

GRTS Model Training

US EPA: Andrea Matzke (Matzke.Andrea@epamail.epa.gov)
Tetra Tech: Sabu Paul (sabu.paul@tetrattech.com)

TETRA TECH, INC.

What Will You Learn?

- STEPL model
 1. Create an Excel Model
 2. Use BMP calculator
- R5 model (a simple Excel model **not** just for Region 5)
- Special discussion
 - BMP Efficiency Estimator
 - Online data server

Part 1: STEPL

What is STEPL?

- Calculates nutrient (N, P, and BOD pollutants) and sediment loads by land use type and aggregated by watershed
- Calculates load reductions as a result of implementing BMPs
- Data driven and highly empirical
- A customized MS Excel spreadsheet model
 - Simple and easy to use
 - Formulas and default parameter values can be modified by users (optional) with no programming required

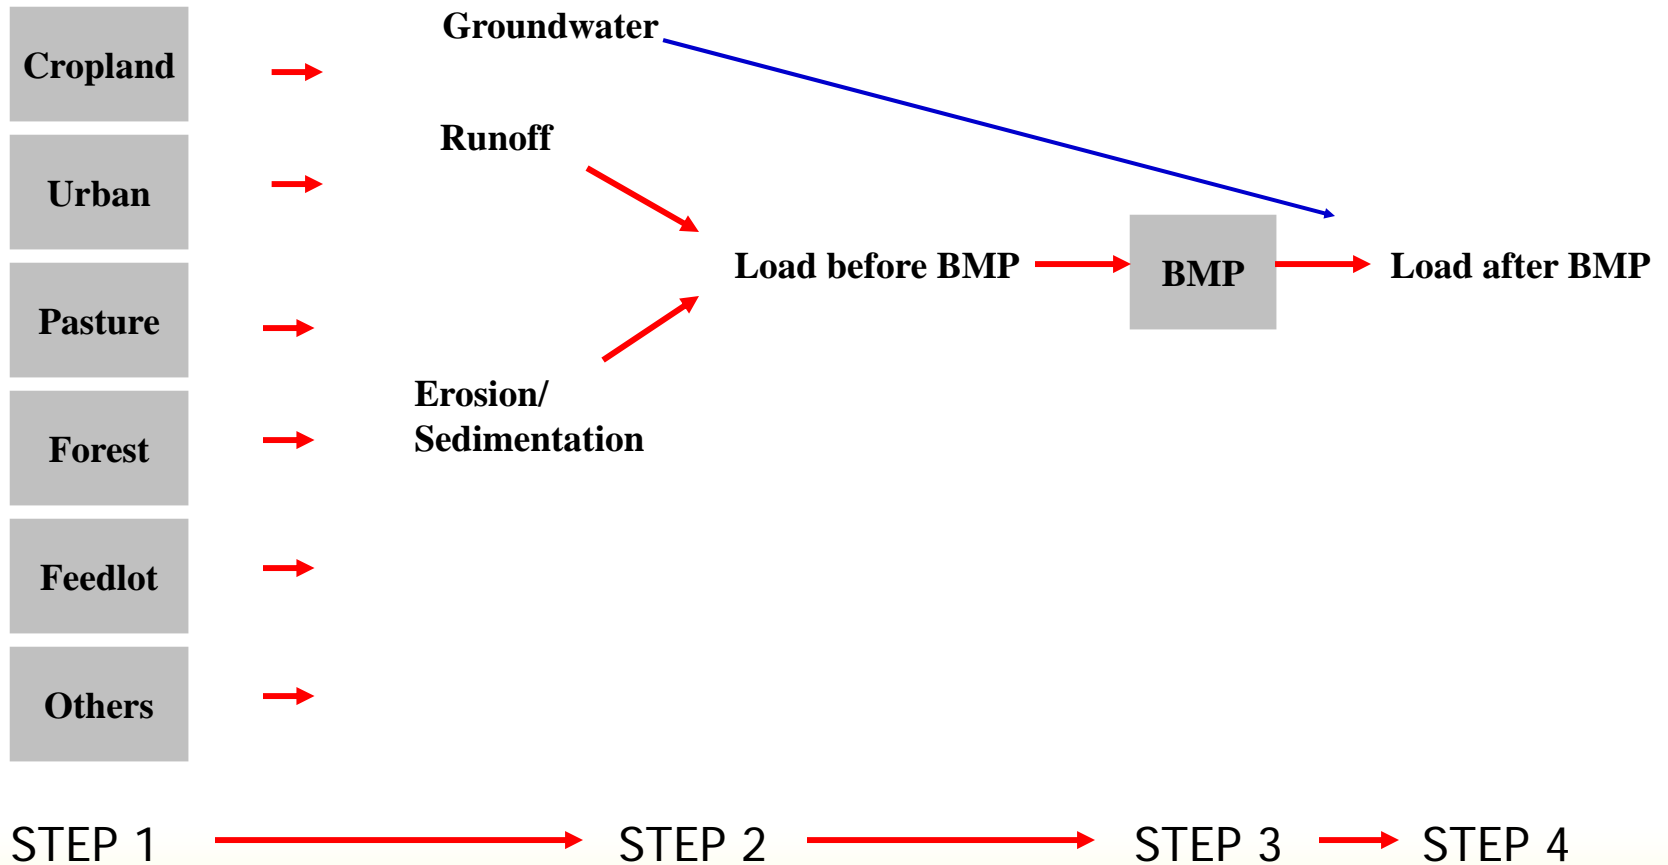

STEPL Users?

- Basic understanding of hydrology, erosion, and pollutant loading processes
- Knowledge (use and limitation) of environmental data (e.g., land use, agricultural statistics, and BMP efficiencies)
- Familiarity with MS Excel and Excel Formulas

Welcome to STEPL and Region 5 model

Spreadsheet Tool for Estimating Pollutant Load (STEPL) employs simple algorithms to calculate nutrient and sediment loads from different land uses and the load reductions that would result from the implementation of various best management practices (BMPs). STEPL provides a user-friendly Visual Basic (VB) interface to create a customized spreadsheet-based model in Microsoft (MS) Excel. It computes watershed surface runoff, nutrient loads, including nitrogen, phosphorus, and 5-day biological oxygen demand (BOD5), and sediment delivery based on various land uses and management practices. For each watershed, the annual nutrient loading is calculated based on the runoff volume and the pollutant concentrations in the runoff water as influenced by factors such as the land use distribution and management practices. The annual sediment load (sheet and rill erosion only) is calculated based on the Universal Soil Loss Equation (USLE) and the sediment delivery ratio. The sediment and pollutant load reductions that result from the implementation of BMPs are computed using the known BMP efficiencies.

Region 5 model is an Excel workbook that provides a gross estimate of sediment and nutrient load reductions from the implementation of agricultural and urban BMPs. The algorithms for non-urban BMPs are based on the "Pollutants controlled: Calculation and documentation for Section 319 watersheds training manual" (Michigan Department of Environmental Quality, June 1999). The algorithms for urban BMPs are based on the data and calculations developed by Illinois EPA. Region 5 model does not estimate pollutant load reductions for dissolved constituents.

STEPL Input Sheet: Values in RED are required input. Change worksheets by clicking on tabs at the bottom. You entered

This sheet is composed of eight input tables. The first four tables require users to change initial values. The next four tables (initially hidden) contain instructions for data entry.

Step 1: Select the state and county where your watersheds are located. Select a nearby weather station. This will automatically specify values for rainfall.

Step 2: (a) Enter land use areas in acres in Table 1; (b) enter total number of agricultural animals by type and number of months per year that they are kept on the farm; (c) enter values for septic system parameters in Table 3; and (d) if desired, modify USLE parameters associated with the selected county.

Step 3: You may stop here and proceed to the BMPs sheet. If you have more detailed information on your watersheds, click the Yes button in the optional input tables.

Step 4: (a) Specify the representative Soil Hydrologic Group (SHG) and soil nutrient concentrations in Table 5; (b) modify the curve number taken from the NRCS National Engineering Handbook; (c) modify the nutrient concentrations (mg/L) in runoff in Table 7; and (d) specify the detailed land use distribution in the urban area in Table 8.

Step 5: Select BMPs in BMPs sheet. **Step 6:** View the estimates of loads and load reductions in Total Load and Graphs sheets.

Show optional input tables? Treat all the subwatersheds as parts of a single watershed Groundwater

State: Alabama County: Baldwin Weather Station (for rain correction factors): 0 Default

1. Input watershed land use area (ac) and precipitation (in)

| Watershed | Urban | Cropland | Pastureland | Forest | User Defined | Feedlots | Feedlot Percent Paved | Total | Annual Rainfall |
|-----------|-------|----------|-------------|--------|--------------|----------|-----------------------|-------|-----------------|
| W1 | 200 | 200 | 200 | 200 | 0 | 10 | 0-24% | 810 | |
| W2 | 200 | 200 | 200 | 200 | 0 | 10 | 0-24% | 810 | |
| W3 | 200 | 200 | 200 | 200 | 0 | 10 | 0-24% | 810 | |

Input / BMPs / Total Load / Graphs

Composed of four worksheets

BMPs Worksheet

Urban BMP Tool

Gully and
Streambank Erosion

1. BMPs and efficiencies for different pollutants on CROPLAND, ND=No Data

| Watershed | Cropland | | | | BMPs | % Area BMP Applied |
|-----------|----------|------|-----|----------|--|--------------------|
| | N | P | BOD | Sediment | | |
| W1 | 0.485 | 0.55 | ND | 0.405 | <input checked="" type="radio"/> Contour Farming | 100 |
| W2 | 0.1 | 0.3 | ND | 0.35 | <input checked="" type="radio"/> Diversion | 100 |
| W3 | 0 | 0 | 0 | 0 | <input checked="" type="radio"/> 0 No BMP | 100 |

Each land use type within each watershed can have a separate BMP.
Also it can be partial application.

Total Load Worksheet

1. Total load by subwatershed(s)

| Watershed | N Load (no BMP) | P Load (no BMP) | BOD Load (no BMP) | Sediment Load (no BMP) | N Reduction | P Reduction | BOD Reduction | Sediment Reduction |
|-----------|-----------------|-----------------|-------------------|------------------------|-------------|-------------|---------------|--------------------|
| | lb/year | lb/year | lb/year | t/year | lb/year | lb/year | lb/year | t/year |
| W1 | 39888.8 | 5615.6 | 60882.3 | 342.9 | 8.6 | 3.3 | 17.1 | 4.7 |
| W2 | 39879.8 | 5612.2 | 60864.2 | 338.0 | 0.0 | 0.0 | 0.0 | 0.0 |
| W3 | 39879.8 | 5612.2 | 60864.2 | 338.0 | 0.0 | 0.0 | 0.0 | 0.0 |
| Total | 119648.4 | 16839.9 | 182610.8 | 1018.8 | 8.6 | 3.3 | 17.1 | 4.7 |

Each row of results corresponds to a different watershed or project.

