

# Renesas Flash Programmer V2.05

Flash memory programming software

User's Manual: Common

All information contained in these materials, including products and product specifications, represents information on the product at the time of publication and is subject to change by Renesas Electronics Corp. without notice. Please review the latest information published by Renesas Electronics Corp. through various means, including the Renesas Electronics Corp. website (http://www.renesas.com).

#### Notice

- Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
- Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
- 3. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
- 4. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from such alteration, modification, copy or otherwise misappropriation of Renesas Electronics product.
- 5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.
  - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots etc.
  - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; and safety equipment etc.

Renesas Electronics products are neither intended nor authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems, surgical implantations etc.), or may cause serious property damages (nuclear reactor control systems, military equipment etc.). You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application for which it is not intended. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for which the product is not intended by Renesas Electronics.

- 6. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
- 7. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or systems manufactured by you.
- 8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
- 9. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You should not use Renesas Electronics products or technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. When exporting the Renesas Electronics products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations.
- 10. It is the responsibility of the buyer or distributor of Renesas Electronics products, who distributes, disposes of, or otherwise places the product with a third party, to notify such third party in advance of the contents and conditions set forth in this document, Renesas Electronics assumes no responsibility for any losses incurred by you or third parties as a result of unauthorized use of Renesas Electronics products.
- 11. This document may not be reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
- 12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.
- (Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.
- (Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

## **How to Use This Manual**

**Target Readers** This manual is intended for users who are using the flash programmer in designing

and developing a system that employs a Renesas Electronics microcontroller

equipped with on-chip flash memory.

**Purpose** This manual is intended to give users an understanding of the basic specifications

and correct use of the Renesas flash programmer.

Organization This manual includes the following sections.

- Overview
- Installation
- Unique code embedding function
- Troubleshooting
- Cautions
- Messages
- Supplementary information

logic circuits, and microcontrollers.

Conventions Note: Footnote for item marked with Note in the text.

Caution: Information requiring particular attention

Remark: Supplementary information

Numeral representation: Binary ... xxxx or xxxxB

Decimal ... xxxx

How to Read This Manual It is assumed that the readers of this manual have general knowledge of electricity,

Hexadecimal ... 0XXXXX or xxxxH

Any character or item on the screen that can be selected or input

Name of button

Name of commands, dialog boxes, options, or areas on the screen

| Term                              | Meaning  |
|-----------------------------------|--|
| RFP                               | Abbreviation of the Renesas Flash Programmer software for programming flash memory   |
| E1/E20                            | Abbreviation of the E1 emulator / E20 emulator   |
| MINICUBE2                         | Nickname used for the main unit of QB-MINI2, the on-chip debug emulator with programming function  |
| Tool used                         | General term for the tool used by the customer, which is E1, E20, or MINICUBE2.  |
| Utility                           | Software used for self-diagnosis of the tool used and to update the MINICUBE2 firmware.  |
| Target microcontroller            | The Renesas Electronics on-chip flash memory microcontroller used by the user  |
| Target system                     | User-designed board on which the target microcontroller is mounted   |
| Program adapter <sup>Note 1</sup> | Conversion adapter used to write programs to the target microcontroller  |
| Device information file           | Device information files contain parameter information required for writing programs to the flash memory in the target microcontroller. These files have the extension *.prm, *.pr5, or *.fcf. Do not change the data in the device information files. If the data is changed, RFP might not operate properly. |
| Workspace file                    | The workspace is where projects are stored. There is always at least one project in the workspace. Some workspaces allow multiple projects to be registered.   |
|                                   | In RFP, workspace files have the extension *.rws.  |
|                                   | Caution: Use workspace files that correspond to the version of the generated RFP. An error occurs when the RFP reads files from other RFP versions. In such cases, create new workspace files.   |
| Project file                      | Project files store the data required to write programs. In RFP, a project file stores the settings related to the programming environment, such as target microcontroller settings and command option specifications. In RFP, project files have the extension *.rpj.   |
| Signature                         | Information about the microcontroller.   |
| rfp.ini                           | This file is where the RFP settings are saved. The settings are saved when RFP is terminated.  |
| OCD security ID <sup>Note 3</sup> | A security feature related to on-chip debugging of a microcontroller.  |
| Flash options Note 3              | General term for MCU operations such as security settings.   |
| Option data <sup>Note 3</sup>     | General term for flash options, wide-voltage mode, and full-speed mode <sup>Note 2</sup>   |
| ID code <sup>Note 3</sup>         | Authentication code used in the ID authentication mode and in OCD. For details, refer to the user's manual of the microcontroller.   |
| Lock bit <sup>Note 3</sup>        | One of the security functions of the microcontroller. For details, refer to the user's manual of the microcontroller.  |
| HEX file                          | Program file without option data   |
| HCUHEX file                       | A program file that integrates option data and that is generated by using the HEX Consolidation Utility (HCU), which is used to generate ROM code for flash memory products whose flash memories are pre-written by Renesas Electronics.   |

| Term                                     | Meaning  |
|--|--|
| Program file                             | The program file refers to the file that contains the program to be written to the microcontroller. The following program file formats are supported by RFP when writing to an RL78, 78K, or V850 microcontroller:           |
|  | a. HEX files in Intel HEX format   |
|  | b. HCUHEX files in Intel HEX format  |
|  | c. HEX files in Motorola S format  |
|  | d. HCUHEX files in Motorola S format   |
|  | The following program file formats are supported by RFP when writing to an RX, or RH850 microcontroller:   |
|  | a. HEX files in Intel HEX format   |
|  | b. HEX files in Motorola S format  |
|  | Caution An empty area will be supplemented with FFH.   |
|  | Notes 1. Blank areas are complemented by FFH when reading is performed.  |
|  | <ol><li>For details on the format, refer to the information on how to<br/>order ROM codes (C10302J).</li></ol>   |
|  | <ol><li>The only supported character code is ASCII (one byte).</li><li>Unicode (two bytes) is not supported.</li></ol>   |
| COMx                                     | COMx is a serial interface port incorporated in the host PC.   |
|  | When writing data to the target system by using the serial interface incorporated in the host PC, select COMx as the tool used. Any value from 1 to 256 can be specified for <i>x</i> .                                      |
| USB Direct                               | USB Direct is a method to write in the microcontroller in the USB boot mode by using the USB interface port of the host PC. When writing data by using the USB interface of the host PC, select USB Direct as the tool used. |
| FINE                                     | FINE is a single or dual line communications interface operating through the FINE pin of microcomputers. Select RX100 and RX200 as the microcomputer to be used and E1 or E20 as the tool to be used.                        |
| User/data area                           | Target area of the flash memory to which the program file is written.  |
|  | For the RL78, 78K, and V850: Code flash and data flash For the RX: User area and data area For the RH850: Code area and data area  |
| User boot area                           | Target area of the flash memory to which the program file is written.  |
|  | For the RL78, 78K, V850, and RX100: None For the RX200 and RX600: User boot area For the RH850: User boot area or extended user area   |
| Basic mode                               | This mode is mainly for writing in mass production, and the focus is on basic rewriting processing.  |
| Full mode                                | The full mode is mainly for the use of microcontrollers in development, and facilitates the control of multiple projects and the checking of setting information.  |
| ID authentication mode <sup>Note 3</sup> | One of the security functions of the microcontroller. For details, refer to the user's manual of the microcontroller.  |
| Command protection mode Note 3           | One of the security functions of the microcontroller. For details, refer to the user's manual of the microcontroller.  |
| OTP <sup>Note 3</sup>                    | One of the security functions of the microcontroller. For details, refer to the user's manual of the microcontroller.  |
| OFS <sup>Note 3</sup>                    | One of the security functions of the microcontroller. For details, refer to the user's manual of the microcontroller.  |

| Term                                       | Meaning   |
|--|---|
| Trusted Memory Note 3                      | One of the security functions of the microcontroller. For details, refer to the user's manual of the microcontroller.                                       |
| Option-Setting<br>Memory <sup>Note 3</sup> | Collective term for registers that determine the state of the MCU after release from reset. For details, refer to the user's manual of the microcontroller. |

## Notes 1. The program adapter is a product of Naito Densei Machida Mfg. Co., Ltd.

If you have any questions about the FA adapter board, contact Naito Densei Machida Mfg. Co., Ltd. (Tel: +81-42-750-4172).

- 2. The functions that can be used differ depending on the target microcontroller.
- 3. Refer to the user's manual of the target device for more information.

**Related documents** When using this manual, also refer to the following documents.

The related documents indicated in this publication may include preliminary versions.

However, preliminary versions are not marked as such.

