## Programmable Logic Device Development Tools

## PLD Starter Kit

KANDA SYSTEMS

This starter kit is an easy to use starting kit for any electronics engineer/student who wishes to learn how to use Programmable Logic Devices (PLD's) in their designs. Familiarity can be gained on using 16V8, 20V8 and 20V10 devices typically.

## Features:

- Programmer unit which connects to a PC Parallel port (Parallel lead inc.)
- The programmer has on-board status LEDs indicating power, low supply & programming activity. A 24 pin ZIF socket allows easy loading of devices to be programmed
- PLD Trainer Unit, this is a demonstration board on to which a programmed PLD can be tried out. The unit has 10 input switches for simulating input signals to the PLD and a switchable output which can be routed either to a seven segment display, or 8 individual LEDs.

Both units have an on-board regulator and DC input socket.

Power requirements are 9v DC 300mA.

- A sample ATF16V8B device is included

All software is supplied on 3.5" disks and an Atmel CD-ROM is included as a reference for all the datasheets required for the kit.

## MACH™ ISP Starter Kit

LATTICE-VANTIS

The MACH Starter Kit by Vantis allows for evaluation of In-System-Programming (ISP) with MACH devices and benefits of 'Design Direct' programmable logic software in designing with complex PLDs. The software enables design, simulation and programming of Vantis CPLD and PAL devices. It supports JEDEC file generation and includes MACHPRO software for ISP from PC parallel port.

The kit provides IEEE JTAG testability eliminating separate programming/testing stations, thereby avoiding multiple handling steps, facilitating quick time designs.

System requirements: Wins 95, 98 or NT, AMD K6 or Pentium CPU.

Kit includes: ● CD-ROM with 'Design Direct' CPLD software, MACHPRO software, Databook, Applications notes

- 44-pin ISP board
- MACH ISP manual hardcopy
- Readme installation procedure
- Buffered programming cable
- M4-32/32 and 64/32 samples

each

## MAX7000s

ALTERA

These devices are ideal for system-level integration, featuring ISP, six output enable signals, two global clocks, fast input registers and programmable slew-rate control. ISP uses JTAG, allowing for devices to be programmed and the design board functionally tested, saving on manufacturing steps and on testing times.

The PL Byteblaster programming cable and the PLS-WEB CD-ROM is all that is required for prototyping.

## CPLD Design System

XILINX

The XPLA Designer, provides software and application solutions to a range of fast zero power eXtended Programmable Logic Array (XPLA®) CPLDs. The design tool supports both 3V and 5V devices and is PC Windows (3.1X and Windows 95) based, offering design entry, editing, synthesis, device fitting, function simulation, and full timing simulations. The design entry could be via high-level constructs and low-level directives. Popular state machine constructs, truth tables and Boolean equations are supported. The user is able to rapidly simulate designs via interactive waveform entry and analysis by developing simulation scripts for complex vector patterns. 32 macrocell designs are supported.

## Warp2+® VHDL Compiler

- Supports Cypress PLDs, CPLDs and FPGAs.
- VHDL (IEEE 1076 and 1164) high level language compiler.
- State of the art optimisations and reduction algorithms.
- Supports Boolean, state table, gate level, Register Transfer Language (RTL), Aldec editor

The Cypress CY3120 (Warp2+) VHDL compiler facilitates device independent design over the Cypress PLD and CPLD range and offers portable design solutions across multiple devices. Warp2+ will be hosted by IBM PC-AT and Windows. It utilises a fully compliant subset of IEEE 1076 VHDL including Enumerated Types, Operator Overload, For ..... Generate and support for integer arithmetic. Also included with the CY3120 is a timing simulation from Aldec, a functional graphical waveform simulator enabling on screen entry and modification of stimulus waveforms.

## FPGA Starter Kit

## KANDA SYSTEMS

This kit is a complete development environment as an introduction into the use of Field Programmable Gate Arrays (FPGAs). The kit provides a wealth of VHDL examples and gives a wide range of projects all of which are based around the 40K ATMEL family. The kit specifically programs the ATMEL AT40K20 device.

## The starter kit comprises of:

- Comprehensive FPGA book
- Main PCB
- Adapter board
- Cable
- Dongle
- Atmel IDS CD (Version 6)
- Programming Software
- Registration card

## On-Board Features

- AT40K20 device included
- Configurator & ISP
- Sockets for AVR microcontroller (AT90S8515) and 4 x 512KB EEPROMS
- Infra-red Transmitter
- Infra-red receiver/decoder
- 2 x ADCs (High precision and high speed)
- 1 x DAC
- 8 x Programmable switches & LEDs
- 2 x Serial ports
- PWM voltage output (up to 500mA)
- Multiple clocks - 40MHz, 10MHz, 4.9512MHz and 32.768KHz
- 6 Digit direct drive LCD Display
- Interface for 2 line x 16 intelligent LCD
- AC or DC power supply input

## System requirements:

- PC, minimum Pentium
- WIN 95 or NT4
- At least 32MB RAM (64MB recommended)

## Get Going With 40K Series FPGAs

## KANDA SYSTEMS

A comprehensive book which is also supplied with the FPGA Starter kit, **Order Code 318-7690**, introduces the reader to the Field Programmable Gate Array (FPGA). It starts with an overview on FPGAs and covers the architecture of one particular family of FPGAs, the ATMEL AT40K series. Using the tools five simple designs are looked at, illustrating several features of the architecture and how they are implemented. Finally, more advanced designs are looked at which directly access the use of the FPGA starter kit and its peripherals.

Get Going With 40K Series FPGAs .....Order Code 318-7706

each

## The TRAC Development Kit

TRAC is field Programmable Analogue Device which brings the benefits of a structured, top-down approach to analogue signal processing. The TRAC Development Kit enables instant prototyping of TRAC designs, allowing engineers to prove their ideas and get them speedily to market. This is achieved by the integration of software, hardware and the device which is fully reconfigurable. An analogue application is designed and simulated by the Windows based, drag and drop software and the data is sent to the hardware to programme the device.

The fully functional TRAC development board includes four TRAC020 devices (each with 20 cells per device, digitally programmable to one of eight top-level functions) to permit prototyping of designs up to 80 cells, and boards can be daisy-chained for more ambitious projects. As well as a parallel interface for programme download, an EEPROM is also included for non-volatile programme storage.

## The Development Kit includes:

- DC power supply
- Applications library
- Parallel interface cable
- Manual and documentation
- Design, simulation and download software

## ispPAC

The ispPAC system comprises of a development kit and associated devices which bring analogue functions such as sum/difference, gain/attenuation, integration and high order filters under the control of a programmable routing architecture. The individual PACells have programmable gain and frequency response with user definable routing so that separate internal blocks may be either connected together, or connected to external pins on the device, in this way analogue functions may be produced without compromising performance or bandwidth.

The devices are In-System Programmable, and the development kits include the necessary cables and software together with an evaluation board and sample devices.

The PAC-Designer kit includes:

- PAC-Designer 'Getting Started Manual'
- Software on CD-ROM

Applications:

- Single 5V supply signal conditioning
- Active filters, Gain stages, Summing blocks
- isp Interface to connect to PC parallel port
- Evaluation board
- Analogue Front-Ends for Data Acq. systems
- Sensor signal conditioning

## Memory Kits

PCMCIA Card Driver  
Card Wizard

Card Wizard is a Reader/Writer for all 2.01 compatible type 1, 2 or 3 cards.

Connecting to a standard 16 bit ISA slot, Card Wizard transforms your desktop PC. It presents one type 3 slot on the back ideal for Ethernet or Modem cards, and 13.5mm high slot in a 3.5" or 5.25" bay on the front for type 1, 2 or 3 cards. All the necessary driver software is provided in addition to a comprehensive manual. Card Wizard will support all Memory, ATA cards and I/O devices meeting PCMCIA 2.01 specification.

## Serial EEPROM Designer's Kit

Supports 24C/24LC/24XX/59C/85C/93C/93LCXX Families

Supplied with a universal power supply. UK or International power supply optional. UK and European mains plug lead available separately.

Microchip's Serial EEPROM Designer's Kit includes everything necessary to quickly develop a robust and reliable Serial EEPROM based design and greatly reduce the time required for system integration and hardware/software debug.

The Total Endurance software model enables designers to quickly choose the best Serial EEPROM for the specific application and perform trade-off analysis with voltage, temperature, write cycle and other system parameters in order to achieve the desired erase/write endurance or product lifetime.

Microchip's SEEVAL (Serial EEPROM Evaluation and Programming System) will accept any Microchip Serial EEPROM in DIP package and enable the designer or system integrator to read, or erase any byte or the entire array.

Contents include :

- Microchip Total Endurance® software model
- Microchip Serial EEPROM sample pack
- Microchip SEEVAL® evaluation and programming board
- RS232 serial cable
- Microchip SEEVAL® software

## 8 Bit Microprocessor Kits &amp; Development Tools

## 05BTutor Kit

The Ultimate Tutor is an easy-to-learn, easy-to-install teaching tool for introduction to the M68HC05 range. It allows for learning at own pace from basics to understanding the M68HC05 architecture. On-disk demonstration programs are given which introduce new aspects of assembly language programming and highlight features of the 68HC05, allowing the programming concepts gained to be applied to trainees/designers applications. The 3.5in disk contains emulation and downloading software. External peripheral components may be used with the training board to extend understanding.

Kit includes:

- Demo board assembly
- Tutorial book
- Software disk
- Schematic diagrams
- 9V PP3 battery

Minimum requirements:

- IBM compatible PC (DOS/Wins) or a Power Mac 7.5 or later
- 1+ serial port
- 3.5in floppy disk drive
- 9 to 9 pin serial cable

## M68HC05 In-Circuit Simulator Kits

Motorola's Programmer/In-Circuit Simulator (ICS) kits help develop and debug target systems incorporating members of the 68HC05 microcontroller family. The kits provide an interface to users target system for Windows based editing, assembly, software simulation, programming and in-circuit simulation. The inputs/outputs of the target can be used during code simulation.

## Features:

- Windows based Integrated Development Environment (IDE) with editor, assembly, debugger and simulator – runs under Wins 3x and '95
- Programs EPROM, OTP, or EEPROM microcontrollers

- MCU samples
- Serial cable (PC to ICS)
- Power Supply
- MCU technical databook
- Software/Hardware user's manual
- Applications guide
- 68HC05 CD-ROM

## MC68HC08 In-Circuit Simulator Kits

These Programmer/In-Circuit Simulator (ICS) kits help develop code and debug target systems incorporating the MC68H(R)C908 range of FLASH microcontrollers. The Windows based development environment incorporates an assembler, editor, simulator and debugger which provide an ideal platform to write and debug code for this range of devices.

## Features:

- Windows based IDE interface
- Programs, Simulates and Emulates the selected devices
- JL/JK Unit can accept DIL and SOIC 20/28 pin devices

- Serial cable and all Header cables supplied
- Universal power supply included
- MCU samples
- Technical manuals and software supplied

## SK-5xx Starter Kits

Each starter kit contains an evaluation board which connects to a PC via RS-232 and allows for capabilities of the featured microcontrollers to be assessed and development of applications to be carried out quickly and easily. The board has a wire wrap area and RAM and FLASH memory for program download. Evaluation versions of third party development software are provided, with restricted code size, as well as full data on the microcontroller, the board manual and application notes. The starter kit CD-ROM also contains code examples, both source and executable.

## 8051 Based Microcontrollers

## Dallas 87C520 Starter System

This system is aimed at developers looking to evaluate/program the high speed Dallas 87C520 microcontrollers. The kit is based around a 'Universal 8051 Monitor Module' which allows user code to be downloaded into external RAM and then single-stepped under PC control using the Keil 'dScope' debugger. The system is supplied with an advanced Windows Integrated Development Environment (IDE), Keil C51 Compiler, Assembler and Debugger. This makes it ideal for evaluation and small projects.

## Features:

- Integrated Development Environment (IDE) including an ANSI C Compiler, Macro Assembler, project management utility and software simulator/debugger (limited to 2K total code output)
- Universal 8051 Monitor Module including two serial port channels allowing one for debugging information and one for user serial communications hardware and a prototyping area
- Includes a UK power supply, serial and parallel cables
- Ideal for evaluation purposes and small projects

## 51LPC

The LINK-51 Evaluation Kit comes with EMIT® 3.0 (Embedded Micro Internetworking Technology) Evaluation networking software for the 51LPC family of 80C51-based microcontrollers. EMIT software is a device networking software based on standard Internet technologies that network 8- and 16-bit embedded devices to each other and the Internet.

LINK-51 provides a development environment for embedded network connectivity into electronic devices, including:

- 51LPC microcontroller
- EMIT 3.0 evaluation software
- 51LPC - based evaluation board
- Electronic documentation on disk

EMIT software allows access to the on-board 51LPC via web browser, as well as connection of several micro enabled devices via a local RS232/485 network.

Note: The software provided has a 30 day evaluation period from installation. This does not disable the product completely but remote connection to the device through a Gateway from an internet connection will be lost.

## Features:

## Device Application Tools

- Device object server
- Assembly source code - 8051

- C source code - 8051
- Device debugging tools

- Package data table creation utility
- Device network connectivity software

## User Interface Tools

- Web browser graphical user interface
- Java Bean compliant interface objects

- Dynamic Services for batch process data gathering
- C simulators of EMIT - enabled devices

- EMIT Access Library client application toolkit

## Electronic Documentation

- Complete description of the EMIT architecture
- Step by step tutorials on how to use the references board and easily created user interfaces
- Start to finish development process guidelines

- Development procedures for the different user interface options
- Programming instructions and examples on integration with a device
- Reference details on EMIT components and utilities

## Hardware Reference Design

- LINK-51 evaluation board for the 51LPC family
- RS232 support

- Expansion interface bus for other hardware products

**LINK-51, the 51LPC Evaluation Kit for the P87LPC764** Order Code **309-5745** each

The 51LPC microcontroller family features include:

- C51 compatible
- 2.7V to 6V operating range
- Brownout detection
- Twice the 8051 execution time

- Two 16-bit counters/timers
- Two analogue comparators
- Full duplex UART
- I<sup>2</sup>C comms port

- Watchdog timer
- Active low reset
- Configurable oscillator
- LED drive capability
- Up to 18 I/Os

## 80C5X Starter Kits

Three separate development boards, designed for Farnell by Bluebird Electronics, for Philips 80C552, Infineon 80C515/535 and Infineon 80C517/537 8051 based microcontrollers. The product is aimed at engineers looking for a quick development board to test out their ideas before laying out the production design.

Each kit contains a screen printed double sided PCB with all port pins available to the developer, PLCC socket for the processor, RS232 interface with driver IC, socket and decode for 8, 16 or 32K EPROM, 5 push buttons - one dedicated to reset, 2.5mm power socket, 12MHz crystal, driver IC with 8 LEDs, 200 hole patch area, circuit diagram and assembly notes.

## 87C750/751 Development Kits

Two kits are available for 87C750/751 development, designed to getting projects off the ground with minimum of effort and expense. The I/O is pinned out to give maximum flexibility during development and both boards handle the 24 pin DIL package. All the necessary components are included i.e. sockets, regulator, reset components, LED's resonator etc. A circuit diagram and construction notes are also included.

The 87C75/751 Project Board (120-066) has an additional prototyping block, slide and push switches and connector for an external 9V supply.

Use in conjunction with DS750 Development Kit (485-068).

## Keil - 8051 Software Development Tools

The Keil PK51 Professional Developers Kit comprises of a comprehensive suite of development tools for the 8051 family. The Windows Integrated Development Environment encompasses an optimising ANSI-C compiler, Macro Assembler, Software Simulator and Target Debugger, Integrated Editor and a powerful Project Management Utility. The C-compiler generates highly optimised code for any 8051 derivative and features microcontroller-specific language extensions allowing all resources of the target micro to be utilised.

## Features:

- Windows Integrated Development Environment compatible with Windows 3.11, 95 and NT
- Optimising ANSI-C compiler
- Macro Assembler
- Software Simulator and Target Debugger
- Integrated Editor
- Powerful Project Management Utility
- Supports code generation for most 8051 derivatives which feature either internal or external code memory

## Device Support:

- Generic 8051/8052/87C families
- Philips 87C750/751/752
- Atmel 89C and 89S families
- Infineon 80C517
- Dallas 80C320/520/530

## Keil PK51 2K to 8K Upgrade

## KEIL

This software package allows an existing user of the Keil 'PK51-2K' 8051 Toolset to upgrade to a version which can generate up to 8K bytes of executable program code. The upgrade includes floating point mathematical libraries making it ideal for scientific and educational projects. A full suite of reference documentation is also included.

## Features:

- Upgrade from PK51-2K to 8K bytes version
- Integrated Development Environment (IDE) including an ANSI C Compiler, Macro Assembler, project management utility and software simulator/debugger (limited to 8K total code output)
- Floating point mathematical libraries making it ideal for scientific/educational projects
- Full Keil PK51 Reference Manual Set
- Supports most popular 8051 devices

## Micro-Pro PLUS device Programming System

Supports Atmel, Dallas, Intel, ISSI, Philips, Temic, etc.

This programming system has the ability to program the on-chip code/EEPROM space of most 8051 microcontroller derivatives from Atmel, Dallas, Philips, Intel ISSI and Temic. Support for the majority of the Atmel AVR microcontroller family is also offered together with a selection of Atmel products including EEPROM and FLASH memories. The powerful Windows interface software supports code and data buffers, setting of special option bits and a device auto-program utility. System contents include a programmer, parallel cable, software and mains power supply adaptor.

## Features:

- Supports programming of on-chip memory of most 8051/251 and Atmel AVR microcontrollers
- Supports programming of many Atmel serial and parallel EEPROM devices plus a selection of Atmel FLASH memories
- Powerful Windows Interface Software (compatible with Win 3.11, 95 and NT)
- Compatible with binary and Intel HEX files
- Accepts 8/20/40 pin DIL devices without adaptor
- Fast programming algorithms (many approved by manufacturer)
- Field upgradeable programmer by virtue of FPGA architecture
- Connects to PC parallel port

## Device Support:

Atmel 89C, 89F, 89S, 90S (AVR) microcontroller families  
Atmel serial EEPROM devices  
Atmel parallel EEPROM family  
Atmel FLASH memory family  
Dallas 87C520

## Gemini-1 - ISP Programmer for Philips 8051 Flash Microcontrollers

Gemini-1 is a CE compliant programmer, supports In-System Programming (ISP) of the Philips 89C51Rx+ FLASH Microcontroller Families using the serial port of the target microcontroller.

## Features:

- Supports In-System Programming (ISP) of the Philips 89C51Rx+ FLASH Microcontroller Family
- Connects to PC serial (COM) port using cables supplied
- ISP cable connects to user target system via 10-way header
- Obtains power (+5V) from the target system
- Generates +12V Vpp on-board the programmer
- Powerful 'Programmer Interface Software' (compatible with Win 3.1, 95, 98 & NT)
- Field upgradeable programmer firmware

Device support: ● Philips: 89C51RA+, 89C51RB+, 89C51RC+, 89C51RD+

## C51 Starter System

## 8051 FLASH Microcontroller Starter System

This CE compliant starter system provides a comprehensive suite of development tools for the Atmel 8051 microcontroller family. The system hardware comprises of a combined parallel and serial device programmer, feature-packed evaluation module, In-System Programming (ISP) cable and mains power supply. Also included is a powerful Keil Integrated Development Environment (IDE) featuring an editor, Macro assembler, C compiler, linker, software simulator and HEX creator. Sample programs are supplied to help the developer to quickly become familiar with the 8051 microcontroller family and C. It is possible to download code from the IDE straight to the sample AT89S8252 microcontroller fitted in the evaluation module without removing the device from the socket.

- Programs Atmel 89C 20-pin microcontrollers in the ZIF socket
- Programs Atmel 89S microcontrollers in-system via ISP cable
- Evaluation module supplied features 8/20/40 pin microcontroller sockets, LEDs, switches, serial communications etc.
- Includes Keil PK51-2K 8051 Toolset (limited to 2K total code output)
- Fast programming algorithms (many approved by manufacturers)

## Device Support:

Atmel (parallel prog mode) – AT89C1051, AT89C2051  
In-System Programming – AT89S8252, AT89S53

## Atmel 8051 Professional Starter System

This is a CE compliant starter system for engineers wishing to learn programming and development with 8051 microcontrollers. The system hardware comprises of a Micro-ISP serial programmer, an Atmel AT89S8252 microcontroller which features 8K of FLASH and 2K of EEPROM on-chip memory, an 89S Personality Module, a feature packed Evaluation Module and a prototyping module. The 89S Personality Module comes fitted with an AT89S8252 device that can be programmed In-System. The Evaluation Module features LEDs, push buttons, piezo sounder and serial communications and the Prototyping Module features an area where small circuits can be developed. Both the Evaluation and Prototyping Modules plug into the Personality Module providing a completely re-usable development system. The Keil C Compiler is included (limited to 2K total code output) providing a powerful and flexible development environment.

## Features:

- Integrated Development Environment (IDE) including an ANSI C Compiler, Macro Assembler, project management utility and software simulator/debugger (limited to 2K total code output)
- Microcontroller 89S Personality Module featuring 40-pin socket and an ISP header
- Evaluation Module featuring LEDs, push buttons, piezo sounder, RS232 serial port and a Prototyping Module featuring an area for small circuits to be developed. These modules plug into the Microcontroller Personality Module
- Micro-ISP serial programmer with Windows software (compatible with Win 95, 98 and NT)
- Connects to a spare PC serial (COM) port
- Field upgradeable programmer firmware

## Device Support

## Support Tools for the 8051 family

## 89C-1051/2051 Demo Module

An evaluation module for the 89C-1051/2051 FLASH microcontrollers.

Features include:

- 8 multiplexed I/O lines - LED/Push button
- RS-232 Serial communications up to 120K Baud
- Inexpensive ADC using on-chip comparator
- Accepts either Atmel 89C1051 or 89C2051
- Supplied complete with pre-programmed 89C2051 and PC serial cable
- C51 software provided includes pitch generation, ambient light meter, serial communications and DVM
- Credit card size - 85 33mm

## 89C-1051/2051 OEM Module

An OEM module for evaluation or design-in into custom products.

Features include:

- Supports Atmel 89C1051 and 89C2051 processors
- RS-485 Serial hardware - allows up to 32 modules to be networked together
- RS-232 Serial hardware - allows connection to terminal (supports one hardware and one software UART)
- 1K bytes EEPROM memory for non-volatile data storage
- A/D circuitry using microcontroller on-chip comparator
- All microcontroller I/O lines brought out to header

## Micro-ISP Programming System

The programmer downloads the program serially, bit by bit, to the microcontroller. By utilising the ISP features of the Atmel 89S and 90S microcontroller families, the devices can be reprogrammed without removing from the target board.

The programming system includes the 8051 socket stealer which allows you to add In-System-Programmability to existing hardware by using an 89S8252 in place of any generic 8051 40-pin DIL microcontroller.

Features include:

- Programmer connects to parallel port
- No power supply required
- Windows-based software
- 8051 socket stealer module
- AT89S8252 microcontroller
- Atmel CD-ROM Data Book
- Full documentation

SEM450

**AT-89S-ISP-SYSTEM** .....Order Code **795-239** each

### 8051/AVR Socket Stealer

795-252

795-264

The Socket Stealer Module adds In-System Programmability to existing hardware by simply plugging into the 40-pin or 40-pin microcontroller socket. For 8051 devices the microcontroller is replaced with an Atmel 89S8252 which is then plugged into the Socket Stealer. For AVR devices the existing microcontroller is plugged into the Socket Stealer. Future software revisions can be made without disturbing the microcontroller by simply connecting a Micro-ISP or Activ8r programmer to the ISP header of the Socket Stealer and reprogram in-system.

#### Features

- Adds In-System programming to existing non-ISP circuit board designs
- Ideal for code development purposes, allowing firmware to be developed and tested quicker and more easily
- Isolates MISO, MOSI and SCK microcontroller pin from target circuit during programming avoiding any contention problems

#### Device Support

Atmel AVR - Atmel AT90S8515/4414

### Micro-ISP Series IV - Atmel Microcontroller ISP System

This CE compliant programmer supports In-System Programming (ISP) of the Atmel 89S (8051), 90S (AVR) and ATmega (AVR) FLASH microcontroller families. The programmer connects to any standard PC serial port and comes complete with a 10-way serial programming cable which connects to the user target system. Programming is via a 3-wire SPI bus plus control of the microcontroller RESET line.

#### Features:

- Programs Atmel 89S (8051), 90S (AVR) and ATmega (AVR) microcontrollers In-System
- Standard version operates with a supply voltage range of 4.6V to 6.0V. Low Voltage version operates with a supply voltage range of 3.0V to 6.0V
- Connects to a PC serial (COM) port
- Serial Programming ribbon cable connects to user target system
- Obtains power from user target system
- Meridian for Windows - Programmer interface software (compatible with Win 3.1, 95, 98 and NT)
- Field upgradeable programmer firmware

#### Device Support

### AVR Professional Starter System

This CE compliant starter system provides a comprehensive suite of development tools for the Atmel AVR RISC microcontroller family. The system hardware comprises of a combined parallel and serial device programmer, feature-packed evaluation module, In-System Programming (ISP) cable and mains power supply. Also included is a powerful software Integrated Development Environment (IDE) featuring an editor, AVR Macro Assembler, AVR BASIC LITE compiler and software simulator. Sample programs are supplied to help the developer to quickly become familiar with the AVR microcontroller family. It is possible to download code from the IDE straight to the sample AT90S1200 microcontroller fitted in the evaluation module without removing the device from the socket.

#### Features:

- Programmer supports parallel and In-System Programming (ISP) of Atmel 90S (AVR) RISC microcontrollers
- Evaluation module supplied features 8/20/40 pin microcontroller sockets, LEDs, switches, serial communications etc.
- Integrated Development Environment (IDE) including editor, BASIC compiler (restricted to 1Kbytes code) assembler and software simulator
- Programmer/Evaluation module connect to PC serial (COM) port
- Meridian for Windows-Programmer Interface Software (compatible with Win 3.11, 95 and NT)
- Field upgradeable programmer firmware

### Atmel AVR Professional Development System

This CE compliant development system provides a comprehensive suite of development tools for the Atmel AVR RISC microcontroller family. The system hardware comprises of a combined parallel and serial device programmer, 'Classic' AVR Microcontroller Personality Module, feature-packed Evaluation Module, Prototyping Module, In-System programming (ISP) cable and UK mains power supply. Also included is an Integrated Development Environment (IDE) featuring an editor, macro assembler, optimised BASIC compiler and software simulator. Extensive on-line help and many examples are provided to help reduce the learning curve.

#### Features:

- Integrated Development Environment (IDE) including editor, BASIC compiler (limited to 1K code size), assembler and software simulator. The IDE also includes a macro assembler, support for in-line assembly and linking with pre-assembled object files
- Windows programmer software (compatible with Win 95, 98 and NT)
- Classic AVR Microcontroller Personality Module which plugs into the Evaluation and Prototyping Modules
- Evaluation module features eight, 20 and 40-pin microcontroller sockets, LEDs, switches, piezo buzzer, serial communications and LCD connector. The Prototyping Module features an area for small circuits to be developed.
- Connects to a spare PC serial (COM) port
- Field upgradeable programmer firmware

## 8051 Based Microcontrollers — Continued

## AVR BASIC IDE

AVR BASIC is a powerful Integrated Development Environment (IDE) for the Atmel AVR range of RISC microcontrollers. The BASIC compiler produces very tight AVR machine code by translating the BASIC source into actual run-time assembly code. The Toolset incorporates an editor, optimising BASIC compiler, macro assembler and HEX creator. Assembled output can be viewed along with the source code. An extensive collection of examples demonstrating how to program different aspects of the AVR microcontrollers is included. Compatible with Windows 95, 98 and NT.

## Features:

- Integrated Development Environment (IDE) including editor, BASIC compiler, assembler and software simulator. It also includes a macro assembler and support for in-line assembly and linking with pre-assembled object files
- Support for floating point mathematics (full version only)
- Compiled BASIC generates highly optimised AVR machine code. Not a run time interpreter, minimal speed/code overhead compared with assembler
- Comprehensive suite of code examples available
- Breaks the cost barrier for small projects. Ideal for educational, hobbyist and professional use
- Assembly-like commands can be freely mixed with BASIC code
- Not a run-time interpreter, minimal speed/code overhead compared with assembler
- Supports direct access to SRAM, Registers and EEPROM memory
- 1K maximum code size with Lite version, unrestricted code size with full version

## Device Support

AVR BASIC Lite - AT90S1200

AVR BASIC Full - AT90S1200, AT90S2313, AT90S2323, AT90LS2323, AT90S2343, AT90LS2343, AT90S4414, AT90S8515, AT90S4434, AT90LS4434, AT90S8535, AT90LS8535, ATmega103(L), ATmega603(L)

## AVR ICE200 In-Circuit Emulator

New

The ICE200 is a true Real-Time In-Circuit Emulator for the Atmel AVR microcontroller family. The system offers full speed emulation of most AT90S and AT tiny derivatives including emulation of memory, I/O and on-chip peripherals. Full symbolic debugging in 'C' or assembler is supported using the powerful 'AVR Studio' IDE from the Atmel. (AT Mega family not supported.)

The ICE200 comes complete with target pods for 8, 20, 28 and 40 pin standard and A/D derivatives.

## Features:

- Non-intrusive single-chip emulation of processor core, I/O, peripherals and EEPROM memory using dedicated AVR emulator chip from Atmel
- Emulation pods for 8, 20, 28 and 40 pin DIL devices included
- Full support for devices featuring A/D converters
- Supplied with AVR Studio - Integrated Development Environment:
  - integrated assembler
  - commands include: Run, Break, Trace, Into, Step over, Step out, Run to cursor, Reset
  - Full visibility of, and access to the target AVR Register File, SP, PC and Memory contents
  - Unlimited number of breakpoints

## Imagecraft AVR C Compiler

This is an ANSI C compiler for Atmel AVR devices with many features only found in more expensive compilers. An Integrated Development Environment (IDE) is provided which includes a flexible editor, target Configuration Wizard and project builder. The compiler includes optimisation, fast compilation, embedded assembly and support for interrupt functions. A comprehensive printed manual and source code examples are provided to aid learning.

## Features:

- Integrated Development Environment with automatic rebuilding including a fully ANSI C compliant AVR compiler (compatible with Windows 95, 98 and NT)
- Configuration Wizard to ease loading, adding and changing target configurations and a flexible editor with syntax highlighting
- Full support for floating point data types (IEEE single precision) and long filenames
- Built-in peephole optimiser
- Relocatable assembler, linker and librarian

## Device Support

Atmel AT90S2313, AT90S2323, AT90LS2323, AT90S2343, AT90LS2343, AT90S4414, AT90S8515, AT90S4434, AT90LS4434, AT90S8535, AT90LS8535, ATmega103(L), ATmega603(L)

## Keyfob Starter Kit

## KANDA SYSTEMS

This is a new development in the range of programmers for the ATMEGA series microcontrollers. The programmer consists of a keyfob style case with all the electronics on board to store and download programs of upto 64KBytes of program code. The keyfob is ideal for situations where a new program needs to be loaded onto a device which is in a remote location such as installed equipment on a customer's premises. The programmer does not need any technical expertise to operate, code updates can be achieved by non-technical personnel.

Code is Uploaded onto the keyfob from a PC parallel port via a supplied adaptor and a windows based setup 'wizard' guides you through the simple routines to download all software including serial numbers and configuration information such as code protection.

The target board needs to have the connections available for serial programming.

Spare keyfobs are available.

