Notes for using Adobe Acrobat

When scanning a paper document and converting the image to PDF using Adobe Acrobat, unexpected images may be output when:

1. Setting "Edge Shadow Removal" in Acrobat, and setting "Digital Endorser" or "Black Background" options in the TWAIN driver at the same time. Letter strings embedded in the image or the background may be missed.

Solution 1: Set "Edge Shadow Removal" to "OFF" or set any option other than "Adaptive" for "Color/Grayscale" and/or "Monochrome" under "Compression" by selecting [File]⇒[Create PDF]⇒[From Scanner]⇒[Optimization Options] in Acrobat.

Solution 2: Adjust the scanning density in the TWAIN driver.

2. Setting "Adaptive" for "Color/Grayscale" and/or "Monochrome" under "Compression" in Acrobat and scanning in a resolution lower than the resolution recommended for Acrobat.

Solution: Set OPTION to something other than "Adaptive" under "Compression."

3. Scanning a document longer than the double letter (11x17) or A3 size, when setting "Overscan" in the TWAIN driver, the scan may fail.

Solution: When scanning a double letter (11x17) or A3 size of document, do not set "Overscan" in TWAIN driver.

*As for detailed usage and information on Acrobat, refer to "Create a PDF file from a scanned document" in Acrobat Help.

	Are the AC cable and AC adapter properly connected to the scanner?	Correctly connect the AC cable and the AC adapter. Disconnect the AC cable and the AC adapter from the scanner, then connect them again. If this does not restore the power supply, contact the store where you purchased the scanner or an authorized FUJITSU scanner service provider.
	Is Windows normally started up?	Push the power button again after completely starting up Windows.
Scanning does not start.	Are the documents loaded correctly on the ADF paper chute?	Load the document correctly on ADF paper chute.

	Does the Function Number Display indicates an alarm or an error?	When the Function Number Display indicates an alarm or an error, refer to chapter 6 "Troubleshooting" of "fi-6130/fi-6230 Operator's Guide" for removing the alarm or the error.
	Does the alarm state remain displayed even after the scanner has been turned off and back on again?	Turn off and on the power button. If this does not eliminate the alarm state, contact the store where you purchased the scanner or an authorized FUJITSU scanner service provider.

Appendix2 DAILY CARE

When operating the scanner, the ADF's inside glass becomes very hot.

Before you clean inside the scanner, turn off its power and unplug the AC adapter from the outlet. Wait for at least 15 minutes.

Turn on the scanner when you clean the Feed rollers or Eject rollers.

Do not use any aerosol sprays or alcohol based sprays to clean the scanner.

Dust blown up by strong air from the spray may enter the inside of the scanner. This may cause the scanner to fail or malfunction.

Sparks, caused by static electricity, generated when blowing off dust and dirt from the outside of the scanner may cause a fire.

■ Cleaning Materials

Cleaning Materials	Parts Number	Remarks
Cleaner F1	PA03950-0352	1 bottle Moisten the cloth with this fluid and wipe the scanner clean. (*1)
Cleaning wipe	PA03950-0419	24 sheets per pack (*1)(*2)
Lint-free dry cloth	- Commercially available one	

*1: For details about the cleaning materials, contact the FUJITSU scanner dealer where you purchased the scanner.

*2: Pre-moistened with Cleaner F1, Cleaning Wipes are used instead of moistened cloths.

■ Cleaning Method

The ADF must be cleaned with a lint-free cloth moistened with the Cleaner F1.

It may take long before the cleaner vaporizes if a large quantity is used. When cleaning the scanner parts, dampen a cloth with modest quantities of the cleaner. In addition, wipe off the cleaner completely with a soft lint-free cloth to leave no residue on the surface of the cleaned parts.

■ Locations and Cycle for Cleaning

Part to clean	Standard Cleaning Cycle
Brake Roller	Clean these parts after every 5,000 sheets.
Pick roller	
Feed rollers	
Plastic rollers	
Eject rollers	
Glass	

The scanner must be cleaned more frequently if you scan any of the following type of sheets:

- Documents of coated paper
- Documents that are almost completely covered with printed text or graphics
- Chemically treated documents such as carbonless paper
- Documents containing a large amount of calcium carbonate
- Documents written by pencil
- Documents on which the toner is not fused sufficiently.

For details on cleaning the ADF, refer to section 4.3 "Cleaning the ADF" of "fi-6130/fi-6230 Operator's Guide" on the Setup CD-ROM.

Appendix3 REPLACING CONSUMABLES

During its operation, the inside glass of the ADF becomes very hot.

Before replacing the consumables, turn its power off and unplug the AC adapter from the outlet. Wait at least 15 minutes.

■ Consumables and Replacement Cycles

The followings are the specifications of consumables and their recommended replacement cycles.

Description	Parts No.	Standard Replacement Cycle
Brake roller	PA03540-0001	After 200,000 sheets or one year
Pick roller	PA03540-0002	After 200,000 sheets or one year

To purchase consumables, contact the store where you purchased the scanner or an authorized FUJITSU scanner service provider.

The replacement cycles above are rough guidelines when using A4/Letter woodfree or wood containing paper 64 g/m² (17 lb). This cycle varies according to the type of the paper used and how frequently the scanner is used and cleaned.

Use only the designated consumables.

The following illustrations show the locations of the consumables. For details, refer to chapter 5 "REPLACING CONSUMABLES" of "fi-6130/fi-6230 Operator's Guide" on the Setup CD-ROM.