Documents related to development tools

| Document name   | Document number |

## **Caution** The related documents listed above are subject to change without notice.

Be sure to use the latest version of each document for designing, etc.

**Term replacement** When the RX100, RX200 is used, some terms in this manual should be replaced as shown in the table below.

| Term                | To be replaced with   |
|---------------------|-----------------------|
| Flash shield window | Area protection       |
| USB Direct          | USB interface mode    |
| Get Flash options   | Access window read    |
| Set Security        | Access window program |

#### **CHAPTER 1 OVERVIEW**

Renesas Flash Programmer (hereafter referred to as RFP) is software that erases, writes, and verifies programs on the target system on which a Renesas Electronics single-chip microcontroller with on-chip flash memory is mounted by using an E1 emulator (hereafter referred to as E1), E20 emulator (hereafter referred to as E20), or the on-chip debug emulator with programming function, QB-MINI2 (hereafter referred to as MINICUBE2), or a serial interface.

#### 1.1 Features

- Writing controlled by the host PC
- · Writing settings can be saved in a workspace file
- Microcontroller-specific information required for writing is included in the product package as a device information file. Such information of the generic device should be obtained by the query.
- Two types of writing operation windows (Basic mode and Full mode)
- Automatic writing by the script execution function
- Embedding of unique codes

## 1.2 Writing Quality

Thoroughly confirm, verify and evaluate the following points before using RFP, in order to improve the writing quality.

- Design circuits as described in the user's manual for the target microcontroller, E1, E20, and MINICUBE2.
- Use the microcontroller and RFP as described in the user's manual of the target microcontroller, RFP, E1, E20, and MINICUBE2.
- Make sure that the power supplied to the target microcontroller is stable.

## 1.3 Supported Microcontrollers

Microcontrollers supported by RFP are listed on the following websites:

http://www.renesas.com/rfp

## 1.4 System Overview

An overview of the RFP system is illustrated in the following diagram.

Product package Targe system RFP Device information file Target cable USB cable USB driver E20 Workspace file Project file MINICUBE2 Program file Script file Unique code file Serial cable (RS-232C) rfp.ini USB cable (USB Direct) Targe system<sup>Note</sup>

Figure 1-1. RFP Connection Image

Note

To write data to the target system by using the serial interface incorporated in the host PC, a writing circuit is required in the target system. See the sample circuit shown on the following websites:

http://www.renesas.com/rfp

**Remark** Do not modify or delete the folder and file configuration of the RFP.

## RFP operation overview

The following operations can be performed by using RFP. The settings on the host PC are saved in an rfp.ini file.

- · Creating, saving, and reading workspace files
- Reading program files and device information files
- · Target command execution
- · Checksum calculation for program files
- Creating and saving multiple project files in workspace files (only full mode)
- Executing script commands
- Embedding unique codes

## 1.5 Operating Environment

This section explains the following items with respect to the operating environment:

- · Hardware environment
- Software environment

#### 1.5.1 Hardware environment

## (1) Host PC

- Processor: 1 GHz or higher
- Main memory: 1 GB or more (2 GB or more when using 64-bit Windows); 2 GB or more recommended
- Display: Resolution of 1,024 x 768 or higher and 65,536 or more colors
- Interface: USB 2.0 (when using E1, E20, MINICUBE2, USB Direct)
  Serial interface (RS-232C) (when using COMx)

## (2) Tools used

- E1
- E20
- MINICUBE2

#### 1.5.2 Software environment

- Windows Vista (32-bit and 64-bit)
- Windows 7 (32-bit and 64-bit)
- Windows 8/8.1 (32-bit and 64-bit)
- Microsoft .NET Framework 4
- Runtime library of Microsoft Visual C++ 2010 SP1

For any of these, we recommend having the latest service pack installed.

## 1.6 Handling of HCUHEX Files

An HCUHEX file is required for ordering flash memory products whose flash memories are pre-written by Renesas Electronics. After being generated by the HEX Consolidation Utility (HCU), operation based on the HCUHEX file must be verified by using the flash memory programmer. Because RFP handles the HCUHEX file as master data, the user can check the settings specified for writing and option data.

Some RL78, 78K, V850, and RH850 microcontrollers support HCUHEX files. If a microcontroller supports HCUHEX files, it is written in the user's manual of the microcontroller. (SH, RX, and R8C microcontrollers do not support HCUHEX files.)

For details, see the description on each feature in this manual. For details about the HCU, see the user's manual of the HCU or the target microcontroller. The HCU user's manual is available on the following website:

http://www.renesas.com/support/downloads/download\_results/ods/other/hcu\_gui.jsp

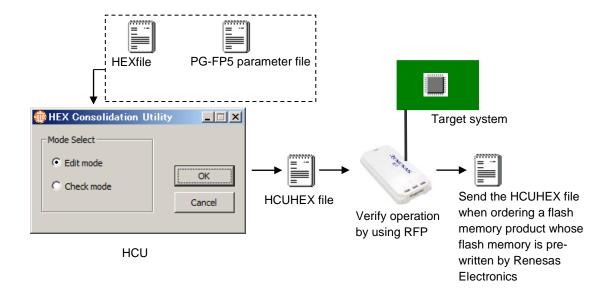

Figure 1-2. Example of Using RFP and HCUs

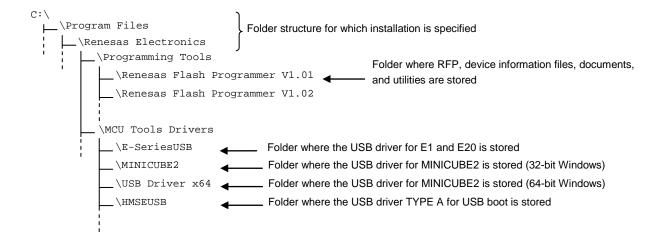

#### **CHAPTER 2 INSTALLATION**

This chapter describes installation.

#### 2.1 Installation

To install the product package (RFP, USB driver, and device information file), insert the CD into the host PC to start the installer. Install as instructed by the installer program.

After the product package is installed, the folders are organized as follows:

#### 2.1.1 Notes on installation

- (1) Multiple versions of RFP can be installed on a single host PC. Although we recommend using the latest version of any development tool, leaving a previous version on your host PC and then installing the latest version lets you easily switch the development environment. Note that the Vx.yy part of the version notation (Vx.yy.zz) reflects the ability to install multiple versions (installation of multiple versions with different Vx.yy parts is supported). When more than one version having the same Vx.yy is installed, the last version to be installed overwrites the previous version.
- (2) You might be asked to reboot your computer after installing the RFP. Be sure to close all other applications before rebooting your computer.
- (3) You must have administrator privileges to install the RFP.
- (4) The RFP can only be installed in a folder that is named using ASCII characters. (Note that the 11 characters / \* : < > ? | " \ ; , and character strings that begin and end with a space cannot be used.) The RFP might not operate correctly if installed in a folder that is named using other characters.
- (5) The RFP cannot be installed from a network drive or on a network drive.
- (6) The installer does not specify environment variable paths. If these paths are required, add them after installation.
- (7) The Microsoft .NET Framework and the Microsoft Visual C++ runtime libraries are required to run the installer. If the Microsoft .NET Framework or the Microsoft Visual C++ runtime libraries are not installed, the RFP will install them.
- (8) If you install the free evaluation version, make sure that your host PC is connected to the network before installing the program. If you wish to install the program on a host PC that is not connected to the network, first go to the Microsoft Download Center and install the Microsoft .NET Framework 4 before installing RFP.
- (9) The following folders created after installation (including the files under the folders) contain files required for the tools to operate. Do not delete them.
  - (Windows is the 32-bit edition and the system drive is C:)
  - C:\Program Files\Common Files\Renesas Electronics CubeSuite+\
  - (Windows is the 64-bit edition and the system drive is C:)
  - C:\Program Files (x86)\Common Files\Renesas Electronics CubeSuite+\
- (10) To change the folder of the installed tools, uninstall all the CS+ related software and the programming GUI for RFP, and install them again.
- (11) In the environment where the CS+, RFP, E1, E20, MINICUBE2 and USB driver for USB Boot are installed, the RFP, E1, E20, MINICUBE2 and USB driver for USB Boot are included in the target software of the CS+ integrated uninstaller. If you don't want to delete them, remove them from the uninstallation targets.
- (12) If the installer is started on a non-Japanese version of Windows, then if the path contains multi-byte characters it will cause an error, and the installer will not start.
- (13) If a CS+ instance launched via Rapid Start is in the notification area (system tray) during installation, the following error will appear. Exit the application, and run the installer again.

