

SHIFT

User Manual
DIGITAL VAPOR HOOKAH

Thanks for choosing Shift by EHUQA - the original digital vapor hookah. Excellent choice. However, to get the most out of this product and ensure long lasting use, please read this entire manual carefully.

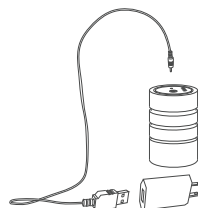

Parts Breakdown

- 1.Shift Digital Vaporizer (x1)
- 2.Refillable Vapor Pods (x4)
- 3.USB Charging Cord (x1)
- 4.Wall adapter for USB Charging Cord (x1)
- 5.User Manual (x1)

First Use / Charging Notes

- 1.Before First Use, you should charge the battery for about 8 hours for optimal battery life in the future.
- 2.To charge the *Shift*, attach the thin cylindrical plug into the small matching socket at the top of the Shift near the LED lights. Attach the other side (USB) to a power source. We recommend the included wall charger. Allow it to charge for 8 hours before first use.

- 3.You will notice 4 blue lights at the top - each blue light represents about 25% of battery life, so that 4 blue bars represents full battery life. For best use, you should always have at least 2 blue lights worth of charge.
- 4.When refilling vapor pods, use only EHUQA brand or approved liquid for maximum performance and to guarantee your warranty. Using other blends of liquid, not made specifically for the *Shift*, may not perform correctly and can cause damage to your vapor pods.

Filling your Shift Vapor Pods / Shift Assembly

- 1.Looking at the Vapor Pods, you will notice one end has a hole. This is the side to unscrew.

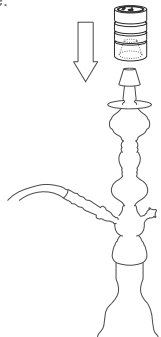

2. Using EHUQA *Digital Hookah Liquid*, fill the Pod along the side, avoiding the very center. Ideally, you should only fill until about 80% of the pod is full, leaving some room for air.

3. Fill and Re-Attach the screw top of TWO Vapor Pods.
4. Find the seam in the *Shift's* Body, and while holding both ends, unscrew the metal body in two.
- 5.Place the two Vapor Pods, filled at 80%, inside the two open slots - with the HOLES facing YOU.
6. Replace and reattach the bottom of the *Shift's* cylinder body, so that the direction of the hole on the base of the *Shift* unit is aligned and facing the same way as the holes on the Vapor Pods.

How to use the Shift Digital Hookah

- 1.Place the now assembled *Shift* on top of the hookah of your choice.

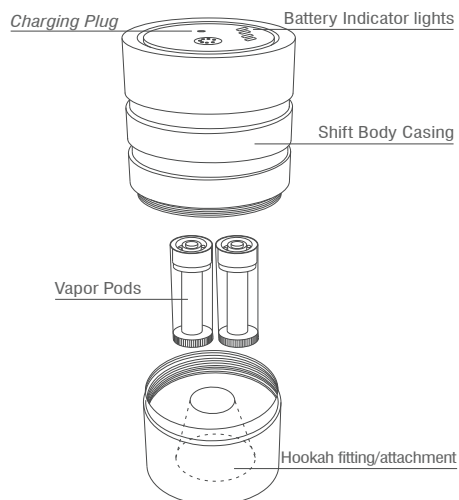

2. Using the included sealing rings (if needed), make sure the cylinder connector at the head of your hookah and the bottom of the *Shift* are connected tightly, letting no air through the sides.

3. Making sure all connections in the system are air tight, you can begin to puff on the hose of your hookah as you normally would. The air pressure sensor in the *Shift* unit will turn on and begin to prime the Vapor Pods. After 2-3 "warm up puffs" the system will be ready.

4. **Enjoy!**

Maintenance and Usage Notes

- 1.Remember to make sure to never wet the electrical system or battery within the *Shift* unit.
- 2.Airflow is absolutely critical to the function of the Shift. Make sure you're never blocking an air passage way or restricting the flow of air.
- 3.The seal ring diameter of the *Shift* is 17mm.
- 4.Remember to charge and fully discharge the battery between uses for optimal battery life.
- 5.If you encounter an issue or defect with your *Shift* unit CONTACT EHUQA - do not return to the store you bought it from.
- 6.Use only as directed with the products recommended. Deviations of usage can cause your warranty to be voided.
