## Insert the SIM and memory cards

Make sure the phone is switched off.

1. At the top of the phone, put your fingernails in the seam between the screen frame and the back cover. Do not use any sharp tools, as they may damage the phone.
2. Place your thumb in the middle of the back cover and bend the cover to remove it.

**Tip:** For best performance, it is recommended that you use a fast 4–128GB memory card by a well-known manufacturer.

### Replace the battery and back cover

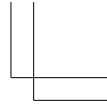

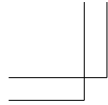

1. Line up the battery contacts, and put the battery in.
2. Press the bottom edge of the back cover against the bottom edge of your phone, and snap the cover into place.

#### Certification information (SAR)

**This mobile device meets international guidelines for exposure to radio waves.**

Your mobile device is a radio transmitter and receiver. It is designed not to exceed the limits for exposure to radio waves (radio frequency electromagnetic fields), recommended by international guidelines from the independent scientific organization ICNIRP. These guidelines incorporate substantial safety margins that are intended to assure the protection of all persons regardless of age and health. The exposure guidelines are based on the Specific Absorption Rate (SAR), which is an expression of the amount of radio frequency (RF) power deposited in the head or body when the device is transmitting. The ICNIRP SAR limit for mobile devices is 2.0 W/kg averaged over 10 grams of tissue.

SAR tests are carried out with the device in standard operating positions, transmitting at its highest certified power level, in all its frequency bands. The maximum recorded SAR values for this device are:

	Maximum SAR value	Frequency bands used when Maximum SAR value was recorded
When held against the head	1.09 W/kg over 10g	4-slot GPRS 900 and WLAN 2450
When operated at a separation distance of 1.5 centimetres (5/8 inch) from the body	1.19 W/kg over 10g	4-slot GPRS 900 and WLAN 2450

This device meets RF exposure guidelines when used against the head or when positioned at least 1.5 centimetres (5/8 inch) away from the body. When a carry case, belt clip or other form of device holder is used for body-worn operation, it should not contain metal and should provide at least the above stated separation distance from the body. To send data or messages, a good connection to the network is needed. Sending may be delayed until such a connection is available. Follow the separation distance instructions until the sending is finished.

During general use, the SAR values are usually well below the values stated above. This is because, for purposes of system efficiency and to minimise interference on the network, the operating power of your mobile is automatically decreased when full power is not needed for the call. The lower the power output, the lower the SAR value.

Device models may have different versions and more than one value. Component and design changes may occur over time and some changes could affect SAR values. The latest available SAR information for this and other Nokia device models can be found at [www.nokia.com/sar](http://www.nokia.com/sar).

For more info, go to [www.sar-tick.com](http://www.sar-tick.com). Note that mobile devices may be transmitting even if you are not making a voice call.

The World Health Organization (WHO) has stated that current scientific information does not indicate the need for any special precautions when using mobile devices. If you are interested in reducing your exposure, they recommend you limit your usage or use a hands-free kit to keep the device away from your head and body.

For more information and explanations and discussions on RF exposure, go to the WHO website at [www.who.int/peh-emf/en](http://www.who.int/peh-emf/en).

### Original accessories

For availability of approved accessories, check with your dealer. An extensive range of accessories is available for your device. For more details, see [www.nokia.com/accessories](http://www.nokia.com/accessories).

#### Practical rules about accessories

- Keep all accessories out of the reach of small children.
- When you disconnect the power cord of any accessory, grasp and pull the plug, not the cord.
- Check regularly that accessories installed in a vehicle are mounted and are operating properly.
- Installation of any complex car accessories must be made by qualified personnel only.

#### Battery

Type: BL-5J

Talk time:

Up to 10 hours (WCDMA) / 13.4 hours (GSM).

Standby:

Up to 22 days.

**Important:** Battery talk and standby times are estimates only.

Actual battery talk and standby times depend on SIM cards, features used, battery age and condition, temperatures to which battery is exposed, network conditions, and many other factors, and may be significantly shorter than those specified above. Ringing tones, hands free call handling, use in digital mode, and other features will also consume the battery, and the amount of time a device is used for calls will affect its stand-by time. Likewise, the amount of time that the device is turned on and in the standby mode will affect its talk time.
