### 6.2 Media

Video Setup, please click "Video"

## 1) Video format

Support 50HZ(PAL) and 60HZ(NTSC), and Dial priority three formats.

## 2) Encode Protocot

Support H.264 and H.265 two formats.

## 3) Encode Level

Support baseline, mainprofile, highprofile

three formats.

## 4) Resolution

Main bit flow support 1920x1080,1280x720, minor bit flow support 640x360,320x180,the bigger resolution is, the clearer the image will be, more network bandwidth will be taken.

## 5) Bit Rate

User can assign bit flow/stream, normally speaking, the bigger bit flow is, the clearer the image will be. The bit allocation must combine with network bandwidth, when the network bandwidth is too narrow and the allocated bit flow is too big, will cause video signal flow not to be transmitted normally, the video effect will be worse.

## 6) Frame rate

User can specify the size of the frame rate, generally, the frame rate greater, the image more smooth; Frame rate is smaller, the more sense of beating.

## 7) I key frame interval:

Set interval between 2 I frame, the bigger interval is, the response will be lower from viewing window.

## 8) Bit Rate control

Code stream control way:

Constant bit rate: video coder will be coding

according to preset speed

Variable bit rate: video coder will adjust the speed based on preset speed to gain the best image quality.

## 9) Fluctuate level

Restrain the fluctuation magnitude of variable rate, grade  $1 \sim 6$
