1. K-Wordlnk

K-WordInk allows you to put and save your handwritten annotations or hand drawn graphics at any place in a Microsoft Word file, while either your annotations or hand drawn graphics will become part of this file.

U Support Microsoft Office Word 2000 or Higher Version

1.1 Access K-WordInk Program

At the lower left corner of the screen and access the Tablet Software

「Start」▶ 「All Programs」▶ 「Tablet Software」

► 🥰 K-WordInk

When you activate the Microsoft Office Word application, the K-WordInk will automatically appear into the Word tool bar (thus becoming an add-on program of Word) if you run your installation properly.

When using the Word 2002 or 2003 application, you will be unable to use the other macro application at the time of activating the K-WordInk because in Word 2002, the Macro Security is default to High (K-WordInk is a Macro application which is an add-on). Therefore, please adjust the Macro Security from high to middle in Word as follows :

Setup Method :

1. Open Word ► Tool ► Macro ► Security. (Set Security to Middle, and then re-open the Word.)

2. When security is changed to Middle, there will be a dialog box asking whether to use the Macro at the time of opening the Word. As shown in the figure below, please press the Enable Macros button and you can use the K-WordInk immediately.

1.2 Introduction to K-WordInk

Pen

Highlight

No pen pressure available. It is used for annotating, signing or drawing on a Word document.

You can make annotations or draw graphics at any part of the screen and select the color or thickness of penpoint to highlight the handwriting.

No pen pressure available. Used in stressing on or reminding
 Fluorescent Marker of the key points of an article, which are displayed in a translucent color.

.

Can be used to mark the key text or character strings, and may be ideally suitable for online viewing purpose.

Ø

About

System information, version information and copyright statement for K-WordInk.

1.3 Introduction to Pen and

3

Fluorescent Marker Tool Bars

When you open a Word document, you can choose to press either Pen or Fluorescent Marker buttons to start handwriting annotations.

- Select Pen : The handwritings and drawing will be the same as those drawn by a pen or a ball point pen, where the thickness of each stroke will remain unchanged from start to end. You can also select the color or thickness of penpoint before starting to write.
- 2. Select Fluorescent Marker : The handwritings are displayed in a transluscent color and similar to those drawn by a fluorescent marker. Fluorescent marker can be used to stress or highlight the key areas of a document.

Adjust the thickness board, thereby adjusting the thickness of penpoint.Once you adjust it, new thickness will be adopted for the handwriting. (Support Microsoft Word 2000,Word 2002 and Word 2003.)

Current thickness ofThickness ofpenpointcurrent level ofpenpointthickness. The numberpenpointindicates the unit in pixel. The larger the number, the thicker
the pen point.

Select the color of penpoint according to any color chip available in the color field. Once you adjust it, the handwriting color will be changed into the selected color, until the color is changed again next time. In a non-drawing mode, choice of color will be ignored.

Current color of The left color chip below the color filed will display the current color of penpoint color of penpoint.

Restore Cancel the last stroke. Press once to delete the previous stroke, until all handwritings are deleted.

X	Delete	Delete all handwritings.
	Complete	When you complete your annotations, press Complete to send out your handwritings, which can form a graphics object pasted in a Word document for editing. Now, the drawing mode is already terminated. If you still want to make annotations or draw graphics, press Pen or Fluorescent Marker buttons again to re-annotate after the transmission of graphics is completed.

Sending time can vary with different computer speeds and RAM sizes. If the file edition is not considered as a word document, paste of the graphics object will not be accepted and the graphics can not be inserted into the file. At this time, the graphics will be temporarily saved on the Clipboard, and then you can click Paste if you wish to insert them into other files.

Close

Close annotation or drawing mode immediately and delete all handwritings that are not sent out yet.