## Features:

- Programs ALL AT90S devices
- 64Byte program capacity
- Programs Data space
- Programs Fuses (on devices which support serial fuse programming)
- Programs Lockbits
- Programs an ID into the keyfob
- All software supplied on 3.5" disk
- All cables and adaptors needed for upload and download are supplied
- Battery included (GP 23A, 12V)

## Arizona Microchip PIC Development Tools

## PICSTART Plus - Low Cost Development/Evaluation System

Supports all PIC16/PIC17 families (Replaces PICSTART-16B1 and PICSTART-16C)

The CE compliant **PICSTART Plus** development system from Microchip provides a highly flexible, low cost microcontroller design tool for all PIC 8-bit, programmable devices (DIL packages up to 40 pins).

PICSTART Plus operates on any PC compatible machine running under the Windows® 3.1 and '95 systems. PICSTART Plus is easy-to-use and features Microchip's highly acclaimed MPLAB® integrated development environment, with its built-in editor, MPASM assembler and Windows based MPLAB-SIM simulator. Full documentation, MPLAB/Data on CD-ROM, development programmer and a device sample are also included.

Supplied with a universal power supply. UK or International power supply optional.

UK mains plug lead available separately.

SEM389

### MPLAB-ICD In-Circuit Debugger

The MPLAB-ICD is a powerful development tool based on the FLASH PIC16F877 and can be used to develop this and other PICmicro microcontrollers from the 16Cxx family. It uses the In-Circuit Debugging capability of the PIC16F87x and In-Circuit Serial Programming (ICSP) protocol to offer a cost effective In-Circuit FLASH programming and debugging from the graphical user interface of the MPLAB-IDE. This allows a designer to develop and debug source code by watching variables, single-stepping and setting break points. The MPLAB-ICD also programs FLASH PIC16F87x family.

The MPLAB-ICD consists of three basic components: ICD module, ICD header and ICD demo board.

#### System Features:

##### In-Circuit run-time debugging:

- Real-time code execution
- Single step
- One hardware breakpoint
- Variable watching
- 3.0V to 5.5V
- 32kHz to 20MHz
- Development and Evaluation kit supporting PIC16F87x
- PC communication via serial interface at speeds up to 57600 baud

##### Uses Microchip's free MPLAB IDE:

- Editor
- Assembler
- Linker
- Simulator
- Project Manager
- Source level symbolic debug
- Interface to ICD and other hardware tools

##### Devices Supported:

PIC16F873/874/876/877

Also included are MPLAB-ICD User's Guide and MPLAB-ICD Tutorial.

### EPIC Plus Programmer

- Low Cost Programmer for: PIC12Cxxx, 16C55x, 16C6xx, 16C7xx, 16C8x, 16F8x
- Upgradeable software for future Micros
- Variety of ZIF adapters available
- In-Circuit Serial Programming adapter available
- Operates on power supply, 12Vac, or 2xPP3 batteries
- Includes free Macro Assembler
- Supports Windows '95, NT and DOS

www.R.F.Solutions

The EPIC Plus is a development level programmer for the mid-range PIC micros. Included with the programmer is an 18-pin socket for programming 8 and 18 pin DIP packages. ZIF adapters are available to program 28 and 40 pin DIP and surface mount devices. An In-Circuit Programming adapter for the 16F84 or 16C84 allows for quick erasing and programming, avoiding continual transfer between the programmer and the target system.

### PIC Tutor and Development Board (PIC-TDB)

Supports PIC12C5xx, PIC16C5x/6x/6xx/7x/84, PIC17C4x/7x

The PIC-TDB is a useful support tool aimed at a wide range of users from beginners to experienced hardware engineers. The board is designed with features which make it ideal as a first step educational tool as well as an advanced and powerful hardware development platform.

With numerous example programs using many features on board, an inexperienced user can familiarise with the assembly language, program structure and internal operation of the PIC device. Full listings of the examples are given, each providing a new useful function for the user to adopt in a specific function, such as driver routines for interfacing the PIC to LCDs, 7 segment LEDs, ADCs, DACs, matrix keypads, serial communications to EEPROMs and more.

#### Features:

- LCD (8 2 characters with parallel interface)
- 4 3 matrix keypad
- LED (4 digit with serial interface)
- Real-Time-Clock (day, date, time) with serial interface
- EEPROMs (SPI and I<sup>2</sup>C serial interfaces)
- 12-bit ADC (serial interface)
- 12-bit DAC (serial interface)
- Programmable gain amplifier
- RS232 interface port
- 8 LED indicators
- 2 PWM outputs
- On-board voltage regulator
- Highly configurable
- Supplied with software examples

Supplied with UK power supply only.

## Arizona Microchip PIC Development Tools — Continued

## PIC Millennium Board

The Millennium Board Starter Kit contains all the necessary components to start learning the intricacies of the PIC and is aimed at both Engineers and Students. Students can use the board to help form the core of their learning experience and also use it in "real world" applications in industry.

Once the board is assembled the user can concentrate on the software development. The board is laid out in an uncluttered way with none of the peripheral devices or I/O pins being dedicated. This concept enables maximum flexibility for project development.

The PCB has component ident and pin function information and comprises:-

**Basic items** - regulator and reset components, choice of a 4 or 8MHz oscillator module to drive the PIC, prototyping block for project expansion, sockets for 40, 28 (narrow), 18 and 8 pin PIC's.

**Opto** - alphanumeric LCD display module (16 character x 2 line) with separate backlight control, 4 seven-segment LED displays, 6 undedicated LED's.

**I/O** - 3 x 4 keypad for data input, dual RS232 ports, thermistor, potentiometer, 4 switches, 4 push buttons.

**For programming** - connectors are provided for an external ICSP programmer for in situ programming.

Full circuit diagram and construction notes are provided.

A 3.5" disk accompanying the kit contains source code examples for both CCS-C compiler and assembler for projects based on the board. Examples of applications include LED flashers, LED to LCD display driving, keyboard interfacing, A/D routines, RS232 interfacing and many more. Each project is supplied with relevant wiring information and is fully commented to assist the user in following the program.

The user will need a programmer such as the PICSTART Plus (704-740) to develop the software and program a PIC Micro.

## PIC Tutorial Board

The PIC tutorial, from Arizona Technologies Ltd., offers a system for getting started with the Microchip PIC range of microcontrollers. It is based on demonstration and prototyping PCB, and a Windows help file software suite. It takes the user from first principles of microcontrollers through to advanced programming and hardware design of all facets of a PIC based embedded application.

Device operation is extensively covered with all major peripherals explained by actual working designs. The development tools such as editor, assembler, simulator, in-circuit emulators and programmers are dealt with as are design tips and techniques.

For more advanced applications the add-on tutorial modules are available, each with tutorial software.