Figure 2-1 [Question (Q0140035)] Dialog Box

#### 2.2 Uninstallation

To uninstall the RFP package (RFP, USB driver, and device information file), use "Programs and Features" on the Control Panel. The CS+ integrated uninstaller can also be used to uninstall the RFP package.

## 2.3 Updating RFP and Firmware

The firmware is a program embedded in the microcontroller for controlling E1, E20, or MINICUBE2. Updating RFP and the firmware enables the following:

- · Addition of newly supported functions or microcontrollers
- · Correction of restrictions

For RFP and the firmware, use of the latest version is recommended to ensure correct operation of E1, E20, and MINICUBE2.

The latest version of the firmware for RFP and MINICUBE2, and MINICUBE2 Diagnostic Tools can be checked and obtained at the following websites:

- RFP
  - http://www.renesas.com/rfp
- MINICUBE2

http://www.renesas.com/minicube2

How to check the firmware version and configure and update your system are described below.

For the E1 and E20, check that the RFP has the correct versions of the E1 and E20 firmware. If the firmware does not match, the firmware will automatically be updated.

For MINICUBE2, see **MINICUBE2 Diagnostic Tools User's Manual (U18588E)** for how to check the firmware version, and configure and update your system.

#### CHAPTER 3 UNIQUE CODE EMBEDDING FUNCTION

This chapter explains the unique code embedding function.

#### 3.1 Overview

The unique code embedding function embeds a unique code in the specified area in the loaded program file. To enable this function, describe unique codes and a specified area in the unique code file and configure the setting in the [Unique code setting(U)] dialog box. A unique code file can specify one specified area and multiple unique codes. Each unique code has an index. When [Program] command or [Autoprocedure] command (for RL78, 78K, V850 only) finishes normally, the index is updated to the next index. When [Verify] command or [Checksum] command finishes normally, the index is not updated.

## 3.2 [Unique code setting] dialog box

This dialog box is used to configure the settings for a unique code (the enable/disable status of the unique code embedding function, definition file, start/end positions of the definition file, and the action when there is a conflict with the program file code).

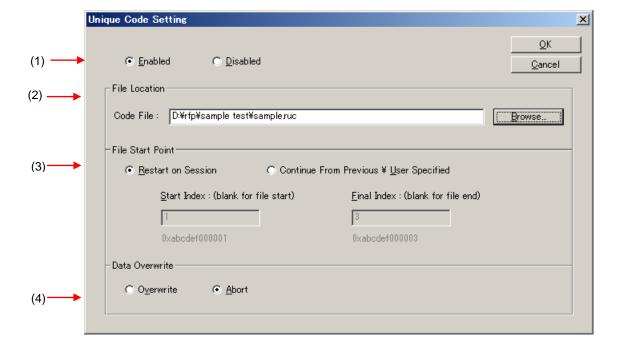

Figure 3-1. [Unique Code Setting] Dialog Box

## (1) [Enabled/ Disabled] option button

Specifies whether to enable/disable the unique code embedding function.

## (2) [File Location] area

Specifies the full path of the unique code file. Enter the file name in the [File name:] text box directly, or click the Browse... button and open the [Browse for folder] dialog box to specify the file.

#### (3) [File Start Point] area

Specifies the start/end positions for the indexes described in the unique code file.

[Start from the beginning of the file] option button

The lines from the first to the last are specified. When the RFP restarts, it starts at the first line.

[Start at the last position (start/end positions can be specified)] option button

Specifies the start/end positions. When the RFP restarts, it starts at the last position.

[Next position (blank if it is the beginning of the file)] box

The next position is displayed or specified. The unique code is displayed under the box.

[End position (blank if it is the end of the file)] box

The end position is displayed or specified. The unique code is displayed under the box.

#### (4) [Data Overwrite] area

Selects the action from the option buttons when data (other than FFh) exists in the area in the loaded program file where the unique code is to be embedded (that means a conflict exists). If [Overwrite] is selected, the unique code will overwrite. If [Abort] is selected, the error message is displayed and the command is aborted.

When the OK button is pressed, the settings are saved temporarily and the dialog box closes.

When the Cancel button or the X button is pressed, the settings are discarded and the dialog box closes.

## 3.3 Unique code file

This section describes a unique code file (file extension, file format, format and example).

## (1) File extension

\*.ruc

## (2) File format

File format: text format

Newline: CR + LF

The only supported character code is ASCII (one byte). Unicode (two bytes) is not supported.

## (3) Format

The first line :format
The second line :area
The third line :address
The fourth line :size

The fifth line :index data

The sixth line and after :index number and unique code

The lines starting with // are comment lines and will be skipped.

Caution: The index number should be incremented by 1.

## (4) Example

//Sample unique code file

format hex

area user flash

address 0xf000

size 6

index data

000001 abcdef000001

000002 abcdef000002

000003 abcdef000003

## 3.4 Unique code definition

This section describes the unique code definition described in a unique code file. The command interpreter is case-insensitive.

Table 3-1. Unique Code Definition

| Function                   | Unique code definition  |
|----------------------------|---|
|                            | Description   |
| Specify the format         | format <hex ascii=""  =""></hex>  |
|                            | Specifies the format of the unique code.  |
|                            | <hex>: hexadecimal format</hex>   |
|                            | <ascii>: ASCII format (0x21-0x7e)</ascii>   |
| Specify the area           | area <code 1="" 2="" area="" boot="" code="" data="" flash="" user=""  =""></code>                |
| : When the RH850 is used   | Specifies the area of the flash memory.   |
|                            | <code 1="" flash="">: Code area (BANK A)</code>   |
|                            | <code 2="" flash="">: Code area (BANK B)</code>   |
|                            | <data 1="" flash="">: Data area (BANK A)</data>   |
|                            | <data 2="" flash="">: Data area (BANK B)</data>   |
|                            | <user area="" boot="">: User boot area</user>   |
| Specify the area           | area <user boot="" data="" flash="" user=""  =""></user>  |
| : When the except RH850 is | Specifies the area of the flash memory.   |
| used                       | <user flash="">: User area</user>   |
|                            | <data flash="">: Data area</data>   |
|                            | <user boot="" flash="">: User boot area</user>  |
| Specify the address        | address <address></address>   |
|                            | Specifies the start address of the area where the unique code will be embedded.                   |
|                            | <filename>: hexadecimal format starting with "0x" or "H"</filename>                               |
| Specify the size           | size <size></size>  |
|                            | Specifies the size of the area where the unique code will be embedded.                            |
|                            | <size>: the size in bytes is specified (range: 1-2048, integer)</size>                            |
| Unique code declaration    | index data  |
|                            | Declares the unique code data starts at the next line.  |
| Index and unique code      | <index> <unique code=""></unique></index>   |
|                            | Specifies the Index and unique code. (Maximum: 17280)   |
|                            | <index> : the index is specified (range: 0-4294967295, integer)</index>                           |
|                            | <unique code="">: the unique code is specified (big endian format, with specified format</unique> |
|                            | and size)   |

#### CHAPTER 4 TROUBLESHOOTING

This chapter explains how to troubleshoot RFP.

Remark If an error occurs during the above procedure, see CHAPTER 4 TROUBLESHOOTING and APPENDIX A MESSAGES. Also see the user's manual of the tool used and execute diagnostic tests. If the above still does not resolve the problem, see the FAQ (at http://www.renesas.com/support/), or contact Renesas via the Renesas website: http://www.renesas.com/contact/.

#### Problems During Startup

This section explains how to troubleshoot problems that might occur in the process from installation to startup.

## (1) When the tool is connected to the host PC via a USB interface, the driver is not recognized by Plug and Play.

Cause:

The USB connector might not be inserted properly into the USB port of the host PC.

Check that the USB connector is fully inserted into the USB port of the host PC. Alternatively, disconnect the USB connector, and then insert the USB connector again after a while.

## (2) The USB driver file cannot be found at the specified location.

The USB driver might not have been installed normally.

Action:

See CHAPTER 2 RFP INSTALLATION and reinstall the USB driver.

#### (3) The tool is connected to the host PC but the power LED on the tool is not turned on.

The USB port of the tool or the host PC might have a defect.

Action:

Check a defect of the tool using the diagnostic tool for the tool used. If a defect is found, consider repair. If there is no defect, try connecting the tool to another host PC.

#### (4) The "Add New Hardware Wizard" screen appears when tool is connected with the host PC.

Cause:

If the USB connector of the tool is inserted into a port that differs from the one used during installation, the tool might be recognized as a new hardware item.

Action:

Select "Search for a suitable driver for my device (recommended)" and install the USB driver.

## 4.2 Problems During Operation

This section describes the troubleshooting for problems that may occur during operation.

