local Lan Control, and Remote control are available for your real time control and timing. Lonhand software provided supports Windows, MAC, IOS, android, Webpage.

Handware Parameters:

USR-R16-T			
Machine dimension	250*90*23mm (L*W*H)		
Working voltage	R16-T: DC 12V/15-60V		
Power	12V: Max: 7W		
consumption	15-60V:MAX: 8W		
Operating	-40~85°C		
temperature			
Storage	Temperature: -40~85°C		
environment	Humidity: 5%~95%RH		
Relay voltage	10A 277VAC/28VDC		
	12A 125VAC		
delivery order	USR-R16-T*1 12VDC Ethernet Cable		

Default Parameters			
Network Mode	TCP-Client		
Devicename	USR-R16		
Password admin			
Default IP 192.168.0.7			
Web account password	account: admin		
	password: admin		

### 1.2 Preparation

1. Download and install LonHand software into your mobile phone.

As for Windows or other systems, you can download Lonhand software from the url below. http://www.usr.so/Download/cat-44.html

As for IOS system, search for "LonHand" in app store then download and install. Also you can scan the below two-dimensional code.

Android

### 1.3 USR-R16-T Quick start

- 1.3.1 Direct Connect Control
  - 1. The default IP of USR-R16-T is 192.168.0.7. Firstly, set your PC with static IP such as 192.168.0.10
  - 2. Connect the R16-T to your computer through the RJ45-1. Then three indicator lights are on.
  - 3. Open the software **C** LonHand.exe .You can click **C** If the devices are not displayed.

4. Click the USR-R16 then enter into control menu.

5. You can click the switch button to control the USR-R16 now.

#### 1.3.2 Local Lan Control

- 1. Check the IP of your router. If it is 192.168.0.XX, you can connect directly. If not, set the R16-T IP to be same segment with the router's.(For example, if your router IP is 192.168.1.1, then you can change R16-T to be 192.168.1.7). As for detailed steps, pls refer to 3.2 Revise device IP.
- 2. Connect R16-T to the router through the RJ45-1, also connect PC to the router.
- 3. Open the software and find USR-R16.

6. Click "User" then "Synchronized to local".

Disconnect the wireless network, and change to other network, then click "Synchronized to local". You will see the wifi icon become remote one, now you can control it.

# **2** Function Specification

#### 2.1 Product Features

#### USR-R16-T

- 1. TCP interface, remote control switch
- 2. 16 high current output jack
- 3. Support password authentication for safe control
- 4. 5 timer switch function in ever output
- 5. Control software supports five platform: Windows, MAC, IOS, Android, Webpage, you can choose freely
- 6. Restore factory Settings function

### 2.2 Indicator and Key Function Introduction

#### Indicator light:

3.5 Restore Factory Defaults

You can restore factory defaults via key or webpage.

As for key configuration, pls refer to Chapter 2.2 Indicator and Key Function Introduction.

### **3 Directions for Use**

#### 3.1 Wiring Schematic Drawing

- 1. Every Relay has normally open and normally closed contacts, you can choose according to your needs.
- 2. Every output's circuit is desperate. You need to supply power for everyone.

#### 3.2 Revise device IP

The default IP of USR-R16-T is 192.168.0.7. First, set your PC with static IP such as 192.168.0.10. If you need to control via router but its IP is not192..168.0.XX, revise the device's IP to be the same segment with router's or choose to DHCP.

Note: Obtaining an IP address automatically, you will not make direct connect control. It can be available if you revert to Static IP.

- Set your PC with static IP such as 192.168.0.10
- Enter a Web page of 192.168.0.7. In the pop-up window, enter you name (admin) and password (admin) to login.

# **4** LonHand of Windows Introduction

Please refer to the manual of LonHand for detailed operation.

1. Open the LonHand software

Picture.4-1 LonHand interface

2. The software will search R16 automatically. If you don't see R16 in software, please click . Then you can see the information as following.

Picture.4-2 Device list

3. Click R16, enter into the control menu.

The control menu displays the control button, which is close by default. You can click the button to control relay as shown. Also the button will indicate according to the relay state.

4. You can also set R16 all open or close by the upper right button, the interface is as follows:

Picture.4-4 all on/off

5. Remote control

Firstly, you need to register a user account (account number and the password 4-8 characters, can be numbers, letters, combination of numbers and letters, case sensitive), and then login.