Graphs Worksheet

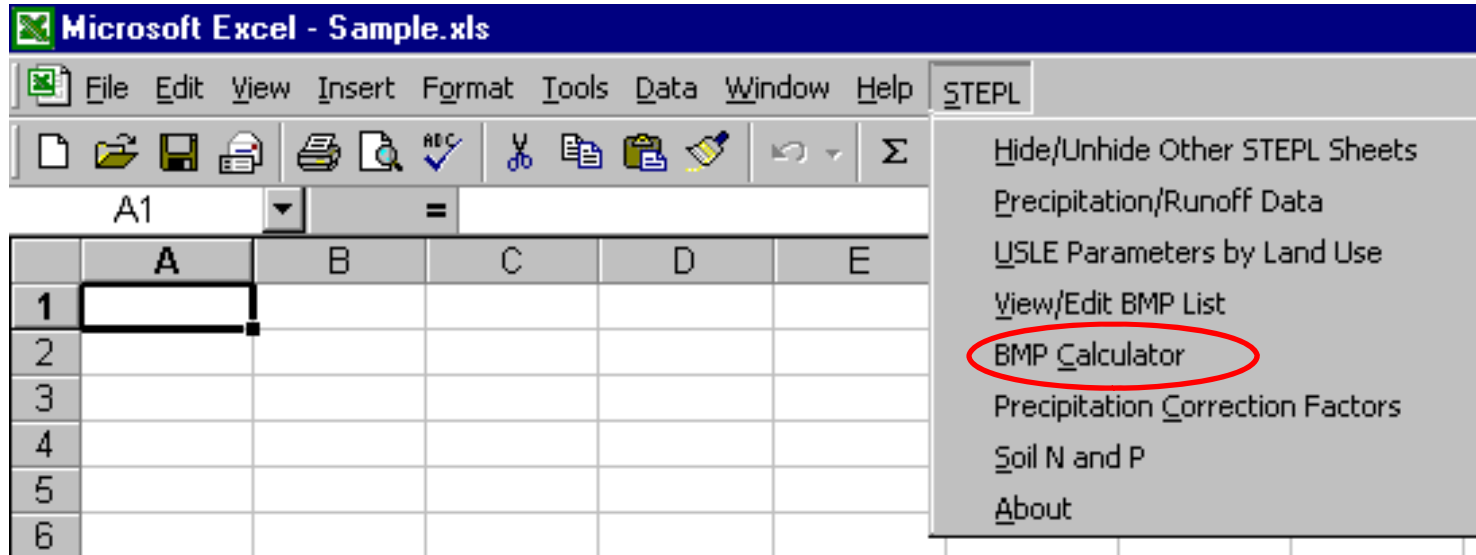

STEPL BMP Calculator

- Calculates combined efficiency of a BMP train for a given land use. The use of BMP calculator requires the understanding of BMPs and their placement in the watershed.

Customized Menu

Tip: To ensure that files are linked to the customized menu, set Excel **Default file location** to C:\STEPL or D:\STEPL

Step: Tools menu > Options submenu > General tab

STEPL BMP Calculator

- Describe schematically BMP configuration
 - Number and linkages
 - BMP type and efficiency
 - Land use area
- Calculate combined efficiency

Use source area or original load as the weighting factor

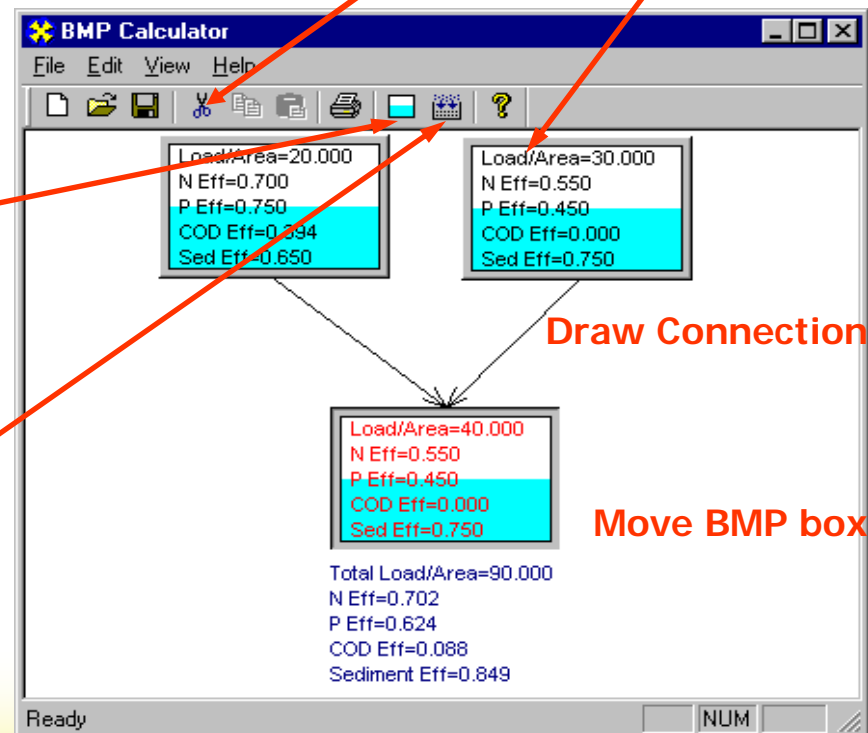

Delete Connection

Add BMP box

Calculate combined efficiency

Draw Connection

Move BMP box

New Features in 4.0

- Ability to specify different ways (by Subwatersheds or Individual Project Area vs. the Entire Watershed) to calculate sediment delivery
- Calculation of Gully and stream bank erosion
- Calculation of groundwater and pollutant output

Treat all the subwatersheds as parts of a single watershed Groundwater load calculation

1. Gully dimensions in the different watersheds

| Watershed | Gully | Top Width (ft) | Bottom Width (ft) | Depth (ft) | Length (ft) | Years to Form | BMP Efficiency (0-1) | Soil Textural Class |
|-----------|--------|----------------|-------------------|------------|-------------|---------------|----------------------|---------------------|
| W1 | Gully1 | 5 | 5 | 5 | 5 | 1 | 0.95 | Clay |

2. Impaired streambank dimensions in the different watersheds

| Watershed | Strm Bank | Length (ft) | Height (ft) | Lateral Recession | Rate Range (ft/yr) | Rate (ft/yr) | BMP Efficiency (0-1) | Soil Textural Class |
|-----------|-----------|-------------|-------------|-------------------|--------------------|--------------|----------------------|---------------------|
| W1 | Bank1 | 5 | 100 | 1. Slight | 0.01 - 0.05 | 0.03 | 0.95 | Clay |

Hands-on Exercises

Sample Problem Exercises

- Exercise #1
 - Estimate total annual load for a specific farm, and total load reduction resulting to implementation of a (single) BMP on croplands
 - Hypothetical watersheds based on Agricultural Statistics and NRCS data
- Exercise #2
 - Similar to Exercise #1 but with multiple BMPs
- Exercise #3
 - Similar to Exercise #1 but BMP trains implemented on croplands, and a single BMP on urban land
- Exercise #4
 - Similar to Exercise #1 but for multiple subwatersheds and BMP trains implemented on croplands, and pasture land
- Exercise #5
 - Hypothetical watersheds for demonstrating gully and streambank erosion

Sample Problem Exercise

#1

Estimate total annual load for a farm
in Cullman County in Alabama

Cullman
County

Agricultural Statistics of Alabama

| Summary 2002 | |
|------------------------------|---------|
| Number of Farms | 45126 |
| Acreage of farms | 8904387 |
| Average size of farm (ac) | 197 |
| Median Size of farm (ac) | 90 |
| Total Cropland Number | 34073 |
| Total Cropland Area (ac) | 3732751 |
| Harvested Cropland Number | 23327 |
| Harvested Cropland Area (ac) | 1995139 |

| Animals | |
|-----------------------------|---------|
| Cattles and calves (farms) | 27094 |
| Cattles and calves (number) | 1437795 |
| Beef cows (farms) | 23558 |
| Beef cows (number) | 765901 |
| Milk cows (farms) | 223 |
| Milk cows (number) | 18939 |
| Hogs and pigs (farms) | 576 |
| Hogs and pigs (number) | 168013 |
| Sheep and lambs (farms) | 445 |
| Sheep and lambs (number) | 11374 |

Based on 2002 Census of Agriculture, USDA National Agricultural Statistics Service

Agricultural Statistics of Cullman County

| Land Information | | |
|----------------------------|--------------|----------------|
| Average Farm Size (ac) | 101 | |
| Average Cropland Size (ac) | 64.2 | |
| Animal Information | | |
| Animal | Total | Average |
| Beef Cattle | 39,018 | 28.58 |
| Dairy Cattle | 1,962 | 140.14 |
| Swine (Hog) | 152 | 11.69 |
| Sheep | 508 | 25.4 |
| Chicken | 1,572,552 | 14427.08 |

Based on 2002 Census of Agriculture, USDA National Agricultural Statistics Service

Sample Problem Exercise

#1

- Generate a new custom spreadsheet. Note that you may reuse a spreadsheet you created previously for a different project.
 - Click Start button (e.g., normally located at the Windows bottom left corner), then Program, STEPL, and STEPL to run the STEPL main executable program (stepl.exe in /STEPL folder) and display main interface
 - Select options. For Exercise #1, specify the following:
 - Specify number of watershed = 1
 - Select first option under Option for Initialization (default selection – Set initial land use areas and animal numbers to zeros)
 - Click ok to create new spreadsheet
 - Click ok to the following message box
 - Save the spreadsheet using a new file name
 - For this example, you may save it to exercise1.xls
 - When the new spreadsheet is opened, click Ok button to enable stored formulas/equations in the spreadsheet

Sample Problem Exercise

#1

- Enter data in the Input Worksheet (numbers in red in spreadsheet)
 - By default, optional tables are not shown. Click yes to show the optional tables (Table 5-8) with their default values. Click no to hide them.
 - Select state = Alabama, and county = Cullman. Notice that initial values for Annual Rainfall and Number of Rain Days are automatically specified in Table 1 as you select a state or county.
 - Select a weather station = Al Birmingham FAA. Notice that correction factors change with the selected weather station.
 - In Table 1, enter the land use areas for your watershed (Refer next slide)
 - Also in Table 1, Select the feedlot percent paved assuming feedlot area is not zero. Default value = 0-24%.