The kit includes:

- Demonstration/prototyping board
- Tutorial software suite disk
- Microchip CD-ROM
- Microchip CD-ROM
- PCB circuit diagram
- Product registration form

SEM538

## PIC Tutorial Board

**Tutorial 1 - Keyboard interface** - supplied with 4 x 4 keypad. Demonstrates how to interface the PIC to the keypad.....  
**Tutorial 2 - LCD module interface** - supplied with 2 x 16 character module. Demonstrates how to interface the PIC to a display.....  
**Tutorial 3 - Interfacing Dallas Touch Memory** - supplied with Touch memory. Demonstrates interfacing and applications for tagging and tracking through to access control.....  
**Tutorial 4 - Swept Tone Generator** - supplied with miniature loudspeaker and amplifier components. Demonstrates the PWM channel available on the PIC..  
**Tutorial 5 - Real Time Clock application** - supplied with 32.768kHz watch crystal. Shows how to generate a real time clock with timer in the PIC .....

**Tutorial 6 - Input Capture/Output Compare** - Shows capture and compare facilities available on the PIC.....

## Low Cost PIC Demonstration Boards

PICDEM 1/2/14A/17 are simple boards which demonstrate the capabilities of several PICmicro families. All necessary hardware is included to run basic demonstration programs which are supplied on a disk. The user can program the samples provided with the PICDEM on PICSTART Plus or PROMATE-II and easily debug/test the sample code. The user can connect the PICDEM with MPLAB-ICE and download the sample code to the emulator and debug/test the code. A prototype area is provided for user hardware.

Included in each PICDEM kit is:

- PICDEM demonstration board
- Demonstration/tutorial software
- Product samples
- Complete documentation

SEM230

## PICDEM-1 supports

PIC16C5x/62x/71, 17C4x.....Order Code 525-789 each

## PICDEM-2 supports

PIC16C62/63/64/65, 16C72/73/74 .....Order Code 563-481 each

PICDEM-3 supports PIC923 and PIC924 .....Order Code 315-4865 each

PICDEM-14A supports PIC14C000 .....Order Code 111-570 each

## PICDEM-17A

supports PIC17C756/762/766 .....Order Code 306-2235 398.01 each

## PIC Project Board 1 and 2

The PIC Project Boards are designed for development with any of the 18 pin PICs. They can form the basic hardware for both education and prototype development. The kits are supplied in a strong plastic case to protect the completed board. All the necessary components are included i.e. regulator, reset components, LED's, speaker, 4MHz resonator etc.

A circuit diagram and construction notes are included together with a diskette giving application examples which can be used with the board. The Project Boards are best accompanied by a PICSTART<sup>PLUS</sup> (704-740) programmer.

Project Board 2 has an additional prototyping block and connector for an external 9V supply.

## PIC Hardware Starter Kits

These kits now have enhanced features. They are ideal for quick prototype evaluation, lab ideas, one off projects and demonstrations, as well as aiding the learning process whilst gaining a working knowledge of the PIC microcontroller.

The 8/18 pin board (459-884) handles the newer 8 pin PICs (12C508, 509, 671 etc.) together with 18 pin PIC - you can use both an 8 pin and 18 pin sockets simultaneously.

The 28 pin board (459-896) will handle all 16C5xx series of PICs in wide (0.6") or narrow (0.3") versions - **not 16Cxx 28 pin**.

All kits comprise 8 LEDs and series resistors, 5V regulator, reset components, socket strips and a 4MHz resonator. The PCB is approx. 48mm x 96mm enabling applications to remain compact.

The kits are best accompanied by a PICSTART<sup>PLUS</sup> (704-740) programmer.

PCBC54 Hardware Kit for 8/18 pin PICs .....	Order Code .459-884	each
PCBC55 Hardware Kit for 28 pin PICs (16C5xx) .....	Order Code .459-896	each

## PIC16C64/74 Hardware Kit and PIC16C63/73 Adaptor

The kit has all the standard components featured in the 459-884 and 459-896 hardware kits **above** (8 LEDs, all I/O pinned, regulator, 4MHz resonator etc) but has the addition of a reset button, 4 undedicated push switches, RS232 female connector, RS232 interface driver, socket for an 8 pin EEPROM, and a patch area of 200 holes for user development.

An adaptor is available to convert the PIC16C63/73 DIL pin out to fit into the 40 pin socket on the PIC16C64/74 board.

## PIC Trainer Project Boards

These populated boards are ideal for prototype evaluation and for learning PIC programming. The boards have been designed so that the user can start with a working PCB to reduce development time. The project boards are supported by 'The Engineers Guide to Programming PICs' book, Order Code 183-143. PIC Trainer 1 refers to program examples with some code modifications shown in the last chapter.

**PIC Trainer 1** Features push button inputs and LED outputs with provision for a ULN2803 Darlington driver.

- Suitable for 18-pin devices (16C54, 16C56, 16C71 and 16C84)
- Socket provided for a Darlington driver (ULN2803)
- 4 input switches connected to port A
- 8 LEDs connected to port B
- Suitable projects include push button switching, LED pattern generator, delay timers and logic replacement

**PIC Trainer 2** Features 4 x 3 data entry keypad, 4 push button inputs and 4 seven segment display drivers.

- Suitable for 28-pin devices (16C55 and 16C57)
- 4 x 3 keypad connected to ports A and B
- 4 input switches connected to port B
- 4 x 7 segment LED displays connected to port B
- Suitable projects include digital clock, simple calculator, key scan and HEX to 7 segment display

Both project boards have:

- ZIF socket for easy insertion of the PIC
- 4MHz crystal for 1µs instruction time
- 5V regulator and a diode to protect against incorrect voltage polarity

The two boards are also available in kit form, without the ZIF sockets.

## PIC Block MC18D

This populated board is a high quality PCB designed to accept any 18 pin DIL PIC or SCENIX microcontroller. Its use is not only confined to being a development board but also due to the features on board. It can also be integrated into a system as a finished product. The PIC BLOCK has an on-board power supply section, input conditioning, output drive of 500mA per channel and all connections are via PCB mounting screw terminals.

Features:

- 6 buffered and filtered inputs to cope with a range of input voltages and noisy environments. Input voltage range 3 to 24V DC
- 6 open collector digital outputs each capable of sinking 500mA
- Power source can be AC 7-20V, or DC 9-28V. A low current regulated 5V supply is available to power external circuits
- An on-board reset button is provided as is space for output pull-up resistors should they be required
- On board 4MHz resonator
- PCB construction all PTH and ground planed on both sides
- Dimensions 81 x 66 x 22mm with 4mm mounting holes

SEM888

PIC Block MC18D .....	Order Code 332-7980	each
-----------------------	---------------------	------

## PIC Panic Modules

The PANIC modules are a means to quickly produce professionally housed prototyped PIC projects. Two ready assembled modules have been developed to enable prototyping with either 18 or 28 pin 16Cxx PICs and then simply replace the cover and mount accordingly.