If K-WordInk cannot be automatically added into the Word tool bar, please follow the procedures below to solve the problem :

- After the Word is opened, check if the Annotate in the Tool Bar under the View is activated.
 If not activated, please click on Annotate to activate it.
- If there is no option of Annotate in the Tool Bar under the View, please use the Pen System CD to reinstall the K-WordInk (Only reinstall the K-WordInk).
- If you still cannot add the K-WordInk into the Word tool bar, click on the "Options" under the "Tool" in the drop-down menu, and check the location of activation in the File Location (See figure below).

Example

Open the MS Office on windows, you can start the functions of K-Notice for writing, annotating or drawing.

3. K-Command

lanvi

K-Command

K-Mail

K-Notice K-Signer

K-WordInk

K-Command allows you to create/use handwritten symbols on the pen tablet to open programs, documents, Internet, virtual buttons, wav files, insert text, menu functions or system commands.

Tablet Software

Tablet

3.1 Access K-Command

Press the button at the lower left corner of screen,

「Start」▶ 「All programs」▶ 「Tablet Software」

► K-Command

After acesssing the K-Command, the small icon for K-Command will appear on the tool bar at the lower right corner of the screen. When you write or draw anything on the digital tablet, the

cursor will be change into the icon

3.2 Pause K-Command

Select the small icon \bigotimes on the tool bar at the lower right corner of the screen. Now, this icon will be changed into \bigotimes , which means pausing the K-Command. Click \bigotimes again, and the small icon will be changed back into \bigotimes , and you can start to use K-Command.

3.3 Application of K-Command

Open the Microsoft Word by K-Command.

From the upper-left corner, write a W, while the handwritten symbol shall be correctly recognizabled. The small icon at the lower right corner will change into a blue color \bigotimes , make a tick sound and open the Microsoft Word.

3.4 Tool Setup for K-Command

Setup

You can set up the ink button, ink width and ink color.

Move the cursor to the small icon for K-Command on the tool bar at the lower right corner of the screen. Press the UP button on the digital pen (equivalent to the Right Mouse Key), and select the option of Reset

kanvus

Function. Then, move the cursor to the Setup Button, and this button will

change into . Press the Setup Button, and there will be a setup of the following screep :

following screen :

Drawing Bu	itton: PenTi	in(Leff)	-
Pen Tip Wi		-	
Pen tip wi	dth: 7 🚊	Pixels	
	~ .	1 115	
🔽 Start Per	nCommander	when Wind	dows Starts

- 1. Ink Button : You can only write symbols by pressing down the ink button. You can set the ink button as pen point based on your personal habit (left mouse key), or as second pen button(right mouse key).
- **2.** Ink Width : You can set up the ink width with unit in pixels. The larger the number, the thicker the pen written stroke.
- 3. Ink Color : You can set up the color of writing.

4. Activate K-Command When Windows System Is Started : If you

3.5 Symbol Definition for K-Command

When you use it the first time, please refer to definition screens for all symbols. There are two ways of reset function as below :

1. **Reset Function :** Write a capital Z from top to bottom, and then draw a line back to the starting point.

Unload PenCommander Reset Function : Move the cursor to the small icon for K-Command on the tool bar at the lower right corner of the screen. Press the UP button on the digital pen (equivalent to the Right Mouse Key), and click and select the option of Reset function. The definition screen for all symbols will appear as shown below :

2.

K-Comma	nd		Q	4 × -
Сору	Paste	Minimize	Maximize	Back
Forward	Undo	Redo	A Page Up	Page Down
Enter	L Desktop	Cut	لللل Dpen	New
Save	Print	Find	Launch IE	Launch Excel
Launch Word	e-Mail	Exit	X Customize	Deactivate

3.6 How to use K-Command

When you write or draw anything on a digital tablet, the cursor will be changed into the icon as

Kanvi

the right \square . When written symbols are recognized, the small icon will be changed into a blue color \bigotimes , and make a tick sound to execute the selected commands. When written symbols are not recognized, the small icon will change into the red color \bigotimes , and make a beep. Now, there

will be no action for that symbol.

The computer will only make a tick sound or a beep when its volume is opened.

(1) Cut and Paste

Copy : Draw a straight line like the capital numeric1 from bottom to top.

Paste : Draw a straight line like the capital numeric1 from top to bottom.

Cut: Draw a curve like a lying block of alphabet U from top left to right.

(2) Minimize and Maximize the Window

Minimize : Draw a slanted line from top right to lower left.

Maximize : Draw a slanted line from lower left to top right. When restoring the maximized window to its original size, please re-draw the symbol signifying Maximize.

Desktop : Minimize all windows. First, draw a straight line from top to bottom, and then turn it to right for 90 degrees. If you wish to restore all windows after minimizing them, please re-draw the symbol for desktop.

To next page, draw a straight line from right to left (designed for Internet Explorer).

Xanvi

To next page, draw a straight line from right to left (designed for Internet Explorer).

First page, draw a line from top to buttom and then reverse following the original line.

Last page, draw a line from bottom to top and then reverse following the original line. To scroll pages, please hold on first pen button (button near the penpoint), and move the penpoint on the digital tablet up and down slightly above the tablet (pen type scrolling).

(4) Edition

Restore: to PreRestore in such text editors as Word, Excel and WordPad, draw a line from right to left and then turn back following the original line.

Redo: draw a line from right to left and then turn back following the original line.

Input: draw a straight line from top to bottom and turn the line to left for 90 degrees.

Search: draw a direct line from top to bottom and turn the line to right for 90 degrees.

(5) Access and stop programs

Open the Word: to activate the Microsoft Word. Draw a curve like alphabet W from top left corner to lower right.

Open the Excel: to activate the Microsoft Excel. Draw a curve like a lying, block of alphabet W from top right corner to lower left.

Email: to activate e-mails. Draw a curve like alphabet M from lower left to top right.

Open IE: to activate the Internet Explorer. Draw a curve like a small letter e from the middle.

End: to leave the application program. Draw a diagonal from top right to lower left,

and then draw a line upwards and finally draw another diagonal from top left to lower right to end.

Kanvi

To pause K-Command, draw a curve like alphabet U from top to bottom.

(6) File Commands

- To open an old file: draw a counterclockwise triangle from the top left.
- To open a new file: draw a curve like alphabet N from lower left and then upwards.
- To save a file: draw a curve like alphabet S from lower right and then downwards.
 - To print a file: draw a curve like alphabet P from lower left and then upwards.

3.7 Reset Functions of K-Command

You can edit K-Command with various pen command buttons. Each K-Command application has seven functional options, but can only be executed one at a time. Detailed instructions are as the follows :

Execute

Execute Button : You can open any application program or document.

You can either type in the route or file name directly, or click the browse button is to select. Besides application programs or files, you can also designate the directory location at the start of execution and provide the parameter value for executing the applications.

For example : select the browse button A and find out the Pclassic.exe, the execution file for Painter Classic to start Painter Classic as shown in the figure below :

5.3 Introduction to Pen and

Brush Pen Toolbars

When any application software is activated, you can choose either Pen or Brush Pen button to execute the handwritten signature or graphics.

- Choose Pen : The handwritings will be the same as those drawn by a pen or a ball point pen. The thickness of each stroke will remain unchanged from start to end. You can choose the thickness of penpoint before penning down to write.
- Choose Brush Pen : Handwritings feature functions of pen pressure and will be similar to fonts drawn by a Chinese Brush Pen.

Adjust the thickness the thickness of penpoint can be adjusted. If you adjust with the slide bar, new thickness will be adopted for the handwriting.

3 Current thickness of penpoint currently will be displayed in a box, indicating the current level of penpoint thickness. The number indicates the unit in pixel. The larger the number, the thicker the pen point.

Select the color of penpoint from any color chip available in the color field. If you select a color, the handwriting color will be changed into the selected color, until the color is replaced again next time. In a non-painting mode, choice of color will be ignored.

Current thickness of penpoint The color in the box will display the current color of penpoint.

Recover Cancel the last stroke.
