2.6 Pre-installed Windows CE Resources Function and the External Test

Wince system used to test players mp3, network, and the use of USB, SD cards use a variety of common services procedures.

Please follow the chapter "program to install and update the system" to download you need programmer wince image file (this example burning wrote NK_N35.bin).

WINCE system restart after a Windows XP style interface, as shown below.

2.6.1 Button Test

Driver Position: Driver button is located in the BSP (SMDK2440 folder) in the .:

SMDK2440\DRIVERS\Userkey

Description: Development board of six key USB keyboard can simulate the upper and lower, left, right, enter and shift the focus of key "TAB", the system is activated, do not need to launch any program to open it, their relationship is as follows:

- K1 TAB
- K2 UP
- K3 ENTER
- K4 DOWN
- K5 LEFT
- K6 RIGHT

On the desktop, press K1 key, the focus shifted to the desktop icon, the icon will appear around the empty box, figure.

The "Recycle Bin", this time around by the upper and lower key, the focus shifted to other icons, such as "my device", figure:

Venus Supply Co., Ltd. 196/1, Soi Thedsaban-Nimit-Nau 8, Thedsaban-Nimit-Nau Road, Ladyao, Chatuchak, Bangkok, 10900, Thailand Tel. +(66)2954-2408 , Fax. +(66)2953-8443, Website: www.thaieasyelec.com

Enable Your Design ThaiEasyElec.com

文件 编辑 查看 转到 × P . Application FriendlyARM Data My **Program Files** Documents Windows Temp 🛛 我的设备 17:03 🎔

Press the "Enter" key, or K3, can open a window:

2.6.2 LED Test

System Startup, click on the desktop to run the "QQ2440 test" Open LED test procedure,

in Figure:

Click the process button, can control the development of the four on-board LED's light

and out.

2.6.3 Screen Rotation Test

Description: screen rotation driver has been shifting in the LCD driver, it does not require special hardware support pure software implementation, so no need to separate the other driver.

LCD driver location: SMDK2440\DRIVERS\DISPLAY

System Startup, click to run the desktop "screen rotation", run the interface, like the left figure below, click on the "spin" button, the screen will, counter-clockwise 90 degrees, such as the bottom right.

We can also use the same method to test COM3; this is not explained in detail.

2.6.5 How to use the USB

Used in wince using the standard USB and USB windows use similar systems, when activated after WINCE, insert the USB Host USB interface, this board to the USB power supply, USB light flashes, wait a few seconds the system since USB dynamic load, and then doubleclick the desktop to the "My Computer" icon, open the Resource Manager, you can see the USB Letter: the hard disk, as shown in fig.

Double-click the hard disk can read and write access to the USB data.

2.6.6 How to use SD/MMC Card

Description: The development board using the SD card driver from the Samsung's public boards, only the driver dll files, not source code.

The SD/MMC card inserted into the SD slot on the board, the resource manager can be seen on the SD card drive letter: Storage Card, double-click to open access to the directory; you can on the SD/MMC card read and write.

2.6.7 Use Windows Media Player to play mp3

Double-click the desktop to open the Media Player icon Windows Media Player emerging players, the following chart, Point File-> Open the basis of tips to find the mp3 player you want to file so that you can like in the PC Windows in the same broadcast put mp3 files, and another player, Media Player can play WMV video file format, your own testing.

FriendlyARM English User Manual 172 Rev.01 (20090909)

2.6.8 Use Super Player, SD card playback mpeg4 movie

Super player in Windows Mobile is frequently used for a media player, which is similar to our regular the use of the computer's "audio-visual Storm" player, we are now integrated into it, you can use it in the 3.5-inch screen fluent in a variety of formats of media player software, such as mpeg2, mov, avi and other formats.

Double-click to run on the desktop to open a "super player", as in the figure below, at "File > Open File ..." the election optional you need to play the movie file, the next plan is to play the video shots.

2.6.12 Web Server Testing

We configured the system to boot WINCE will start the http service, known as web server, this when Internet access lines, the PC in your browser development board, enter the IP address, the server can see the target board to provide a simple page, which shows that the services have been launched.

2.6.13 Touchscreen Calibration

WINCE system you are using a touchscreen may be not very accurate, when you connect USB mouse, point to Start > Settings > Control Panel, find "stylus" icon, double-click to open "Stylus Properties" window, point "calibration" tab of the "re-calibration" button to begin re-calibration.

oitor

According to the system prompt, use the five-point calibration method to start using touch pen calibration, calibration has finished, it will jump out the window as follows, At this time the location of any point to return to a "Stylus Properties" window, point of "OK" to save.

If you want to save the calibration parameters, please point "Start -> hang", and then restart it.

FriendlyARM English User Manual 179 Rev.01 (20090909)

2.6.14 Use the ActiveSync Synchronization to USB Communications

Note: the installation of sync when connected to USB drive, use the CD-ROM in the "\windows platform tools\CE USB driver" using the same step we assume that you have 9.3 installed in accordance with the driver and ActiveSync synchronization software.

By default, when activated after WINCE system, USB Device connectivity and settings have been doing a good job, and this can be directly connected with USB development board and PC, you can see a successful connection is as follows:
