

164 320 12 - UP12 OIL 12 V

164 320 13 - UP12 OIL 24 V

**ELETTROPOMPA AUTOADESCANTE PER TRAVASO
DI OLII LUBRIFICANTI O DI LIQUIDI VISCOSI**

**SELF PRIMING ELECTRIC PUMP
FOR TRANSFERRING LUBRICATING OILS
OR VISCOUS FLUIDS**

**AVVERTENZE D'USO
INSTRUCTIONS FOR USE**

PRODUCT DESCRIPTION

A

Self-priming electric particularly designed for the transfer of lubricating oils or viscous liquids (see chapter of exclusions), for discontinuous use.

The pumping elements are made up of bronze gear drives which can possibly even run dry for brief periods.

TECHNICAL DETAILS

B

CODICE	TIPO	VOLT	FUSIBILE	PORTATA	FLOW RATE	PESO	P.ZI x CART.
CODE	TYPE	VOLT	FUSE	ø 12 mm	ø 16 mm	WEIGHT	PCS x CART.
164 320 12	UP12/OIL	12	15 A	360 l/h	900 l/h	4,1 kg	6
164 320 13	UP12/OIL	24	7,5 A	360 l/h	900 l/h	4,1 kg	6

AMBIENT CONDITIONS

C

Ambient operating conditions:

Temperature: min. -10 °C / max. +60 °C **Relative humidity:** max. 90 %

Warning: the above indicated temperature ranges are applicable to all components of the pump and these limits must be respected in order to avoid any possible damage or malfunctioning.

ELECTRICAL CONNECTIONS

D

The electric pump must be connected to a source of direct current (either battery or transformer) with an amp rating of over 15A and 7,5A at nominal voltage of 12V and 24V respectively. The pump must be protected by a suitable rated fuse.

OPERATING CYCLE

E

The pump has been designed for discontinuous use. Under conditions of high operating pressures (eg. with closed or blocked outlet, excessive length of the delivery circuit and/or excessive pressure due to accessories), the pump can be subjected to elevated stresses and overheating and therefore should not be used for prolonged periods under such conditions.

APPLICATIONS

F

There are numerous fields of applications for the pump, however only exclusively with the allowed liquids mentioned:

- transfer of lubricating oil
- transfer of viscous liquids
- transfer of oils, antifreezing
- circulation of viscous liquids
- draining of engine sumps

G FLUIDS ALLOWED / NOT ALLOWED

ALLOWED:

FRESH WATER

ENGINE OIL AND NON-CORROSIVE VISCOUS LIQUIDS, max viscosity 85 cst

DIESEL FUEL, max temperature 80°C

NOT ALLOWED:

PETROL (GASOLINE)

FLAMMABLE LIQUIDS with PM < 55°C

FOODSTUFF LIQUIDS

CORROSIVE CHEMICAL PRODUCTS

SOLVENTS

RELATED DANGERS

FIRE EXPLOSION

FIRE EXPLOSION

FOODSTUFF LIQUID CONTAMINATION

PUMP CORROSION -

INJURY TO PERSONNEL

FIRE EXPLOSION

DAMAGE TO SEALS

H TRANSPORTATION AND HANDLING

Due to limited weight and dimensions the pump does not require the use of any special handling or lifting equipment. When handling manually, normal personal protective gear should be worn (safety shoes with toe piece, etc.)

The pump is carefully packed prior to shipment. Upon receiving, the pump packaging should be inspected for damages and the pump stored in a dry area.

I INSTALLATION

It is recommended that the use of the pump be according to normative safety standards and also as per the precautions listed below.

I-1 PACKAGING ENVIRONMENTAL DISPOSAL

The packing material does not require special disposal precautions, as it is not polluting or dangerous. The user is anyway invited to effect a proper waste separation, in order to facilitate the recycling of the materials of which the packing is composed.

I-2 PRELIMINARY CHECKS

Check that there has been no damage to the pump during transportation or storage. Both inlet and outlet ports should be carefully cleaned removing possible dust or residual packaging material. Verify that the available electrical power supply corresponds to the pump specification requirements.

I-3 POSITIONING OF THE PUMP

The pump can be mounted in any position. Fix the pump utilizing suitable screws corresponding to the antivibration mounts supplied with the pump.

WARNING: THE PUMP MOTOR IS NOT EXPLOSION PROOF. Do not install the pump where flammable vapours or gases may be present. Install the pump in an accessible place for inspection.

The pump is IP55 protection rated. It is good practice to avoid any pump contact with water splashes possibly causing water seepage into the motor with high risk of internal oxidation and/or short circuit.

TUBING CONNECTIONS

I-4

- Prior to making any tube/hose connections, check that the inlet ports have no end caps.
- Do not position the pump at a height greater than 2 m with respect to the minimum level of the fluid to be transferred. Pump damage may occur if this height is exceeded as the pump may not draw fluid. Make sure that the outlet tube is empty and without chokes.
- Avoid choking the inlet or outlet tubes so that pump efficiency is optimized. The use of an inlet filter is mandatory especially with fluids containing impurities (filter grid gauge 0,5mm). In this case frequent cleaning and maintenance of the filter is advisable. Utilize tubes and connection pieces that are resistant to the fluid types handled and avoid any possible environmental dispersion.

PUMP INSTALLATION

I-5

The electrical installation of the pump must include a protection fuse which is suitably rated as indicated on the motor label and sized with reference to the chosen point of application.

WARRANTY EXPIRES IF NO FUSE IS UTILIZED

Always mount the anti vibration rubber fittings supplied with the pump kit. Their usage ensures a consistent reduction in noise and vibration levels.

Electrical cabling size should depend on the distance between pump and battery power supply.

Up to 5 m length: 4 mmq

Over 5 m length: 6 mmq

The use of undersized cabling can cause overheating of the electrical wiring and subsequent fire hazard. There will also be a voltage drop at the motor terminals with a consequent reduction in efficiency.

The flow rate value indicated on the motor label is obtained with a 16 mm internal tube diameter. Tubes with inferior diameters will cause an increase in current with potential risk of motor overheating.

To ensure the correct directional flow of the fluid as indicated by the arrow on the top of the pump, it is necessary to connect the positive pole of the battery supply to the red wire (+) on the motor end-cap and the negative pole to the black wire (-). Electrical connections must be made using adequate terminal blocks and connectors ensuring a tight fitment of the electrical cables. Bad wiring can cause power losses and/or overheating of the cabling itself.

WARNING: it is the responsibility of the installation technician to ensure a correctly designed circuit installation fitted according to regulations. Environmental risks must be taken into account with the installation.

L

TROUBLESHOOTING

L-1 CHECK POINTS IF THE PUMP HAS STOPPED OR WILL NOT START

- Check the effectiveness of the battery power supply (voltage activity)
- Check if the fuse has blown
- Check for any foreign matter present in-between the pump gear drives. To do this, disconnect the power supply and unscrew the four fixing screws, remove the pump front cover plate and inspect the pump chamber. Replace the cover plate in the same initial position after inspection.
- Avoid running the pump dry for more than a few minutes. Pumps found defective that have run dry in the absence of fluid are not covered by warranty.
- The average life span of the motor commutator brushes is approximately 800/1000 hours under normal operating conditions. Stoppages are possible due to brush wear and tear after such a time period.

L-2

WHY THE PUMP WILL NOT PRIME ITSELF?

- The pump is fitted at a height greater than 2 m above the fluid level.
- The pump has run dry for too long a period
- Long periods of inactivity. In this case it is advisable to add liquid directly into the pump chamber before start-up. It is also advisable to add, before running the pump, a drop of lubricating oil inside the pump only.
- Air leak at the suction pipe due to the following reasons:
 - Possible cuts in the pipe, inadequate hose clamps, malfunctioning of the filter due to defective/worn seals or filter clogged.
- Air leak at the pump front plate cover due to the following reasons:
 - Loose fixing screws, poor effectiveness of the seal.
- Faulty electrical cable connections
- Presence of obstructions or restrictions in the suction or delivery pipes or the use of special devices(eg. automatic spray pistol or aqua-stop).
- Presence of liquid loops in the outlet tube.

L-3

GOOD PRACTICES ENSURING A WELL FUNCTIONING PUMP

No particular maintenance is required if the pump is utilized for the transfer of diesel fluids. If it is expected that the pump will not be used for a period of at least 30 days, especially in the case of usage with fresh or salty water, it is advisable to run fresh water through the pump and to then loosen the pump front plate screws.

Upon re-use, run the pump briefly (a few seconds) and then tighten the screws again. Check under conditions of maximum operating pressure that the motor current value is within the motor label specifications.

NORMAL MAINTENANCE

L-4

Check every month the pump chamber and keep clean from any foreign matter.
Check every month that electrical wiring is in good condition.
Every 800 hours of pump operation substitute the motor brushes.

INDICATORS THAT THE PUMP IS FUNCTIONING CORRECTLY

L-5

- Temperature of pump body and motor frame is within 60°C - 70°C
- Regular flow and constant pump noise levels
- Amp-draw within the limits indicated in the technical details.

TO OPEN THE PUMP

L-6

- It is recommended that a specialized service technician be consulted for any pump repair work or the replacement of worn out internal components, exclusively with original spare parts.
- During the warranty period, only by authorized Marco S.p.A. personnel, failing which the warranty will expire.

ENVIRONMENTAL DISPOSAL

M

For a correct disposal of the pump at the end of its life, contact the local waste disposal service. The proper waste separate collection helps avoiding possible negative effects on the environment and on everybody's health. It also facilitates the recycling of the materials of which the product is composed.

WARRANTY

N

- 1) The Warranty period is 2 years from date of purchase on production of the appropriate sales invoice.
- 2) Should the original sales invoice not be available, then the 2 year warranty period will be valid from date of production.
- 3) The Warranty becomes null and void in the case of incorrect utilization or disregard of the instructions contained herein.
- 4) The Warranty only covers original production defects.
- 5) The Warranty does not cover any related installation costs involved.
- 6) Transport costs are refundable only in the case where warranty has been duly recognized and accepted by Marco Spa. These costs will be limited to the actual shipment costs between Marco Spa warehouse and the client's delivery address.
- 7) No credit notes or replacement items will be issued prior to the receipt and proper testing of any Marco goods that are deemed faulty.