Sample Problem Exercise #1

- Enter data in the Input Worksheet (numbers in red in spreadsheet), cont'd.
 - Also enter data into Tables 2 and 3. Set the number of **months manure applied** to **3**
 - In Table 4, examine the initial USLE parameter values for each land use type which were automatically specified as you selected the state and county.

| | |
|-------------|----|
| Cropland | 75 |
| Pastureland | 20 |
| Feedlots | 5 |

| | |
|--------------|-----|
| Beef Cattle | 10 |
| Dairy Cattle | 10 |
| Swine (Hog) | 5 |
| Sheep | 10 |
| Chicken | 100 |

| | |
|------------------------------|------|
| No. of Septic Systems | 5 |
| Population per Septic System | 2.38 |
| Septic Failure Rate, % | 0.87 |

You can always change the default and initial data when local data are available.

Sample Problem Exercise

#1

- Examine estimated load in Total Load and Graph worksheets and enter the results below:

Total Annual N Load (lb/yr): _____ 4699.1

Total Annual P Load (lb/yr): _____ 1042.7

Total Annual Sediment Load (ton/yr): _____ 428.5

Amount and source with highest annual load contribution:

N load (lb/yr): __2276.2.0 What source: ___ Cropland

P load (lb/yr): __705.6 What source: ___ Cropland

Sediment load (lb/yr): _406.1 What source: ___ Cropland

Note that load reduction = 0 since you have not specified any BMP yet – see next slide

Sample Problem Exercise #1

For the same farm area, estimate total annual load reduction assuming reduced tillage is practiced in cropland areas

- Enter BMP data in BMPs worksheet
 - In Table 1 which is for cropland areas, select Reduced Tillage System under BMP column. Note that initial values of BMP efficiencies are automatically specified with the selected BMP.

Sample Problem Exercise

#1

- Examine estimated load reduction in Total Load and Graph worksheets and enter the results below:

Total Annual N Load Reduction (lb): _____ 1511.8

Total Annual P Load Reduction (lb): _____ 467.6

Total Annual Sediment Load Reduction (ton): _____ 304.6

Source with highest annual load contribution after BMP:

N load (lb): ____2135.9 What source: __Feedlots

P load (lb): ____292.9 What source: __ Feedlots

Sediment load (lb): ____101.5 What source: __Cropland

End of Problem Exercise #1 – Try adjusting your input data and reexamine the results.

Sample Problem Exercise

#1

- **In the Input worksheet check the box next to Groundwater load calculation**
- Examine estimated load in Total Load and Graph worksheets and enter the results below:

Total Annual N Load (lb/yr): _____ 5221.0

Total Annual P Load (lb/yr): _____ 1065.2

Total Annual Sediment Load (ton/yr): _____ 428.5

Amount and source with highest annual load contribution:

N load (lb/yr): __2135.92 What source: ___ Feedlot

P load (lb/yr): __292.95 What source: ___ Feedlot

Sediment load (lb/yr): _101.52 What source: ___ Cropland

End of Problem Exercise #1 – Try adjusting your input data and reexamine the results.

Sample Problem Exercise

#2

For the same farm area, estimate total annual load reduction assuming reduced tillage is practiced in cropland areas and Solids Separation Basin BMP on feedlots

- Create a spreadsheet for this project or exercise.
 - Instead of generating a new custom spreadsheet using the STEPL main executable program, you will be using the spreadsheet in the previous exercise.
 - Save the spreadsheet used for Exercise #1 to save recent changes.
 - Save this spreadsheet with a new name (exercise2.xls, be sure to **save the file as *.xls type**). This new spreadsheet will be used for Exercise #2.

Sample Problem Exercise

#2

- Enter new data in the Input Worksheet
 - Note that all the input data entered in the previous spreadsheet are still valid
 - Only modification is an additional BMP

Sample Problem Exercise

#2

- Examine estimated load reduction in Total Load and Graph worksheets and enter the results below:

Total Annual N Load Reduction (lb): ____2259.4

Total Annual P Load Reduction (lb): _____ 558.4

Total Annual Sediment Load Reduction (ton): ____ 304.6

Source with highest annual load contribution after BMP:

N load (lb): _1388.3 What source: __Feedlots

P load (lb): _237.97 What source: __Cropland

Sediment load (lb): _101.5 What source: __Cropland

Note that load reductions have been calculated since BMPs have been already specified in the previous exercise. For this exercise, assume that the same BMPs are installed for all cropland and urban areas in the 8-digit watershed.

Sample Problem Exercise

#3

Estimate total annual load and load reduction for a watershed that consists more than one farm where all croplands are practicing reduced tillage and filter strips (shown below) and urban open spaces has LID/Bioretenention:

Assume all croplands is implementing
the above BMP train

Sample Problem Exercise

#3

- Create a spreadsheet for this project or exercise.
 - Save the spreadsheet used in Exercise #2 to exercise3.xls.
 - Enter new data in the Input Worksheet

| 1. Input watershed land use area (ac) and precipitation (in) | | | | | | | |
|--|-------|----------|-------------|--------|--------------|----------|-----------------------|
| Watershed | Urban | Cropland | Pastureland | Forest | User Defined | Feedlots | Feedlot Percent Paved |
| W1 | 100 | 500 | 50 | 25 | 0 | 5 | 0-24% |

| 2. Input agricultural animals | | | | | | | | | |
|-------------------------------|-------------|--------------|-------------|-------|-------|---------|--------|------|----------------------------|
| Watershed | Beef Cattle | Dairy Cattle | Swine (Hog) | Sheep | Horse | Chicken | Turkey | Duck | # of months manure applied |
| W1 | 20 | 10 | 0 | 10 | 0 | 2000 | 0 | 0 | 3 |

| 3. Input septic system and illegal direct wastewater discharge data | | | | | |
|---|-----------------------|------------------------------|------------------------|--|-------------------------------|
| Watershed | No. of Septic Systems | Population per Septic System | Septic Failure Rate, % | Wastewater Direct Discharge, # of People | Direct Discharge Reduction, % |
| W1 | 50 | 2.38 | 0.87 | 0 | 0 |

Sample Problem Exercise

#3

- Examine estimated load in Total Load and Graph worksheets and enter the results below:

Total Annual N Load (lb): ____ 17015.2

Total Annual P Load (lb): ____ 4108.5

Total Annual Sediment Load (ton): ____ 1526.7

Source with highest annual load contribution:

N load (lb): __ 11208.3 What source: ____ Cropland

P load (lb): __ 3176.6 What source: ____ Cropland

Sediment load (lb): __ 1467.7 What source: __ Cropland

Sample Problem Exercise

#3

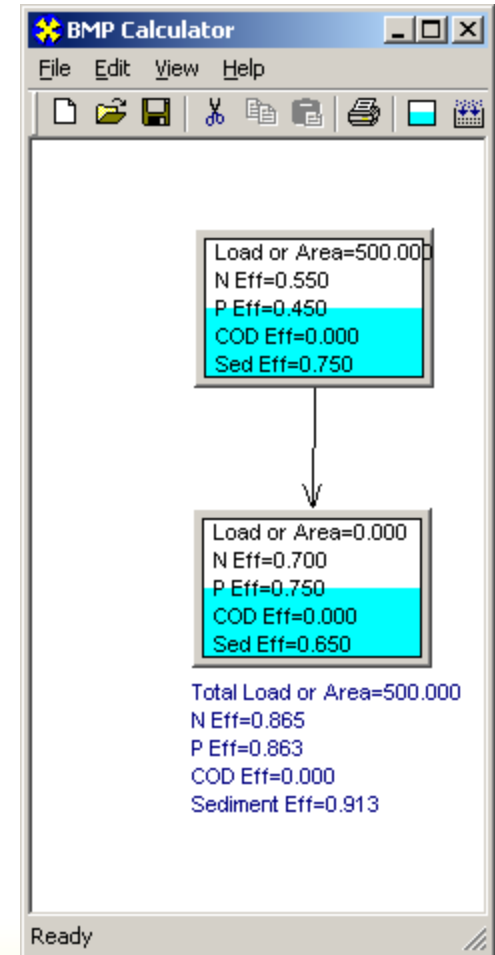

- Enter BMP data in BMP worksheet
 - In Table 1, which is for cropland areas, select “Combined-BMP calculated” under BMP column to indicate that we have a “Reduced Tillage-Filter Strip” BMP train in croplands.
 - Note that the N, P, BOD, and Sediment BMP efficiencies remained zero. If you have the combined efficiency values for this particular BMP train, enter them in Table 7 (number in red). These values will be reflected in Table 1 and in other tables (i.e., if the same BMP train is implemented for other land uses).
 - If you do not have the values, you may use the BMP calculator (next step)

Sample Problem Exercise

#3

- Use BMP Calculator to estimate combined efficiencies of the BMP train
 - Run the BMP Calculator by selecting the STEPL/BMP Calculator menu of the STEPL spreadsheet. If the system cannot find the BMP Calculator program, navigate to /STEPL folder and select BMPCalculator.exe
 - Using the BMP Calculator interface, do the following (refer back to slide 13 for steps in using BMP Calculator):
 - Add two BMP boxes (one each for Reduced Tillage, and Filter Strip)
 - Enter BMP information (type, area, etc.) for each BMP box by double-clicking the box (Question: What is the area associated with the filter strip)
 - Specify the connection between the two BMPs (Question: Which BMP should be upstream). You may move the boxes to make them more readable
 - Calculate the combined efficiencies for N, P, BOD, and Sediment (0.865, 0.863, ND, 0.913).
 - Enter the combined efficiencies in Table 7 of STEPL spreadsheet. Note the efficiencies are reflected in Table 1.

Sample Problem Exercise #3

- Click Urban BMP Tool
 - Select Open Space under urban land use options->Select LID/Bioretenion under Available LID/BMP -> Click Apply LID/BMP

Set Urban LID/BMP

Select a Watershed: 1

Select an Urban Land Use

Commercial Industrial Institutional Transportation Multi Family

Single Family Urban-Cultivated Vacant-Developed Open Space

Select LID/BMP

Available LID/BMP: LID/Bioretenion LID/BMP Area (ac): 5.00 Total Available Area (ac): 5.00

Simple Form

You can always manually change the initial BMP efficiencies if local data are available.

If your BMP is not in the selection list, you may use STEPL-View/Edit BMP List menu to add your BMP to the database (please refer to the user manual)

Sample Problem Exercise

#3

- Examine estimated load reduction in Total Load and Graph worksheets and enter the results below:

Total Annual N Load Reduction (lb): ___9929.3

Total Annual P Load Reduction (lb): ___ 2833.4

Total Annual Sediment Reduction (ton): ___ 1340.0

Source with highest annual load contribution after BMP:

N load (lb): ___3952.4 What source: ___ Feedlot

P load (lb): ___658.6 What source: ___Feedlot

Sediment load (lb): ___127.7 What source: ___Cropland

End of Problem Exercise #3 – Try adjusting your input data and reexamine the results.