**Remark** For causes and actions for the messages displayed in the internal error, fatal error, selection, and warning dialog boxes, and output panel, see **APPENDIX A MESSAGES**.

#### (1) One of the following errors is displayed on the output panel.

Error (E1000001): *E1/E20/MINICUBE2/COMx* communication time out. Error (E1000009): *E1/E20/MINICUBE2/COMx* communication error.

#### Cause 1:

The USB cable might not be connected properly or the USB driver might not have been installed normally.

#### Action 1:

See 4.1 Problems During Startup and take an appropriate action.

#### Cause 2:

The installed USB driver is not displayed in the Device Manager. Alternatively, the "!" or "x" is prefixed.

#### Action 2:

- <1> With RFP connected to the host PC, right-click the driver marked with the "!" or "x", and then click [Uninstall].
- <2> Execute [Scan for hardware changes] in the Device Manager.
- <3> Reinstall the USB driver by Plug and Play.

#### Cause 3:

The tool might not have been recognized (when connected via a USB hub).

#### Action 3:

Try the following:

- <1> Disconnect the USB cable and then reconnect it.
- <2> Connect the USB connector to another port on the USB hub.
- <3> If the above measures do not resolve the problem, do not use the USB hub but directly connect the USB connector to the USB port of the host PC main unit.

# (2) The following message is displayed in the output panel and the flash memory programming mode cannot be entered.

```
Error (E1002001): No response from Target Microcontroller (FLMD).
Error (E1002002): No response from Target Microcontroller (RESET).
Error (E1002003): No response from Target Microcontroller (FREQ).
```

#### Cause 1:

If MINICUBE2 is used, the mode select switch might be specified incorrectly.

#### Action 1:

Check the target microcontroller and the mode select switch setting.

#### Cause 2:

If MINICUBE2 is used, the 78K0-OCD board might be connected.

#### Action 2:

Remove the 78K0-OCD board.

#### Cause 3:

The connection between the target cable and target system might be wrong.

#### Action 3

<1> If 78K or V850 is used, connect the TxD and RxD signals from the target cable with TxD (SO) and RxD (SI) of the target microcontroller so that signal input/output are consistent.

Tool used Target microcontroller

TxD TxD (SO)

RxD RxD (SI)

<2> The signal lines used for programming must be isolated from other devices, using jumper switches or the like; otherwise, malfunction might occur.

## Cause 4:

The wrong microcontroller name might be selected in the [Create a new workspace] dialog box.

## Action 4:

Select the same name as that of the target microcontroller.

#### Cause 5:

No clock might be able to be supplied to the target microcontroller.

## Action 5:

- <1> Check if the settings in the [Supply Oscillator] dialog box are correct. For the correct settings, see the user's manual of the target microcontroller.
- <2> Check the clock supply on the target system.

## Cause 6:

Power might not be supplied normally to the target microcontroller.

#### Action 6:

- <1> Check the power supply setting.
- <2> Check that the power is supplied on the target system. If the power is supplied from the tool used, a power shortage might occur. In such a case, supply power from the target system.

## Cause 7:

For the RX, the I/O signal setting does not match the wiring of the target system.

#### Action 7:

Check if the settings in the [Mode Pin Settings] dialog match the wiring of the target system.

(3) The following message is displayed on the output panel and normal communication is not performed in the flash memory programming mode.

Error (E1002004) : Communication failure or timeout.

#### Cause 1:

The clock or power supply might not be stable.

#### Action 1:

Confirm that the clock or power is stably supplied on the target system.

#### Cause 2:

Communication might not be stable.

#### Action 2:

- <1> Check that there is no noise on the communication line.
- <2> Confirm that the tool used is properly connected with the target system.
- <3> Confirm that unused pins are properly handled.
- <4> Confirm that the correct clock and communication rate are selected. Stable programming might be achieved by setting a lower value for the clock or communication rate.

(4) When the RX is selected, the driver for USB boot is not recognized in the [Select USB Device] dialog box.

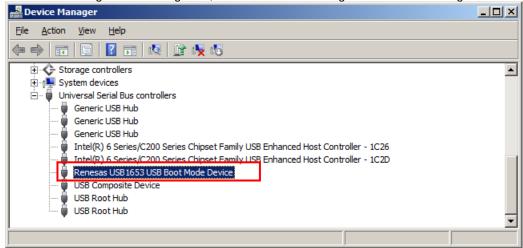

#### Cause:

A wrong driver may be recognized as the driver for USB boot. Normally "Generic Boot USB Direct" should be recognized.

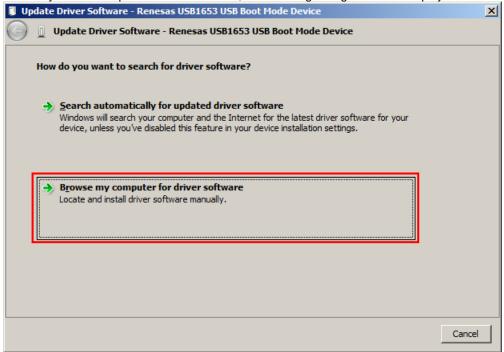

#### Action:

Install the correct driver in the following steps (Windows 7 is used in this example).

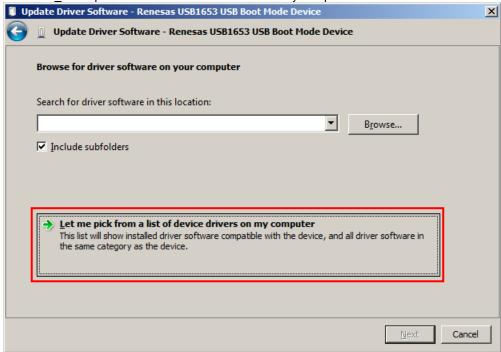

<1> When a wrong driver is recognized, Windows Device Manager shows the following state.

<2> When you select "Update Driver Software", the following dialog window is displayed.

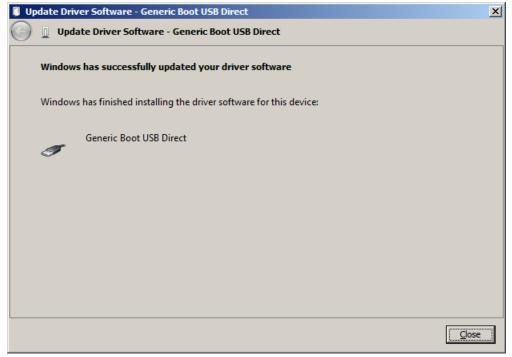

<3> Select "Let me pick from a list of device drivers on my computer".

<4> The dialog box below is shown. If "Generic Boot USB Direct" is not displayed, re-install the USB driver for the USB boot MCU Type A in the RFP installer. Select "Generic Boot USB Direct" and click the Next > button

<5> Installation of the driver for USB boot is finished.

## (5) When you forget the ID code of the RX. Or when a wrong ID code is entered.

#### Action:

Refer to the address in the program file to which the ID code was set. For details, refer to the user's manual of the target device.

When the control code for the ID code is set so that the entire erasure is performed after entering a wrong ID code three times consecutively, you can write in the flash memory after another entry into boot mode.

#### **CHAPTER 5 CAUTIONS**

This chapter describes cautions of RFP.

#### 5.1 Connecting Two or More E1s or E20s

Applies to: RX, RH850

The following restriction applies when two or more E1s or E20s are connected to a single host PC. If the USB cable is connected to or disconnected from an E1 or E20 or the power for an E20 is turned on or off during communication, the RFP may encounter a communications error or be terminated.

## 5.2 Manipulating the User Boot Mat

Applies to: RX610

If none of the valid ID codes has been set before a generic boot device is connected (i.e. the device is not protected), manipulation of the user boot mat gets disabled on completion of the connection. To enable manipulation of the user boot mat, set a valid ID code before connecting the generic boot device.

## 5.3 Mapping of Data Flash Memory

Applies to: V850

Mapping of data flash memory might differ according to whether the MCU is in normal operation or flash memory programming mode. Refer to the user's manual of the microcontroller for more information on mapping in the flash memory programming mode.

## 5.4 Host PC

Applies to: All microcontrollers

Some tools (E1, E20, MINICUBE2, serial interface, and USB interface) may not work with the host PC you are using. If this is the case, check the connection between the tool and the host PC. If the tool still does not work, you may need to use a different host PC.

## 5.5 USB-to-serial converter

Applies to: All microcontrollers

We do not recommend the use of a USB-to-serial converter because it may cause delays in timing and data being lost due to the specifications of the converter.

#### 5.6 Option-Setting Memory

Applies to: RX

If a program file includes valid data for any register in the the option-setting memory area, the option-setting memory is set. All bits in sections for which there are no data are filled with "1".

#### APPENDIX A MESSAGES

## A.1 Message Format

Messages are displayed in the internal error, fatal error, selection, and warning dialog boxes and on the output panel.

Figure A-1. Internal Error Dialog Box

Figure A-2. Fatal Error Dialog Box

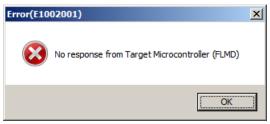

Figure A-3. Selection Dialog Box

Figure A-4. Warning Dialog Box

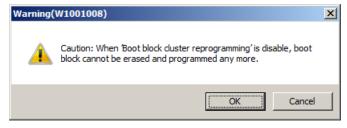

Figure A-5. Output Panel

# A.2 Messages Displayed in Internal Error, Fatal Error, Selection, and Warning Dialog Boxes - Common

(1/2)

| 04000000 | Manager        | Failed to mad the massacra DLI   |
|----------|----------------|--|
| C1090002 | Message        | Failed to read the necessary DLL.  |
|          | Action by user | Restart RFP. If this does not resolve the problem, reinstall RFP.                                      |
| E1011001 | Message        | Invalid Program File.  |
|          | Description    | This error is displayed when the program file is invalid. Make sure that the file format is            |
|          |                | supported and a valid program file has been specified.   |
| E1011002 | Message        | Unique code: a conflict occurs at 0xxxxx.  |
|          | Description    | This error is displayed when data already exists where the unique code is tried to be written.         |
| E1011003 | Message        | Unique code: invalid header (xxxx).  |
| E1011004 | Message        | Unique code: invalid area name (xxxx).   |
| E1011005 | Message        | Unique code: unique code address is outside the xxxx area.   |
| E1011006 | Message        | Unique code: unique code acquisition failed.   |
| E1012001 | Message        | Unrecognised code file syntax.   |
| E1012002 | Message        | The project information is not valid.  |
| E1091002 | Message        | Check whether the file or folder has been set to read-only.  |
|          | Description    | This error occurs when the program fails to save project information.                                  |
|          | Action by user | Make sure that the folder or file is not read-only.  |
| E1092005 | Message        | The project file is broken.  |
|          | Description    | This error occurs when the program fails to parse a file.  |
|          | Action by user | Specify a project file that is compatible with RFP.  |
| E1092007 | Message        | The project information cannot be restored.  |
|          | Description    | This error occurs when the program fails to restore or convert project information. It will also       |
|          |                | occur if the program fails to extract the structure of a project to copy. This error is also output if |
|          |                | a project file created by a newer RFP than the one currently used is selected.                         |
|          | Action by user | Specify a project file that is compatible with RFP.  |
| E1092008 | Message        | This is not a valid project file.  |
|          | Description    | This error occurs when the program fails to restore project information.                               |
|          | Action by user | Specify a project file that is compatible with RFP.  |
| E1092011 | Message        | The project information is invalid.  |
|          | Description    | This error occurs when the program fails to parse a file.  |
|          | Action by user | Specify a project file that is compatible with RFP.  |
| E1093001 | Message        | The specified file could not be opened.  |
|          | Description    | This error occurs when a file could not be opened.   |
|          | Action by user | Make sure that the file exists and is not corrupt.   |
|          |                | Check the access privileges to the file.   |
| E1091026 | Message        | Invalid workspace name.  |
|          | Description    | The characters <, >,  , :, *, ?,  /, and " cannot be used to specify workspace names.                  |
|          | Action by user | Remove the illegal character (<, >,  , :, *, ?,  /, or ") from the workspace name.                     |
| E1093002 | Message        | The project with the same name already exists.   |
|          | Description    | This error occurs if a project with the same name already exists in the currently opened               |
|          |                | workspace when a project is tried to be added in the Full mode.  |
|          | Action by user | Change the project name. Or, delete the existing project with the same name if necessary.              |
|          |                |  |

(2/2)

| E1093003 | Message        | A program file with the same name exists.  |
|----------|----------------|--|
|          | Description    | This error occurs if a program file with the same name already exists in the currently opened    |
|          |                | project when a program file is tried to be added in the Full mode.                               |
|          | Action by user | Change the program file name. Or, delete the existing program file with the same name if         |
|          |                | necessary.   |
| Q1091004 | Message        | File already exists. Overwrite?  |
|          | Description    | This message is used for various dialog boxes when the dialog box has a field to specify a       |
|          |                | filename.  |
|          | Action by user | [Yes]: The command is executed. The file is overwritten.   |
|          |                | [No]: The command is canceled. The file is not overwritten and the focus will be returned to the |
|          |                | original dialog box.   |
| W1011001 | Message        | Unique code: all data up to the last (Index xxxx) have been processed.                           |
| W1012001 | Message        | No code file specified.  |
| W1012002 | Message        | Start value exceeds End value.   |
| W1012003 | Message        | Please enable Unique Code Setting to drop files.   |
| W1012004 | Message        | Cannot load multiple dropped files.  |
| W1012005 | Message        | Code file size does not match data list size.  |
| W1012006 | Message        | Invalid Index.   |
| W1012007 | Message        | Specified code file does not exist   |

## A.3 Messages Displayed in Fatal Error, Selection, and Warning Dialog Boxes - RL78, 78K, V850 -

(1/4)

| E1000001  | Message        | E1/E20/MINICUBE2/COMx/USB Direct communication time out.  |
|-----------|----------------|---|
| _ 1000001 | moodago        | After being connected to E1/E20/MINICUBE2/COMx/USB Direct, communication was not                |
|           | Description    | established and the process timed out.  |
|           | Action by user | Make sure that the connection to E1/E20/MINICUBE2/COMx/USB Direct is properly set up.           |
| E1000002  | Message        | MINICUBE2 Firmware version too old.   |
|           | Description    | The MINICUBE2's firmware version might be outdated and unable to operate correctly.             |
|           | Action by user | Access the update service site, download the latest firmware, and update the utility.           |
| E1000003  | Message        | Program File not found.   |
|           | Description    | Program File was not loaded correctly.  |
|           | Action by user | Specify a Program File.   |
| E1000004  | Message        | Device Information File not found.  |
|           | Description    | The Device Information File was not loaded correctly.   |
|           | Action by user | Restart RFP. If this does not resolve the problem, reinstall RFP.                               |
| E1000005  | Message        | Programmer software already started.  |
| 21000000  | Description    | RFP might already be running, so execute the RFP command after terminating one of the           |
|           | Besonption     | RFPs.   |
| E1000006  | Message        | Related software already started.   |
|           | Action by user | A related tool (such as the self-diagnostics tool) might already be running, so execute the RFP |
|           |                | command after terminating the tool.   |
| E1000007  | Message        | Detection error by 78K0-OCD adapter board.  |
|           | Action by user | Please remove the 78K0-OCD board. It is connected but cannot successfully communicate           |
|           |                | with the target.  |
| E1000008  | Message        | Reading error of Flash Programming Tool information from Project file.                          |
|           | Description    | An error occurred when trying to open the specified project file.                               |
|           | Action by user | Specify a project file that is compatible with RFP.   |
| E1000009  | Message        | Unable to connect E1/E20/MINICUBE2/COMx/USB Direct.   |
|           | Description    | E1/E20/MINICUBE2/COMx Direct could not be connected.  |
|           | Action by user | Make sure that the connection to E1/E20/MINICUBE2/COMx/USB Direct is properly set up.           |
| E1001001  | Message        | Invalid Device Information File.  |
|           | Description    | The device information file might be invalid.   |
|           | Action by user | Restart RFP. If this does not resolve the problem, reinstall RFP.                               |
| E1001002  | Message        | Not supported Device Information File.  |
|           | Description    | There might be an unsupported device information file.  |
|           | Action by user | Access the Version-up Service website, download the latest firmware, and update the device      |
|           |                | information file by using the utility.  |
| E1001003  | Message        | Invalid Program File.   |
|           | Description    | The file format might be unsupported, or an invalid program file might have been specified.     |
|           | Action by user | Specify a correct program file.   |
| E1001004  | Message        | Device Information File not found.  |
|           | Description    | No device information file has been loaded.   |
|           | Action by user | - The project file cannot be read because the device information file has been changed.         |
|           |                | Create a new project file.  |
|           |                | - Restart RFP. If this does not resolve the problem, reinstall RFP.                             |

