SanDisk meets the storage needs of mobile device users.

The SanDisk line of mobile storage solutions increases the capacity and functionality of your mobile device, allowing you to take full advantage of the newest storage-intensive applications that include video, audio, imaging and games. The newest generation of feature-rich multimedia mobile phones and other mobile devices demand a lot more memory storage. Now SanDisk, the world's leading supplier of flash data storage, offers a complete line of removable memory cards and connectivity solutions to meet your every need.

SanDisk miniSD™

 The SanDisk miniSD memory card offers all of the benefits of a standard SD card, but in a much smaller size. In fact, the miniSD card is over 60% smaller than a full-sized SD card! SanDisk's miniSD includes the same SD interface, so it will work in any current SD host with the use of an adapter.

SanDisk SD™

The SanDisk SD card provides high capacity memory in a very small size. It includes a high-performance interface and built-in security features for the protection of copyrighted data. SanDisk SD cards are 100% compatible with all SD-compliant devices.

SanDisk RS-MMC™

The SanDisk RS-MMC (Reduced-Size MultiMediaCard), offers the same high performance and functionality of a standard MultiMediaCard in about half the size, making it ideal for the newest generation of power-sensitive, ultra-small mobile phones and other mobile devices. The SanDisk RS-MMC includes the same MMC interface, so it will work in any current MMC host with the use of an adapter.

SanDisk TransFlash™

The new SanDisk TransFlash is a small, removable memory card that allows you to upgrade the capacity of your TransFlash device. The SanDisk TransFlash makes it easy to transport your personal content, applications, and system settings from one TransFlash enabled mobile phone to another.

SanDisk Memory Stick Duo™

At only half the size of a standard Memory Stick™ card, the SanDisk Memory Stick Duo is used in mobile phones that require more storage capacity for storage-intensive features such as cameras, audio players, and games. Plus, every SanDisk Memory Stick Duo card comes with an adapter for use in all Memory Stick or Memory Stick PRO devices.

SanDisk Memory Stick PRO Duo™

The SanDisk Memory Stick PRO Duo card features fast data transfer and real time recording of high-resolution moving images and video.

SanDisk 256MB + Wi-Fi SD™ Card

Now you can conserve precious internal memory of your mobile device by downloading content and files directly to the SanDisk 256MB + Wi-Fi SD card. Combining both flash memory and wireless communications in a single card, the easy-to-use SanDisk 256MB + Wi-Fi SD card is the only mobile solution that delivers increased memory and wireless connectivity in one card!

1MB = 1 million bytes, 1GB = 1 billion bytes
