Features

- High-quality Full HD (1080P) real-time monitoring, up to 60 fps. (SNC-VB635/VB630/VM630/VM631/VM632R)
- High-quality Full HD (1080P) real-time monitoring, up to 30 fps. (SNC-XM637/XM636/XM632)
- High-quality SXGA (1280 × 1024) live images from camera can be monitored at a maximum frame rate of 60 fps. (SNC-VB635/VB630/VB600/VM630/VM600/VM631/VM601/VM632R/VM602R)
- High-quality HD (720P) real-time monitoring, up to 30 fps. (SNC-CX600W/CX600)
- Exmor CMOS sensor enables high-quality images for streaming.
- Wide dynamic range (View-DR) and Visibility Enhancer enable clearer images for streaming in the high contrast environment.
- NR (XDNR) enables clearer images for streaming in the low lightness environment.
- Two video compression modes (video codecs) JPEG/H.264 are supported.
- The maximum triple codec mode is available.
- Easy Focus enables easier focus adjustment when it is installed. (Except SNC-EB630B/EB600B/XM637/XM636/XM632/CX600W/CX600)
- “Edge Storage” for recording of video or audio signal based on alarm detection (such as network block), and same protocol real-time image streaming. (SNC-VB635/VB630/VB600/VB600B/VM630/VM600/VM600B/VM631/VM601/VM632R/VM602R/VM637/XM636/XM632)
- Motion detection, passive infrared motion sensor (SNC-CX600W/CX600) and camera tampering detection functions.
- Up to 20 users (SNC-CX600W/CX600: five users) can view images from one camera at the same time.
- Date/time can be superimposed on the image.
- PoE (Power over Ethernet) compliant. (except SNC-CX600W)
- The recorded movie in the memory card can be played, saved, or deleted by using the browser. (SNC-VB635/VB630/VB600/VB600B/VM630/VM600/VM600B/VM631/VM601/VM601B/VM632R/VM602R/XM637/XM636/XM632/CX600W/CX600)
- The camera image can be sent by using Wi-Fi. (SNC-CX600W)

How to Use This User's Guide

This User's Guide explains how to operate the Network Camera from a computer.

The User's Guide is designed to be read on the computer display.

This section gives tips on making the most of the User's Guide. Read it before you operate the camera.

Jumping to a related page

When you read the User's Guide on the computer display, you can click on a sentence to jump to a related page.

Software display examples

Note that the displays shown in the User's Guide are explanatory examples. Some displays may be different from the ones that appear in actual use.

The illustrations of the camera and menu display in the User's Guide show the SNC-VB600 as an example.

Printing the User's Guide

Depending on your system, certain displays or illustrations in the User's Guide, when printed out, may differ from those that appear on your screen.

Installation Manual (printed matter)

The supplied Installation Manual describes the names and functions of parts and controls of the Network Camera, connection examples, and how to set up the camera. Be sure to read the Installation Manual before hand.

System Requirements

The following computer environment is necessary for the computer to display images and the controls of the camera.

(Apr 2014)

Common

OS

Microsoft Windows XP, Windows Vista (32-bit version only), Windows 7 (32-bit version, 64-bit version), Windows 8 Pro (32-bit version, 64-bit version)*, Windows 8.1 Pro (32-bit version, 64-bit version)*

Authorized editions:

Windows XP: Professional

Windows Vista: Ultimate, Business

Windows 7: Ultimate, Professional

Windows 8: Pro

Windows 8.1: Pro

Microsoft DirectX 9.0c or higher

Web Browser

Windows Internet Explorer Ver. 7.0, Ver. 8.0, Ver. 9.0, Ver. 10.0*, Ver.11.0*

Firefox Ver.19.0

Safari Ver.5.1

Google Chrome Ver.25.0

CPU

Intel Core i7, 2.8 GHz or higher

Intel Core2 Duo, 2.13 GHz or higher (SNC-CX600W/CX600)

Memory

2 GB or more

Display

1600 × 1200 pixels or higher

* In case of Windows 8 or Windows 8.1, use the Internet Explorer desktop user interface (desktop UI) edition.

** High framerate mode: Monitoring maximum 60 frames

Accessing the Camera Using the Web Browser

After the IP address has been assigned to the camera, check that you can actually access the camera using the Web browser installed on your computer.

- 1 Start the Web browser on the computer and type the IP address of the camera in the URL address bar.

The live viewer window is displayed.

Display sample

Note

- The maximum number of users on the network who can see a viewer at the same time is 20 users (SNC-CX600W/CX600: five users). However, if the transmission function of the camera is overloaded, access to the camera may not be possible, even if there are fewer than the maximum number of users.
- If monitoring with sound, the maximum number of users is 10.
- When using a Wi-Fi network, it may take longer for the image to be transmitted. (SNC-CX600W)

Using the SSL function

Note

The model on sale in China does not support the SSL function.

When Internet Explorer is used

When you enter the camera IP address, “Certificate Error” may appear according to the status of the certificate set on the camera. In this case, click **Continue to this website (not recommended)**. to continue.

The live viewer window appears (in SSL communication).

When “Allow HTTP connection for some clients” (page 43) is checked

To use HTTP and SSL connections separately to access, enter the following in the address box of the browser.

For HTTP connection

`http://192.168.0.100/index.html?lang=en`

For SSL connection

`https://192.168.0.100/index.html?lang=en`

When the live viewer of the camera is displayed for the first time

“Security Warning” is displayed. When you click **Yes**, ActiveX control is installed and the live viewer is displayed.

Notes

- If **Automatic configuration** is enabled in the Local Area Network (LAN) settings of Internet Explorer, the image may not be displayed. In that case, disable **Automatic configuration** and set the proxy server manually. For the setting of the proxy server, consult your network administrator.
- When you install ActiveX Control, you should be logged in to the computer as Administrator.

Tip

The software is optimized for Internet Explorer using medium font.

To display the viewer correctly

To operate the viewer correctly, set the security level of Internet Explorer to **Medium** or lower, as follows:

- 1** Select **Tools** from the menu bar for Internet Explorer, then select **Internet Options** and click the **Security** tab.
- 2** Click the **Internet** icon (when using the camera via the Internet), or **Local intranet** icon (when using the camera via a local network).
- 3** Set the slider to **Medium** or lower. (If the slider is not displayed, click **Default Level**.)

When using antivirus software, etc., on the computer

- When you use antivirus software, security software, personal firewall or pop-up blocker on your computer, the camera performance may be reduced, for example, the frame rate for displaying the image may be lower.
- The Web page displayed when you log in to the camera uses JavaScript. The display of the Web page may be affected if you use antivirus software or other software described above on your computer.

Basic Configuration by the Administrator

You can monitor the camera image by logging in with the initial conditions set for this network camera. You can also set various functions according to the installing position, network conditions or purpose of the camera. We recommend you configure the following items before monitoring images from the camera.

Setting contents	Setting menu
Set the format of the image sent from the camera.	Video codec Tab (page 28)
Select the White balance mode according to the installation position.	White balance (page 27)
Select the brightness of the image sent from the camera.	Exposure (page 26) Brightness (page 27)
Select the quality of the image sent from the camera.	Video codec Tab (page 28)
Select the view size of the image.	View size (page 13)
Select whether the audio from the external input is sent or not.	Audio Tab (page 30)
Synchronize the date and time of the camera with those of the computer.	Date & time Tab (page 22)
Make the setting for sending the monitor image attached to an e-mail.	Mail Transfer Tab (page 60)
Set the user access right for the camera.	User Tab (page 41)
Use Wi-Fi to make the setting for connecting the camera (SNC-CX600W)	Wi-Fi Tab (page 37)

Precautions for Preventing Access to the Camera by an Unintended Third Party

The camera may be accessed by an unintended third party on the network, depending on the usage environment. Changing the user name and password of the camera administrator from the default settings is highly recommended for security reasons. If the camera is accessed by an unintended third party, there may be an undesired effect, such as operations or settings to block monitoring, etc.

The camera can be fraudulently accessed in a network environment where a device is connected or connectable to the network without the administrator's permission, or a PC or other network device connected to the network can be used without any permission. Connect to these environments at your own risk. To prevent unauthorized access to the camera, set it according to the following steps.

Do not use the browser you use to set the camera to access other websites while you set or after setting the camera. You will remain logged in to the camera as long as the browser is open, so to prevent an unintended third party's use or execution of malicious programs, close the browser after you finish setting the camera.

How to set up

- 1** Set the network address of the camera using SNC toolbox.
For details about how to use SNC toolbox, refer to the application guide.
After this step, do not use SNC toolbox to change the network settings of the camera. Use SNC toolbox to search for the camera only.
- 2** Start the web browser and set the SSL function to **Enable** in the camera settings.
For details, refer to “Setting the Security — Security Menu” in the Administrator menu on page 41.
- 3** Restart the web browser and access the camera again.

- 4** Set the user name and password of the administrator of the camera.
For details, refer to “Setting the Security — Security Menu” in the Administrator menu on page 41.
- 5** Check the Referer check checkbox.
For details, refer to “Setting the Security — Security Menu” in the Administrator menu on page 41.

Hereafter, use the camera using the SSL connection. If you use the FTP still image sending function, the SSL function will be disabled, and communication content will not be coded. Do not use the FTP still image sending function if the camera is at risk of unauthorized access.

Note

The model on sale in China does not support the SSL function.

Operating the Camera

This section explains how to monitor the image from the camera using your Web browser.

The functions of the camera should be set by the Administrator. For the setting of the camera, see “Administering the Camera” on page 21.

Administrator and User

This network camera identifies those who log in as the **Administrator** or **User**.

The **Administrator** can use all the functions of this network camera, including camera settings. The **User** can use the functions for monitoring the image and audio from the camera, and control the camera. The **Viewer mode** setting is used to restrict the user’s access rights. There are five types of users.

Each type of user can use the corresponding functions below.

Function	Administrator	User			
		Full	Pan/Tilt	Light	View
Monitor a live image	●	●	●	●	●
View the date and time	●	●	●	●	●
Control the frame rate (JPEG mode only)	●	●	–	–	–
Control the image view size	●	●	●	●	–
Save a still image and movie in the computer	●	●	●	●	–
Switch the TCP/UDP transmission mode (Available in H.264 mode only)	●	●	–	–	–
Perform the pan/tilt/zoom operation	●	●	●	–	–
Receive audio	●	●	●	●	●
Select the codec mode	●	●	●	●	–
Control the setting menu	●	–	–	–	–
Play the recorded file in the memory card	●	●	–	–	–
Delete the recorded file in the memory card	●	–	–	–	–

● Usable function

– Not usable function

The access rights of the administrator and the user can be set in “Setting the Security — Security Menu” of the Administrator menu on page 41.

Logging in to System

Logging in as a user

- 1 Start the Web browser on your computer and type the IP address of the camera you want to monitor.

The live viewer is displayed.

Display sample:

Note

If the live viewer does not start correctly, the security level of the Internet Explorer may be set to higher than **Medium**. See “To display the viewer correctly” on page 8 and check the security level.

About Viewers

You can use the following viewers.

ActiveX viewer

This viewer can monitor the camera image in any of the **JPEG** and **H.264** video codecs.

Two types of ActiveX viewer are available: Live viewer and Playback viewer.

You must install this viewer when you access the viewer for the first time.

When you display the viewer of the camera for the first time

When you access the network camera using ActiveX viewer for the first time, the **Security Warning** appears. Click **Yes** and install ActiveX Control. You can use all the functions of the viewer with ActiveX Control.

Plug-in free viewer

This viewer enables a browser other than Internet Explorer to display images.

Notes

- If **Automatic configuration** is enabled in the Local Area Network (LAN) Settings of Internet Explorer, the camera image may not be displayed. In that case, disable **Automatic configuration** and set the proxy server manually. For the setting of the proxy server, consult your network administrator.
- When you install ActiveX Control, you should be logged in to the computer as the Administrator.

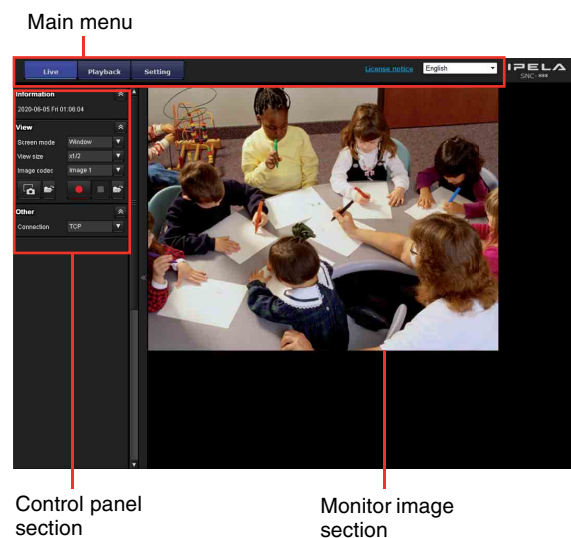

Tip

Every page of this software is optimized for Internet Explorer in **Medium** font.

Configuration of Live Viewer

This section explains the functions of the parts and controls of the live viewer. For a detailed explanation on each part or control, see the specified pages.

Live viewer using ActiveX viewer

Main menu

Live viewer

Displays the ActiveX viewer or the Plug-in free viewer.

Playback viewer

Click to play, save and delete the recorded movie in the memory card. (page 18)

Setting

Click to display the Administrator menu. (page 21)
You can operate this function only when logging in as the administrator.

License notice

Displays the software consent agreement, etc.

Language

Set language from pull-down.

Control panel section

You can drag the panels to the monitor screen and configure them.

To return to the control panel, drag the panel and configure the control panel.

Click the to hide the detail setting menu or click it again to show the menu.

Information panel

Check the date and time here.

View panel

You can change the screen mode, view size of the image, image codec mode and frame rate. Also, still images and movies can be saved (movie saving can also be stopped) from here. Microphone and audio output levels can be adjusted.

Screen mode

Select Window or Full Screen.

View size

Selects the view size to be displayed.

Click **View size** list box to select the view size.

Select **x1/4** to display images, reduced to 1/4 of the size set in **Image size**.

Select **x1/2** to display images, reduced to 1/2 of the size set in **Image size**.

Select **x1** to display images set in **Image size** (page 29) of the Video / Audio menu or Video menu.

Select **Full** to display images according to the view size.

Select **Fit** to display images according to the view size, with fixed aspect ratio.

Image codec

Select Image1, Image2 and Image3 of the video codec.

Frame rate

(Displayed only when the camera image is in JPEG.)

Selects the frame rate to transmit images.

Capture

Click to capture a still image shot by the camera and to store it in the computer. Click  to open the folder to be saved.

Note

In the case of Windows VISTA, Windows 7, Windows 8 or Windows 8.1, if “Enable Protected Mode” is checked in Control Panel-Internet Option-Security, still images cannot be shot.

Run/ Stop Save Video

Runs and stops Save Video. Click  to open the folder to be saved.

Note

In the case of Windows VISTA, Windows 7, Windows 8 or Windows 8.1, if “Enable Protected Mode” is checked in Control Panel-Internet Option-Security, video content cannot be saved.

Volume

Displays when **Enable** in the Audio tab of the Video / Audio menu is checked.

Use the slide bar to adjust the volume for sound output level.

When you click , the icon changes to  and the output from the speaker stops. To output sound from the speaker, click  again.

Mic volume

Displays when **Audio upload** (page 30) in the Audio tab of the Video / Audio menu is set to **Enable**, and a user with audio enabled in the User tab of the Security menu accesses the device.

Use the slide bar to adjust the microphone volume.

When you click , the icon changes to  and the microphone input stops. To input the microphone, click  again.

Camera control panel

This panel allows you to control the camera’s pan/tilt/home position and zoom (page 16).

Image action

Select the mode of operation from **Off**, **Area zoom** and **Vector dragging**.

Pan/Tilt control

Click the arrow button the direction in which you want to move the camera. Keep it pressed to move the camera continuously.

To return to the home position, click .

Zoom control

Click  to zoom out, and click  to zoom in.

Zooming continues while the button remains pressed.

Other panel

(The **Other** panel is displayed in the case of an H.264 image.)

You can switch between TCP and UDP (Unicast/Multicast).

Each click switches the transmission mode of the video/audio data between TCP mode, Unicast mode, and Multicast mode (page 17).

Monitor image

The image shot by the camera is shown here. There are two modes for on-screen pan/tilt/zoom operation using a mouse: Area zoom mode and Vector dragging mode. In the Area zoom mode, click to adjust the camera direction to the center of the image. The Area zoom will move the camera in the direction that displays the area selected by the operator and zooms in at the same time. The operator can choose a part of the image to view and zoom in by surrounding an area with a frame by dragging the mouse. In the Vector dragging mode, the camera moves to the dragged direction. How long you drag the mouse determines the speed. Releasing the button on the mouse after dragging stops the panning or tilting of the camera. You can also use the camera control panel bar to change the camera direction. The zoom operation using the mouse wheel is available in all modes.

Plug-in free viewer

Live viewer using Plug-in free viewer

Display sample:

Control bar

Monitor screen

Monitor screen

There are two modes for on-screen pan/tilt/zoom operation using a mouse: Area zoom mode and Vector dragging mode. A control bar is displayed on the screen. In the Area zoom mode, click to adjust the camera direction to the center of the image. The Area zoom will move the camera in the direction that displays the area selected by the operator and zooms in at the same time. The operator can choose a part of the image to view and zoom in by surrounding the area with a frame by dragging the mouse. In the Vector dragging mode, the camera moves to the dragged direction. How long you drag the mouse determines the speed. Releasing the button on the mouse after dragging stops the panning or tilting of the camera. You can also use the tool bar to change the camera direction. The zoom operation using the mouse wheel is available in all modes.

Control bar

The following operation buttons are available.

- ▼ Setting
You can set the streaming method, image size, frame rate, PTZ operation mode and image codec.
- ▶ Streaming start button
Starts streaming. (Appears while stops streaming.)
- ⏸ Streaming stop button
Stops streaming. (Appears while streaming.)
- 📷 Save still image button
Captures still images taken by the camera and saves them to the computer.

Using Solid PTZ function

You can operate the camera by using the Solid PTZ function, which provides panning, tilting and zooming by adjusting the position and zooming ratio from the maximum image size (1280 × 720*, 1280 × 1024**, 1920 × 1080***), without moving the camera.

- * 1280 × 720: SNC-CX600W/CX600
- ** 1280 × 1024: SNC-VB600/VB600B/VM600/VM600B/VM601/VM601B/VM602R/EB600/EB600B/EB602R/EM600/EM601/EM602R
- *** 1920 × 1080: SNC-VB635/VB630/VM630/VM631/VM632R/EB630/EB630B/EB632R/EM630/EM631/EM632R/XM637/XM636/XM632

There are three modes of camera operation: **Area zoom mode**, **Vector dragging mode** and **PTZ Control bar**. You can control pan/tilt and zoom in either mode.

The available functions for the camera operation modes vary according to the live viewer display. The available functions are as follows.

	ActiveX viewer	Plug-in free viewer	
		JPEG	MJPEG
Operation from control panel	○	—	—
Area zoom	○	○	○
Vector dragging	○	○	○
PTZ control bar	—	○	○

Notes

- **Pan/Tilt limitation**
The solid PTZ function controls streaming by cropping or reducing a maximum size image. Thus, the more the camera zooms out, the less area to be panned or tilted, and becomes unavailable at the WIDE end.
- **Zoom limitation**
The solid PTZ function enables you to display an area of 1/16 the maximum image size (Aspect ratio: 1:4), when zoomed in at the TELE end. An image cannot be enlarged beyond this.
And the whole area shot in the maximum image size will be displayed if the camera is zoomed out at the WIDE end.
The solid PTZ function's zoom is performed digitally; therefore, some deterioration in image quality may be observed at the TELE end.
- The Plug-in free viewer display method will be selected automatically.

Controlling via the control panel (Operation common to Area zoom mode and Vector dragging mode)

You can operate the camera direction and zoom by using the control panel for the monitor image currently displayed.

Pan/Tilt control

Click the arrow button in the direction in which you want to move the camera. Keep it pressed to move the camera continuously.

To return to the home position, click .

Zoom control

Click  to zoom out, and click  to zoom in.

Zooming continues while the button remains pressed.

Note

The four edges of the image may be dark depending on the zoom position. This is a phenomenon related to the structure of the camera, and does not cause a problem.

Panning and tilting by clicking the monitor image (Area zoom mode only)

Click on the monitor image, and the camera moves so that the clicked portion is positioned at the center of the display.

Panning, tilting and zooming by specifying the area (Area zoom mode only)

Click and hold the left button of the mouse on the monitor image, and drag the mouse diagonally to draw a red frame around the portion you want to enlarge. The camera moves so that framed portion is positioned at the center of the display and is zoomed in.

Note

When the specified area is zoomed in, the center may be shifted or some portion of the image may appear out of the monitor image section. In this case, click the point you want to move to the center or click the arrow button on the camera control panel.

Panning and tilting by dragging the screen (Vector dragging mode only)

When you click on the starting point on the image and drag to the end point, the camera pans/tilts in the direction of the arrow from the starting point to the end point. The speed of operation is determined by the length of arrow. Releasing the button on the mouse stops the panning/tilting of the camera.

Using pan/tilt/zoom operations with the displayed control bar (PTZ Control bar only)

Pan/Tilt operations

Click the arrow of the direction you wish to move the camera. Continue pressing on the arrow to keep moving the direction of the camera.

Zoom operation

Click **-** to zoom out, click **+** to zoom in. The zoom operation continues while you are pressing on the button.

Switching Transmission Mode

You can change the transmission mode for video/audio data.

This function can be used when the video codec mode is set to **H.264** and the ActiveX viewer in the live viewer is used.

Note

The function may not operate correctly if you use personal firewall software or antivirus software on your computer. In that case, disable the software or select the TCP mode.

- 1 Select **TCP**, **Unicast** or **Multicast** from the **Connection** drop-down list in the Other panel.

TCP: This is normally selected.

When **TCP** is selected, HTTP communication is adopted for video/audio communications. HTTP is the protocol used for reading the usual Web page. In an environment capable of reading Web pages, you can watch or listen to video/audio by selecting the TCP port.

Unicast: When **Unicast** is selected, RTP (Real-time Transport Protocol) is adopted for video/audio communications. Since RTP is the protocol for running video/audio data, the video/audio playback is smoother than when TCP (HTTP) is selected. If a firewall is installed between the camera and the computer, or depending on the network environment, video/audio may not play back properly when **Unicast** is selected. In this case, select **TCP**.

Multicast: This protocol is selectable when **Multicast streaming** in the Streaming tab of the Video / Audio menu or Video menu is set to **Enable**. When **Multicast** is selected as the transmission port, RTP (Real-time Transport Protocol) and UDP multicast techniques are adopted for video/audio transmission. By selecting it, the network transmission load of the camera can be reduced. If a router that does not correspond to a multicast or firewall is installed between the camera and the computer, video/audio may not play back properly. In this case, select **TCP** or **Unicast**.

Note

When connecting via a proxy server, neither **Unicast** nor **Multicast** can be selected.

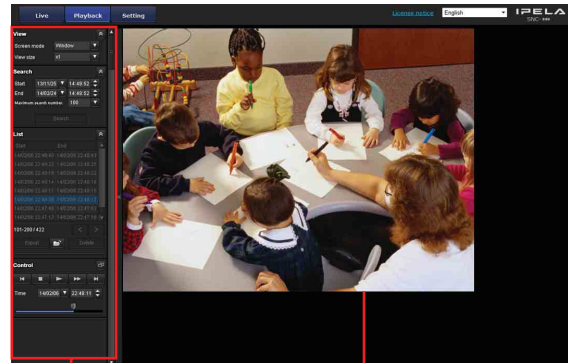

Playback viewer

You can play, save or delete the movies recorded in the memory card.

Supported models: SNC-VB635/VB630/VB600/VB600B/VM630/VM600/VM600B/VM631/VM601/VM601B/VM632R/VM602R/XM637/XM636/XM632/CX600W/CX600

This function is available only in the following users.

- Administrator
- When **Viewer mode** is set to **Full**

Control panel section

Monitor image section

Control panel section

View panel

You can change the screen mode or view size of the image.

Screen mode

Select Window or Full Screen.

View size

Select the view size to be displayed.

Click the **View size** list box to select the view size.

Select **x1/4** to display images, reduced to 1/4 of the size set in **Image size**.

Select **x1/2** to display images, reduced to 1/2 of the size set in **Image size**.

Select **x1** to display images set in **Image size** (page 29) of the Video / Audio menu.

Select **Full** to display images in full size.

Select **Fit** to display images in full size with fixed aspect ratio.

Search panel

Specify the search period.

Start

Select the start time for searching.

End

Select the end time for searching.

Maximum search number

You can specify the maximum number of the search results.

Search

Search for recorded movies in the specified period.

Search results list

Displays the search results from the search panel. You can select the movie which you want to play, save or delete.

You can select multiple files for deletion by clicking those movies while pressing the control key.

Range of the search results displayed in the list

101-200 / 422

Indicates the list of the total search results that is currently displayed.

> Go to the next search result

Displays the next search results.

< Go to the previous search result

Displays the previous search results.

Export

Save recorded movie

Save the selected movie to your computer. Click to open the folder in which the movie is to be saved.

Delete

Delete recorded movie

Delete the selected movie(s).

Note

Only the administrator can delete movies. Deleted movies cannot be restored.

Control panel (Basic)

You can play, pause, stop, fast forward or jump the selected movie on the search results list. Also you can specify the start position for playback.

If you click the button, the control panel (detail) is displayed.

Control panel (Detail)

Specify the start position for playback

Specify the playback time

You can play, pause, stop, fast forward or jump the selected movie on the search results list. Also you can specify the start position for playback, playback time, save the movie or save the captured still image.

If you click the button, the control panel (basic) is displayed.

Specify the start position for playback

Move the start position by dragging the slider.

Time

Time 13/07/25 20:36:06

Specify the recorded date and time from which the movie will start playback.

◀ Previous record

Jump to the previous movie.

■ Stop button

Click this button to stop a movie playing.

▶ Play button

Play the movie.

Click this button to play the movie at the normal speed after pressing the fast forward button.

⏸ Pause button

Click this button to pause a movie playing.

⏩ Fast forward

Click this button to fast forward the moving being played.

▶ Next record

Jump to the next movie.

📷 Still image capture

Save the capture of a recorded movie as a still image file to your computer. Click  to open the folder in which the movie is to be saved.

Specify the playback time

Specify the start and end position of the movie by moving the slider.

You can save the specified time to your computer.

You can also specify the start time to **In** and end time to **Out**.

Export**Save selected part of recorded movie**

Save the part of movie which is specified by the playback time to your computer. Click  to open the folder in which the movie is to be saved.

Monitor image

Play the selected movie from the search results list.

Adminstrating the Camera

This section explains how to set the functions of the camera by the Administrator.

For details about monitoring the camera image, see “Operating the Camera” on page 11.

This section explains the basic operations and each option of the Administrator menu.

Note on the display of menu options

The setting menus of this unit will clearly display only the setting options that you can currently select. Grayed out options cannot be selected.

Only supported functions are displayed.

Basic Operations of the Administrator Menu

You can use the Administrator menu to set all functions to suit the user’s needs.

Click **Setting** in the viewer to display the Administrator menu.

How to set up the Administrator menu

- 1 Log in to the homepage to display the viewer.
For details, see “Logging in as a user” on page 12.
- 2 Click **Setting** on the main menu.
The authentication dialog appears. Enter the user name and password for Administrator. The Administrator menu appears.
The user name “admin” and password “admin” are set at the factory for the Administrator.
For security, be sure to change the password from the factory setting before using the camera.
- 3 Click the menu name (example: System) on the left side of the Administrator menu.
The clicked menu appears.

Example: “System” menu

- 4 Select the required tab above the menu, and set each setting option in the tab.

Example: “Date & time” tab of “System” menu

See page 22 for details of the menu tabs and setting options.

- 5 After setting, click **OK**.
The settings you have made become active.

Click **Cancel** to nullify the set values and return to the previous settings.

Buttons common to every menu

The following buttons are displayed on all the menus.

Click this button to confirm the settings.

Click this button to nullify the set values and return to the previous settings.

General notes on menus

- One-byte katakana character is not valid for any text field, such as User name.
- After changing a setting on a menu, wait at least 30 seconds before turning off the power of the camera. If the power is turned off immediately, the new setting may not be stored correctly.
- If the camera settings are changed while watching the live viewer, some settings cannot be restored. To reflect the change on the opening live viewer, click **Refresh** on the Web browser.

Configuration of the Administrator menu

System

Displays the System menu. (“Configuring the System — System Menu” on page 22)

Video / Audio

Displays the Video / Audio menu for setting the camera image and audio. (“Setting the Camera Image and Audio — Video / Audio Menu Setting the Camera Image — Video Menu” on page 25)

Video

Displays the Video menu for setting the camera image. (“Setting the Camera Image and Audio — Video / Audio Menu Setting the Camera Image — Video Menu” on page 25)

Network

Displays the Network menu for setting the network connection. (“Configuring the Network — Network Menu” on page 35)

Security

Displays the Security menu for setting the login user name and password to specify which computer(s) can connect to the camera. (“Setting the Security — Security Menu” on page 41)

PTZ control

Displays the setting menu for solid PTZ and serial interface. (“Setting the PTZ control — PTZ control Menu” on page 50)

Action input

Displays the setting menu for all built-in detection functions. (“Setting the Sensor input/Camera tampering detection/Motion detection — Action input Menu” on page 51)

Action output

Displays the Action output menu for setting an action of the functions such as e-Mail (SMTP) and Edge Storage. (“Setting the Action output — Action output Menu” on page 59)

Schedule

Displays the Schedule menu for the e-Mail (SMTP) function, Alarm output function, Voice alert function, etc. (“Setting the Schedule — Schedule Menu” on page 68)

CLOUD

Displays the setting menu for the CLOUD service. (“Setting the CLOUD service — CLOUD Menu” on page 69)

Configuring the System — System Menu

When you click **System** in the Administrator menu, the System menu appears.

Use this menu to perform the principal settings of the software.

The System menu consists of the following tabs: **Information**, **Date & time**, **Installation**, **Initialize**, **System log** and **Access log**.

Information Tab

Information	
Model Name	***
Serial number	2014
Software version	***

Model Name

The model name of the camera is displayed.

Serial number

The serial number of the camera is displayed.

Software version

The software version of the camera is displayed.

Date & time Tab

Date & time	
Current date & time	2012-08-28 19:29:46
PC clock	2012-09-13 15:14:04
Date & time format	yyyy-mm-dd hh:mm:ss
Time setting	Keep current setting
Time zone	(GMT -5:00) Eastern Time (US & Canada)
Automatically adjust clock for daylight saving time changes	<input checked="" type="checkbox"/>

Current date & time

Displays the date and time set on the camera.

Note

After you have purchased the camera, be sure to check the date and time of the camera and set as necessary.

PC clock

Displays the date and time set on your computer.

Date & time format

Select the format of date and time to be displayed in the viewer from the drop-down list.

You can select the format between **yyyy-mm-dd hh:mm:ss** (year-month-day hour:minutes:seconds), **mm-dd-yyyy hh:mm:ss** (month-day-year hour:minutes:seconds), and **dd-mm-yyyy hh:mm:ss** (day-month-year hour:minutes:seconds).

Time setting

Select how to set the day and time.

Keep current setting: Select if you do not need to set the date and time.

Synchronize with PC: Select if you want to synchronize the camera's date and time with the computer.

Manual setting: Select if you want to set the camera's date and time manually.

Select the year, month, date, hour, minutes and seconds from each drop-down list.

Synchronize with NTP: Select if you want to synchronize the camera's date and time with those of the time server called NTP server (Network Time Protocol).

Set the NTP server when **Synchronize with NTP** is selected.

NTP server

Synchronize with the selected NTP server address.

Note

When the CLOUD service is activated, you cannot set the time and cannot change the NTP server. If you want to set them, deactivate the CLOUD service.

Time zone

Set the time difference from Greenwich Mean Time in the area where the camera is installed.

Select the time zone in the area where the camera is installed from the drop-down list.

Manual time zone

If you select **Manual** in Time zone, you can set a desired time zone that is not included in the list box. The input format is compliant with IEEE 1003.1 section 8.3 standard.

Format:

stdoffset[dst[offset][,start[/time],end[/time]]]

std: 3 to 100 character strings

offset: time difference (displayed in +/-)

dst: name of summer time

offset: offset of summer time, default time is 1 hour

start: start date and time of summer time

end: end date and time of summer time

Values in [] can be omitted.

For example:

In case of (UTC-06:00) Central Standard Time (USA and Canada);

CentralStandardTime6DaylightTime1,M3.2.0,M11.1.0

The name of the time zone is CentralStandardTime and the time difference is 6 hours. The name of the summer time is DaylightTime, and the summer time offset from the time difference is 1 hour, starting from the second week on Sunday in March until the first week on Sunday in November.

Automatically adjust clock for daylight saving time changes

When selected, the clock is automatically adjusted according to the daylight saving time of the selected time zone.

Note

If the time zone selected in **Time zone** is different from that set on the computer, the time is adjusted using the time zone difference and set on the camera.

OK/Cancel

See "Buttons common to every menu" on page 21.

Installation Tab

You can perform settings related to installation.

Auto iris responding speed

Supported models: SNC-VB635/VB630/VB600/VB600B/EB630/EB630B/EB600/EB600B

When you use a non-standard lens, adjust the speed according to the lens you use.

Select high values to make the iris respond faster, lower values to make the iris respond slower.

Stabilizer

Set the stabilizer function. Select the checkbox to display steadier images when the camera is installed in a place subject to vibration.

Notes

- When the stabilizer function is set, the angle of image taken will be smaller than usual.
- The stabilizer may not respond, depending on the amount of vibration.
- Be sure to set this function during the installation.
- Set the privacy masking position or the motion detection area, before setting the stabilizer.

Eflip

Supported models: SNC-VM630/VM600/VM600B/VM631/VM601/VM601B/VM632R/VM602R/EM630/EM600/EM631/EM601/EM632R/EM602R/XM637/XM636/XM632

You can display flip vertical images on the computer. Select **On/Off** according to the type of installation, such as on a ceiling, or on a rack, etc.

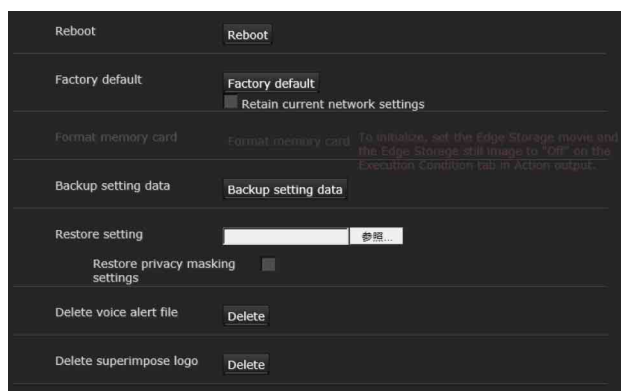

Note

- Privacy mask positions and motion detection areas, etc., will not be inverted, even if the **On/Off** setting of the inverted image is switched. To invert the image, make the setting again.
- When the Eflip setting is changed, the settings in the Video codec tab of the Video / Audio menu are initialized.

OK/Cancel

See “Buttons common to every menu” on page 21.

Initialize Tab

Reboot

Used when rebooting the system.

Click **Reboot**, and the message “This System will be rebooted. Are you sure?” appears. Click **OK** to reboot the camera. It takes about two minutes to restart.

Factory default

Resets the camera to the factory settings.

Retain current network settings

When this item is checked, only the current network settings will be retained after reset.

Click **Factory default**, and the message “This System will be rebooted. Are you sure?” appears.

When you click **OK**, the network indicator on the camera starts to blink. After adjustments of the default settings have finished, the camera reboots automatically. Do not turn off the camera until the camera reboots.

Tip

The camera can also be reset to the factory settings by turning on the power of this unit while pressing the reset button on the camera. For details, refer to the supplied Installation Manual.

Format memory card

You can format a memory card (not supplied) inserted into the card slot of the camera. When you click **Format memory card**, a confirming message appears. Click **OK** to start formatting. Any files and folders stored in the memory card will be deleted.

Notes

- Before formatting, set **Edge Storage movie** and **Edge Storage still image** in the Execution Condition tab of the Action output menu to **Off**, to write-protect the memory card.
- Do not activate the **Format memory card** function when no card is inserted into the card slot.

Backup setting data

Saves the setting data of the camera in a file.

Click **Save**, and follow the instructions on the Web browser to specify the folder and save the setting data of the camera.

The file name preset at the factory is “snc-vb600.cfg” for SNC-VB600.

Restore setting

Loads the stored setting data of the camera.

Click **Browse...** and select the file in which the setting data is stored. Click **OK**, and the camera is adjusted according to the loaded data.

Restore privacy masking settings

If you select this, the stored setting data of the camera and the privacy masking data are loaded.

Notes

- With **Restore setting**, some items in the Network menu (page 35) cannot be restored.
- The following items cannot be stored or restored with **Backup setting data** or **Restore setting**.
 - audio files uploaded using the SNC audio upload tool
 - a certificate to be used in the 802.1X function
 - a certificate to be used in the SSL function
 - superimpose logo

Delete voice alert file

Click **Delete** to delete all the audio files stored in the camera using the SNC audio upload tool.

This function is not available for SNC-XM637/XM636/XM632.

Notes

- Clicking **Delete** deletes all the stored audio files simultaneously. To delete a specified audio file only, perform deletion of the audio file in the corresponding Execution Condition tab of the Action output menu (page 59).
- Before deleting the audio file, set **Voice alert** to **Off** in the Execution Condition tab of the Action output menu (page 59).

Delete superimpose logo

Click **Delete** to delete the superimposed logo, specified by Position in the Superimpose tab of the Video / Audio menu, from the camera.

To set whether to show or hide the superimpose logo, you need to configure the setting under the Superimpose tab.

System log Tab

The data of the software activity of the camera is recorded in this log. It includes data that is useful if a problem occurs.

Click **Reload** to reload the latest data.

Access log Tab

The access record of the camera is displayed.

Click **Reload** to reload the latest data.

Setting the Camera Image and Audio

— Video / Audio Menu

Setting the Camera Image — Video Menu

When you click **Video / Audio** or **Video** menu in the Administrator menu, the Video / Audio menu or Video menu appears.

Use this menu to set the functions of the camera.

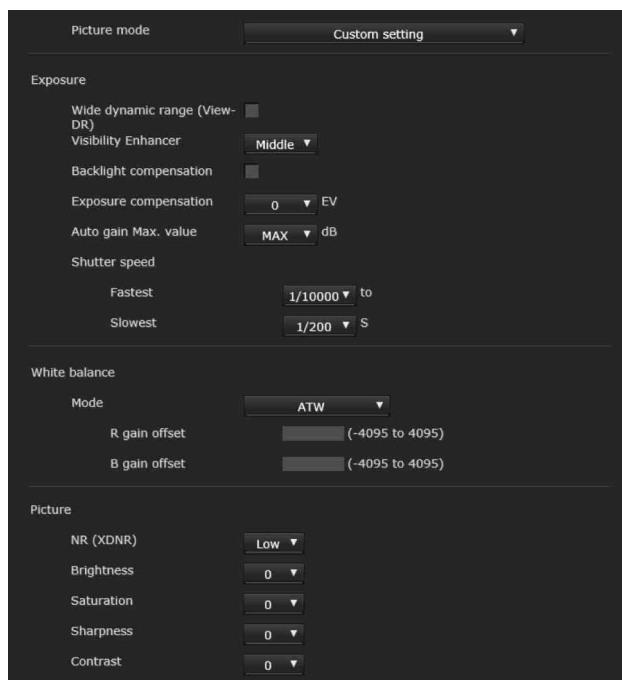

The Video / Audio menu consists of the following tabs:

SNC-VB635/VB630/VB600/VB600B: Picture, Focus, Video codec, Audio, Superimpose, Day/Night, Privacy masking and Streaming.
SNC-VM630/VM600/VM600B/VM631/VM601/VM601B/VM632R/VM602R: Picture, Focus / Zoom, Video codec, Audio, Superimpose, Day/Night, Privacy masking and Streaming.

The Video menu consists of the following tabs:

SNC-EB630/EB600: Picture, Focus, Video codec, Superimpose, Day/Night, Privacy masking and Streaming.
SNC-EB630B: Picture, Video codec, Superimpose, Day/Night, Privacy masking and Streaming.
SNC-EB632R/EB602R/EM630/EM600/EM631/EM601/EM632R/EM602R: Picture, Focus / Zoom, Video codec, Superimpose, Day/Night, Privacy masking and Streaming.
SNC-XM637/XM636/XM632: Picture, Video codec, Audio, Superimpose, Day/Night, Privacy masking and Streaming.
SNC-CX600W/CX600: Picture, Video codec, Audio, Superimpose, Privacy masking and Streaming.

Picture Tab

You can set the color conditions, exposure, etc., of the camera.

Preview screen

Preview the image and adjust the picture setting.

Picture mode

Select the combination of image quality mode to suit the camera scene.

You can set the scene to **Standard**, **Situation Priority**, **Flickerless**.

When the dialog appears, click **OK** to apply the selected picture mode. You can change the settings of image quality individually.

Standard

Set the image quality to suit variable scenes.

Situation Priority

You can set the priority to **Moving object** or **Low noise**. Priority level can also be set.

Moving object: Stabilizes images.

Low noise: Reduces noise on images especially dark scenes.

Flickerless

Select when you want to reduce the flicker on images. Set according to power frequency (50 Hz or 60 Hz) of the lighting you use.

Exposure

Adjust the settings of exposure.

Wide dynamic range (View-DR)

Unsupported models: SNC-CX600W/CX600

In high-contrast scenes such as against a back light, this function reduces overexposure and underexposure.

Select the checkbox to turn on the Wide dynamic range (View-DR) function.

Wide dynamic range (View-DR) level

Supported models: SNC-VB600/VB600B/VM600/VM600B/VM601/VM601B/VM602R/EB600/EM600/EM601/EM602R/EB602R

Using the Wide dynamic range (View-DR) function will improve visibility of bright and dark parts of an image. The level of this function is adjustable.

Notes

- To improve visibility of bright and dark parts, the camera superimposes images taken by fast shutter speed.
 - When you select **High**, the camera takes the image by superimposing 4 images.
 - When you select **Middle**, the camera takes the image by superimposing 2 images.
- When the wide dynamic range (View-DR) is activating, **Middle** is automatically activated for models for which this option is not displayed.
- When you select **High** or **Middle**, the effect of the Shutter speed function in the Picture tab of the Video / Audio menu or Video menu is limited, depending on the scene.
- When you set **Wide dynamic range (View-DR) level** to **High**, **High framerate mode** in the Video codec tab of the Video / Audio menu cannot be set to **On**. (SNC-VB600/VM600/VM601/VM602R)
- When **Wide dynamic range (View-DR)** is selected, **High framerate mode** in the Video codec tab of the Video / Audio menu or Video menu cannot be set to **On**. (SNC-VB635/VB630/VM630/VM631/VM632R)
- When the Wide dynamic range (View-DR) setting is changed, the video codec setting is initialized.

Visibility Enhancer

Using the Visibility Enhancer function will make the darker part of a camera image brighter as well as automatically correct brightness and contrast to show bright parts clearly without overexposure.

Backlight compensation

Select the checkbox to enable the backlight compensation function.

Exposure compensation

Select the exposure correction value from the list box to adjust the target brightness for the automatic exposure setting. A larger value brightens the image, and a smaller value darkens the image.

Auto gain Max. value

Limit the maximum value of gain-controlled automatic exposure control.

Note

The value shown in the auto gain maximum rate is a standard value, and may differ from the actual one.

Shutter speed

Auto-controlled shutter speed automatically sets the exposure.

Select the minimum and maximum shutter speeds from the list box.

White balance

Mode

Select the White balance mode.

ATW: Eliminating the influences caused by environmental illumination or lights, adjust the white balance automatically to reproduce original colors of the objects (approximately 2000 K to 10000 K).

ATW-PRO: Automatically adjusts the color to be closest to the image you are viewing (approximately 2500 K to 6000 K).

When **ATW** or **ATW-PRO** is selected, **R gain offset** and **B gain offset** become effective.

Indoor: Sets a white balance suitable for indoor photography.

Outdoor: Sets a white balance suitable for outdoor photography.

Fluorescent lamp: Sets a white balance suitable for photography under three-band fluorescent lighting with a neutral white color.

Mercury lamp: Sets a white balance suitable for photography under a mercury lamp.

Sodium vapour lamp: Sets a white balance suitable for photography under a high-pressure sodium vapor lamp.

Metal halide lamp: Sets a white balance suitable for photography under a metal halide lamp.

White LED: Sets a white balance suitable for photography under the light of white LEDs.

One push WB: The **One push trigger** button becomes active. Click **On** to adjust the white balance instantly.

Manual: When this option is selected, **R gain** and **B gain** become active. Selectable gain values are from 0 to 4095.

Picture

NR (XDNR)

Select the level to reduce image noise. When you select **Off**, the NR function is not available.

Brightness

Set the brightness. Select high values to make the image brighter, lower values to make the image darker.

Saturation

Set the saturation. Select high values to make the image color stronger, lower values to make the image color weaker.

Notes

Supported models: SNC-CX600W/CX600

- The image color may not change if the subject is in a dark place.
- When the selected value is not 0, the image color may change after the brightness is changed.

Sharpness

Set the sharpness. Select high values to make the image edges sharper, lower values to make the image edges smoother.

Contrast

Set the contrast. Select high values to make the image contrast stronger, lower values to make the image contrast softer.

Camera operating mode (SNC-XM637/XM636/XM632/CX600W/CX600)

You can switch the operating modes of the camera. Select either **25 fps** or **30 fps**.

The settings of the camera operating mode are related to the frame rate selected in the Video codec tab.

OK/Cancel

See “Buttons common to every menu” on page 21.

Focus Tab — Adjusting the Focus

Supported models: SNC-VB635/VB630/VB600/VB600B/EB630/EB600

Preview screen

Preview the image and adjust the focus.

Easy Focus

Adjust the focus position.

Click the **Start** button to adjust the focus position automatically.

Focus

The most suitable focus position may not be available depending on imaging conditions. If so, adjust the focus position manually.

Note

Use **Focus** only when **Easy Focus** cannot be set to the most suitable focus position.

Focus reset

Click the **On** button to return to the default flange back position.

Focus / Zoom Tab — Adjusting the focus/zoom

Display sample: SNC-VM630

Supported models: SNC-VM630/VM600/VM600B/VM631/VM601/VM601B/VM632R/VM602R/EM630/EM600/EM631/EM601/EM632R/EM602R/EB632R/EB602R

Adjust the focus and zoom position by looking at the image.

Preview screen

Preview the image and adjust the focus/zoom.

Easy Focus

Adjust the focus position.

Click the **Start** button to adjust the focus position automatically.

Focus

The most suitable focus position may not be available depending on imaging conditions. If so, adjust the focus position manually.

Note

The most suitable focus may not be available depending on imaging conditions. If so, click the <<<, <<, <, >, >>, >>> buttons to adjust the focus.

Zoom

Click the button to adjust the zoom position accordingly.

Note

The focus is moved slightly after adjusting; adjust the focus again, as necessary.

Video codec Tab

Use this tab to set the items for the video codec.

High framerate mode

Supported models: SNC-VB635/VB630/VB600/VM630/VM600/VM631/VM601/VM632R/VM602R

When the setting is set to **On**, set the maximum frame rate to 60 fps (NTSC) or 50 fps (PAL).

When the setting is set to **Off**, the maximum frame rate is 30 fps (NTSC) or 25 fps (PAL).

For details about how to switch NTSC/PAL, refer to the supplied Installation Manual.

Notes

- When the setting is set to **On**, Image 2 may not be available, and Image 3 is not available.
- When the high framerate mode setting is changed, settings for Image 1, Image 2, and Image 3 are returned to the default settings.
- When **Wide dynamic range (View-DR) level** in the Picture tab of the Video / Audio menu is set to **High**, you cannot select **On**. (SNC-VB600/VM600/VM601/VM602R)
- When **Wide dynamic range (View-DR)** in the Picture tab of the Video / Audio menu is set, you cannot select **On**. (SNC-VB635/VB630/VM630/VM631/VM632R)

Image 1, Image 2 and Image 3

Up to three image codec modes can be set. Configure the following setting for each image mode.

Image codec

Select **H.264**, **JPEG** or **Off**. Note that Image 1 cannot be set to **Off**.

Note

The selectable size of images and frame rate for Image 2 and Image 3 may be limited, depending on the setting of codec type, image size, frame rate, and image quality for Image 1.

- The total of frame rate for Image 1, Image 2 and Image 3 should not exceed 60 fps.
- If you set the bitrate of Image 1 to 32000 kbps, set Image 2 and Image 3 to Off.
- If you set the bitrate of Image 1 to 16000 kbps or faster, set the bitrate of Image 2 and Image 3 below 4000 kbps.

If you set a value exceeding the standard, the following symptoms may occur.

- The image delays more than usual.
- The frame is skipped when playing an image.
- The voice is broken.
- The response of the camera to commands delays.

Image size

You can select the size of images sent from the camera.

Notes

- Some parts of the screen may not be displayed depending on the image size.
- If the image size is 720 × 574 or 720 × 480, the full image is displayed but not in the 1:1 pixel aspect ratio.

Frame rate

Set the frame rate of the image.

“fps” is a unit indicating the number of frames transmitted per second.

The frame rate of JPEG image can be changed by the setting of **Image quality**.

I-picture interval

Set the I-picture insertion interval in seconds.

H.264 profile

Set the profile setting for H.264 video codec to **high**, **main** or **baseline**. The video compression efficiency is **high**, **main** and **baseline** in sequence. The specified profile may not be available depending on the program you use. Select the profile which is suitable for your program.

Bit rate compression mode

Select **CBR**, **VBR** or **Adaptive rate control**.

If you want to keep the bit rate fixed, select **CBR**. If you want to keep the image quality fixed, select **VBR**.

If you select **Adaptive rate control**, the bit rate is automatically optimized for unstable network connections or wireless networks with a lot of interference.

Notes

- The frame rate or bit rate that is actually transmitted may be different from the set values depending on image size, scene, network environment.
- The **Adaptive rate control** cannot operate when the Plug-in free viewer is being used.
- If you want to use the **Adaptive rate control**, set the connection method in the live viewer to **Unicast**. If you set **TCP** as a connection method, the adaptive rate control will be disabled. For details, refer to “Switching Transmission Mode” in “Operating the Camera” on page 17.

Bit rate

When you set **Image codec** to **H.264** and set **Bit rate compression mode** to **CBR**, the bit rate of the image transmission for a line can be set.

When the bit rate is set to a high level, a high image quality can be enjoyed.

Maximum bit rate limit

Enable the check box when **Bit rate compression mode** is set to **VBR**, to set the maximum value of the bit rate.

Max: Set the maximum value of the bit rate when the camera is operated with **VBR**.

Accept frame skip: If you enable the checkbox, the frame skip will be allowed for bit rate control.

Min, Max

Set the maximum and minimum bit rates that are adjusted with the adaptive rate mode when **Bit rate compression mode** is set to **Adaptive rate control**.

Image quality

If you set **Image codec** to **JPEG**, or **Bit rate compression mode** to **VBR** when **Image codec** is set to **H.264**, the image quality setting will be enabled. Selectable values are from **1** to **10**. When **10** is selected, the best image quality is achieved.

Bandwidth control

Limits the network bandwidth for the JPEG image data output from the camera when you set **Image codec** to **JPEG**.

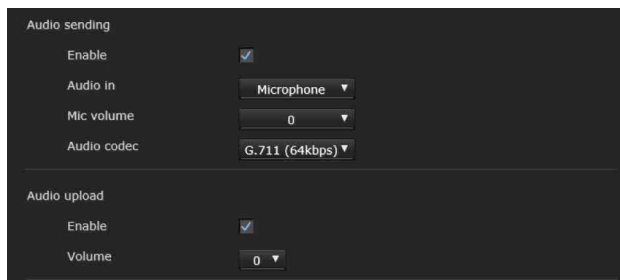

Note

Audio may be interrupted depending on the selected bandwidth. In this case, select a wider bandwidth. This function is not available when the setting is set to **0**.

OK/Cancel

See “Buttons common to every menu” on page 21.

Audio Tab

Audio sending

Make settings for sending audio from the microphone input connector or the built-in microphone.

Enable

Select the checkbox if you want to send audio from the network camera.

Note

When you change the **Audio** setting, click **Refresh** on the Web browser to reflect the change on the opening live viewer page.

Audio in

Select microphone input or line input. SNC-XM637/XM636/XM632/CX600W/CX600 models only have a built-in microphone. An audio cannot be selected.

Mic volume

When the Audio in is set to the microphone input, set the volume level of the audio input from the microphone input connector or the built-in microphone. It is adjustable from **-10** to **+10**.

Audio codec

Select the codec type for sending audio input from the microphone input connector or the built-in microphone. The bit rate may differ, depending on the codec type.

Note

No audio is output if the Plug-in free viewer is used.

Audio upload

Using the SNC audio upload tool, you can output audio that is input to your computer's audio input terminal to the speaker connected to the line output jack of the camera or the built-in speaker of the camera. This function is not available for SNC-XM637/XM636/XM632.

Enable

Select the checkbox to enable the audio upload function.

Volume

Set the speaker volume level from **-10** to **+10**.

OK/Cancel

See “Buttons common to every menu” on page 21.

Superimpose Tab

Select whether or not to superimpose the custom string and the character date & time on the image.

Notes

- For setting the superimposing, set **Image size1** in the Video codec tab of the Video / Audio menu or Video menu to the maximum rate.
- Deselect the checkbox of **Stabilizer** in the Installation tab of the System menu. After setting superimpose, set the **Stabilizer** function again.

Preview screen

Preview the image, and adjust the superimposed image. You can move the position of superimposed image displayed on the preview screen by drag and drop.

Image

Select the video codec mode to set for the superimposed image.

The setting for the superimposed image is available if you select the checkbox next to the list box.

For details about the video codec mode, see the Video codec tab in the Video / Audio menu or Video menu.

Position

Select the number of the display position or logo, on the preview screen. When **Logo** is selected, the logo file setting is displayed.

Note

Permissible logo file specifications;
 File format: PNG8 with alpha channel
 Image size: 160 × 120 or smaller
 Width (pixels): multiples of 16

When display position number 1, 2 or 3 is selected, the following setting menus appear.

Type

Set the type of display information to codec, date & time, event or text.

Custom string

Describes the superimposed content for each position. For Type setting, codec is displayed as <codeinfo>, date & time is displayed as <datetime>, event is displayed as <event>, and you can add a custom string.

Codec: Displays the video codec information.

Date & time: Displays the date and time.

Event: Displays the event alarm information.

Text: Displays the custom string.

Text color

Select the font color of the superimposed text.

Background color

Select the background color of the superimposed text.

Alignment

Set the horizontal position of the superimposed text.

Transparent

Select the background color transparent of the superimposed text. When you select Off, transparent is not available.

Events displayed

Displays in the menu when the type is set to **Event**. Select the type of superimpose to be displayed for the event.

OK/Cancel

See “Buttons common to every menu” on page 21.

Day/Night Tab

Use this tab to set the day/night function of the camera.

Mode

Select the day/night mode. This function has the following modes.

Auto: Normally works in day mode; switches automatically to night mode in a dark place.

Sync with IR Illuminator

Supported models: SNC-VM632R/VM602R/EM632R/EM602R/EB632R/EB602R

On: The irradiator works in conjunction with day/night switching.

Off: Deactivate the irradiator.

IR Illuminator level

Supported models: SNC-VM632R/VM602R/EM632R/EM602R/EB632R/EB602R

This setting is available when **Sync with IR Illuminator** is set to **On**.

Set the infrared intensity of the irradiator.

Note

When the Sync with IR illuminator is used, a close-up object in images may have blown out highlights. To avoid blown out highlights, set **Wide dynamic range (View-DR)** in the Picture tab of the Video / Audio menu or Video menu to **On**.

Threshold

Set the brightness level when the night mode is set. For SNC-VM632R/VM602R/EM632R/EM602R/EB632R/EB602R, this setting is available when **Sync with IR Illuminator** is set to **Off**.

Brightness threshold

Supported models: SNC-VM632R/VM602R/EM632R/EM602R/EB632R/EB602R

This setting is available when **Sync with IR Illuminator** is set to **On**.

Set the brightness level when the night mode is set.

Hold time

Set the reaction time of changes in brightness.

Manual: Switch the day/night mode manually.

When the checkbox of the night mode is selected, the camera works in night mode. Otherwise, the camera works in day mode.

Timer: Normally the camera works in day mode. It switches to night mode at the time you set in **Timer of Day/Night** in the Schedule menu.

Sensor input: Controls the day/night mode by synchronizing it with the sensor input.

Select the synchronized sensor from **Sensor input 1** and **Sensor input 2**. While a sensor input is detected, the camera works in night mode.

Supported models: SNC-VB635/VB630/VB600/VB600B/VM630/VM600/VM600B/VM631/VM601/VM601B/VM632R/VM602R

Status

Displays the day/night function status.

Easy Focus

If you check **Day/Night Sync**, Easy Focus will operate together with **Day/Night** switching, and the focus will be automatically adjusted.

For details about Easy Focus, refer to “Focus Tab — Adjusting the Focus” on page 27 and “Focus / Zoom Tab — Adjusting the focus/zoom” on page 28.

Notes

- The image goes out of focus while Easy Focus is operating.
- The motion detection alarm does not work while Easy Focus is operating.
- If you want to check **Day/Night Sync**, check if the image is in focus under the monitoring environment for **Day/Night** mode in advance.

OK/Cancel

See “Buttons common to every menu” on page 21.

Privacy masking Tab

Using the privacy masking enables you to hide images by masking specified parts of the images when streaming.

Note

Perform the following before setting the privacy masking.

- Set **Image size1** in the Video codec tab of the Video / Audio menu or Video menu to the maximum rate.
- Deselect the checkbox of **Image 1** in the PTZ control tab of the PTZ control menu.
- Deselect the checkbox of **Stabilizer** in the Installation tab of the System menu. After setting the privacy masking, set the **Stabilizer** function again.

Preview screen

This screen is for monitoring images and configuring privacy masking.

You can move the position of the privacy mask displayed on the preview screen by drag and drop.

Effect

Set the effect of privacy masks.

Color

Specify the color of privacy masks. This setting is common to every privacy mask.

Position

Select the number corresponding to the display position on the preview screen.

After completing the configuration, register by clicking **OK**.

Clear

Click the button to delete the privacy mask set in **Position**.

Clear all

Click the button to delete all privacy mask.

Setting a privacy mask

Operate according to the following procedure to set a privacy mask in the position of your choice:

- 1 Select the number to register from the **Position** drop-down list.
- 2 Specify the privacy mask area by dragging the mouse on the preview screen.
- 3 Select the effect and color of the mask from the **Effect** and **Color** drop-down list.

Note

The color is common to every privacy mask. The color selected last is applied.

- 4 Click **OK**.
The mask is displayed on the preview screen.

OK/Cancel

See “Buttons common to every menu” on page 21.

Streaming Tab

Unicast streaming

Video port number 1	50000	(1024 to 65534)
Video port number 2	52000	(1024 to 65534)
Video port number 3	54000	(1024 to 65534)
Audio port number	56000	(1024 to 65534)
RTSP video port number 1	51000	(1024 to 65534)
RTSP video port number 2	53000	(1024 to 65534)
RTSP video port number 3	55000	(1024 to 65534)
RTSP audio port number	57000	(1024 to 65534)

Multicast streaming

Enable

Multicast address 1	239.192.0.200	
Multicast address 2	239.192.0.200	
Multicast address 3	239.192.0.200	
Video port number 1	60000	(1024 to 65534)
Video port number 2	62000	(1024 to 65534)
Video port number 3	64000	(1024 to 65534)
Audio port number	58000	(1024 to 65534)
RTSP multicast address	239.192.0.200	
RTSP multicast video port number 1	61000	(1024 to 65534)
RTSP multicast video port number 2	63000	(1024 to 65534)
RTSP multicast video port number 3	65000	(1024 to 65534)
RTSP multicast audio port number	59000	(1024 to 65534)

RTSP setting

RTSP port number	554	(554, 1024 to 65534)
RTSP time out	0	(0 to 600)

Use this tab to set the items for the transmission by unicast or multicast.

Unicast streaming

Specify the transmission port numbers of the H.264 video data and audio data to be used when **Unicast** is selected from the **Connection** drop-down list in the **Other** panel on the live viewer.

Video port number 1, 2, 3

Specify the transmission port number of the H.264 video data. The default setting is 50000, 52000 or 54000. Specify an even number from 1024 to 65534. Two port numbers (the number specified here and an odd number with 1 added to the specified number) are actually used for video data communication and control. When performing simultaneous multi-transmission, a different port number will be used for every transmission, based on the port number specified here.

The settings for Image 1, Image 2 and Image 3 apply to Video port number 1, 2 and 3 respectively.

Audio port number

Specify the transmission port number of the audio data. It is initially set to 56000. Specify an even number from 1024 to 65534. Two port numbers (the number specified here and an odd number with 1 added to the specified number) are used for audio data communication and control. When operating multi-transmission at the same time, a different port number will be used in every transmission based on the port number specified here.

Note

Specify different numbers for the video port number and the audio port number.

RTSP video port number 1, 2, 3

Specify the H.264 video transmission port number used for RTSP unicast streaming. The default setting is 51000, 53000 or 55000. Specify an even number from 1024 to 65534. Two port numbers (the number specified here and an odd number with 1 added to the specified number) are actually used for video data communication and control. When performing simultaneous multi-transmission, a different port number will be used for every transmission, based on the port number specified here.

The settings for Image 1, Image 2 and Image 3 apply to RTSP video port number 1, 2 and 3 respectively.

RTSP audio port number

Specify the audio transmission port number used for RTSP unicast streaming. The default setting is 57000. Specify an even number from 1024 to 65534. Two port numbers (the number specified here and an odd number with 1 added to the specified number) are actually used for audio data communication and control. When performing simultaneous multi-transmission, a different port number will be used for every transmission, based on the port number specified here.

Multicast streaming

Set whether the camera uses multicast streaming for H.264 video data and audio data or not. It reduces the transmission load on the camera by having a computer of the same segment network receive the same transmitting data.

Enable

Select the checkbox to allow multicast sending. When you select the checkbox, set **Multicast address**, **Video port number** and **Audio port number** properly.

Multicast address 1, 2, 3

Type the multicast address used on the multicast streaming.

Video port number 1, 2, 3

Specify the H.264 video transmission port number used for the multicast streaming. The default setting is 60000, 62000 or 64000. Specify an even number from 1024 to 65534. Two port numbers (the number specified here and an odd number with 1 added to the specified number) are used for video data communication and control.

The settings for Image 1, Image 2 and Image 3 apply to Video port number 1, 2 and 3 respectively.

Audio port number

Specify the audio transmission port number used for the multicast streaming. It is initially set to 58000. Specify an even number from 1024 to 65534. Two port numbers (the number specified here and an odd number with 1 added to the specified number) are used for audio data communication and control.

Note

Specify different numbers for the video port number and the audio port number.

RTSP multicast address

Set the multicast address used on RTSP multicast streaming.

RTSP multicast video port number 1, 2, 3

Specify the H.264 video transmission port number used for RTSP multicast streaming. The default setting is 61000, 63000 or 65000. Specify an even number from 1024 to 65534. Two port numbers (the number specified here and an odd number with 1 added to the specified number) are actually used for video data communication and control.

The settings for Image 1, Image 2 and Image 3 apply to RTSP video port number 1, 2 and 3 respectively.

RTSP multicast audio port number

Specify the audio transmission port number used for RTSP multicast streaming. The default setting is 59000. Specify an even number from 1024 to 65534. Two port numbers (the number specified here and an odd number with 1 added to the specified number) are actually used for audio data communication and control.

RTSP setting

Set the RTSP setting which cannot be set in the Unicast streaming setting and Multicast streaming.

RTSP port No.

Set the port number used for RTSP streaming. The default setting is 554.

If you change the setting, the RTSP server will be rebooted.

RTSP time out

Specify the time out of the Keep-Alive command by RTSP streaming. You can set the time out from 0 second to 600 seconds.

At the 0 setting, time out of the Keep-Alive command is not available.

OK/Cancel

See “Buttons common to every menu” on page 21.

Configuring the Network

— Network Menu

When you click **Network** in the Administrator menu, the Network menu appears.

Use this menu to configure the network to connect the camera and the computer.

The Network menu consists of the following tabs:

Network and **QoS**

SNC-CX600W has the **Wi-Fi** tab also.

Network Tab

This section provides the menus for connecting the camera through the network cable.

Status

MAC address

Displays the MAC address of the camera.

Ethernet status

Displays the current transmission rate.

Auto-MDI/MDIX

According to the port of the connected Ethernet device, automatically switches the port of the unit between MDI and MDI-X for transmission.

Displays the Ethernet port mode of the unit.

IP address

Displays the current IP address.

Subnet mask

Displays the current subnet mask.

Default gateway

Displays the current default gateway.

LinkLocal IP address

Displays the current link-local IP address.

Primary DNS server

Displays the current primary DNS server.

Secondary DNS server

Displays the current secondary DNS server.

IPv6 address 1, 2

Displays the current IPv6 address.

IPv6 default gateway

Displays the current IPv6 default gateway.

LinkLocal IPv6 address

Displays the current link-local IPv6 address.

IPv4 setting

Configure the IPv4 network setting.

To obtain the IP address automatically from a DHCP server

Select **Obtain an IP address automatically (DHCP)**.

The IP address, subnet mask, default gateway are assigned automatically.

Note

When you select **Obtain an IP address automatically (DHCP)**, make sure that a DHCP server is operating on the network.

To specify the IP address manually

Deselect **Obtain an IP address automatically (DHCP)**. Type the address in the **IP address**, **Subnet mask** and **Default gateway** boxes. **Host name** and **Domain suffix** are not available.

IP address

Type the IP address of the camera.

Subnet mask

Type the subnet mask.

Default gateway

Type the default gateway.

Host name

Type the host name of the camera to be transmitted to the DHCP server. This setting is valid only when **Obtain an IP address automatically (DHCP)** is selected.

Domain suffix

Type the domain suffix of the camera to be transmitted to the DHCP server. This setting is valid only when **Obtain an IP address automatically (DHCP)** is selected.

Note

The domain suffix is sent to the DHCP server as FQDN (Fully Qualified Domain Name) information when **Host name** is set.

IPv6 setting

Configure the IPv6 network setting.

To obtain the IPv6 address automatically

Select **Obtain IP address automatically**.

The IP address, prefix length, default gateway are assigned automatically.

Note

If you select **Obtain IP address automatically**, ask the network administrator whether an IPv6 address can be assigned.

This function is not available in a multi-prefix environment. The transmission may not work properly.

To specify the IPv6 address manually

Deselect **Obtain IP address automatically**. Type the address in the **IP address**, **Prefix length** and **Default gateway** boxes.

IP address

Type the IP address of the camera.

Prefix length

Type the prefix length value.

Default gateway

Type the default gateway.

Common setting

Configure the common setting for IPv4 and IPv6 network.

HTTP port number

Type the HTTP port number. Normally select 80.

MTU

Type the IP-MTU value for the Ethernet port.

To obtain DNS server address automatically

Select **Obtain DNS server address automatically**. The **Primary DNS server** and **Secondary DNS server** are assigned automatically.

Note

To obtain a DNS server address automatically, first enable **Obtain an IP address automatically (DHCP)** in the IPv4 setting, or **Obtain IP address automatically** in the IPv6 setting.

Ask the network administrator whether a DNS server address can be obtained automatically.

To specify the DNS server address manually

Deselect **Obtain DNS server address automatically**. Type the address in the **Primary DNS server** and **Secondary DNS server** boxes.

Primary DNS server: Type the IP address of the primary DNS server.

Secondary DNS server: Type the IP address of the secondary DNS server, if necessary.

OK/Cancel

See “Buttons common to every menu” on page 21.

Wi-Fi Tab

Display sample: SNC-CX600W

The screenshot shows the Wi-Fi configuration page. At the top, there is a table with columns for SSID, Security, Channel, and Signal. Below the table is a 'Refresh' button. The main configuration area includes fields for SSID, Security (set to WPA/WPA2), and Passphrase. There is a WPS section with 'Wireless interface status' set to 'NO CONNECTION', a 'Connect' button, and a 'PIN No.' field with a 'Generate' button. The 'Status' section displays MAC address, IP Address (0.0.0.0), Subnet mask (0.0.0.0), Default gateway (0.0.0.0), Primary DNS server, and Secondary DNS server. The 'IPv4 setting' section has checkboxes for 'Obtain an IP address automatically (DHCP)' and 'Obtain DNS server address automatically', both checked. Other fields include Host name, Domain suffix, and MTU (1500).

Supported models: SNC-CX600W

Use this tab to set the connection of the Wi-Fi network.

Notes

- A wired network and a Wi-Fi network cannot be used at the same time.
- The IP address of a Wi-Fi network will be assigned only when a wired network is not connected.

Wi-Fi network connection check

Displays the current connection status of a Wi-Fi network.

If the camera is connected to a Wi-Fi router, the display will be highlighted.

SSID

Displays SSID of the Wi-Fi router that can be connected to.

Security

Displays the current setting method as either authentication or encryption.

None

Connect to a Wi-Fi router without encryption.

WEP

Connect to a Wi-Fi router using WEP (Wired Equivalent Privacy).

WPA/WPA2

Connect to a Wi-Fi router by performing an authentication which is compliant to WPA/WPA2 (Wi-Fi Protected Access).

Channel

Displays the wireless channels of a Wi-Fi router that can be connected to.

Signal

Displays the signal strength. If it is lower than 60%, improve the installation environment as follows:

- 1 Change the installation position of the camera.
- 2 Adjust the antenna angle of the Wi-Fi router.
- 3 Change the installation position of the Wi-Fi router.
- 4 Install a repeater.

Note

The displayed signal intensity is an estimate. If the number is small, the connection may break easily.

Refresh

Refresh the Wi-Fi network display.

Note

When you click **Refresh**, video or images may be interrupted.

Manual setting of a Wi-Fi network

You can set the connection of a Wi-Fi router manually. Before connecting, locate the Wi-Fi router setting information (SSID, authentication, encryption, key or password, etc.).

Note

The connection may not be possible if you use the router that is not compliant with the Wi-Fi standard (802.11b/g/n).

SSID

This is the identification for the Wi-Fi network connection.

Security

Select authentication and encryption to combine with a Wi-Fi network connection.

Note

Communication contents may be intercepted depending on the security setting.

WPA/WPA2

Connect to the Wi-Fi network using WPA/WPA2 authentication. It is necessary to enter a **Password**.

WEP (Deprecated)

Type a WEP key (encryption key) of alphanumeric characters.

Communication contents may be intercepted because the security of WEP is weak. This setting is not recommended.

None (Deprecated)

Connect to the Wi-Fi network without encryption. Communication contents may be intercepted from an unencrypted connection. This setting is not recommended.

WPS settings

Set WPS (Wi-Fi Protected Setup).

WPS is the standard of Wi-Fi Alliance to simply connect to a Wi-Fi network with security protection. Before connecting to the Wi-Fi network, check whether the Wi-Fi router is compliant with the WPS standard.

Click the WPS push button, or enter the 8-character PIN code for the Wi-Fi router.

Wi-Fi network connection by WPS button

- 1 Refer the instruction manual of the Wi-Fi router, and enable the WPS function (button method).
- 2 Click **WPS**. Check the status whether it is **Connecting**.

- 3 The automatic setting between the Wi-Fi router and the camera starts. It takes up to two minutes to connect.
- 4 When the connection is complete, the status will be **Connected**.
The status **Connection failure**. means the connection was not performed successfully. Check whether the WPS function of the Wi-Fi router is enabled. For details, refer to the instruction manual of the Wi-Fi router. If you still cannot connect, use “Manual setting of the Wi-Fi network.”
- 5 An IP address for a Wi-Fi network will be assigned when the network cable of the camera is disconnected.

Wi-Fi network connection by PIN code

- 1 Click **Generate** to generate the PIN code.
- 2 Enter the 8-character PIN code generated by step 1 to connect to the Wi-Fi router. For details on how to enter or connect, refer the instruction manual of the Wi-Fi router.
- 3 Click **Connect** to start the connection by PIN method. It takes up to two minutes to connect to WPS.
- 4 When the connection is complete, the status will be **Connected**.
The status **Connection failure**. means the connection was not performed successfully. Check whether the WPS function of the Wi-Fi router is enabled. For details, refer to the instruction manual of the Wi-Fi router. If you still cannot connect, use “Manual setting of the Wi-Fi network.”
- 5 An IP address for a Wi-Fi network will be assigned when the network cable of the camera is disconnected.

Connection status

Displays the setting status.

MAC address

Displays the MAC address of the camera.

IP address

Displays the current IP address.

Subnet mask

Displays the current subnet mask.

Default gateway

Displays the current default gateway.

Primary DNS server

Displays the current primary DNS server.

Secondary DNS server

Displays the current secondary DNS server.

IPv4 setting

Configure the IPv4 network setting.

To obtain the IP address automatically from a DHCP server

Select **Obtain an IP address automatically (DHCP)**.

The IP address, subnet mask, default gateway are assigned automatically.

Note

When you select **Obtain an IP address automatically (DHCP)**, make sure that a DHCP server is operating on the network.

To specify the IP address manually

Deselect **Obtain an IP address automatically (DHCP)**. Type the address in the **IP address**, **Subnet mask** and **Default gateway** boxes. **Host name** and **Domain suffix** are not available.

IP address

Type the IP address of the camera.

Subnet mask

Type the subnet mask.

Default gateway

Type the default gateway.

Host name

Type the host name of the camera to be transmitted to the DHCP server. This setting is valid only when **Obtain an IP address automatically (DHCP)** is selected.

Domain suffix

Type the domain suffix of the camera to be transmitted to the DHCP server. This setting is valid only when **Obtain an IP address automatically (DHCP)** is selected.

Note

The domain suffix is sent to the DHCP server as FQDN (Fully Qualified Domain Name) information when **Host name** is set.

MTU

Type the IP-MTU value for the Ethernet port.

To obtain DNS server address automatically

Select **Obtain DNS server address automatically**. The **Primary DNS server** and **Secondary DNS server** are assigned automatically.

Note

To obtain a DNS server address automatically, first enable **Obtain an IP address automatically (DHCP)** in the IPv4 setting.

Ask the network administrator whether a DNS server address can be obtained automatically.

To specify the DNS server address manually

Deselect **Obtain DNS server address automatically**. Type the address in the **Primary DNS server** and **Secondary DNS server** boxes.

Primary DNS server

Type the IP address of the primary DNS server.

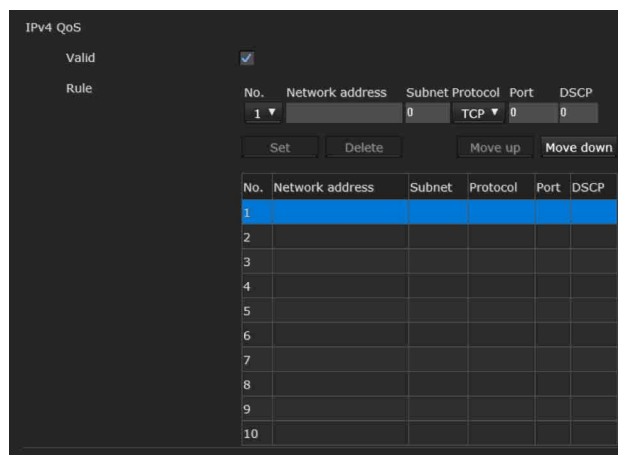

Secondary DNS server

Type the IP address of the secondary DNS server, if necessary.

OK/Cancel

See “Buttons common to every menu” on page 21.

QoS Tab

In this tab, you can mark the data traffic packets sent from the device and configure the settings for QoS control. Rules for the types of data traffic can be created using IPv4 address, port number, protocol, etc. A maximum of 10 rules can be registered.

IPv4 QoS

Enable

Select the checkbox to configure the QoS setting for IPv4.

Rule

Used to register, edit and delete QoS.

No.

Select the number to use when registering on the QoS table.

When you select a registered number, the registered QoS information is displayed.

Network address

Enter the network address of the target on which to perform QoS.

Subnet

Enter the subnet mask values of the target on which to perform QoS.

Tip

The subnet mask value represents the number of bits from the left side of the network address.

Protocol

Select the protocol.

Port

Enter the port number for the data traffic of the device (e.g. HTTP:80).

DSCP

Set a value to mark the data traffic (0 ~ 63).

This value is set in the DSCP field included in the IP header of the data traffic.

Set

Used when registering on the QoS table.

QoS is set according to the following procedure:

- 1** Select **No.** from **No.** and enter the necessary conditions for **Network address**, **Subnet**, **Protocol** and/or **Port No.**
- 2** Enter values in **DSCP**.
- 3** Click **Set** and configure the QoS.

Delete

Select **No.** to delete the setting and click **Delete**.

Move up

Increases the priority of the rule.

Select a rule from the QoS table to prioritize and click **Move Up**.

Move Down

Decreases the priority of the rule.

Select a rule from the QoS table to lower its priority and click **Move Down**.

QoS table

Displays the list of registered QoS information. If multiple conditions match, the rule with the smallest number has priority.

OK/Cancel

See “Buttons common to every menu” on page 21.

Setting the Security

— Security Menu

When you click **Security** in the Administrator menu, the Security menu appears.

The **Security** menu consists of the **User**, **Access limit**, **SSL**, **802.1X** and **Referer check** tabs.

User Tab

Set the user names and passwords of Administrator and up to 9 types of user (User 1 to User 9), and the viewer mode of each user.

Administrator, User 1 to 9

Specify **User name**, **Password**, **Re-type password** and **Viewer mode** for each user ID.

User name

Type a user name between 5 and 16 characters.

Password

Type a password between 5 and 16 characters.

Re-type password

To confirm the password, retype the password that you typed in the **Password** box.

Audio

Use the SNC audio upload tool to set whether to enable the audio output to the speaker connected to the line output jack of the camera or the built-in speaker. If you need to output the audio, select the checkbox to enable.

Note

When you want to set the audio output using the SNC audio upload tool, be sure to set **Audio upload** in the Audio tab of the Video / Audio menu to **Enable**.

Playback

Set whether to enable using the playback viewer. Select the checkbox to enable.

Viewer mode

When the user is authenticated for logging in the viewer, select the viewer mode to be displayed after authentication.

Administrator: The user can operate all functions in this mode.

Full: The user can operate all functions except deleting the recorded movie in the memory card.

Pan/Tilt: In addition to the **Light** mode, the user can operate pan/tilt/zoom.

Light: In addition to the **View** mode, the user can select the image size of the viewer, select codec and capture a still image.

View: The user can only monitor the camera image.

For the functions available for each viewer mode, see “Administrator and User” on page 11.

Viewer authentication

Set whether the user is authenticated or not when the viewer is displayed.

When the checkbox is selected, the viewer is displayed in accordance with the viewer mode of the authenticated user. When the checkbox is not selected, select the viewer mode of the viewer which is displayed without authentication from **Full**, **Light** or **View**.

Authentication mode

Set the authentication method for user authentication.

Basic authentication: Use the basic access authentication.

Digest authentication: Use the digest access authentication.

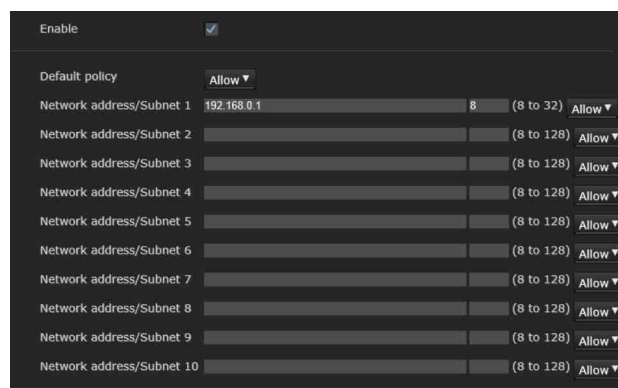

Note

If you change the settings in **Authentication mode**, close the web browser and access again.

OK/Cancel

See “Buttons common to every menu” on page 21.

Access limit Tab

This allows you to control which computers can have access to the camera.

Likewise, when using IPv6, security settings can be configured for each network.

Enable

Select the checkbox to enable the access limit.

Default policy

Select the basic policy of the limit from **Allow** and **Deny** for the computers specified in the Network address/Subnet 1 to Network address/Subnet 10 menus below.

Network address/Subnet 1 to Network address/Subnet 10

Type the network addresses and subnet mask values that you want to allow or deny access to the camera.

You can specify up to 10 network addresses and subnet mask values. For a subnet mask, type 8 to 32.

(In the case of IPv6, enter a value between 8 and 128.)

Select **Allow** or **Deny** from the drop-down list on the right for each network address/subnet mask.

Tip

The subnet mask value represents the bit number from the left of the network address.

For example, the subnet mask value for “255.255.255.0” is 24.

If you set **192.168.0.0/24** and **Allow**, you can allow access from computers having an IP address between “192.168.0.0” and “192.168.0.255”.

Note

You can access the camera even from a computer having an IP address whose access right is set to **Deny**, if you enter the user name and password set for the **Administrator** boxes in the User menu.

OK/Cancel

See “Buttons common to every menu” on page 21.

SSL Tab

The screenshot shows the SSL configuration interface. At the top, there is a 'Common setting' section with a dropdown menu for 'SSL function' set to 'Enable'. Below this is the 'SSL server authentication' section, which includes a 'Certificate options' dropdown set to 'Use an external certificate', a 'Status' dropdown set to 'Valid', and several input fields for 'Issuer DN', 'Subject DN', 'Available period', and 'Extended Key Usage'. There are 'Delete', 'Import', and 'Reset' buttons in this section. The 'Import' button has a '参照...' (Reference) link next to it. Below the server authentication section is the 'SSL client authentication' section, which has an 'Enable' checkbox that is currently unchecked. This section contains four 'Trusted CA certificate' entries (1 through 4). Each entry has input fields for 'Issuer DN', 'Subject DN', 'Available period', and 'Extended Key Usage', along with 'Delete', 'Import', and 'Reset' buttons. The 'Import' buttons for each entry also have '参照...' links.

Configure the SSL or TLS function (called “SSL” hereafter). The settings allow the camera to communicate with the client PC by using SSL.

Notes

- The model on sale in China does not support the SSL function.
- When using the SSL function, always configure the settings after setting the date and time of the camera. If the date and time are not correctly set, it may cause browser connection problems.

- Reload the window when you change the SSL setting. Press the F5 key on the keyboard to reload.

Common setting

SSL function

Select **Enable** to use the SSL function.

When **Enable (Allow HTTP connection for some clients)** is selected, both HTTP and SSL connections are allowed. When **Enable** is selected, only SSL connection is allowed.

When Internet Explorer is used

When SSL session is established,  appears in the right of the address bar on your web browser.

When you use SSL connection for the first time

When you use SSL connection only with the SSL function **Enable**, you cannot access the camera if the SSL function does not work properly.

In this case, you must reset the camera to the factory settings. (All settings will be initialized.)

To avoid this, check that SSL connection is possible by performing the following steps.

- 1 Set the SSL function to **Enable (Allow HTTP connection for some clients)**.
- 2 Click **OK** to close the viewer and the setting window.
- 3 Display the viewer in SSL connection. Refer to “Using the SSL function” on page 7 for connection.
- 4 After confirming that SSL connection is possible, set the SSL function to **Enable**.

Even if the setting window or the browser is closed as SSL connection is impossible, http connection will be possible if **Enable (Allow HTTP connection for some clients)** is selected. First check the setting contents of SSL tab in http connection, then check the SSL connection again.

If **Enable (Allow HTTP connection for some clients)** is not selected, you will not be able to access the camera if SSL connection becomes impossible. In this case, turn on the power of the main unit while pressing the reset switch on the camera to initialize. For details, refer to the supplied Installation Manual.

Note

SSL connection will load the camera down; therefore, not all images may be downloaded, and the  mark may appear when the camera accesses the setting

window from the browser. In this case, reload the window. Press the F5 key on the keyboard to reload.

SSL server authentication

Certificate options

Select an installation mode of the certificate.

Use an external certificate: Uses the certificate including private key information issued by a CA. The PKCS#12 and PEM formats are supported.

Note

SSL is not available when **Certificate options-Use an external certificate** is selected, or certificate and private key password is not set properly even SSL is set to “**Enable**”.

Use a self-signed certificate (For test use): This mode uses the certificate and private key pair generated by “Self-signed certificate generation” on page 44. Private key information corresponding to the certificate is stored in the camera. You do not need to install an external certificate. However, you cannot execute the existence proof that is one of the SSL functions for the following reasons.

- The private key generated in the camera is self-signed by the camera.
- A prepared value is set for a distinguished name (Common name, etc).
- The certificate is not issued by a trusted CA.

For reasons of security, we recommend using this mode only when there is no problem even if perfect security is not saved.

Notes

- When **Use a self-signed certificate (For test use)** is selected, the **Security Alert** dialog appears on the SSL connection with a browser. For details, refer to “Using the SSL function” (page 7).
- SSL connection may be impossible due to the type of certificate installed in the camera. In this case, refer to “How to install the CA certificate” on page 45 and install.

To import the certificate

Click **Browse...** to select the certificate to be imported. Click the **OK** button appearing on the dialog when you select the file, to import it to the camera.

Note

The import process becomes invalid if the selected file is not a certificate or the imported certificate is not allowed.

Self-signed certificate generation

A self-signed certificate can be generated in the camera to be used when **Use a self-signed certificate (For test use)** is selected from **Certificate options**.

Click **Generate** to generate a self-signed certificate in the camera. Clicking **Generate** again after **Generate** has been clicked once will update the self-signed certificate stored in the camera.

Note

Make sure to set the date and time on the camera correctly before performing this operation. If the date and time are not correctly set, it may cause browser connection problems. Before selecting **Generate** in **Self-signed certificate generation**, click **OK** to select **Use a self-signed certificate (For test use)** in **Certificate options**.

To display certificate information

When the certificate has been set in the camera correctly, its information appears on **Status**, **Issuer DN**, **Subject DN**, **Validity Period** and **Extended Key Usage**.

Status

Shows if the status of the certificate is valid or invalid. The following statuses are recognised.

Valid: The certificate is correctly stored and set.

Invalid: The certificate is not correctly stored and set.

Possible causes are as follows:

- **Use an external certificate** is selected and the private key password included in the certificate is not specified correctly.
- **Use an external certificate** is selected and the private key password is specified in spite of the fact that the key pair in the certificate is not encrypted.
- **Use an external certificate** is selected and the key pair is not included in the certificate.
- **Use a self-signed certificate (For test use)** is selected without the self-signed certificate being generated.

Note

When the certificate to be imported is of PKCS#12 format and the private key password is not set correctly, <Put correct private key password> is displayed in the boxes of **Issuer DN**, **Subject DN**, **Validity Period** and **Extended Key Usage**.

Specify the correct private key password to confirm the information of the certificate.

To delete the imported certificate or self-signed certificate

Click **Delete** to delete the certificate or self-signed certificate imported to the camera.

Private key password

Type the password for the private key information included in the certificate using up to 50 characters. This text box is active only when **Certificate options** is set to **Use an external certificate**.

Leave the text box blank if the private key information included in the certificate is not encrypted.

If no private key password is set in the camera, an active text field is displayed and this allows a password to be entered.

If a private key password is already set, it is displayed as an inactive text field.

Reset

To change the private key password, click this button. The current password is cleared and the password text box becomes active to allow a new password entry.

Note

Click **Cancel** at the bottom of the menu if you want to cancel changing the private key password after clicking **Reset**. Doing so restores the other setting items in the Client certificate tab to the previous settings.

SSL client authentication

In this tab, you can manage the CA certificate needed for the camera to use the client authentication of the SSL function.

Notes

- When using the client authentication, the personal certificate must be successfully installed on the PC to use it. If this preparation cannot be performed, do not configure settings on this tab. Otherwise, you may not be able to connect to the camera.
- The setting of SSL client authentication is available only when SSL server authentication certificates are uploaded.

Enable

You can configure whether to enable the client authentication of the SSL function.

Trusted CA certificate 1 to 4

You can import a trusted CA certificate (route certificate, etc.) to the camera.

Up to four certificates from trusted CAs can be imported to the camera. Only PEM format is supported.

To import the CA certificate

- 1 Click **Browse...** to select the CA certificate to be saved in the camera.
- 2 Click the **OK** button appearing on the dialog. The selected file will be imported to the camera.

Note

Import process will be invalid if the selected file is not a CA certificate.

To display the information of the CA certificate

When the CA certificate has been saved in the camera correctly, its information appears on **Issuer DN**, **Subject DN**, **Validity Period**, and **Extended Key Usage** for your reference.

To delete the CA certificate

Click **Delete** to delete the selected CA certificate from the camera.

Tip

To enable a client certificate, it is recommended that the settings are configured following the procedure below:

- ① **Import the necessary CA certificate.**
- ② **Select the SSL client authentication checkbox and click OK.**

Note

When you set SSL client authentication to **Enable** and click **OK**, the camera will immediately operate to enable client authentication. Make sure that the personal certificate on your PC is successfully installed.

OK/Cancel

See “Buttons common to every menu” on page 21.

How to install the CA certificate

The camera may not be connected because the browser (Internet Explorer) does not display whether the certificate will be accepted or not due to the type of certificate. In this case, install the CA certificate as follows.

- 1 Save in the PC the certificate of CA which has signed the certificate to be installed in the camera. The extension of the certificate file is normally “.cer”. Double-click this file. The following **Certificate** dialog appears.

- 2 Click **Installation Certificate...**. The **Certificate Import Wizard** appears.

3 Click **Next**.

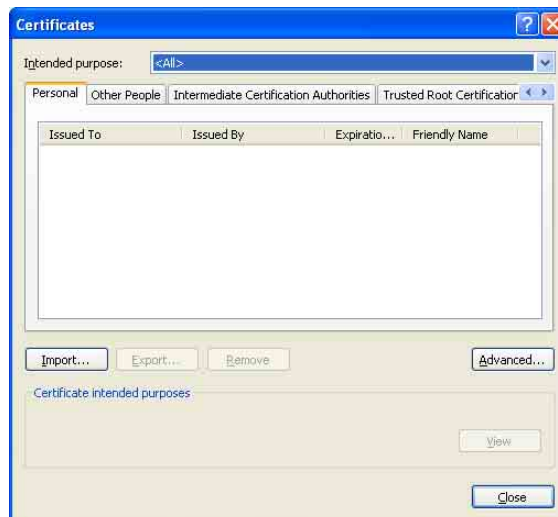

4 Select **Automatically selects the certificate store based on the type of certificate** and click **Next**. **Completing the Certificate Import Wizard** appears.

5 Check the contents, then click **Finish**. The CA certificate will be installed.

To remove an installed CA certificate

1 In Internet Explorer, click in the order **Tools, Internet options, Content tab** and **Certificates**. The **Certificates** dialog appears.

2 Select the certificate you want to remove. The CA certificate is usually stored in **Trusted Root Certification Authorities**.

3 Click **Remove**. **Do you want to delete the certificate** appears to confirm.

4 Click **Yes**. The certificate will be removed. There may be a case that a certificate cannot be removed by the steps above due to the type of certificate. Check the installation condition and remove it following the steps below.

Note
You need to log in as Administrator to perform these steps.

1 Open **Run...** of the Windows menu, then enter **mmc** and click **OK**.

2 Select **File** in the **Console 1** window and **Add/Remove Snap-in...** (when Windows XP Professional is used). **Add/Remove Snap-in...** dialog appears.

3 Click **Add** to display **Add Stand-alone Snap-in** dialog. You need to follow this step if using Windows XP Professional.

- 4 Select **Certificates** from the list, then click **Add**. **Certificate Snap-in** is displayed.
- 5 Select **Computer account** as the certificate administrated in this Snap-in, then click **Next**.
- 6 Select **Local Computer** as the computer administrated in this Snap-in, then click **Finish**.
- 7 Close **Add Standalone Snap-in** (for Windows XP Professional only) and **Add/Remove Snap-in...** dialogs.
The items for administrating **Certificates** appears in the **Console Route** window.
Confirm the relevant certificate, then remove it.

802.1X Tab

The screenshot displays the configuration interface for 802.1X authentication, divided into three main sections:

- Common setting:** Includes an 'Enable' checkbox (checked), an 'EAP Identify' text field, and an 'EAP method' dropdown menu set to 'TLS'.
- Client certificate:** Features a 'Status' dropdown (set to 'Valid'), fields for 'Issuer DN', 'Subject DN', 'Available period', and 'Extended Key Usage'. It includes a 'Delete' button, an 'Import' button with a file selection dialog, and a 'Private key password' field with a 'Reset' button.
- CA certificate:** Contains four sub-sections labeled 'Trusted CA certificate 1' through '4'. Each sub-section has fields for 'Issuer DN', 'Subject DN', 'Available period', and 'Extended Key Usage', along with 'Delete' and 'Import' buttons.

Configure the wired port-based authentication in compliance with the 802.1X standard.

Notes

- To use the 802.1X authentication function, you need knowledge of the 802.1X authentication and digital certificate. To establish an 802.1X network, you need to configure the authenticator, authentication server and other elements. For details on these settings, refer to the manual of the corresponding equipment.

- When using the 802.1X authentication function, always configure the settings after setting the date and time of the camera. If the date and time are incorrect, port authentication may not be performed correctly.

System configuration of 802.1X network

The following figure shows a general system configuration of an 802.1X network.

Supplicant

A supplicant is a device that connects to the authentication server to join the network. This camera serves as a supplicant in the 802.1X network. The supplicant can enter the 802.1X network after appropriate authentication by the authentication server.

Authenticator

An authenticator forwards certificate request data or response data that the supplicant or authentication server issues to the other party. Normally a hub, router or access point serves as an authenticator.

Authentication server

An authentication server has a database of connecting users and verifies if the supplicant is a valid user or not. It can also be called RADIUS server.

CA (Certificate Authority)

A CA issues and manages certificates of the authentication server (CA certificates) and user certificates. The CA is essential for certificate-based user authentication. Normally a CA is located inside an authentication server.

Note

This camera supports EAP mode in which the supplicant and the server authenticate using the certificate. This mode requires a CA to issue the certificate.

Common setting

Enable

Select the checkbox to enable the 802.1X authentication function.

EAP identity

Type the user name to identify the client in the 802.1X authentication server up to 250 characters.

EAP password

A supplicant EAP password is needed to be inputted when PEAP is selected with EAP condition. The password can contain half-width letters and the length should be within 50 characters.

Reset

To change the once set EAP password, click **Reset** and clear the current password. A new password can be entered.

Note

After you click **Reset**, if you wish to cancel the EAP password change, click **Cancel** at the bottom of the screen. This will cancel other changes made to the settings.

EAP method

You can select the authentication method used with the authentication server. This device supports TLS and PEAP.

TLS: By this method, the supplicant and the server authenticate each other using a certificate. This enables secure port authentication.

PEAP: By this method, an EAP password is used for the supplicant authentication and a certificate is used for server authentication.

Client certificate

When TLS is selected as the EAP method, the client certificate is imported, displayed or deleted for the camera authentication.

To import the client certificate

Click **Browse...** to select the client certificate to be imported.

Click the **OK** button appearing on the dialog, and the selected file will be imported to the camera.

Note

The import process becomes invalid if the selected file is not a client certificate or the imported client certificate is not allowed.

To display the information of the client certificate

When the client certificate has been saved in the camera correctly, its information appears on **Status**, **Issuer DN**, **Subject DN**, **Validity Period** and **Extended Key Usage**.

Status

Shows if the status of the client certificate is valid or invalid.

Valid means the client certificate is correctly stored and set.

Invalid means the client certificate is not correctly stored and set.

Possible causes of **Invalid** are as follows:

- The private key password included in the client certificate is not specified correctly.
- The private key password is specified in spite of the fact that the key pair in the client certificate is not encrypted.
- The key pair is not included in the client certificate.

Note

When the client certificate to be imported is of PKCS#12 format and the private key password is not set correctly, “<Put correct private key password>” is displayed in the boxes of **Issuer DN**, **Subject DN**, **Validity Period** and **Extended Key Usage**. Specify the correct private key password to confirm the information of the certificate.

To delete the client certificate

Click **Delete**, and the client certificate stored in the camera will be deleted.

Private key password

Type the password for the private key information included in the client certificate using up to 50 characters.

Leave the text box blank if the private key information included in the client certificate is not encrypted.

If a private key password is already set, it is displayed as turned letters.

Reset

To change the private key password, click this button. The current password is cleared and the password text box is activated to allow new password entry.

Note

Click **Cancel** at the bottom of the screen if you want to cancel changing the private key password after clicking **Reset**. Doing so restores the other setting items in the Client certificate tab to their previous settings.

CA certificate

You can import a trusted CA certificate (server certificate or route certificate) to the camera. Up to four certificates from trusted CAs can be imported to the camera. Only the PEM format is supported.

To import the CA certificate

Click **Browse...** to select the CA certificate to be imported.

Click the **OK** button appearing on the dialog, and the selected file will be imported to the camera.

Note

Import process becomes invalid if the selected file is not a CA certificate.

To display the information of the CA certificate

When the CA certificate has been saved in the camera correctly, its information appears on **Issuer DN**, **Subject DN**, **Validity Period** and **Extended Key Usage**.

To delete the CA certificate

Click **Delete**, and the CA certificate stored in the camera will be deleted.

OK/Cancel

See “Buttons common to every menu” on page 21.

Referer check tab

Referer check checks if the web page which requires access is authorized when the camera is accessed. If the web page is not authorized, the camera denies access of the web page to the camera.

If you want to access from web pages other than the one that the camera provides, register their host names and port numbers in the **Exception list**.

Referer check

Select the checkbox for the **Referer check**.

Exception list

Register the hosts that are not targeted for the **Referer check**.

No.

Select the registered numbers of the **Exception list**.

Host name

Type the host name or IP address of the PC that supplies the web page you want to register on the **Exception list**.

Port No.

Type the host name or the port number of the PC that supplies the web page you want to register on the **Exception list**.

Set

Register the values of the **Host name** and **Port No.** you typed to the list of the selected number.

Delete

Delete the contents of the list selected in **No.**

OK/Cancel

See “Buttons common to every menu” on page 21.

Setting the PTZ control

— PTZ control Menu

When you click **PTZ control** in the Administrator menu, the PTZ control menu appears.

The **PTZ** control menu consists of the following tab:

Solid PTZ

SNC-VB635 displays **Serial** tab, also.

Solid PTZ Tab

Solid PTZ

Select the checkbox to enable the Solid PTZ function. You can set Image 1, Image 2 and Image 3 separately.

Note

The Solid PTZ function is not available with Plug-in free viewer.

OK/Cancel

See “Buttons common to every menu” on page 21.

Serial Tab

Display sample: SNC-VB635

Supported models: SNC-VB635

Set this setting to control other devices connected via RS-485 interface, in which a control signal (TCP/IP packets) from the network is converted into an RS-485 signal. Recommended setting depends on the connected device.

TCP port No.

Set the port number to any number in the range 1024 to 65535, except well-known port numbers.

Baud rate

Set the baud rate corresponding to the connected devices. The available baud rates are as follows. 38400, 19200, 9600, 4800, 2400, 1200(bps)

Parity bit

Select the parity corresponding to the connected devices, from [none], [odd], [even].

Character length

Select the character length corresponding to the connected devices, from [8], [7] (bits).

Stop bits

Select the stop bits corresponding to the connected devices, from [2], [1] (bits).

OK/Cancel

See “Buttons common to every menu” on page 21.

Setting the Sensor input/ Camera tampering detection/Motion detection

— Action input Menu

When you click **Action input** in the Administrator menu, the Action input Menu appears.

The Action input Menu consists of the following tabs:

**SNC-VB635/VB630/VB600/VB600B/VM630/
VM600/VM600B/VM631/VM601/VM601B/
VM632R/VM602R: Event condition, Sensor
input, Camera tampering detection, Motion
detection, Face detection and Network
disconnection.**

**SNC-EB630/EB630B/EB600/EB600B/EB632R/
EB602R/EM630/EM600/EM631/EM601/
EM632R/EM602R: Event condition, Camera
tampering detection, Motion detection and Face
detection.**

**SNC-XM637/XM636/XM632/CX600W/CX600:
Event condition, Camera tampering detection,
Motion detection, Face detection and Network
disconnection.**

When the Motion detection or Face detection tab is displayed for the first time

When you click **Motion detection** or **Face detection**, “Security Warning” is displayed. When you click **Yes**, ActiveX control is installed and the Motion detection or Face detection tab is displayed.

Notes

- If **Automatic configuration** is enabled in the Local Area Network (LAN) settings of Internet Explorer, the image may not be displayed. In that case, disable **Automatic configuration** and set the proxy server manually. For the setting of the proxy server, consult your network administrator.
- When you install ActiveX control, you should be logged in to the computer as Administrator.

Event condition Tab

Create event execute conditions for each action.

Event condition 1, 2, 3, 4, 5

Select the event condition.

You can combine the alarm using the following event execute conditions.

- and:** detect when both conditions happen within a specified interval regardless of the sequence.
- or:** detect when either condition happens.
- then:** detect when each of the conditions happen within a specified interval in sequence.

If you set the event condition to **None**, the following alarm 1, 2, 3 menus appear.

1, 2, 3

Select the alarm.

Selectable alarms are as follows.

Displayed items vary depending on the function.

Sensor input 1: The external sensor that is connected to sensor input 1 of the camera I/O port.

Sensor input 2: The external sensor that is connected to sensor input 2 of the camera I/O port.

Presence sensor: The alarm is triggered by the presence sensor function.

Camera tampering detection: The alarm is triggered if the camera detects tampering, such as direction shifting or spray.

Motion detection: The alarm is triggered by the motion detection function.

VMF: The alarm is triggered by the VMF function.

Face detection: The alarm is triggered by the face detection function.

Network disconnection: The alarm is triggered by disconnection to a specific IP address.

Note

You cannot set more than two functions for **Presence sensor**, **Camera tampering detection** or **Network disconnection** in the same event condition.

Interval

Specify the interval time used when condition is set to **and**, **then**.

In the case the condition is set as 1 and 2, the system sounds an alarm when either 1 or 2 happens, and the other happens within the specified interval.

In the case the condition is set as 1 then 2, the system sounds an alarm when 1 happens, and then 2 happens within the specified interval.

If you select “or” condition, this setting will be ignored. The maximum duration to be set is 7200 seconds.

Sensor input Tab — Set the sensor input 1/2

Sensor input mode

Set the direction of the detected input signal to the sensor input terminal of the camera.

Normally open: Triggers an alarm when the sensor input is short-circuited.

Normally closed: Triggers an alarm when the sensor input is open-circuited.

Notes

- Allow at least two seconds for the input signal to be detected; otherwise, some events may not be detected.
- When you use video streaming by SSL connection, set as follows. Some events may not be detected if the camera is not in the following conditions.
 - Set the Bit rate below 1 Mbps.
 - Set the Frame rate below 30 fps.
 - Use the video streaming below two transmissions at the same time.

OK/Cancel

See “Buttons common to every menu” on page 21.

Camera tampering detection Tab — Set the camera tampering detection

Notes

- Before using the camera tampering detection function, first adjust the focus* or the focus/zoom**.
If you adjust focus/zoom with the camera tampering detection function activated, detection may not be effective.
- * Focus: SNC-VB635/VB630/VB600/VB600B/EB630/EB600
- ** Focus/zoom: SNC-VM630/VM600/VM600B/VM631/VM601/VM601B/VM632R/VM602R/EM630/EM600/EM631/EM601/EM632R/EM602R/EB632R/EB602R
- Deselect the checkbox of **Stabilizer** in the Installation tab of the System menu. After setting the camera tampering detection, set the **Stabilizer** function again.

Enable

Select the checkbox to activate the function to detect camera tampering, such as direction shifting or spray.

Detection status

Display the tampering detection state of the time when Camera tampering detection tab is opened. To clear the detection status, click **Clear** button.

OK/Cancel

See “Buttons common to every menu” on page 21.

Motion detection Tab — Set the motion/VMF detection

Motion detection responds to moving objects in the camera image and triggers an alarm.

In VMF, an alarm sounds when motion is detected under the motion detection setting, entering or passing through a specified area or inspection line. An alarm also sounds when an object has been left or removed from a specified area or inspection line.

The detected object will be displayed on the monitor in the green frame. The removed object and left object will be displayed in the magenta frame.

When you click the Motion detection tab, a dialog appears. Enter the user name and password.

The factory setting of the user name and password for the Administrator is set to “admin”.

For security, be sure to change the password from the factory setting before using the camera.

Note

Perform the following before setting the motion detection.

- Set **Image size1** in the Video codec tab of the Video / Audio menu or Video menu to the maximum rate.
- Deselect the checkbox of **Image 1** in the PTZ control tab of the PTZ control menu.
- Deselect the checkbox of **Stabilizer** in the Installation tab of the System menu.

What is VMF

VMF is a function for detecting an object entering or passing through a specified area or inspection line, or when an object has been left or removed from a specified area or inspection line. Video/audio recording and/or audio file playback can be synchronized with this alarm. You can set the inspection methods to execute independently. Intrusion and Passing can also be set to execute in combination.

For example:

- An alarm sounds when an object enters areas A, B and C.
- An alarm sounds when an object passes through area A and enters area B.
- An alarm sounds when an object passes through areas A and B, and enters area C.
- An alarm sounds when an object enters area A, and passes through area B.

Intrusion

When a moving object enters the designated area, an alarm sounds.

Passing

A passage line is determined, and when a moving object passes the setting line, an alarm sounds.

Left object

When a moving object has been left in the designated area, an alarm sounds.

Removed object

When a moving object has been removed from the designated area, an alarm sounds.

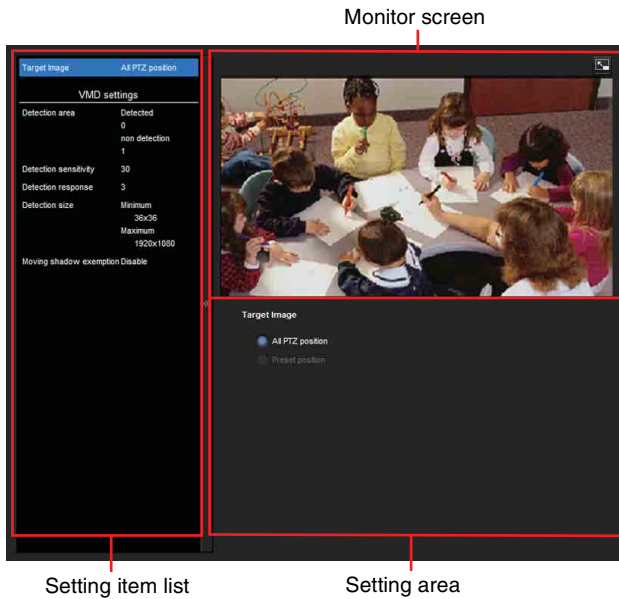

Notes

- Before actual use, perform an operation test and confirm that the motion detection function works correctly.

- Even when privacy masking is used, the motion detection function operates based on the images before masking is processed.

Setting items for motion detection

Use the settings tab to set the conditions for the motion detection function while observing camera images.

VMD settings

Detection area

Specify the effective scope of motion detection.

Note

The frames shown on the monitor screen are not displayed on the image files sent or recorded with motion detection.

Configuring the detection area

The following procedure is used to configure the motion detection area:

- 1 Use the following buttons to specify the active area(s) and inactive area(s).

Add detection area

Clicking this button will add an active area window in the center of the screen.

When you place the cursor on the area, the cursor changes to a crossed arrow, which you can drag to move the area.

When you place the cursor on the vertex of the area, the cursor changes to \leftrightarrow , which you can drag to move the vertex.

Add non detection area

Clicking this button will add an inactive area window in the center of the screen.

When you place the cursor on the area, the cursor changes to a crossed arrow, which you can drag to move the area.

When you place the cursor on the vertex of the area, the cursor changes to \leftrightarrow , which you can drag to move the vertex.

Delete Area

Clicking this button will change the cursor to a button. While the cursor is a button, click on a part of the area to delete that area.

After the deletion, the cursor will return to its original form. To exit this operation, click this button again.

It is the same function as the button displayed under VMF settings.

Add vertex

Clicking this button will change the cursor to a button. In that state, when you click on a part of the side of the area, a vertex is added to that point. After the addition, the cursor will return its original form. To exit this operation, click this button again.

It is the same function as the button displayed in VMF settings.

Delete vertex

Clicking this button will change the cursor to a button. In that state, when you click on a part of the vertex of the area, the vertex added to that point is deleted. After the deletion, the cursor will return its original form. To exit this operation, click this button again.

It is the same function as the button displayed in VMF settings.

Note

The vertex can be moved in an outward direction but cannot be moved toward the inside of an area.

Detection sensitivity

Set the sensitivity of motion detection.

A value from **1** to **256** can be specified. Clicking **Return to the default** changes the value to the default value.

Detection response

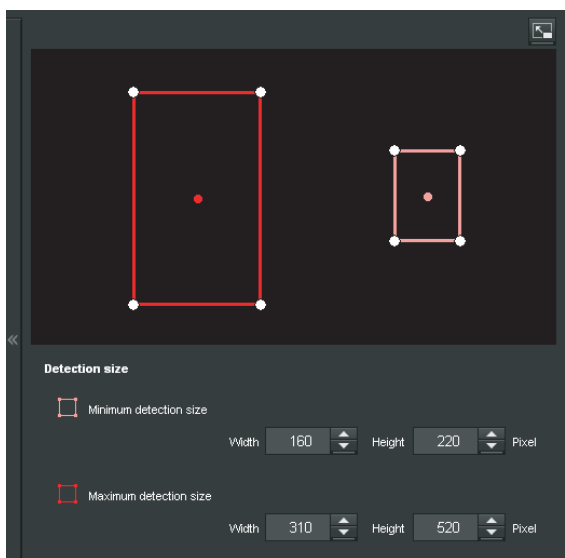

Set the response velocity of motion detection.

A value from **1** to **5** can be specified. Clicking **Return to the default** changes the value to the default value.

Detection size

Specify the minimum detection size and maximum detection size for motion detection. To specify the detection size, you can either enter values or drag the vertices of the area.

- The area size is measured in pixels.
- When you place the cursor on the area, the cursor changes to a crossed arrow, which you can drag to move to the minimum detection size area and maximum detection size area.
 - When you place the cursor on the vertex of the area, the cursor changes to \longleftrightarrow . Drag and move the vertex to adjust the detection size.

Moving shadow exemption

Set ON/OFF for the moving shadow exemption function of motion detection. Selecting **Do not respond to shadows** will prevent the shadows of a moving object from being recognized as moving objects. Deselect the checkbox to disable the shadow removal function of motion detection.

VMF settings

Set the alarm to sound when the specified conditions (**Intrusion, Passing, Left object, Removed object**) of the motion detection occur. You can also set the order for Intrusion or Passing, and set the alarm to sound only when the specified conditions occur in sequence.

Filter type

Select the filter type from **Intrusion, Passing, Left object, Removed object** or **Off**.

Time until left/removed object is detected

Enter the time you want to elapse before the alarm is triggered. This setting is available only when the filter type is set to **Left object** or **Removed object**.

Filter settings

Settings for each filter can be edited here. The inspection line and active window are set to default values. Edit according to use.

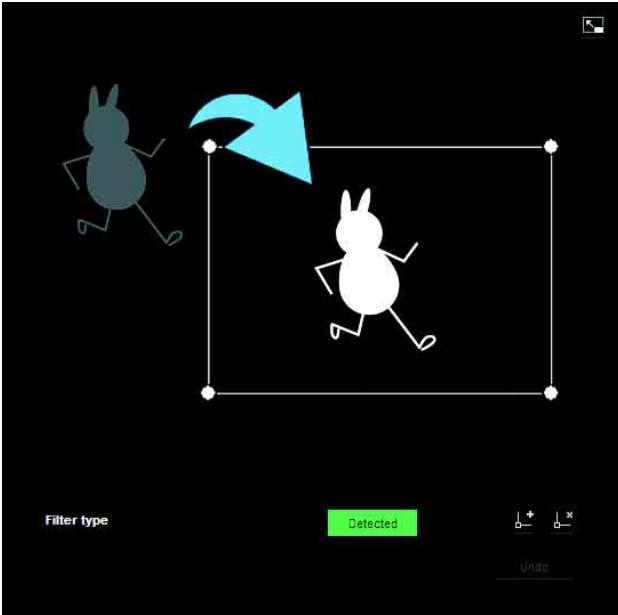

VMF status indicator of each filter

The filter is on when the set filter type conditions (**Intrusion, Passing, Left object, Removed object**) are met.

Tip

The buttons displayed on the edit screen for filter is used in the same way as those for detection setting. See page 54.

Intrusion

This criterion is for whether a moving object exists in the trigger area. Similar to an active window, a trigger area can also be moved and vertexes can be moved, added or deleted.

Passing

Edit the pass inspection line according to the following procedure:

Passing object trigger line

By default, one passing object trigger line is displayed. The number of vertexes is 2. Placing the cursor on the line will turn the cursor into a cross, and when you drag the line, the whole line will move.

Placing the cursor on the vertex will turn the cursor into , and when you drag the line, the vertex will move. The arrow displayed in the center of the passing object trigger line shows the direction of inspection. Trigger is performed when an object passes the passing object trigger position in this direction.

Trigger direction setting

Each time you click , the trigger direction toggles among the directions left, right and both.

Passing object trigger position

Select the passing object trigger position from **All sides**, **Left side**, **Top side**, **Right side** and **Bottom side**.

Left object

This criterion is for whether a moving object has been left in the trigger area. Similar to an active window, a trigger area can also be moved and vertexes can be moved, added or deleted.

Removed object

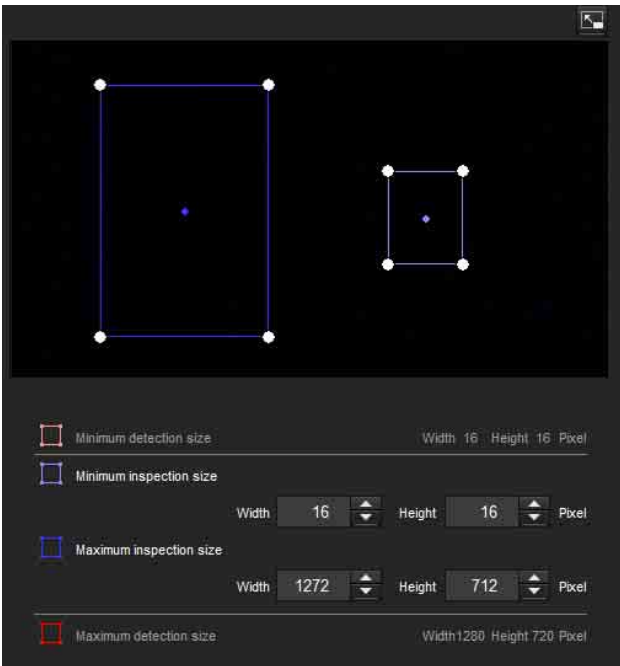

This criterion is for whether a moving object has been removed from the trigger area.

Similar to an active window, a trigger area can also be moved and vertices can be moved, added or deleted.

Trigger size

Specify the minimum trigger size and maximum trigger size of motion. To specify the size, you can either enter values or drag the vertices of the area.

The size of motion is measured in pixels.

- When you place the cursor on the area, the cursor changes to a crossed arrow, which you can drag to move the minimum trigger size area and maximum trigger size area.

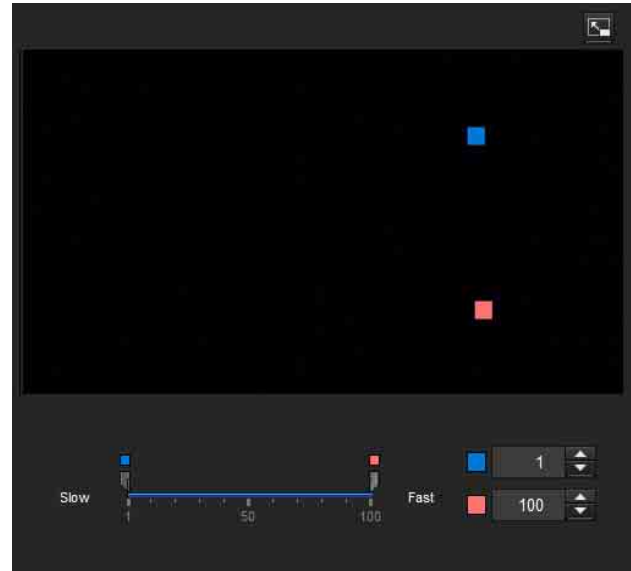

- Placing the cursor on the vertex of the minimum trigger size area or maximum trigger size area will change the cursor to \leftrightarrow , then you can drag the vertex to change the inspection size.

Tip

The minimum and maximum detection sizes configured in the VMD setting are displayed, but the size of the area cannot be modified from here.

Trigger speed

Specify the minimum and maximum speeds to be detected.

- Min. speed and Max. speed can be specified within a scale of 100.
- The blue marker for minimum speed cannot be set to the right of the red marker for maximum speed.
- The squares indicating Min. speed and Max. speed move on the right and left sides of the preview screen.

Note

The set value is only valid under the conditions of **Intrusion** or **Passing**.

Matching decision

Select the filter type you want to match and check **Use as matching condition**.

Select Filter 1, Filter 2 and Filter 3 in the list box of **Matching decision**.

Set the alarm to sound when the specified maximum 3 conditions occur in sequence. If the conditions occur in a different order, the alarm will not sound. Select the condition from **Intrusion**, **Passing** or **None**.

Filter order switching button

Clicking  switches the order of filter between the neighbouring methods.

e.g., If you click the button between 1 and 2, they will switch order. If you click the button between 2 and 3, they will switch order.

Specifying the time

Specify the reference interval in seconds between 1 and 2, or 2 and 3.

For example, if 1 and 2 are set and “3 seconds” is specified, an alarm will sound when the inspection conditions of 2 are met within 3 seconds from when the inspection conditions of 1 are met.

VMF status indicator of Matching decision

The indicator is on when the set filter type conditions are met.

Full-screen display button

Click  to display the ActiveX area in full screen. Clicking again will show the normal display.

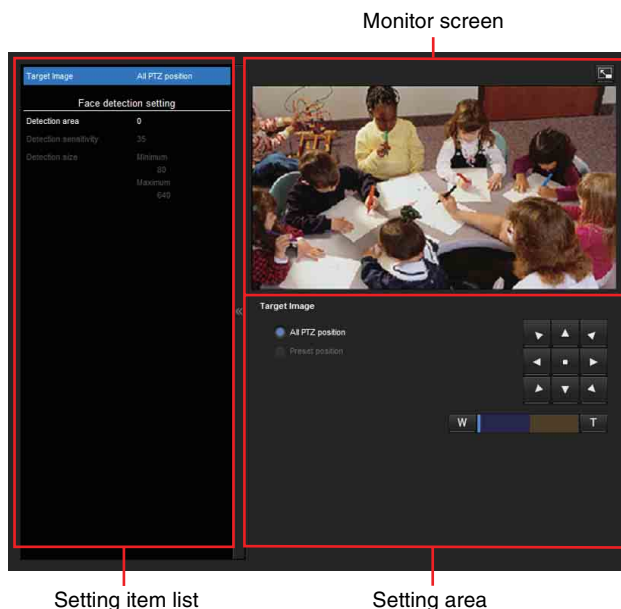

Stretch bar

Click  to hide the menu list on the left and enlarge the preview screen. Clicking again will show the menu list as it was before.

OK/Cancel

Click **OK** to finalize any changes made to the settings and send them to the camera. If you click **Cancel**, changes made to the settings will be discarded and the screen will be reloaded with the current camera settings.

Face detection Tab — Set the face detection

Face detection responds to faces in the camera image and triggers an alarm.

When you click the Face detection tab, a dialog appears. Enter the user name and password.

The factory setting of the user name and password for the Administrator is set to “admin”.

For security, be sure to change the password from the factory setting before using the camera.

Notes

- Before actual use, perform an operation test and confirm that the face detection function works correctly.
- Perform the following before setting the face detection.
 - Set **Image size1** in the Video codec tab of the Video / Audio menu or Video menu to the maximum rate.
 - Deselect the checkbox of **Image 1** in the PTZ control tab of the PTZ control menu.
 - Deselect the checkbox of **Stabilizer** in the Installation tab of the System menu.
- Some parts at the top and bottom cannot be set for models which have a maximum image size of 1280 × 1024 (SNC-VB600/VB600B/VM600/VM600B/VM601/VM601B).
- An inactive area cannot be specified.
- A horizontal face (leaning too far sideways) cannot be detected.
- Vertexes cannot be added or deleted. They are for specifying a rectangular area only.
- Even when privacy masking is used, the face detection function operates based on the images before masking is processed.

Detection area

Specify the effective scope of face detection. You can set the area in the same way as the detection area setting in VMD settings. (page 54)

A maximum of ten detection areas can be set. Similar to the detection area setting in VMD settings, a trigger area and vertexes can also be moved.

Detection sensitivity

Set the sensitivity of face detection. A value from **0** to **64** can be specified. Select low values to limit detection to the human face, or high values to also detect subjects that are similar the human face. This makes detection easier when the subject is far from the camera.

Clicking **Return to the default** changes the value to the default value.

Detection size

Specify the minimum and maximum size of face detection. You can specify the size by specifying values or by dragging vertexes to choose the area.

OK/Cancel

Click **OK** to finalize any changes made to the settings and send them to the camera.

If you click **Cancel**, changes made to the settings will be discarded and the screen will be reloaded with the current camera settings.

Network disconnection Tab — Monitoring the connection of a specified IP address

Monitored IP address

Set the specific IP address of which the network connection status is to be monitored.

OK/Cancel

See “Buttons common to every menu” on page 21.

Setting the Action output — Action output Menu

When you click **Action output** in the Administrator menu, the Action output menu appears.

The Action output Menu consists of the following tabs:

SNC-VB635/VB630/VB600/VB600B/VM630/VM600/VM600B/VM631/VM601/VM601B/VM632R/VM602R: Execution Condition, Mail Transfer, Alarm output, Edge Storage, Voice alert, HTTP alarm notification and FTP still image sending.

SNC-EB630/EB630B/EB600/EB600B/EB632R/EB602R/EM630/EM600/EM631/EM601/EM632R/EM602R: Execution Condition, Mail Transfer, HTTP alarm notification and FTP still image sending.

SNC-XM637/XM636/XM632: Execution Condition, Mail Transfer, Edge Storage, HTTP alarm notification and FTP still image sending.

SNC-CX600W/CX600: Execution Condition, Mail Transfer, Edge Storage, Voice alert, White LED, HTTP alarm notification and FTP still image sending.

Execution Condition Tab

Set execute conditions for each action.

Set the action output execute conditions when the condition created in the Event condition tab is implemented.

Displayed items vary depending on the function.

Mail Transfer: Set the condition of mail transfer.

Alarm output 1: Set the condition to control alarm output of the I/O port on the rear of the camera.

Alarm output 2: Set the condition to control alarm output of the I/O port on the rear of the camera.

Edge Storage movie: Set the condition to record movies using the Edge Storage function.

Edge Storage still image: Set the condition to record still images using the Edge Storage function.

Voice alert 1: Set the condition of Voice alert 1 recorded in the camera.

Voice alert 2: Set the condition of Voice alert 2 recorded in the camera.

Voice alert 3: Set the condition of Voice alert 3 recorded in the camera.

HTTP alarm notification 1: Set the condition for the HTTP alarm notification to recipient 1.

HTTP alarm notification 2: Set the condition for the HTTP alarm notification to recipient 2.

HTTP alarm notification 3: Set the condition for the HTTP alarm notification to recipient 3.

FTP still image sending: Set the condition for sending with the FTP still image sending function.

White LED: Set the White LED lighting condition. Only the Presence Sensor can be selected. The White LED lights up when it is dark.

Mail Transfer Tab — Setting the e-Mail (SMTP) Function

The screenshot shows the following configuration options:

- SMTP Server:** SMTP server name (text field), SMTP port number (25, range 1 to 65535), Authentication (None dropdown).
- Address:** Recipient e-mail address 1, 2, 3 (text fields), Administrator e-mail address (text field).
- Content:** Subject (text field), Message (text area).
- Event triggered execution:** File attachment (checked checkbox), Image file name (text field), Suffix (Date & time dropdown).
- Periodical execution:** Image file name (text field), Suffix (Date & time dropdown).
- Trouble sending:** Enable (checkbox), Continuous sending (checkbox), Recipient e-mail address (text field).

SMTP Server

Notes

- You cannot send an audio file by using the e-mail sending function.
- The frame rate and operability on the viewer may be reduced while a file is being transmitted by the e-Mail (SMTP) function.

SMTP server name

Type the SMTP server name using up to 64 characters, or the IP address of the SMTP server.

SMTP port number

Enter a port number from 25 or 1024 to 65535. The standard port number is 25.

Authentication

Select whether authentication is required when you send an e-mail.

None: No authentication is required when an e-mail is sent.

SMTP: Select when SMTP authentication is required.

POP before SMTP: Select when POP before SMTP authentication is required.

Combination of POP before SMTP and SMTP:

Select when both SMTP authentication and POP before SMTP authentication is required.

POP mode

Select POP3 or APOP as the authentication method for POP authentication.

Note

The model on sale in China does not support the APOP authentication.

Wait time after POP

Set the waiting time in **POP before SMTP** before SMTP authentication after POP authentication is completed. Timeout can be set from 0 to 10,000 msec.

POP server name

This is necessary when **POP before SMTP** is selected for **Authentication**.

Type the POP (receiving mail) server name using up to 64 characters, or type the IP address of the POP server. This setting is necessary when the SMTP server that sends e-mails performs authentication using the POP user account.

POP port number

Enter a port number from 110 or 1024 to 65535. The standard port number is 110.

Authentication mode

Select **Login** or **CRAM-MD5** as the authentication method for SMTP authentication.

Note

The model on sale in China does not support the CRAM-MD5 authentication.

User name, Password

Type the user name and password of the user who owns the mail account using up to 64 characters. This setting is necessary when the SMTP server that sends e-mails performs authentication.

Address

Recipient e-mail address 1, 2, 3

Type the recipient e-mail address using up to 64 characters.
You can specify up to three recipient e-mail addresses.

Administrator e-mail address

Type the Administrator e-mail address using up to 64 characters.
This address is used for reply e-mails and sending system messages from the mail server.

Content

Subject

Type the subject/title of the e-mail. The length for entering letters should be within 64 characters.
When an e-mail is sent in response to an alarm detection, the following string that indicates the type of alarm that will be added in the subject.

- When the Sensor 1 detects an alarm: (Sensor 1)
- When the Sensor 2 detects an alarm: (Sensor 2)
- When the Presence Sensor detects an alarm: (Presence Sensor)
- When the Camera tampering detection detects an alarm: (Tampering)
- When the Motion detection detects an alarm: (VMD)
- When VMF detects an alarm: (VMF)
- When the Network disconnection is detected (Disconnected)
- When the Face detection detects an alarm: (Face Detection)

(Event1 (Condition1)) is additionally available for event condition detection.

Message

Type the text of the e-mail.
The length for entering letters should be within 384 characters.

Event triggered execution

File attachment

Set whether an image file (JPEG file) is to be attached to the e-mail or not.
When the checkbox is selected, the image file made using the settings below is attached. When the checkbox is deselected, only the message is sent.

Image file name

Type the file name you want to assign to the image to be attached to an e-mail. You can use up to 10 alphanumeric characters, – (hyphen) and _ (underscore) for naming.

The actual image file name will be the specified image file name with a suffix and the extension .jpg.

Suffix

Select a suffix to be added to the file name used when the e-mail is sent.

None: The name of the sent file will be the image file name.

Date & time: The date & time suffix is added to the image file name.

The date & time suffix consists of last two-digits of the year (2 digits), month (2 digits), date (2 digits), hour (2 digits), minute (2 digits), second (2 digits), and sequential number (2 digits), thus adding 14-digit number to the image file name.

Periodical execution

You can set to send e-mails periodically.

Image file name

Type the file name of the image attached to the e-mail using up to 10 alphanumeric characters, – (hyphen) and _ (underscore).

The actual image file name will be the specified image file name with a suffix and the extension .jpg.

Suffix

Select a suffix to be added to the file name used when the e-mail is sent.

None: The name of the sent file will be the image file name.

Date & time: The date & time suffix is added to the image file name.

The date & time suffix consists of last two-digits the year (2 digits), month (2 digits), date (2 digits), hour (2 digits), minutes (2 digits) and seconds (2 digits), and sequential number (2 digits), thus adding a 14-digit number to the image file name.

Trouble sending

Supported models: SNC-VB635/VB630/VB600/VB600B/VM630/VM600/VM600B/VM631/VM601/VM601B/VM632R/VM602R/EM632R/EM602R/XM637/XM636/XM632/CX600W/CX600

Set to send an e-mail if a problem with a built-in fan or memory card has been found.

Enable

Select the checkbox to enable the sending of problem reports.

Continuous sending

Set whether to enable continuous e-mail sending.

When the checkbox is selected, an e-mail will be sent once an hour.

Recipient e-mail address

Type the recipient's e-mail address within 64 characters.

OK/Cancel

See “Buttons common to every menu” on page 21.

Alarm output Tab — Setting the Alarm output

You can perform setting in this menu to control the alarm output of the I/O port on the rear of the camera linked to alarm detection function.

Tip

For details on connection of peripheral devices to the alarm output of the I/O port, refer to the supplied Installation Manual.

Duration

Duration 1, 2

Enter the duration for which the alarm is output, between 1 sec. and 60 sec.

Memory card trouble detection

Set to output the alarm when trouble of the memory card is detected.

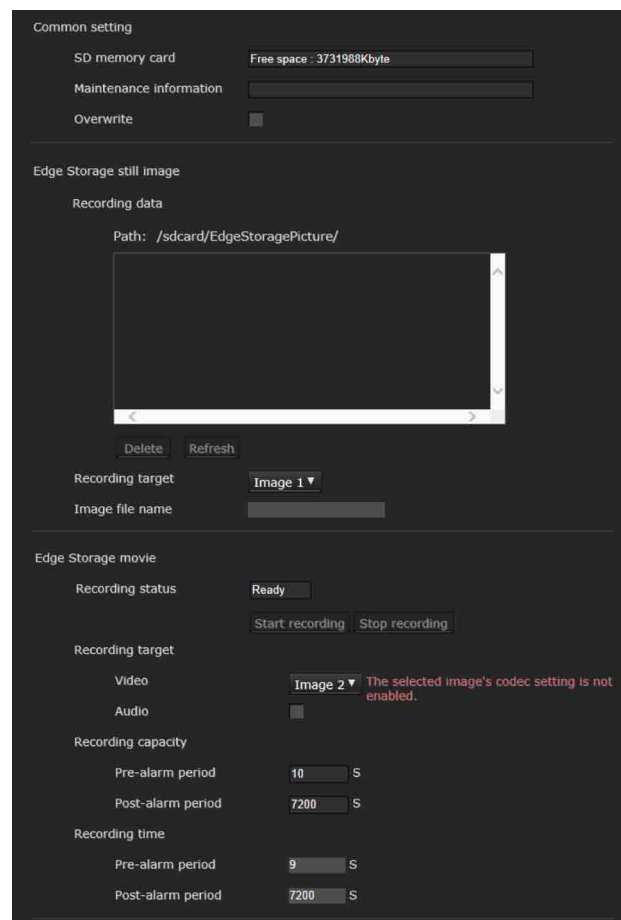

Output port 1, 2

Check the I/O port number that outputs the alarm when the trouble of memory card is detected.

OK/Cancel

See “Buttons common to every menu” on page 21.

Edge Storage Tab — Setting the Edge Storage movie and still image function

With Edge Storage, video or audio signal can be recorded from the alarm detection results, such as network block, recorded video and audio can be streamed with the same protocol as the real-time streaming.

Notes

- The frame rate and operability on the main viewer may be reduced during movie or still image recording.
- The actual interval of recording a still image may be longer than the interval you set.
- Stop the Edge Storage recording before you turn off the power of the camera with a memory card inserted.
- Before you remove or insert a memory card, stop the Edge Storage recording and turn off the power of the camera.
- Before using a memory card, format it by **Format memory card** in the Initialize tab of the System menu (page 24).
- A maximum of 4000 movie records can be saved to a memory card. If the checkbox of **Overwrite** is not selected when the number of records reaches 4000, new recordings cannot be made. If the checkbox of

Overwrite is selected when the number of records reaches 4000, the unit will begin to overwrite old records in ascending chronological order.

- Overwrite is not available for a memory card of less than 4 GB.
- When recording H.264, the recorded data may become very large and the video/audio may be interrupted if the Adaptive rate control is set and other image codec except CBR is selected. Therefore, selecting CBR is recommended.
If you select CBR, set the video codec as follows:
 - Set the **Bit rate** below 2000 kbps.
 - Set the **Frame rate** below 30 fps.
 - Set the **I-picture interval** to 1 second.
- When you record the JPEG with image size 1280 × 720 or above, set the video codec as follows:
 - SNC-VB635/VB630/VM630/VM631/VM601/VM632R/XM637/XM636/XM632: Set the **Image quality** below 2.
 - SNC-VB600/VB600B/VM600/VM600B/VM601B/VM602R/CX600W/CX600: Set the **Image quality** below 5.
 - Set the **Frame rate** to 1 fps.
- When you record, set the **Image codec 2** and **Image codec 3** of the **Video codec** tab in the Video / Audio menu to **Off**.

Common setting

Memory card

Display the available free space of external memory.

Maintenance information

Displays the status of the memory card if you are using the memory card that corresponds to displaying Maintenance information.

Overwrite

Select On to overwrite the file when there is insufficient memory space.

When you select the checkbox, overwrite is enabled. Old records will be overwritten in chronological order. When you deselect the checkbox, overwrite is prohibited, and no recording will be performed.

Note

Records are overwritten in chronological order, regardless of whether they are movies or still images.

Edge Storage still image

Recording data

You can refer to still image files recorded in the memory card. These files will be saved in a folder tree as follows.

```
/sdcard/EdgeStoragePicture/00000000-999999999/
00000000-999999999/
```

(Prefix)YYYYMMDDhhmmss00000001.jpg

Path: Displays the path name of the recording still image file.

When you select a file, a still image will be displayed.

Delete: Click **Delete** to delete the selected folder or file.

If you select a folder, any files in the folder will also be deleted.

Refresh: Click **Refresh** to reload the latest data.

Recording target

Select the video codec mode you want to record.

For detailed settings of video codec mode, see the Video codec tab in the Video / Audio menu.

Notes

- You can record still images even if the video is specified with an image codec set to H.264.
- Image quality setting for a still image can be changed only when the image codec is set to JPEG.
- If you want to change the image quality of recorded still images, change the image codec to JPEG.
- A folder containing no still image files may appear.

Image file name

The file name consists of three parts: a prefix, a file number and an extension.

Set the prefix of up to 30 alphanumeric characters. You can include - (hyphen) and _ (underscore) in the prefix. The file number and extension are assigned automatically by the camera.

The file number consists of the year (4 digits), month (2 digits), date (2 digits), hour (2 digits), minutes (2 digits), seconds (2 digits), and a sequential number (8 digits). The Greenwich Mean Time will be used in the file name. The extension is .jpg.

Edge Storage movie

Recording status

Display the current recording status.

The recording status will not be updated until the screen is refreshed.

Use the **Start Recording** and **Stop Recording** button to start or stop the recording manually.

Note

When recording manually, do not set **Edge Storage movie** in the Execution Condition tab of the Action output menu to **Off**.

Recording target

Video: Select the video codec mode you want to record.

For detailed settings of video codec mode, see the Video codec tab in the Video / Audio menu.

Audio: Set whether to record the audio signals input from the camera.

Select the checkbox to record.

Note

Set **Audio sending** (page 30) in the Audio tab of the Video / Audio menu to **Enable**.

Recording capacity

Displays the maximum recording time in the current camera setting of the video mode, image size, bit rate and frame rate.

Pre-alarm period: Displays the maximum recording time before the alarm is triggered.

Post-alarm period: Displays the maximum recording time after the alarm is triggered.

Note

Maximum recording time varies depending on the image size and quality setting in the Video / Audio menu.

Recording time

Set the recording time for the Pre-alarm image/audio and Post alarm image/audio.

Pre-alarm period: Type the recording time of the image/audio before alarm detection.

Post-alarm period: Type the recording time of the image/audio after alarm detection.

OK/Cancel

See “Buttons common to every menu” on page 21.

Voice alert Tab

Set the voice alert function to output audio from the speaker connected to the line output jack of the camera or the build-in speaker of the camera when an alarm is triggered by the sensor input or detection functions.

Note

Before using the voice alert function, you need to save the audio file to the camera using the SNC audio upload tool. You can download the application guide and SNC audio upload tool from the following URL.

<http://www.sony.net/ipela/snc>

Voice alert 1, 2, 3

Up to three voice alerts can be set. Configure the following setting for each voice.

File

Displays the name of the audio file saved in the camera. “Not uploaded” is displayed dimly if no audio file is saved.

To delete the audio file saved in the camera, click **Delete**.

Note

Before deleting an audio file, set **Voice alert** to **Off**.

Voice alert is included in the Execution Condition tab of the Action output menu.

Test

When an audio file is saved in the camera, you can check it by playing it back.

Click **Play** to play back the audio file.

Repeat

Select playback repeat time from **1** to **3**.

Notes

- If voice alert is actively linked with a different alarm type while another voice alert is occurring, the first voice alert is cancelled and the second one is output.
- When you play back a test, do not set **Voice alert** in the Execution Condition tab of the Action output menu to **Off**.
- If two or three audio files are set to be output simultaneously linked with the same alarm type, priority is given in the order **Voice alert 1, 2** then **3**.

OK/Cancel

See “Buttons common to every menu” on page 21.

HTTP alarm notification Tab

Set to notify a specified URL of an alarm when an event is detected.

HTTP alarm notification 1, 2, 3

Set up to 3 recipients who you want to notify of the alarm.

User name

Type the user name for authentication using up to 64 characters.

Password

Type the password for authentication using up to 64 characters.

Notification at the beginning of event detection

Select the checkbox for the alarm notification when the event detection starts.

URL

Type the recipient of the alarm.

Test

If you click **Execute**, the alarm will be notified manually regardless of whether an event is detected.

Notification at the end of event detection

Select the checkbox for the alarm notification when the event detection ends.

Note

If the **VMF, Camera tampering detection, Face detection, HTTP alarm notification, Event condition** are set as conditions for executing **HTTP alarm notification**, the **Notification at the end of event detection** cannot be set.

URL

Type the recipient of the alarm.

Test

If you click **Execute**, the alarm will be notified manually regardless of whether an event is detected.

Use Proxy

Select the check box if you use a proxy server.

Address

Type the address of the proxy server using up to 255 characters.

Port No.

Type the port number of the proxy server using up to 255 characters.

User name

Type the user name for proxy server authentication using up to 64 characters.

Password

Type the password for proxy server authentication using up to 64 characters.

OK/Cancel

See “Buttons common to every menu” on page 21.

FTP still image sending Tab

Set the items for the still file images that are recorded at alarm detection or recorded periodically and sent to the FTP server.

Note

While transferring the files with **FTP still image sending**, the frame rate and operability of the main viewer decrease.

FTP server

Set the items for the FTP server where files will be sent.

Server name

Type the FTP server name of the FTP server where you want to upload the files using up to 64 characters or type the IP address of the FTP server.

User name

Type the user name for the FTP server using up to 64 characters.

Password

Type the password for the FTP server using up to 64 characters.

Passive mode

Set whether to use the passive mode of the FTP server when you connect to the FTP sever. If you select the checkbox, you can connect to FTP sever in passive mode.

Alarm sending**Image to be sent**

Select the video codec mode for the image of alarm sending.

Set the details of the video codec mode in the Video / Audio menu or the Video codec tab in the Video menu.

Remote path

Type the path where the files will be sent using up to 64 characters.

Image file name

Type the file name of the image that you want to send to the FTP server using up to 10 alphanumeric characters, - (hyphen) and _ (underscore).

Suffix

Select a suffix to be added to the file name used when the image is sent.

Date & time: The date & time suffix is added to the image file name.

The date & time suffix consists of last two-digits of the year (2 digits), month (2 digits), date (2 digits), hour (2 digits), minute (2 digits), second (2 digits), and sequential number (2 digits), thus adding 14-digit number to the image file name.

Sequence number: A sequential 10-digit number 0000000001-4294967295 and a sequential 2-digit number are added to the image file name to be sent.

Sequence number clear

If you click **Clear**, the suffix of the **Sequence number** returns **1**.

Test

If you click **Execute**, the image will be sent to the FTP server once for testing according to the settings of alarm sending.

Periodical sending**Image to be sent**

Select the video codec mode of the image of periodical sending.

Set the details of the video codec mode in the Video / Audio menu or the Video codec tab in the Video menu.

Remote path

Type the path where the files will be sent using up to 64 characters.

Image file name

Type the file name of the image that you want to send to the FTP server using up to 10 alphanumeric characters, - (hyphen) and _ (underscore).

Suffix

Select a suffix to be added to the file name used when the image is sent.

None: The name of the sent file will be the image file name.

Date & time: The date & time suffix is added to the image file name.

The date & time suffix consists of last two-digits of the year (2 digits), month (2 digits), date (2 digits), hour (2 digits), minute (2 digits), second (2 digits), and sequential number (2 digits), thus adding 14-digit number to the image file name.

Sequence number: A sequential 10-digit number 0000000001-4294967295 and a sequential 2-digit number are added to the image file name to be sent.

Sequence number clear

If you click **Clear**, the suffix of the **Sequence number** returns **1**.

Test

If you click **Execute**, the image will be sent to the FTP server once for testing according to the settings of periodical sending.

Manual sending**Image to be sent**

Select the video codec mode of the image of manual sending.

Set the details of the video codec mode in the Video / Audio menu or the Video codec tab in Video menu.

Remote path

Type the path where the files will be sent using up to 64 characters.

Image file name

Type the file name of the image that you want to send to the FTP server using up to 10 alphanumeric characters, - (hyphen) and _ (underscore).

Suffix

Select a suffix to be added to the file name used when the image is sent.

None: The name of the sent file will be the image file name.

Date & time: The date & time suffix is added to the image file name.

The date & time suffix consists of last two-digits of the year (2 digits), month (2 digits), date (2 digits), hour (2 digits), minute (2 digits), second (2 digits), and sequential number (2 digits), thus adding 14-digit number to the image file name.

Sequence number: A sequential 10-digit number 0000000001-4294967295 and a sequential 2-digit number are added to the image file name to be sent.

Sequence number clear

If you click **Clear**, the suffix of the **Sequence number** returns **1**.

Send

If you click **Execute**, the image will be sent to the FTP server once for testing according to the settings of manual sending.

OK/Cancel

See “Buttons common to every menu” on page 21.

White LED tab

Display sample: SNC-CX600W

Make the setting of the Illuminator level and lighting time of the Presence Sensor detection and White LED.

Illuminator level

Select the White LED Illuminator level from 1 to 6. 1 is the weakest and 6 is the strongest one.

Test

Perform the lighting test of the White LED.

When you press the execute button, the LED lights up with the illuminator level you set. When you press the stop button, the LED turns off.

A message appears if you press the execute button after changing the illuminator level. Click **OK** if you want to change the illuminator level setting.

Duration

Select the White LED lighting time from 5 seconds to 30 minutes.

Tip

The lighting time will be extended if the Presence Sensor detection is continuing.

OK/Cancel

See “Buttons common to every menu” on page 21.

Setting the Schedule

— Schedule Menu

When you click **Schedule** in the Administrator menu, the Schedule menu appears. The Schedule menu consists of the **Schedule** tab.

Schedule Tab

When you click the Schedule tab, the setting menu for each action is displayed.

You can set the schedule of the following actions:

SNC-VB635/VB630/VB600/VB600B/VM630/VM600/VM600B/VM631/VM601/VM601B/VM632R/VM602R: Mail Transfer (Event), Mail Transfer (Periodical), Alarm output (Event), Alarm output (Timer), Edge Storage movie, Edge Storage still image (Event), Edge Storage still image (Periodical), Day/Night, Voice alert, HTTP alarm notification , FTP still image sending (Event) and FTP still image sending (Periodical).

SNC-EB630/EB630B/EB600/EB600B/EB632R/EB602R/EM630/EM600/EM631/EM601/EM632R/EM602R: Mail Transfer (Event), Mail Transfer (Periodical), Day/Night, HTTP alarm notification , FTP still image sending (Event) and FTP still image sending (Periodical).

SNC-XM637/XM636/XM632: Mail Transfer (Event), Mail Transfer (Periodical), Edge Storage movie, Edge Storage still image (Event), Edge Storage still image (Periodical), Day/Night, HTTP alarm notification , FTP still image sending (Event) and FTP still image sending (Periodical).

SNC-CX600W/CX600: Mail Transfer (Event), Mail Transfer (Periodical) , Edge Storage movie, Edge Storage still image (Event), Edge Storage still image (Periodical), Voice alert, White LED, HTTP alarm notification, FTP still image sending (Event) and FTP still image sending (Periodical).

Action

Displays an action name to set the schedule.

Always

Select the checkbox to always enable the specified condition for each action.

Always is not available for **Day/Night**.

Interval

You can set the interval of the action which is set to execute periodically.

Setting the schedule

You can set the schedule by arranging the schedule area of each action. Click on the area you want to set the schedule; 1 block for 1 hour. When you double-click on a selected area, the dialog of setting the start time and duration appears, and you can set the details.

If you want to delete a schedule you have set, select the schedule and press the delete key on your keyboard.

Note

When the execution condition of **Mail Transfer** is set to **Periodical**, the interval can be set from 30 minutes to 24 hours.

OK/Cancel

See “Buttons common to every menu” on page 21.

Setting the CLOUD service — CLOUD Menu

Supported models: SNC-VB635/VB630/VB600/VB600B/VM630/VM600/VM600B/VM631/VM601/VM601B/VM632R/VM602R/XM637/XM636/XM632/CX600W/CX600

When you click **CLOUD** in the Administrator menu, the CLOUD menu appears.

The CLOUD menu consists of the **Setting** tab.

Note

The CLOUD service is not available in some regions. For details, contact an authorized Sony dealer.

Setting Tab

The screenshot shows the 'Setting Tab' of the CLOUD menu. At the top, there is a 'Token' field with a masked input. Below it, the 'Registered information' section contains four rows: 'Organization' with the value 'Sony', 'Customer code' with the value '0', 'Site code' with the value '0', and 'Connection status' with the value 'Connected'.

Set the CLOUD service setting.

Connection to the CLOUD server

Check the status of the connection to the server. You can confirm the status of the connection when the checkbox of CLOUD service is not selected.

Token

Enter the necessary Token to connect to the server. After selecting the **OK** button and the setting is finished, you cannot change the Token.

If you want to change the Token, delete it by selecting the **Delete** button, then click the **OK** button. You can then enter a new Token.

Delete

Delete the Token.

CLOUD service

Enable

Select the checkbox to enable the CLOUD service. When you enable this function, the video codec setting will be changed to the setting for the CLOUD service.

Notes

- It may take time until the CLOUD service can be used after enabling it.
- The CLOUD service can be enable only when the NTP server is specified, and the time setting is set to Synchronize with NTP.

Registered information

When the checkbox of CLOUD service is selected, the registered information appears.

Organization

The registered organization information appears.

Customer code

The registered customer code appears.

Site code

The registered site code appears.

Connection status

The connection status to the CLOUD service appears.

OK/Cancel

See “Buttons common to every menu” on page 21.

Glossary

ActiveX control

A component program object that can be used with web pages or other application programs. The technology for creating ActiveX control is part of software developed by Microsoft.

Bandwidth control

To limit the amount of transmitted data.

Bit rate

The rate at which data bits are transmitted.

Capture

To send audio and video converted to digital data from video devices to a computer.

CBR

CBR stands for Constant Bit Rate control. When you select this setting, bits will be consumed at a constant rate.

Codec

Software/hardware for coding/decoding video and audio data.

Contrast

The difference in tone between the lightest and darkest portions of the image.

Default gateway

Device that can be used to access another network.

DHCP server

Acronym for Dynamic Host Configuration Protocol server. The IP address of a terminal without an individual IP address can be automatically distributed by the Dynamic Host Configuration Protocol (DHCP). The DHCP server assigns the IP addresses to the terminals.

Digital certificate

An electronic certificate that a CA (Certificate Authority) attests that a public key to cancel a secret code is issued by an authentic publisher.

DNS server

Acronym for Domain Name System server. As an IP address required for connecting to the device on an IP network is numerical and difficult to remember, the Domain Name System was established. A domain name is alphabetic and is easier to remember. When a client computer uses a domain name to connect to another computer, it asks a DNS server to translate the name into the corresponding IP address. The client computer can then obtain the IP address of the computer to be connected.

Frame rate

The number of frames of a moving image that can be transmitted per a second.

HTTP port

A port used to communicate between the web server and the web client, such as a web browser.

H.264

An image compression format. The standard written by the JVT (Joint Video Team) a joint organization for standardization (composed of ISO and ITU-T), is capable of transmitting video data at a higher compression rate than that of MPEG4.

IP address

Acronym for Internet Protocol Address. An individual IP address is basically assigned to each piece of equipment connected to the Internet.

JPEG

Acronym for Joint Photographic Expert Group. The still image compression technology or standards of ISO (International Organization for Standardization) and ITU-T. Popularly used as an image compression format on the Internet, etc.

MAC address

A network address that uniquely identifies each LAN card.

Multicast

The class D IP address assigned between 224.0.0.0 and 239.255.255.255. Using this IP address enables you to transmit the same data to multiple equipment.

Network address

The portion that identifies the local network (subnet) in an IP address.

Network bandwidth

Bit rate that can be used for networking.

NTP server

Network time server that transmits and receives time information over the networks.

Primary DNS server

One of the DNS servers that can first reply to a request by connected devices or other DNS servers.

Proxy server

A server or software that acts as an intermediary between a local network and the Internet so that it can connect to the Internet in place of a computer on a local network.

QoS

QoS stands for Quality of Service. A technology for controlling communication priority to improve network stability.

Saturation

The degree to which a color is pure.

Secondary DNS server

Subsidiary DNS server used when a primary DNS server cannot be used.

Sharpness

The degree to which the boundary of two portions is clearly distinguished.

SMTP Server

A server for sending or relaying e-mail messages between servers.

Solid PTZ

Zooming in/out function of an image without using an optical zooming function.

SSL

Acronym for Secure Sockets Layer. This is a protocol developed by Netscape Communications Corporation to be used for communications of encrypted data on the Internet.

Subnet mask

32-bit stream used to distinguish the subnet address from an IP address.

TCP

Acronym for Transmission Control Protocol. A standard protocol used for Internet connection. Compared with the other protocol, UDP, TCP provides reliable communication but communication speed is slower.

UDP

Acronym for User Datagram Protocol. A standard protocol used for Internet connection. Compared with the other protocol, TCP, UDP can transmit data faster, but reliable communication is not guaranteed.

Unicast

Transmission of data to specified equipment on a network by specifying a single address.

VBR

VBR stands for Variable Bit Rate control. When you select this setting, the bit rate will be adjusted to suit the camera scene.

WEP

WEP stands for Wired Equivalent Privacy. It is encryption, compliant with the IEEE802.11 standard.

WPA

WPA stands for Wi-Fi Protected Access. It is a standard for encryption developed by Wi-Fi Alliance, the trade group of wireless LAN. This encryption function compensates for WEP (Wired Equivalent Privacy) flaws.

WPA2

WPA2 stands for Wi-Fi Protected Access 2. It is a standard for encryption developed by Wi-Fi Alliance, the trade group of wireless LAN. This encryption function has more strength than WPA.