(2/4)

| E1001005 | Message        | Not specify Program File.   |
|----------|----------------|---|
|          | Description    | No program file has been loaded.  |
|          | Action by user | Specify a Program File.   |
| E1001006 | Message        | Illegal supply frequency setting  |
|          | Description    | The frequency specified to be supplied to the target microcontroller might be incorrect.          |
|          | Action by user | Check the frequency setting, and make sure that the correct clock frequency and                   |
|          |                | divider/multiplier values are set.  |
| E1001013 | Message        | Value is out of clock range   |
|          | Description    | The frequency set to be supplied to the target microcontroller is incorrect.                      |
|          | Action by user | See the microcontroller's manual, and set the correct clock frequency and divider/multiplier      |
|          |                | values.   |
| E1001014 | Message        | Can't Upload Read Data.   |
|          | Description    | Files cannot be saved while the read command is running. The program file might be                |
|          |                | inaccessible (e.g. in use by another program).  |
| E1001018 | Message        | Illegal setting data.   |
|          | Description    | The setting failed due to illegal (invalid) data.   |
|          | Action by user | Revise the setting.   |
| E1001019 | Message        | Error of reading the wireless registry.   |
|          | Description    | The registry key for the wireless unit (QB-MINI2-RF) might be corrupted or not exist.             |
|          | Action by user | Start the MINICUBE2 RF utility, and make the setting.   |
| E1001020 | Message        | The all flash options of a target microcontroller aren't able to read because a protection error  |
|          |                | occurs.   |
|          | Description    | This message appears when all Flash option settings could not be acquired, because a              |
|          |                | protection error occurred when executing the command to retrieve the Flash options.               |
| E1001021 | Message        | OCD Security ID setting is invalid.   |
|          | Description    | The value entered in OCD security ID is invalid.  |
|          | Action by user | Make sure that the number of characters and value entered are correct.                            |
| E1001022 | Message        | Option bytes setting is invalid.  |
|          | Description    | The value entered in OPBT is invalid.   |
|          | Action by user | Make sure that the number of characters and value entered are correct.                            |
| E1001024 | Message        | Value is out of Vdd range.  |
|          | Description    | An incorrect value has been specified for the power to be supplied to the target microcontroller. |
|          | Action by user | Specify a correct power supply value, referring to the user's manual of the microcontroller.      |
| E1001025 | Message        | HCUHEX file does not accord with flash range of target microcontroller.                           |
|          | Action by user | Specify a correct program file.   |
| E1001027 | Message        | An operation was canceled.  |
| E1002001 | Message        | No response from Target Microcontroller (FLMD).   |
|          | Description    | There might have been a problem switching to serial programming mode.                             |
|          |                | - Bad connection between utilizing tool and target microcontroller.                               |
|          |                | - The clock or power source is not supplied correctly.  |
|          |                | - Bad target microcontroller.   |

(3/4)

| E1002002 | Message        | No response from Target Microcontroller (RESET).  |
|----------|----------------|---|
|          | Description    | There might have been a problem switching to serial programming mode.                           |
|          |                | - Bad connection between utilizing tool and target microcontroller.                             |
|          |                | - The clock or power source is not supplied correctly.  |
|          |                | - Bad target microcontroller.   |
| E1002003 | Message        | No response from Target Microcontroller (FREQ).   |
|          | Description    | There might have been a problem switching to serial programming mode.                           |
|          |                | - Bad connection between utilizing tool and target microcontroller.                             |
|          |                | - The clock or power source is not supplied correctly.  |
|          |                | - Bad target microcontroller.   |
| E1002004 | Message        | Communication failure or timeout.   |
|          | Description    | There might have been a problem establishing normal communications after switching to           |
|          |                | serial programming mode.  |
|          |                | - The clock or power supply is unstable.  |
|          |                | - Bad target microcontroller.   |
|          |                | - There might be a fault in the communication port.   |
| E1002005 | Message        | Synchronization failure for baud rate.  |
|          | Action by user | See the microcontroller's manual, and select a supported baud rate.                             |
| E1002006 | Message        | Invalid Signature reading.  |
|          | Description    | The selected device information file does not match the target microcontroller.                 |
|          | Action by user | Specify a correct microcontroller.  |
| E1002007 | Message        | Invalid Device Information file version.  |
|          | Action by user | The level of the selected device information file might be outdated. Download the latest RFP.   |
| E1002008 | Message        | Not Blank.  |
|          | Action by user | Make sure all data is erased and memory is blank before programming to the flash memory.        |
| E1002009 | Message        | Erasing operation failed.   |
|          | Description    | There might have been an erase failure due to bad Flash memory.                                 |
| E1002010 | Message        | Programming operation failed.   |
|          | Description    | An area already containing data might have been overwritten with different data.                |
|          |                | There might have been a programming failure due to bad Flash memory.                            |
| E1002011 | Message        | Verifying operation failed.   |
|          | Description    | Different data might have been written to the program file and the target microcontroller.      |
|          |                | There might have been a verification failure caused by a lead fault due to bad Flash memory.    |
| E1002012 | Message        | Security flag setting failed.   |
|          | Description    | The security setting might have been changed from [Disabled] to [Enabled]. This setting only    |
|          |                | allows the chip to be erased. Some microcontrollers do not allow security settings to be added. |
|          |                | Erase the chip, and then perform all settings at once. There might have been a failure to       |
|          |                | configure security due to bad Flash memory.   |
| E1002013 | Message        | Protection by security setting.   |
|          | Description    | The specified command might have failed to execute because the security of the target           |
|          |                | microcontroller has already been configured. Although some security flags can be cleared by     |
|          |                | erasing with Chip mode, others cannot. See the microcontroller's manual for details.            |
| E1002014 | Message        | Check sum verification failed.  |
|          | Description    | The data programmed to the target microcontroller might be different from the program file.     |

(4/4)

| E1002015 Message   |                | Retry status over.   |  |  |
|--|----------------|--|--|--|
|  | Description    | The command operation has exceeded the specified number of retries. The microcontroller            |  |  |
|  |                | might be defective.  |  |  |
| E1002016   | Message        | Illegal status from Microcontroller.   |  |  |
|  | Description    | The status code returned from the microcontroller is invalid (not a designated code). There        |  |  |
|  |                | might be a runaway process. Check the operating environment, and try running the command           |  |  |
|  |                | again.   |  |  |
|  |                | The communication port might be unstable due to external factors.                                  |  |  |
| E1002018   | Message        | HEX file exceeds target device flash range.  |  |  |
|  | Description    | The address range of the downloaded program file exceeds the range specified for [Operation        |  |  |
|  |                | mode] in the [Target] category.  |  |  |
| E1009001   | Message        | Not Initialized.   |  |  |
|  | Description    | There might have been a failure to acquire working memory on startup, or a failure to start a      |  |  |
|  |                | thread process.  |  |  |
|  | Action by user | Try changing host PC and starting RFP again.   |  |  |
| E1009002   | Message        | Illegal parameter.   |  |  |
|  | Description    | There might have been a failure to perform normal control due to an unstable USB                   |  |  |
|  |                | communication port.  |  |  |
| E1009003   | Message        | Control failed. Please restart the Flash programming tool.   |  |  |
|  | Action by user | The tool used might be locked up. Disconnect the USB, and try connecting again.                    |  |  |
| E1009004   | Message        | Wait status timeout.   |  |  |
|  | Action by user | The microcontroller might be defective. Replace it with a good sample.                             |  |  |
| E1090001   | Message        | Unknown error occurred.  |  |  |
|  | Description    | Illegal processing was detected.   |  |  |
|  | Action by user | Restart RFP. If this does not resolve the problem, reinstall RFP.                                  |  |  |
| M1001027   | Message        | The security setting state of a target microcontroller is as follows.                              |  |  |
| Q1001015   | Message        | The security setting state of a target microcontroller is as follows. If you want to feedback them |  |  |
|  |                | to the Target Security Settings, press OK button.  |  |  |
| Q1001026   | Message        | Turn on the power source for the target again.   |  |  |
| W1000010   | Message        | Check the voltage applied to the target system   |  |  |
|  | Description    | USB VBUS (5 V) from the host PC is applied to the target system. Check if the voltage satisfies    |  |  |
|  |                | the specifications of the microcomputer  |  |  |
| W1001007   | Message        | Caution: When 'Chip Erase' is disable, chip cannot be erased and programmed any more.              |  |  |
|  | Description    | This warning message appears when the "CHIP erase protection" security flag is set, to warn        |  |  |
|  |                | the programmer that it will not be possible to clear a flag.                                       |  |  |
| W1001008   | Message        | Caution: When 'Boot block cluster reprogramming' is disable, boot block cannot be erased and       |  |  |
|  |                | programmed any more.   |  |  |
|  | Description    | This warning message appears when the "boot block area overwrite protection" security flag is      |  |  |
|  |                | set, to warn the programmer that it will not be possible to clear a flag.                          |  |  |
| W1001016   | Message        | Caution: The latest program file exists. Program file is forced to update.                         |  |  |
| W1001023 Message If Disable Block Erase is specified and a security command is executed, |                | If Disable Block Erase is specified and a security command is executed, the Security Release       |  |  |
|  |                | command cannot be executed and the target security setting cannot be cleared again.                |  |  |

## A.4 Messages Displayed in Fatal Error, Selection, and Warning Dialog Boxes - RX, RH850 -

(1/9)

| E1010001 Message The project information is not valid  |             | The project information is not valid   |  |  |  |
|--|-------------|--|--|--|--|
|  | Description | This error is displayed when the project file cannot be accessed. The file might be corrupted. |  |  |  |
|  |             | Remake the project file.   |  |  |  |
| E1010002   | Message     | Generic device query failed  |  |  |  |
|  | Description | This error is displayed when the device specification query fails for some reason. Make sure   |  |  |  |
| Description  This error is displayed when the device specification query fails that the settings for the RFP and the target board are correct. |             | that the settings for the RFP and the target board are correct.                                |  |  |  |
| E1010003   | Message     | Operation failed   |  |  |  |
|  | Description | This error is displayed when an operation fails in program, erase, check sum, or blank check.  |  |  |  |
| E1010004   | Message     | Lock failed  |  |  |  |
| E1010005   | Message     | Unlock failed  |  |  |  |
| E1010006   | Message     | Connect failed.  |  |  |  |
|  | Description | This error is displayed when connection to the microcontroller fails for some reason. Make     |  |  |  |
|  |             | sure that the settings for the RFP and the target board are correct.                           |  |  |  |
| E1010007   | Message     | One or more erase blocks are currently locked and cannot be erased:                            |  |  |  |
| E1010008   | Message     | Erase failed for xx (0xxxxx - 0xxxxx)  |  |  |  |
|  | Description | This error is displayed when erasing the indicated block failed.                               |  |  |  |
| E1010009   | Message     | One or more erase blocks are currently locked and cannot be written:                           |  |  |  |
| E1010011   | Message     | No data to compared  |  |  |  |
|  | Description | This error is displayed when the file to compare does not have any data in the ROM address     |  |  |  |
|  |             | area of the microcontroller.   |  |  |  |
| E1010012   | Message     | Verification Failed  |  |  |  |
|  | Description | This error is displayed when the data in the file to compare does not match the ROM data in    |  |  |  |
|  |             | the microcontroller.   |  |  |  |
| E1010013 Message Unable to verify.   |             | Unable to verify.  |  |  |  |
|  | Description | This error is displayed when the verify data cannot be read for some reason.                   |  |  |  |
| E1010014   | Message     | Operation aborted  |  |  |  |
| Description This error is displayed when the operation is aborted by the user manually.  |             | This error is displayed when the operation is aborted by the user manually.                    |  |  |  |
| E1010015   | Message     | Failed to save read data   |  |  |  |
|  | Description | This error is displayed when saving data failed. Make sure that the folder or file is not      |  |  |  |
|  |             | read-only.   |  |  |  |
| E1010016   | Message     | Upload failed  |  |  |  |
|  | Description | This error is displayed when data cannot be read from the ROM for some reason.                 |  |  |  |
| E1010017   | Message     | Invalid parameter  |  |  |  |
| E1010018   | Message     | Invalid command  |  |  |  |
| E1010019   | Message     | Option bytes setting is invalid  |  |  |  |
| E1010020   | Message     | Verify command failed for 0xXXXX - 0xXXXX  |  |  |  |
| E1010021   | Message     | The project information cannot be restored.  |  |  |  |
| E1010023   | Message     | Set OTP failed   |  |  |  |
| E1010024   | Message     | Failed to validate ICU   |  |  |  |

| E1014011*          | Message     | Changing baud rate - Checksum error  |  |
| E1014012*          | Message     | Changing baud rate - Unable to set baud rate error   |  |
|                    | Description | This error is the unable-to-set-baud-rate error (serial baud rate error too large) that occurs   |  |
|                    |             | when the baud rate is changed. In [Setting Clock], [Clock supply] and [Multiplier for the main   |  |
|                    |             | clock and peripheral clock] must be entered. The most frequently reported errors in those        |  |
|                    |             | settings are regarding the multiplier of the peripheral clock. For those clock settings, see the |  |
|                    |             | hardware manual of the microcontroller. Also, check the clock of your target board               |  |
| (microcontroller). |             | (migrocontroller)  |  |

(3/9)

| E1014013* Message Changing baud rate - Input clock error |             | Changing baud rate - Input clock error  |  |  |
|--|-------------|---|--|--|
|  | Description | This error is displayed when the input frequency setting in [Setting Clock] exceeds the   |  |  |
|  |             | operating range of the microcontroller. In [Device Setting], [Input clock], [Multiplier for the main  |  |  |
|  |             | clock], and [Multiplier for the peripheral clock] must be entered. The most frequently reported   |  |  |
|  |             | errors in those settings are regarding the multiplier of the peripheral clock. For those clock  |  |  |
|  |             | settings, see the hardware manual of the microcontroller. Also, check the clock of your target board (microcontroller).   |  |  |
| E1014014*  | Mossago     |   |  |  |
| E1014014   | Message     | Changing baud rate - Operating frequency error  |  |  |
|  | Description | This error is displayed when the clock setting does not meet the operating frequency  |  |  |
|  |             | specification of the microcontroller. Based on the input conditions (input frequency and multiplier) from the RFP, only a range check (calculation only) for operating frequency is |  |  |
|  |             | performed in the device side. Check the input conditions (input frequency and multiplier) of the  |  |  |
|  |             | RFP.  |  |  |
| E1014015*  | Message     | Changing baud rate - Invalid multiplication ratio error   |  |  |
| E1014016*  | Message     | Changing baud rate - Invalid response   |  |  |
| E1014017*  | Message     | Unable to set baud rate value xxxx bps  |  |  |
| E1014018*  | Message     | End of Setting Data - Erase error   |  |  |
|  | Description | This error is displayed when data erasure of the flash memory upon the startup of the   |  |  |
|  |             | microcontroller in the Boot mode was executed but failed. Possible causes of the error (failure   |  |  |
|  |             | to erase) include 1) Power supply voltage to the microcontroller is not applied properly (power   |  |  |
|  |             | supply from E1/power supply from the target board), 2) The microcontroller cannot operate   |  |  |
|  |             | properly because of the pin settings, and 3) The microcontroller has been damaged for some  |  |  |
|  |             | reason. Check the items 1) through 3) above.  |  |  |
| E1014019*  | Message     | End of Setting Data - Invalid response  |  |  |
|  | Description | This error is displayed when an invalid command is received in the state waiting for the data   |  |  |
|  |             | setting complete command. Check the product name of the microcontroller on the target board   |  |  |
|  |             | as well as the pin settings.  |  |  |
| E1014020*  | Message     | Checking ID Code - Checksum error   |  |  |
| E1014021* Message Checking ID Code - Invalid ID error    |             | Checking ID Code - Invalid ID error   |  |  |
|  | Description | This error is displayed when an ID code different from the one set in the microcontroller to be   |  |  |
|  |             | programmed is entered. The ID code is written to a specific address on the ROM. Check the   |  |  |
|  |             | value of the address of the written program. Operation is dependent on the control code. If you   |  |  |
|  |             | forgot the configured ID code, basically, you cannot read, write, or erase the microcontroller  |  |  |
|  |             | with a serial writer.   |  |  |

| E1014040* | Message     | Reading Data - Checksum error  |  |  |
| E1014041* | Message     | Reading Data - Address error   |  |  |
| E1014042* | Message     | Reading Data - Length error  |  |  |
| E1014043* | Message     | Reading Data - Invalid response  |  |  |
| E1014044* | Message     | Writing Data - Checksum error  |  |  |
| E1014045* | Message     | Writing Data - Address error   |  |  |
| E1014046* | Message     | Writing Data - Write error   |  |  |
|           | Description | This error is displayed when programming to the microcontroller cannot be done for some        |  |  |
|           |             | reason. It may be due to a wrong pin setting or power supply not being supplied to the         |  |  |
|           |             | microcontroller properly.  |  |  |
| E1014047* | Message     | Writing Data - Invalid response  |  |  |
| E1014048* | Message     | Read Checksum mismatch   |  |  |
| E1014049* | Message     | Checksum Read Error  |  |  |
|           | Description | This error is displayed when the sum of the response data of the sum check command is          |  |  |
|           |             | invalid. In the protocol of some microcontrollers, a sum code (1 byte) is added to ensure the  |  |  |
|           |             | integrity of the command data (no error if the sum of the command data and the sum code is 0   |  |  |
|           |             | [lower 1 byte]). This error means the sum of the response data (+ sum code) of the sum check   |  |  |
|           |             | command received from the device is not 0. A possible cause is that serial communication       |  |  |
|           |             | between the RFP and the microcontroller is unstable. Possible causes of unstable serial        |  |  |
|           |             | communication include improper handling of microcontroller pins (TxD/RxD pins not pulled up,   |  |  |
|           |             | wrong Vcl pin handling) and a long communication cable between the PC and                      |  |  |
|           |             | microcontroller (target).  |  |  |

| E1015006*         | Message     | Unable to transmit.   |  |  |  |  |
| E1015008*         | Message     | Invalid transmission buffers.   |  |  |  |  |
| E1015009*         | Message     | Unable to receive.  |  |  |  |  |
| E1015011*         | Message     | Unable to close comms.  |  |  |  |  |
|                   | Description | This error is displayed when the communication port cannot be recognized. Check the port  |  |  |  |  |
|                   |             | setting of your PC. Frequently reported cases of this error include: the PC has no RS232C port  |  |  |  |  |
|                   |             | and 1) a commercially-available USB-RS232C converter is used or 2) a self-made conversion   |  |  |  |  |
|                   |             | circuit (board) using a USB-serial conversion IC is used. In both above cases, communication  |  |  |  |  |
|                   |             | control timing is slightly slower because, unlike the case using a built-in RS-232 port on the  |  |  |  |  |
|                   |             | PC, the port is driven via USB, and timing adjustment between the RFP and the   |  |  |  |  |
|                   |             | microcontroller on the target board may not work properly. As a preventive measure, use a PC  |  |  |  |  |
|                   |             | equipped with a RS-232 port, or use an E1/E20 emulator that can be connected with a PC via USB.   |  |  |  |  |
| E1015012*         | Message     | Comms is already closed.  |  |  |  |  |
| E1015013*         | Message     | COMx connection timed out   |  |  |  |  |
|                   | Description | This error is displayed when a communication problem occurs between the microcontroller   |  |  |  |  |
|                   |             | and the RFP (PC) for some reason, resulting in a timeout. The RFP allows you to set a baud  |  |  |  |  |
|                   |             | rate, but communication cannot be done if the specified baud rate does not match the actual   |  |  |  |  |
|                   |             | setting of the target board (microcontroller). Check the following points. (This error may be   |  |  |  |  |
|                   |             | displayed along with "Generic device query failed.")  |  |  |  |  |
|                   |             | ■ Check the baud rate.  |  |  |  |  |
|                   |             | - Check the operating frequency of the microcontroller to see if the baud rate  |  |  |  |  |
|                   |             | exceeds the allowable communication rate and if the baud rate is appropriate.   |  |  |  |  |
|                   |             | ■ Check the clock setting.  |  |  |  |  |
|                   |             | - Check if the operating frequency of the microcontroller set in the RFP and the clock  |  |  |  |  |
|                   |             | of the target board (microcontroller) match.  |  |  |  |  |
|                   |             | ■ Check the connection between the target board (microcontroller) and the PC.   |  |  |  |  |
|                   |             | - Proper communication may not be expected when a USB-RS232C converter, a   |  |  |  |  |
|                   |             | self-made cable, or the like is used.   |  |  |  |  |
|                   |             | Data received from the microcontroller may be dropped.  |  |  |  |  |
|                   |             | ■Quit the software except RFP, or lower the baud rate.  |  |  |  |  |

(7/9)

| E1017023 | Message                | E1/E20 connection timed out.  |  |
|----------|------------------------|---|--|
|          | Description            | This error is displayed when a communication problem occurs between the microcontroller         |  |
|          |                        | and the RFP (PC) for some reason, resulting in a timeout. The RFP allows you to set a baud      |  |
|          |                        | rate, but communication cannot be done if the specified baud rate does not match the actual     |  |
|          |                        | setting of the target board (microcontroller). Check the following points. (This error may be   |  |
|          |                        | displayed along with "Generic device query failed.")  |  |
|          | ■ Check the baud rate. |   |  |
|          |                        | - Check the operating frequency of the microcontroller to see if the baud rate exceed           |  |
|          |                        | allowable communication rate and if the baud rate is appropriate.                               |  |
|          |                        | ■ Check the clock setting.  |  |
|          |                        | - Check if the operating frequency of the microcontroller set in the RFP and the clock of the   |  |
|          |                        | target board (microcontroller) match.   |  |
|          |                        | ■ Check the connection between the target board (microcontroller) and the PC.                   |  |
|          |                        | - Proper communication may not be expected when a self-made extension cable for                 |  |
|          |                        | connection with E1/E20** is used.   |  |
|          |                        | ** When E1/E20 is used, operation is not guaranteed if an extension cable or the like except an |  |
|          |                        | attached cable is used.   |  |
| E1017024 | Message                | Target is already powered.  |  |
| E1017025 | Message                | Target is not powered.  |  |
| E1017026 | Message                | Invalid MODEENTRY (xxxx).   |  |
| E1020001 | Message                | Unsupported command error   |  |

| E1020038 | Message | No response from the device.   |  |  |
| E1020039 | Message | Connection is failed. Click the back button. Please retry to connect to device.                  |  |  |
| E1020040 | Message | Fatal error!   |  |  |
| E1020041 | Message | Area error   |  |  |
| E1020042 | Message | Device type mismatch error   |  |  |
| Q1010001 | Message | The current user specified connection speed has an error rate above xxxx% on target device.      |  |  |
|          |         | Continue with this value anyway?   |  |  |
| Q1010002 | Message | RFP will now attempt to connect to your device. Please ensure the board is connected,            |  |  |
|          |         | powered and in Boot mode.  |  |  |
| Q1010003 | Message | The device reports one or more erase blocks are currently locked Should RFP temporarily          |  |  |
|          |         | disable this locking to allow erase and program?   |  |  |
| Q1010004 | Message | RFP will unlock some blocks, but this will require them to be erased. Continue?                  |  |  |
| Q1010005 | Message | xxxx file exceeds the flash ROM size of xxxx device. Continue download?                          |  |  |
| Q1010006 | Message | The User Boot Area is not blank. Continue?   |  |  |
| Q1010007 | Message | The current user specified connection speed has an error rate above xxxx% on emulator.           |  |  |
|          |         | Continue with this value anyway?   |  |  |
| Q1010008 | Message | Some blocks will need to be erased. Continue?  |  |  |
| Q1010009 | Message | The setting state of a target microcontroller is as follows. If you want to feedback them to the |  |  |
|          |         | project settings, press OK button.   |  |  |
| Q1010010 | Message | The current user specified connection speed is out of range. Continue with this value anyway?    |  |  |
| W1010001 | Message | Please enter a crystal frequency   |  |  |
| W1010002 | Message | The specified crystal frequency is out of range. Valid values are between xxxx and xxxx          |  |  |
| W1010004 | Message | The current user specified connection speed is out of range. The interface board is unable to    |  |  |
|          |         | communicate at this rate.  |  |  |
| W1010005 | Message | The current user specified connection speed is out of range. The device is unable to sync to     |  |  |
|          |         | this rate.   |  |  |
| W1010006 | Message | Timeout should be set between 1 to 50 seconds.   |  |  |
| W1010007 | Message | download xxxx file which exceeds the flash ROM size of xxxx device.                              |  |  |
| W1010008 | Message | The specified upload range exceeds the area address space and cannot be uploaded.                |  |  |
| W1010009 | Message | Values at index 0xXXXX not equal -> File Data 0xXXXX, Read 0xXXXX                                |  |  |
| 1 O. 1   |         |  |  |  |

(9/9)

| W1010010 | Message | The following file does not contain any data  |  |
|----------|---------|---|--|
|          |         | (or the data may be out of range of the device flash area): xxxx                    |  |
| W1010011 | Message | xxxx file exceeds the flash ROM size of xxxx device.                                |  |
| W1010012 | Message | Blocks which have been set as OTP should be set again at disconnect.                |  |
| W1010013 | Message | Blocks which will be written have not been selected.                                |  |
| W1010014 | Message | The communication speed has been changed to xxxx bps.                               |  |
| W1010015 | Message | If Disable Serial Program is set, RFP can not connect to the targete device again.  |  |
| W1010016 | Message | If Disable Erase is set, RFP can not remove this set.                               |  |
| W1010017 | Message | The device is set as ID Authentication mode. Please disconnect RFP form the device. |  |