Sample Problem Exercise

#4

- Generate a new custom spreadsheet.
 - Similar to exercise 1 create a new spreadsheet, but specify two watersheds this time (Program-> STEPL-> STEPL)
 - Select options. For Exercise #4, specify the following:
 - Specify number of watershed = 2
 - Select first option under Option for Initialization (default selection – Set initial land use areas and animal numbers to zeros)
 - Click ok to create new spreadsheet
 - Click ok to the following message box
 - Save the spreadsheet using a new file name
 - For this example, you may save it to exercise4.xls
 - When the new spreadsheet is opened, click Ok button to enable stored formulas/equations in the spreadsheet

Sample Problem Exercise

#4

- Enter data in the Input Worksheet (numbers in red in spreadsheet)
 - Select state = Alabama, and county = Cullman.
 - Select a weather station = Al Birmingham FAA.

Sample Problem Exercise

#4

- Enter data in the Input Worksheet (numbers in red in spreadsheet), cont'd

1. Input watershed land use area (ac) and precipitation (in)

| Watershed | Urban | Cropland | Pastureland | Forest | User Defined | Feedlots | Feedlot Percent Paved |
|-----------|-------|----------|-------------|--------|--------------|----------|-----------------------|
| W1 | 10 | 100 | 50 | 0 | 0 | 0 | 0-24% |
| W2 | 10 | 200 | 60 | 0 | 0 | 10 | 0-24% |

2. Input agricultural animals

| Watershed | Beef Cattle | Dairy Cattle | Swine (Hog) | Sheep | Horse | Chicken | Turkey | Duck | # of months manure applied |
|-----------|-------------|--------------|-------------|-------|-------|---------|--------|------|----------------------------|
| W1 | 10 | 10 | 10 | 10 | 0 | 1000 | 10 | 0 | 3 |
| W2 | 10 | 10 | 10 | 10 | 0 | 1000 | 10 | 0 | 3 |
| Total | 20 | 20 | 20 | 20 | 0 | 2000 | 20 | 0 | |

3. Input septic system and illegal direct wastewater discharge data

| Watershed | No. of Septic Systems | Population per Septic System | Septic Failure Rate, % | Wastewater Direct Discharge, # of People | Direct Discharge Reduction, % |
|-----------|-----------------------|------------------------------|------------------------|--|-------------------------------|
| W1 | 10 | 2.43 | 2 | 0 | 0 |
| W2 | 10 | 2.43 | 2 | 0 | 0 |

Sample Problem Exercise

#4

- Cropland in watershed 1 has the same BMP train as in example 2,
- Cropland in watershed 2 has filter strip
- Pastureland in both watersheds has filter strip

Assume all croplands in watershed 1 is implementing the above BMP train

Sample Problem Exercise

#4

- Cropland in watershed 1 has the same BMP train as in example 2,
- Cropland in watershed 2 has filter strip
- Pastureland in both watersheds has filter strip

1. BMPs and efficiencies for different pollutants on CROPLAND, ND=No Data

| Watershed | Cropland | | | | | | % Area BMP Applied |
|-----------|----------|-------|-----|----------|---|-----|--------------------|
| | N | P | BOD | Sediment | BMPs | | |
| W1 | 0.865 | 0.863 | 0 | 0.913 | <input checked="" type="radio"/> Combined BMPs-Calculated | 100 | |
| W2 | 0.7 | 0.75 | ND | 0.65 | <input checked="" type="radio"/> Filter strip | 100 | |

7. Combined watershed BMP efficiencies from the BMP calculator

| Watershed | Watershed Combined BMP Efficiencies | | | | | BMPs |
|------------|-------------------------------------|-------|-----|----------|---------------|------|
| | N | P | BOD | Sediment | | |
| W1-Crop | 0.865 | 0.863 | 0 | 0.913 | Combined BMPs | |
| W2-Crop | 0 | 0 | 0 | 0 | Combined BMPs | |
| W1-Pasture | 0.7 | 0.75 | 0 | 0.65 | Combined BMPs | |
| W2-Pasture | 0.7 | 0.75 | 0 | 0.65 | Combined BMPs | |
| W1-Forest | 0 | 0 | 0 | 0 | Combined BMPs | |
| W2-Forest | 0 | 0 | 0 | 0 | Combined BMPs | |
| W1-User | 0 | 0 | 0 | 0 | Combined BMPs | |
| W2-User | 0 | 0 | 0 | 0 | Combined BMPs | |

Sample Problem Exercise

#4

- Examine estimated load reduction in Total Load and Graph worksheets and enter the results below:

Total Annual N Load Reduction (lb): ___ 6909.5

Total Annual P Load Reduction (lb): _____ 1920.5

Total Annual Sediment Reduction (ton): _____ 980.3

Source with highest annual load contribution after BMP:

N load (lb): ___2844.1 What source: ___ Feedlot

P load (lb): ___528.7 What source: ___Cropland

Sediment load (lb): ___287.6 What source: ___Cropland

Sample Problem Exercise

#4

- In the Input worksheet, check the box next to *Treat all the subwatersheds as parts of a single watershed.*
- Examine estimated load reduction in Total Load and Graph worksheets and enter the results below:

Total Annual N Load Reduction (lb): ___ 6184.3

Total Annual P Load Reduction (lb): ___ 1641.3

Total Annual Sediment Reduction (ton): ___ 753.6

Source with highest annual load contribution after BMP:

N load (lb): ___2844.1 What source: ___ Feedlot

P load (lb): ___483.79 What source: ___Cropland

Sediment load (lb): ___351.18 What source: ___Cropland

End of Problem Exercise #4 – Try adjusting your input data and reexamine the results.

Sample Problem Exercise

#5

- Generate a new custom spreadsheet.
 - Similar to exercise 1 create a new spreadsheet, but specify three watersheds this time (Program-> STEPL-> STEPL)
 - Select options. For Exercise #5, specify the following:
 - Specify number of watershed = 3
 - Specify gully formations = 2
 - Specify impaired streambanks = 2
 - Select **second** option under Option for Initialization (Test STEPL model with non-zero initial numbers)
 - Click ok to create new spreadsheet
 - Click ok to the following message box
 - Save the spreadsheet using a new file name
 - For this example, you may save it to exercise5.xls
 - When the new spreadsheet is opened, click Ok button to enable stored formulas/equations in the spreadsheet

Sample Problem Exercise

#5

- Enter data in the Input Worksheet (numbers in red in spreadsheet)
 - Select state = Alabama, and county = Cullman.
 - Select a weather station = Al Birmingham FAA.

Sample Problem Exercise

#5

- Click Gully and Streambank Erosion button in BMPs Worksheet and enter data in the Gully&Streambank Worksheet (numbers in red in spreadsheet)

1. Gully dimensions in the different watersheds

| Watershed | Gully | Top Width (ft) | Bottom Width (ft) | Depth (ft) | Length (ft) | Years to Form | BMP Efficiency (0-1) | Soil Textural Class |
|-----------|--------|----------------|-------------------|------------|-------------|---------------|----------------------|---------------------|
| W1 | Gully1 | 8 | 5 | 5 | 5 | 10 | 0.9 | Clay |
| W3 | Gully2 | 10 | 5 | 5 | 5 | 5 | 0.85 | Fine Sandy loam |

2. Impaired streambank dimensions in the different watersheds

| Watershed | Strm Bank | Length (ft) | Height (ft) | Lateral Recession | Rate Range (ft/yr) | Rate (ft/yr) | BMP Efficiency (0-1) | Soil Textural Class |
|-----------|-----------|-------------|-------------|-------------------|--------------------|--------------|----------------------|---------------------|
| W2 | Bank1 | 5 | 100 | 2. Moderate | 0.06 - 0.2 | 0.13 | 0.95 | Clay |
| W3 | Bank2 | 5 | 100 | 3. Severe | 0.3 - 0.5 | 0.4 | 0.95 | Fine Sandy loam |

Sample Problem Exercise

#5

- Examine estimated load reduction in Total Load and Graph worksheets and enter the results below:

Total Annual N Load Reduction (lb): ____ 20.0

Total Annual P Load Reduction (lb): ____ 7.7

Total Annual Sediment Reduction (ton): ____ 13.8

End of Problem Exercise #5 – Try adjusting your input data and reexamine the results.

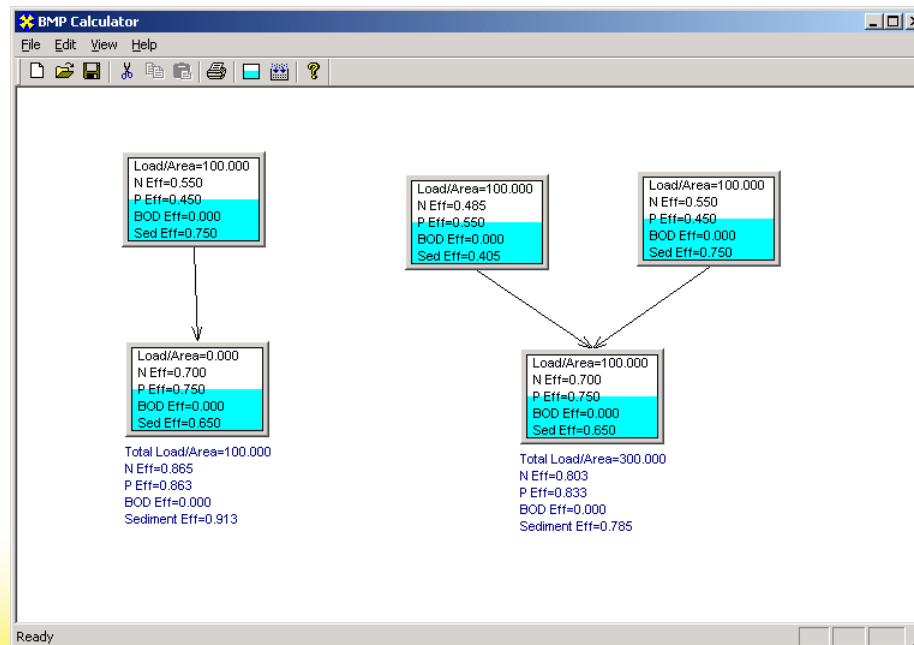

BMP Calculator

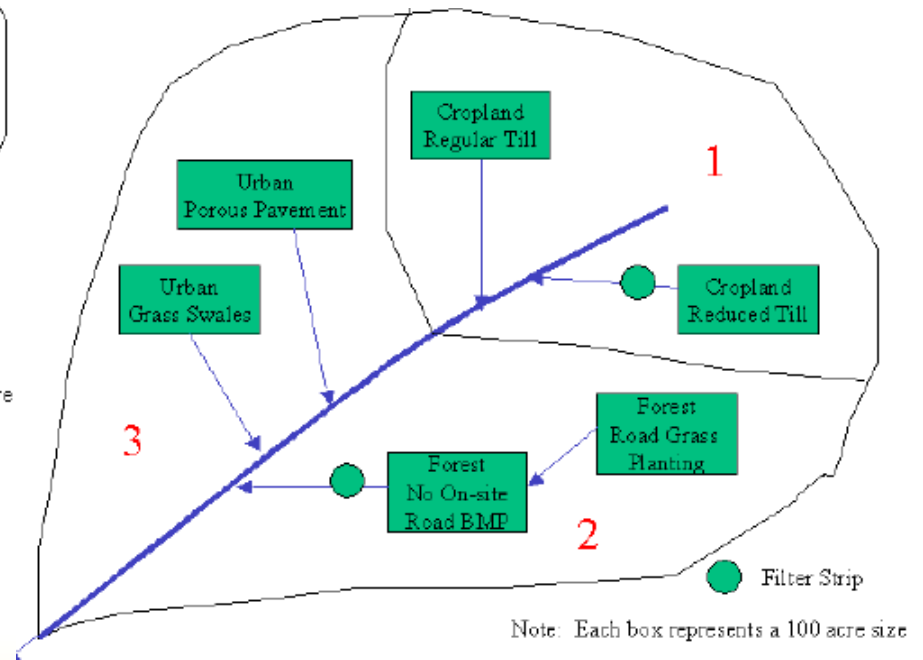

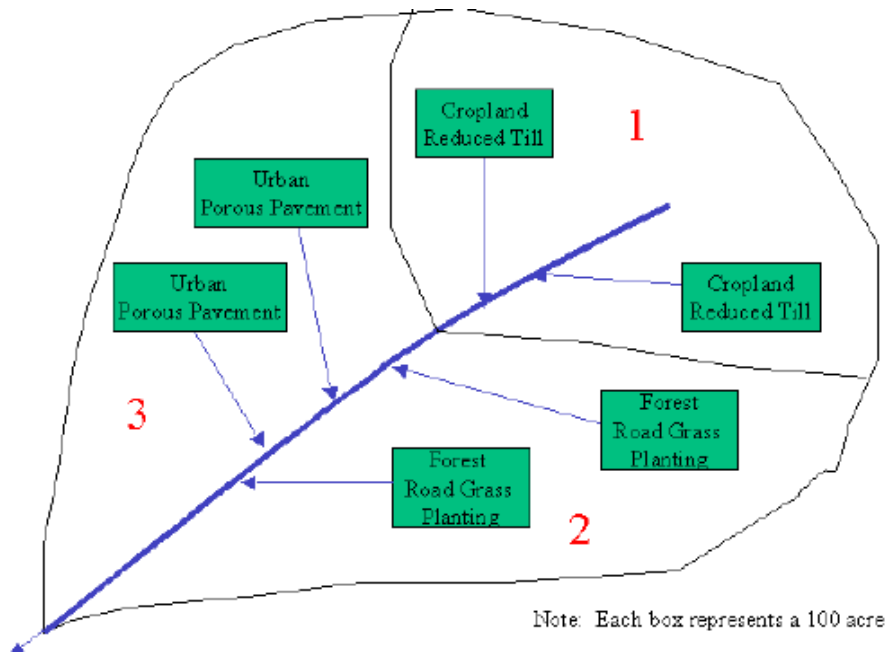

More Exercises for BMP Calculator

- Try different BMP trains in the BMP Calculator. Note that you may define as many trains as you want and calculate each BMP train's combined efficiency at the same time in the same window. You don't need to open a separate BMP window for each BMP train (see illustration below).

Need of BMP Calculator

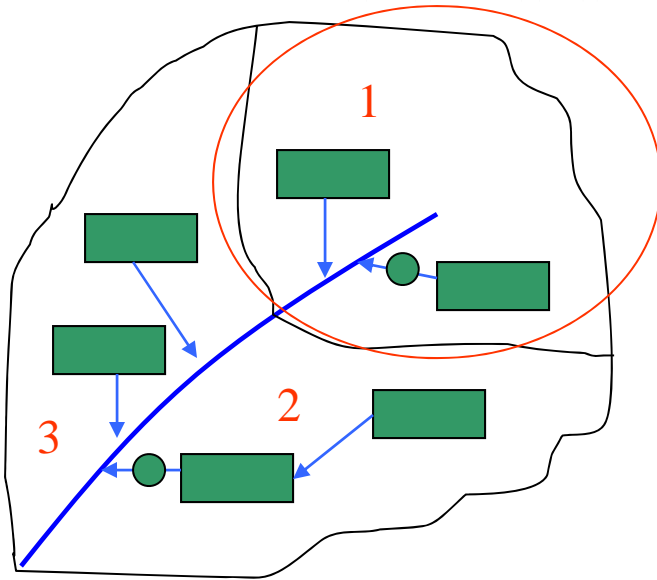

- When is BMP Calculator needed?

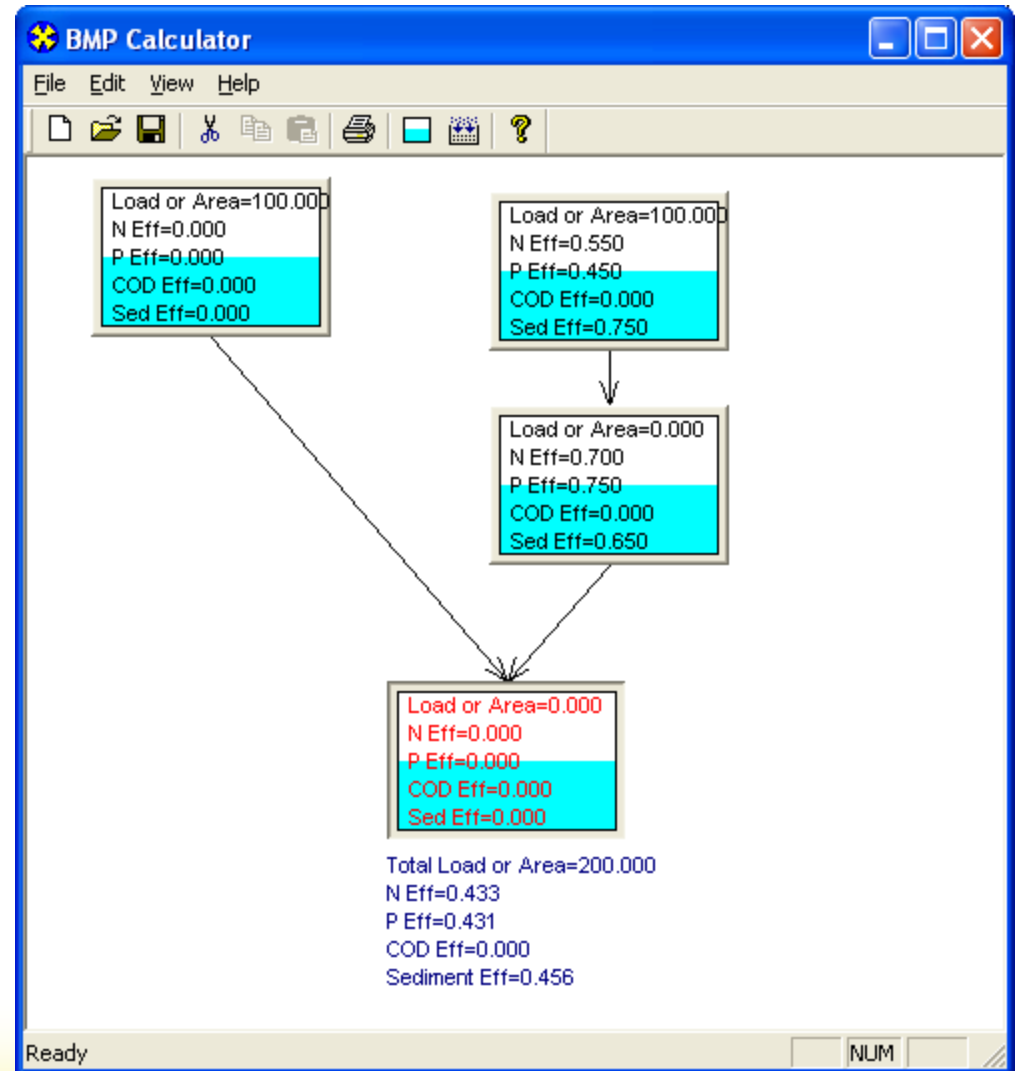

Not needed - No combined efficiency calculation

Needed - Each land use type uses more than one type of BMP

BMP Calculator – Example 1

Each box represents 100 ac

BMP Calculator – Example 2

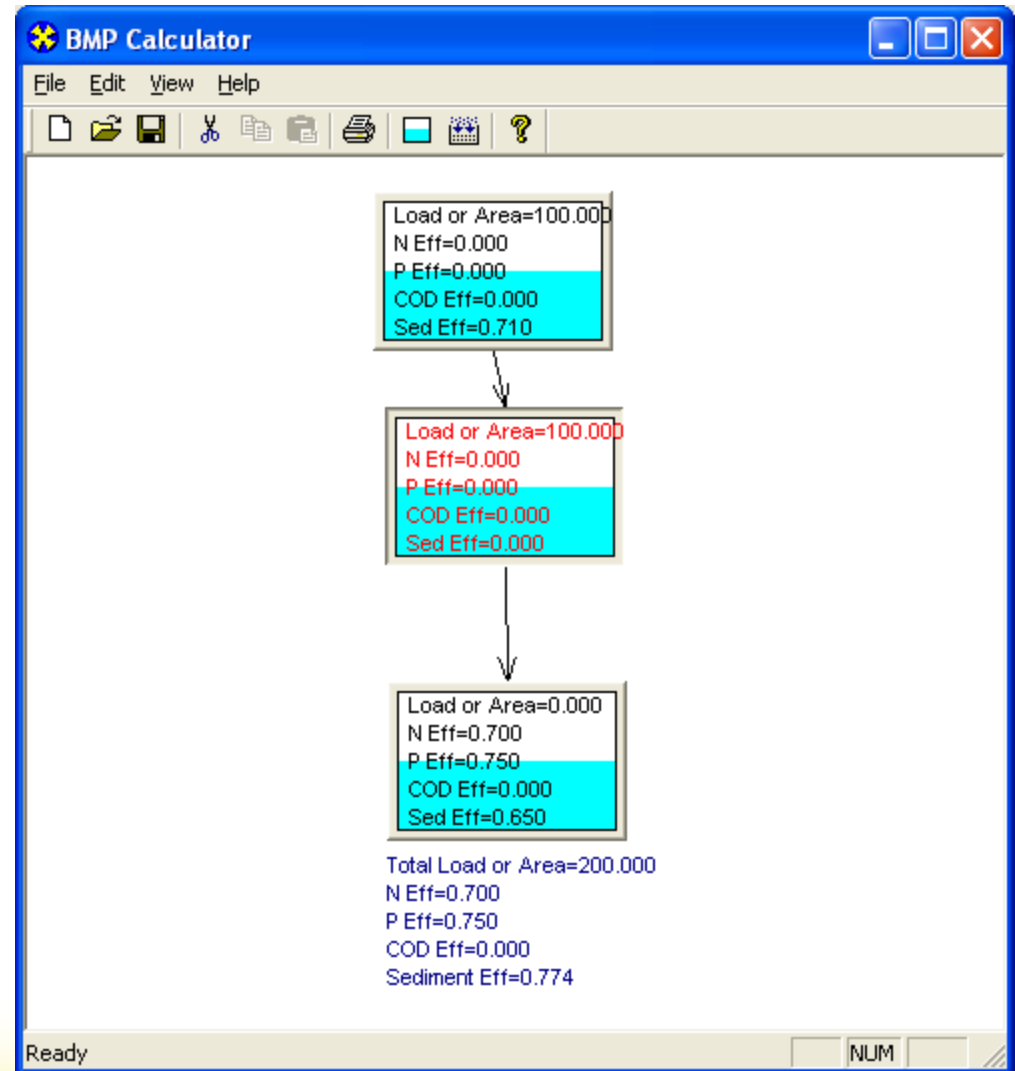

Each box represents 100 ac

**Forest Road
Grass Planting**

**Forest No On-site

R5 model is not limited to Region

5

If controls of the model does not work, set EXCEL > Tools > Macro > Macros > Security to Medium

| | A | B | C | D | E | F | G | H |
|----|---|--|--------------------|---------------------------|----------|--------------|---|---|
| 1 | Estimating Load Reductions For Agricultural and Urban BMPs | | | | | | | |
| 2 | | | | | | | | |
| 3 | This workbook uses the "Pollutants Controlled Calculation and Documentation for Section 319 | | | | | | | |
| 4 | Watersheds Training Manual" (Michigan Department of Environmental Quality, June 1999) to | | | | | | | |
| 5 | provide a gross estimate of sediment and nutrient load reductions from the implementation of agricultural BMP | | | | | | | |
| 6 | The methodology for the gross estimate of sediment and other constituent load reductions from the implement | | | | | | | |
| 7 | urban BMPs is based on reduction efficiencies and calculations developed by Illinois EPA. | | | | | | | |
| 8 | | | | | | | | |
| 9 | Please note: This workbook uses many simplifying assumptions to provide a general ESTIMATE of | | | | | | | |
| 10 | pollutant load reductions through BMP implementation. More accurate results of pollutant load reductions | | | | | | | |
| 11 | may be obtained through direct monitoring and/or a more detailed modeling application. In addition, | | | | | | | |
| 12 | this workbook does not estimate pollutant load reductions for dissolved constituents. | | | | | | | |
| 13 | | | | | | | | |
| 14 | The workbook is divided into worksheets (see bottom of the Window). Each worksheet is specific to | | | | | | | |
| 15 | a particular source. In some cases, multiple practices may take place for a specific site, then the various | | | | | | | |
| 16 | worksheets will all need to be completed; one worksheet must be completed for each BMP. | | | | | | | |
| 17 | The following are the worksheets and what practices they cover: | | | | | | | |
| 18 | | | | | | | | |
| 19 | Worksheet | Possible Practices | | | | | | |
| 20 | Gully Stabilization | Grade Stabilization Structure | | | | | | |
| 21 | | Grassed Waterway | | | | | | |
| 22 | | Critical Area Planting in areas with gullies | | | | | | |
| 23 | | Water and Sediment Control Basins | | | | | | |
| 24 | Bank Stabilization | Animal Trails and Walkways | | | | | | |
| 25 | | Stream Channel Stabilization | | | | | | |
| 26 | | Streambank Protection | | | | | | |
| 27 | Agricultural Fields | Prescribed Grazing | | | | | | |
| 28 | | Residue Management, Mulch Till | | | | | | |
| 29 | | Conservation Crop Rotation | | | | | | |
| 30 | | Conservation Cover | | | | | | |
| 31 | | Cover and Green Manure | | | | | | |
| 32 | | Critical Area Planting | | | | | | |
| 33 | | Stripcropping, Contour | | | | | | |
| 34 | | Stripcropping, Field | | | | | | |
| | Instructions | Gully Stabilization | Bank Stabilization | Ag Fields & Filter Strips | Feedlots | Urban Runoff | | |

Region 5 model has five functional worksheets.

Region 5 Load Estimation Model

- Introduction

- Provide a general estimate of pollutant reduction at the source level
- Initially developed by Indiana Department of Environmental Management (IDEM) based on Michigan DEQ's pollution control manual for section 319 watersheds.

| Source | BMP |
|---------------------|--|
| Gully | Gully Stabilization |
| Streambank | Streambank Stabilization |
| Agricultural Fields | Field Management Practices and Filter Strips |
| Feedlot | Animal Waste System |
| Urban Runoff | Various BMPs |

Gully Erosion: Calculate Load Reduction

- Select a soil texture (e.g. sand, loamy sand)
- Enter gully dimensions and the number of years since the gully formed

Please fill in the **gray** areas below:

| Parameter | Gully | Example |
|-------------------------------------|---------------------------|---------|
| Top Width (ft) | 13 | 15 |
| Bottom Width (ft) | 2 | 4 |
| Depth (ft) | 1.5 | 5 |
| Length (ft) | 300 | 20 |
| Number of Years | 5 | 5 |
| Soil Weight (tons/ft ³) | 0.0425 | 0.05 |
| Soil P Conc (lb/lb soil)* | USER <input type="text"/> | 0.0005 |
| Soil N Conc (lb/lb soil)* | USER <input type="text"/> | 0.001 |

* If not using the default values, users must provide input (in red) for Total P and Total N soil concentrations

Estimated Load Reductions

| | BMP Efficiency* | Gully | Example |
|-------------------------------------|-----------------|-------|---------|
| Sediment Load Reduction (ton/year) | 1.0 | 28.7 | 10 |
| Phosphorus Load Reduction (lb/year) | | 28.7 | 8 |
| Nitrogen Load Reduction (lb/yr) | | 57.4 | 16 |

* BMP efficiency values should be between 0 and 1, and 1 means 100% pollutant removal efficiency.

Gully Stabilization

- Load
 - Average annual erosion during the life of the gully (t/y)
 - = Volume x Soil Weight / Years
 - Nutrient load
 - = Annual Erosion x Soil Nutrient Conc. x Correction Factor
- Load Reduction after implementing gully stabilization
 - Specify reduction efficiency (100% efficiency by default)
 - Reduction is equal to annual erosion x user-specified efficiency

$$\text{Volume} = (\text{Top Width} + \text{Bottom Width}) \times \text{Depth} \times \text{Length} / 2$$

Gully Erosion: Nutrient Correction Factor

- Correction Factor
 - Smaller soil particles -> larger aggregated surface area -> more nutrients attached

| Soil Texture | Nutrient Correction Factor |
|---------------------|-----------------------------------|
| Clay | 1.15 |
| Silt | 1.00 |
| Sand | 0.85 |
| Peat | 1.50 |

Stream Bank Erosion— Calculation

- Select a soil texture (e.g. silty clay)
- Enter the dimensions of the eroding stream banks

Please fill in the gray areas below:

| Parameter | Bank #1 | Bank #2 | Example |
|-------------------------------------|---------|---------|---------|
| Length (ft) | 500 | 500 | 500 |
| Height (ft) | 10 | 10 | 15 |
| Lateral Recession Rate (ft/yr)* | 0.2 | 0.2 | 0.5 |
| Soil Weight (tons/ft ³) | 0.0425 | 0.0425 | 0.04 |
| Soil P Conc (lb/lb soil)** | USER | 0.0005 | 0.0005 |
| Soil N Conc (lb/lb soil)** | USER | 0.001 | 0.001 |

** If not using the default values, users must provide input (in red) for Total P and Total N soil concentrations

*Lateral Recession Rate (LRR) is the rate at which bank deterioration has taken place and is measured in feet per year. This rate may not be easily determined by direct measurement. Therefore best professional judgement may be required to estimate the LRR. Please refer to the narrative descriptions in Table 1.

Estimated Load Reductions

| | BMP Efficiency* Bank #1 | BMP Efficiency* Bank #2 | Bank #1 | Bank #2 | Example |
|-------------------------------------|----------------------------|----------------------------|---------|---------|---------|
| Sediment Load Reduction (ton/year) | 1.0 | 1.0 | 42.5 | 42.5 | 150 |
| Phosphorus Load Reduction (lb/year) | | | 42.5 | 42.5 | 150 |
| Nitrogen Load Reduction (lb/yr) | | | 85.0 | 85.0 | 300 |

* BMP efficiency values should be between 0 and 1, and 1 means 100% pollutant removal efficiency.

Stream Bank Erosion

- Load (Channel Erosion)
= Length * Height * Lateral Recession rate * Soil weight
- Load Reduction
= Load * Load reduction efficiency

Determining Lateral Recession Rate by Field Observation

| Lateral Recession Rate (ft/yr) | Category | Description |
|--------------------------------|-------------|----------------------------------|
| 0.01 – 0.05 | Slight | Some bare bank, no exposed roots |
| 0.06 – 0.2 | Moderate | Bank is mostly bare |
| 0.3 – 0.5 | Severe | Bank is bare with exposed roots |
| 0.5+ | Very Severe | Bank is bare with fallen trees |

Agricultural Practices—Usage

- Check BMPs: Agricultural field practices and filter strips (check both)
- Select a state and a county for default USLE parameter values
- Modify the default USLE parameter values for local conditions, especially the cover factor C and the supporting practice factor P to reflect the before and after treatment effects

| Please check which BMPs apply: | | Please select a state and a county, and default USLE parameters | | |
|--|------------------|---|-------------------------|------------------------|
| <input checked="" type="checkbox"/> Agricultural Field Practices | | Users should use the local USLE parameter values if available! | | |
| <input checked="" type="checkbox"/> * Filter Strips | | State | County | |
| | | Alabama | Autauga | |
| Please fill in the <u>gray</u> areas below: | | | | |
| | | | Example | |
| USLE or RUSLE | Before Treatment | After Treatment | Before Treatment | After Treatment |
| Rainfall-Runoff Erosivity Factor (R) | 374.69 | 374.69 | 120 | 120 |
| Soil Erodibility Factor (K) | 0.20 | 0.20 | 0.35 | 0.35 |
| Length-Slope Factor (LS) | 0.29 | 0.29 | 0.44 | 0.44 |
| Cover Management Factor (C<=1.0)* | 0.20 | 0.04 | 0.7 | 0.5 |
| Support Practice Factor (P<=1.0)* | 0.99 | 0.99 | 0.775 | 0.11 |
| Predicted Avg Annual Soil Loss (ton/acre/year) | 4.21 | 0.84 | 10.03 | 1.02 |
| * User must use the local C and/or P values (in red) to obtain the reduction due to the field practices. | | | | |

Agricultural Practices—Usage 2

- Enter contributing areas (e.g. 50 acres)
- Select a soil texture (e.g. silt)

| Estimated Load Reductions for Agricultural Field Practices | | |
|--|---------|---------|
| | Treated | Example |
| Sediment Load Reduction (ton/year) | 97 | 85 |
| Phosphorus Load Reduction (lb/year) | 118 | 100 |
| Nitrogen Load Reduction (lb/yr) | 236 | 200 |

| Estimated Additional Load Reductions through Filter Strips | | | |
|--|-------------------------|----------------------|---------|
| | Filter-Strip Efficiency | Filter-Strip Treated | Example |
| Sediment Load Reduction (ton/year) | 0.65 | 16 | 92 |
| Phosphorus Load Reduction (lb/year) | 0.75 | 34 | 114 |
| Nitrogen Load Reduction (lb/yr) | 0.70 | 63 | 227 |

| Total Estimated Load Reductions | | |
|-------------------------------------|-------|---------|
| | Total | Example |
| Sediment Load Reduction (ton/year) | 113 | 177 |
| Phosphorus Load Reduction (lb/year) | 152 | 214 |
| Nitrogen Load Reduction (lb/yr) | 298 | 427 |

Note: This worksheet is also applicable to other cases (mining, construction sites) when USLE is used.

Feedlot Pollution Reduction

- Load
 - Enter a contributing area (e.g. 1.74 acre)
 - Specify the percentage of paved area (e.g. 75-100%)
 - Select state and a county (Pennsylvania, Lycoming)
 - Select Weather Station (NY New York Central Park)
 - Enter animal count for each type

| Animal Numbers | Animal Type | Design Weight* |
|----------------|-------------------|----------------|
| 0 | Slaughter Steer | 1,000 |
| 0 | Young Beef | 500 |
| 100 | Dairy Cow | 1,400 |
| 30 | Young Dairy Stock | 500 |
| 0 | Swine | 200 |
| 0 | Feeder Pig | 50 |
| 0 | Sheep | 100 |
| 0 | Turkey | 10 |
| 0 | Chicken | 4 |
| 0 | Duck | 4 |
| 0 | Horse | 1,000 |

Feedlot Pollution Reduction

- Load Reduction
 - Select a feedlot best management practice (e.g. waste management system)
 - System calculates load reduction using pre-assigned (BOD, P, N) efficiencies for the selected BMP

| Estimated Load and Load Reductions | | | |
|---|-----------------|----------------|----------------|
| Pollutants | Load before BMP | Load Reduction | Load after BMP |
| Biochemical Oxygen Demand load (lbs/yr) | 8,598 | NA | NA |
| Phosphorus load (lbs/yr) | 848 | 763 | 85 |
| Nitrogen load (lbs/yr) | 7,239 | 5,791 | 1,448 |

Urban Pollution Reduction

- Load
 - Enter size (acres) of storm water sewered and unsewered areas for each urban land use subclass
 - System calculates load using default unit loads for each land use sub class

Please enter landuse of contributing/drainage area in acres:

| | Sewered | Unsewered |
|----------------|---------|-----------|
| Commercial | 100 | 10 |
| Industrial | 100 | 10 |
| Institutional | 50 | 10 |
| Transportation | 50 | 0 |
| Multi-Family | 100 | 10 |
| Residential | 200 | 10 |
| Agriculture | 0 | 20 |
| Vacant | 20 | 0 |
| Open Space | 250 | 250 |

Note: Storm sewers

Urban Pollution Reduction

- Load Reduction
 - Select BMP
 - System calculates load using default BMP efficiencies for the selected BMP

| | Pre-BMP Loading (lbs/yr) | | Post-BMP Loading (lbs/yr) | | Load Reduction (lbs/yr) |
|---------|--------------------------|--|---------------------------|--|-------------------------|
| BOD | 30,640 | | 13,482 | | 17,158 |
| COD | 234,750 | | U | | U |
| TSS | 681,250 | | 126,031 | | 555,219 |
| LEAD | 531 | | U | | U |
| COPPER | 102 | | U | | U |
| ZINC | 785 | | U | | U |
| TDS | 1,210,084 | | U | | U |
| TN | 7,850 | | U | | U |
| TKN | 4,293 | | U | | U |
| DP | 363 | | U | | U |
| TP | 928 | | 450 | | 478 |
| CADMIUM | 6 | | U | | U |

U = Removal Efficiency for the particular BMP and constituent unavailable.

Region 5 model vs. STEPL 1

- Region 5 model
 - Calculates load at the source level
 - Sources are independent (no relationship between worksheets)
- STEPL
 - Calculates load for different sources at source and watershed level
 - Sources are related in watershed
 - User can specify and update BMP list
 - BMP calculator for complex BMP arrangements

Part 3: Special Discussion

BMP Efficiency Estimator

- Simple calculator to estimate BMP efficiency for non structural BMP
- Estimates efficiency due to changes in cropping patterns or soil support practices

Models and Documentation

- [BMP Efficiency Calculator \(New\)](#)
(Last updated: 09/24/2008. Please send your comments to [STEPL support](#).)

STEPL Online Input Data Server

ONLY FOR PRACTICE!!

Step 1: Select a state

- California
- Colorado
- Connecticut
- District of Columbia
- Delaware
- Florida

Step 2: Select a county

- Alameda
- Alpine
- Amador
- Butte
- Calaveras
- Colusa

Or select a HUC

- 15030101 : Havasu-Mohave L
- 15030102 : Piute Wash
- 15030104 : Imperial Reservoir
- 15030107 : Lower Colorado
- 16040203 : Smoke Creek Des
- 16040204 : Massacre Lake

Step 3: Activate the

Select tool  and click on the map to refine the area of interest

Step 4: Select report

Basic

Generates a preformatted report with tables that you can paste directly into the STEPL worksheets

Custom

Generates preformatted reports using custom percentages of HUC surface area

This tool can be used to estimate the landuse and animal distribution, number of septic system and failure rate, and hydrologic group for your area of interest. These information are required input for the STEPL model. The data are provided by HUCO (overlay of county and 8-digit hydrologic unit boundary).

STEPL Online Input Data Server

The screenshot shows the STEPL Model Input Data Server web application. The browser title is "STEPL Model Input Data Server - Microsoft Internet Explorer provided by Tetra Tech, Inc.". The address bar shows the URL: <http://hudson.tetrattech-ffx.com/website/stepl/viewer.htm>. The page has a blue header with the STEPL logo and navigation icons. The main content area is divided into four steps:

- Step 1: Select a state**: A dropdown menu with "California" selected.
- Step 2: Select a county**: A dropdown menu with "Alameda" selected.
- Or select a HUC**: A list of HUCs for the selected county, with "18040001 : Middle San Joaqui" selected.
- Step 3: Activate the tool**: A blue box with a square icon and text: "Select tool and click on the map to refine the area of interest".
- Step 4: Select report**: Two buttons, "Basic" and "Custom". The "Custom" button is highlighted with a red arrow.

The central map shows a red polygon overlaid on a map of California counties and HUCs. The text below the map reads: "This tool can be used to estimate the landuse and animal distribution, number of septic system and failure rate, and hydrologic group for your area of interest. These information are required input for the STEPL model. The data are provided by HUCO (overlay of county and 8-digit hydrologic unit boundary)."

The status bar at the bottom shows: "Map: -2175216.31, 1958242.66 -- Image: 157, 6 -- ScaleFactor: 221.79810132759712" and "Internet".

Data is available at HUC and county intersection (HUCO Polygon)

STEPL: Discussion

- Watershed vs. subwatershed
 - STEPL model is not limited to subwatershed (can apply to farms, scenarios, etc.)
 - Watershed size (make the subwatershed small enough to reflect BMP effectiveness.
 - You want to know the reduction at the local subwatershed level (Sum of loads from subwatersheds \neq load at the watershed outlet because of the transport loss in the main stem.)
- Local weather data
- How to use the user-defined land use?
- Septic failure rate clarification
- Add new BMPs to the list
- Small treated area vs. large watershed
- R5 100% efficiency assumptions
- Estimate BMP efficiencies using USLE tables

Some useful data!

Estimate BMP Efficiency Using USLE C Value

Table I

Generalized Values of Cover and Management Factor (C) for Field Crops East of the Rocky Mountains (Stewart et al 1975).

| Crop, rotation & management b/ (Please use the abbreviation table below!) | | Productivity a/ | |
|--|--|-----------------|----------|
| | | High | Moderate |
| Continuous fallow, tilled up and down slope | | 1.00 | 1.00 |
| CORN | | | |
| 1 | C, RdR, fall TP, conv (1) | 0.54 | 0.62 |

| 49 | W-M-M-M, conv (4) | 0.021 | - |

Estimate BMP Efficiency Using USLE C Value Table III

Values of Cover and Management Factor (C) for Pasture and Woodland (Novotny & Chesters, 1981).

| Cover | Value |
|-------|-------|
|-------|-------|

Permanent pasture, idle land, unmanaged woodland

95-100% ground cover

as grass 0.003

as weeds 0.01

80% ground cover

as grass 0.01

as weeds 0.04

60% ground cover

as grass 0.04

as weeds 0.09

Managed woodland

75-100% tree canopy 0.001

40-75% tree canopy 0.002-0.004

20-40% tree canopy 0.003-0.01

For example: Increase ground cover from 60% to 80% will reduce erosion about 75%

Estimate BMP Efficiency Using USLE C Value

Table IV

Generalized Values of Cover and Management Factor (C) for Field Crops East of the Rocky Mountains (Stewart et al 1975).

Notes and Abbreviations

a/. High level exemplified by long-term yield averages greater than 75 bu/ac corn or 3 ton/ac hay or cotton management that regularly provides good stands and growth.

b/. Numbers in parentheses indicate numbers of years in the rotation cycle. (1) indicates a continuous one-crop system.

c/. Grain sorghum, soybeans or cotton may be substituted for corn in lines 12,14,15, 17-19, 21-25 to estimate values for sod-based rotations.

Abbreviations:

| | | | |
|-----------|--|----|--------------------|
| B | soybeans | F | fallow |
| C | corn | M | grass & legume hay |
| c-k | chemically killed | pl | plant |
| conv | conventional | W | wheat |
| cot | cotton | wc | winter cover |
| lb re | pounds of residue per acre remaining on surface after new crop seeding | | |
| % re | percentage of soil surface covered by residue mulch after new crop seeding | | |
| xx-yy% re | xx% cover for high productivity, yy% for moderate | | |
| RdR | residues (corn stover, straw, etc.) removed or burned | | |
| RdL | residues left on field (on surface or incorporated) | | |
| TP | turn plowed (upper 5 or more inches of soil inverted, covering residues) | | |

Estimate BMP Efficiency Using USLE P Value Table

Values of Supporting Practice Factor (P) (Stewart et al 1975).

| Practice Slope(%): | 1.1-2 | 2.1-7 | 7.1-12 | 12.1-18 | 18.1-24 |
|--|---------------|---------------|---------------|---------------|---------------|
| <i>No support practice</i> | 1.00 | 1.00 | 1.00 | 1.00 | 1.00 |
| <i>Contouring</i> | 0.60 | 0.50 | 0.60 | 0.80 | 0.90 |
| <i>Contour strip cropping</i> | | | | | |
| R-R-M-M /a | 0.30 | 0.25 | 0.30 | 0.40 | 0.45 |
| R-W-M-M | 0.30 | 0.25 | 0.30 | 0.40 | 0.45 |
| R-R-W-M | 0.45 | 0.38 | 0.45 | 0.60 | 0.68 |
| R-W | 0.52 | 0.44 | 0.52 | 0.70 | 0.90 |
| R-O | 0.60 | 0.50 | 0.60 | 0.80 | 0.90 |
| <i>Contour listing or ridge planting</i> | 0.30 | 0.25 | 0.30 | 0.40 | 0.45 |
| <i>Contour terracing /b</i> | $0.6/n^{1/2}$ | $0.5/n^{1/2}$ | $0.6/n^{1/2}$ | $0.8/n^{1/2}$ | $0.9/n^{1/2}$ |

a/. R = row crop, W = fall-seeded grain, M = meadow. The crops are grown in rotation and so arranged on the field that row crop strips are always separated by a meadow or winter-grain strip.

b/. These factors estimate the amount of soil eroded to the terrace channels. To obtain off-field values, multiply by 0.2. n = number of approximately equal length intervals into which the field slope is divided by the terraces. Tillage operations must be parallel to the terraces.

For example: Contouring will reduce sediment by 10-40% depending on slope

Estimate Runoff Changes Using Curve Number

Runoff Curve Numbers (Antecedent Moisture Condition II) for Cultivated Agricultural Land (Soil Conservation Service, 1986).

| Land Use/Cover | Hydrologic Condition | A | B | C | D <- Soil Hydrologic Group | |
|--|----------------------|------|----|----|----------------------------|----|
| Fallow Bare Soil | - | 77 | 86 | 91 | 94 | |
| Crop residue cover (CR) | Poor * | 76 | 85 | 90 | 93 | |
| | Good | 74 | 83 | 88 | 90 | |
| Row Crops Straight row (SR) | Poor | 72 | 81 | 88 | 91 | |
| | Good | 67 | 78 | 85 | 89 | |
| | SR+CR | Poor | 71 | 80 | 87 | 90 |
| | | Good | 64 | 75 | 82 | 85 |
| Contoured (C) | Poor | 70 | 79 | 84 | 88 | |

| | C+CR | Poor | 69 | 78 | 83 | 87 |
| | | Good | 64 | 74 | 81 | 85 |
| Contoured & terraced (C&T) | Poor | 66 | 74 | 80 | 82 | |
| | Good | 62 | 71 | 78 | 81 | |
| | C&T + CR | Poor | 65 | 73 | 79 | 81 |
| | | Good | 61 | 70 | 77 | 80 |
| Small Grains | SR | Poor | 65 | 76 | 84 | 88 |
| | | Good | 63 | 75 | 83 | 87 |
| | SR+CR | Poor | 64 | 75 | 83 | 86 |
| | | Good | 60 | 72 | 80 | 84 |
| | C | Poor | 63 | 74 | 82 | 85 |
| | | Good | 61 | 73 | 81 | 84 |
| | C+CR | Poor | 62 | 73 | 81 | 84 |
| | | Good | 60 | 72 | 80 | 83 |
| | C&T | Poor | 61 | 72 | 79 | 82 |
| | | Good | 59 | 70 | 78 | 81 |
| | C&T + CR | Poor | 60 | 71 | 78 | 81 |
| | | Good | 58 | 69 | 77 | 80 |
| Close-seeded or broadcast legumes or rotation meadow | SR | Poor | 66 | 77 | 85 | 89 |
| | | Good | 58 | 72 | 81 | 85 |
| | C | Poor | 64 | 75 | 83 | 85 |
| | | Good | 55 | 69 | 78 | 83 |
| C&T | Poor | 63 | 73 | 80 | 83 | |
| | Good | 51 | 67 | 76 | 80 | |

Estimate Runoff Changes Using Curve Number II

Runoff Curve Numbers (Antecedent Moisture Condition II) for Other Rural Land (Soil Conservation Service, 1986).

| Land Use/Cover | Hydrologic Condition | Soil Hydrologic Group | Antecedent Moisture Condition II | | | |
|---|----------------------|-----------------------|----------------------------------|----|----|----|
| | | | A | B | C | D |
| Pasture, grassland or range - continuous forage for grazing | Poor/a | | 68 | 79 | 86 | 89 |
| | Fair | | 49 | 69 | 79 | 84 |
| | Good | | 39 | 61 | 74 | 80 |
| Meadow – continuous grass, protected from grazing, generally mowed for hay | - | | 30 | 58 | 71 | 78 |
| Brush - brush/weeds/grass mixture with brush the major element | Poor/b | | 48 | 67 | 77 | 83 |
| | Fair | | 35 | 56 | 70 | 77 |
| | Good | | 30 | 48 | 65 | 73 |
| Woods/grass combination (orchard or tree farm) /c | Poor | | 57 | 73 | 82 | 86 |
| | Fair | | 43 | 65 | 76 | 82 |
| | Good | | 32 | 58 | 72 | 79 |
| Woods | Poor/d | | 45 | 66 | 77 | 83 |
| | Fair | | 36 | 60 | 73 | 79 |
| | Good | | 30 | 55 | 70 | 77 |
| Farmsteads – buildings, lanes, driveways and surrounding lots | - | | 59 | 74 | 82 | 86 |

a) Poor: 50% ground cover or heavily grazed with no mulch; Fair: 50 to 75% ground cover and not heavily grazed; Good: > 75% ground cover and lightly or only occasionally grazed.

b) Poor: < 50% ground cover; Fair 50 to 75% ground cover; Good: > 75% ground cover.

c) Estimated as 50% woods, 50% pasture.

d) Poor: forest litter, small trees and brush are destroyed by heavy grazing or regular burning; Fair: woods are grazed but not burned and some forest litter covers the soil; Good: Woods are protected from grazing and litter and brush adequately cover the soil.

Estimate Runoff Changes Using Curve Number III

Runoff Curve Numbers (Antecedent Moisture Condition II) for Arid and Semiarid Rangelands (Soil Conservation Service, 1986).

| Land Use/Cover | Hydrologic Condition | Soil Hydrologic Group | A | B | C | D |
|--|----------------------|-----------------------|----|----|----|----|
| Herbaceous - grass, weeds & low-growing brush; brush the minor component | Poor /a | | - | 80 | 87 | 93 |
| | Fair | | - | 71 | 81 | 89 |
| | Good | | - | 62 | 74 | 85 |
| Oak/aspen - oak brush, aspen, mountain mahogany, bitter brush, maple and other brush | Poor | | - | 66 | 74 | 79 |
| | Fair | | - | 48 | 57 | 63 |
| | Good | | - | 30 | 41 | 48 |
| Pinyon/juniper - pinyon, juniper or both; grass understory | Poor | | - | 75 | 85 | 89 |
| | Fair | | - | 58 | 73 | 80 |
| | Good | | - | 41 | 61 | 71 |
| Sagebrush with grass understory | Poor | | - | 67 | 80 | 85 |
| | Fair | | - | 51 | 63 | 70 |
| | Good | | - | 35 | 47 | 55 |
| Desert scrub - saltbush, greasewood, creosotebrush, blackbrush, bursage, palo verde, mesquite and cactus | Poor | | 63 | 77 | 85 | 88 |
| | Fair | | 55 | 72 | 81 | 86 |
| | Good | | 49 | 68 | 79 | 84 |

a. Poor: < 30% ground cover (litter, grass and brush overstory); Fair: 30 to 70% ground cover; Good: 70% ground cover.

Estimate Runoff Changes Using Curve Number IV

Runoff Curve Numbers (Antecedent Moisture Condition II) for Urban Areas (Soil Conservation Service, 1986).

| Land Use/Cover | Hydrologic Condition | Soil Hydrologic Group | A | B | C | D |
|--|----------------------|-----------------------|----|----|----|----|
| ----- | | | | | | |
| Open space (lawns, parks, golf courses, cemeteries, etc.): | | | | | | |
| Poor condition (grass cover < 50%) | | | 68 | 79 | 86 | 89 |
| Fair condition (grass cover 50-75%) | | | 49 | 69 | 79 | 84 |
| Good condition (grass cover > 75%) | | | 39 | 61 | 74 | 80 |
| Impervious areas: | | | | | | |
| Paved parking lots, roofs, driveways, etc.) | | | 98 | 98 | 98 | 98 |
| Streets and roads: | | | | | | |
| Paved with curbs & storm sewers | | | 98 | 98 | 98 | 98 |
| Paved with open ditches | | | 83 | 89 | 92 | 93 |
| Gravel | | | 76 | 85 | 89 | 91 |
| Dirt | | | 72 | 82 | 87 | 89 |
| Western desert urban areas: | | | | | | |
| Natural desert landscaping (pervious areas, only) | | | 63 | 77 | 85 | 88 |
| Artificial desert landscaping (impervious weed barrier, desert shrub with 1-2 in sand or gravel mulch and basin borders) | | | 96 | 96 | 96 | 96 |
| ----- | | | | | | |