The modules comprise a socket for the PIC with all the I/O brought out, a small proto-board, a 78L05 regulator and a socketed 4MHz resonator.

With the addition of a COMMS module, remote data transfer is possible on either RS232 (2xTX, 2xRX pins) or RS485 (with terminating resistor). The modules plug directly into the proto-board and are fitted with screw connectors for external cable connections.

Use with a PICSTART Plus Programmer (704-740) and the PIC of your choice.

## Pre-Cut Bench Mats, Conductive and Static Dissipative

- **Conductive EVA:** easy to clean and chemically inert
  - Non-slip finish, surface resistivity <10<sup>5</sup>  $\Omega$ /sq
  - Excellent lay flat properties
- **Conductive Vermahide:** Durable soft-feel finish
  - Easy to fit, self-adhesive option
  - Non-slip, solder splash resistant
  - Surface resistivity 10<sup>5</sup>  $\Omega$ /sq typically

- **Static Dissipative Rubber:** 2 layer synthetic material
  - Superior heat and abrasion resistance
  - Static dissipative top layer, solder/flux resistant
  - Conductive under layer

- **Static Dissipative PVC:** Single layer nitrile material
  - Conductive mats and 484-313 have four 10mm studs
  - Static dissipative mats have one 10mm stud fitted
  - Additional screw-on 10mm studs are available

**Note:** Connections to single layer PVC static dissipative mats be made to a single, common point. The earth bonding point cord, order code 179-222 (see page 744) is suitable for this purpose.

## Bench Mat Rolls, 3.0m and 3.3m

- For cutting to size
- **Vermahide:** Durable, volume conductive grey mat
  - Non-slip, solder splash resistant
  - Economical, ideal for shelf lining
  - Surface resistance 10<sup>7</sup>  $\Omega$ /sq approx.
- **Norastat:** 2 layer heat/wear resistant rubber mat
  - Top layer is static dissipative
  - Homogenous conductive under layer
  - Solder, flux, oil and grease resistant
  - Surface resistance 10<sup>8</sup>  $\Omega$ /sq typically
- Rivet stud assembly and tool (see below) is recommended for earthing

**Note:** Both these materials have the practical advantage over 3 layer (buried conductive layer) material in that more than one earthing stud may be used per mat if required, as a reliable link can be formed through contacts to an outer conductive layer.

Surface resistivity (typ.): Vermahide 10<sup>8</sup>  $\Omega$ /square, Norastat (top layer) 10<sup>7</sup>  $\Omega$ /square

## Bench and Floor Mat Ground Cords

- 997-250:** 4.6m straight cord
- Damage resistant, moulded male stud
  - 1 M $\Omega$  built-in
- 997-262:** Wristband/mat grounding system
- Snap-on fixing to mat
  - Accepts up to 2 wrist straps
  - 4.6m length, 1M $\Omega$  built-in
  - Connects to earthing point

STA92

	Mftrs. List No.	Order Code	Price Each

## Rivet Stud Assemblies and Tool

Vermason

Pack of 10mm two-part rivet studs suitable for mounting on anti-static matting up to 5mm thickness such as the VERMAHIDE and NORASTAT matting detailed above.

The assembly tool consists of a dolly and punch for rivetting the studs in the desired location(s) on the mat. It is supplied with instructions.

**Note:** Connections of elements of an ESD protected area should be made to only one common point on static dissipative mats that do not have a conductive bottom layer to provide a reliable link between studs, i.e. on 3 layer (buried conductive layer) matting.

## Slimline Earth Bonding Point Bars

- Pre-mounted screws with retaining washers
- Fitted with 1M $\Omega$ , 1 Watt resistors
- Made of ABS with ultrasonically welded back cover
- Printed to show 3 press studs as standard

Vermason

This slim Earth Bonding Point bar is designed to provide an ESD wrist strap bonding point at the workbench. It is slimmer than any EBP, and this feature allows fitting underneath bench tops with narrow edges. (Due to its narrow width it is not possible to connect banana sockets and is therefore designed for when stud connections are required.)

## Work Station Ionisers

Personal H = 171, W = 152, D = 63.5 Bench top H = 178, W = 279, D = 229

Ionisers are designed to neutralise charge in areas prone to static build up, by providing a continuous stream of balanced positive and negative ions.

The **Personal Ioniser** is compact, lightweight and easily portable. It has a twin speed fan, and unique alarm circuitry, indicating when the emitter electrodes require cleaning, thus maintaining optimum performance. Air filter supplied. Decay time at 2ft from ioniser front is 4 seconds.

The **Bench Top Ioniser** is durable and efficient and maintains an ion balance under extreme conditions in most environments. It has a powerful variable speed fan and a heater which compensates for the chill factor by raising the ambient air temperature by 10°F. The laminar air flow reduces air turbulence and ion recombination, prolongs cleanliness and increases efficiency. Decay time at 2ft from ioniser front is 2 seconds.

Both ionisers may be wall, shelf or work bench mounted. Recommended working distance from ioniser front for optimum charge neutralisation 0.15m min to 1.07m max.

## Vectored Air Ionisation Systems

CHARLESWATER Europe

Ion Vector System

Hand-Gun System

Photoelectric Switch

The Ion Vector and Neutralising Hand Gun systems are complete ionisation systems designed to deliver a controlled combination of compressed, ion balanced air, to eliminate static charge, whilst removing dust and other contaminants attracted by the static. The **Ion Vector System** is fixed mounted. Ionised air is delivered via a flexible 1.5m hose, goose-neck nozzle, and stand. It is controlled by either a footswitch (supplied), or optional photo-electric switch for automatic operation on a conveyor belt system.

The **Hand Gun System** is a flexible, hand-held unit. Ionised air is delivered via a 2.1m hose and hand gun nozzle, with thumb operated switch.

Each system comprises a control base unit, air hose, and appropriate nozzle. Base units have quick-connect air line fittings, needle valve air flow adjustment, ion balance adjustment, and replaceable air filter. For operation, a clean, dry air supply is required, and IEC mains cord suggested **order codes 152-575 (UK) or 210-699 (European 'Schuko') style.**

## Workstation Kits

## Field Service Engineer's Kits

Handy, portable static-safe workstation kits. Contents include lightweight fold-up vinyl mat, wristband and coiled cord, and straight ground cord with crocodile clip termination. Mats include 2 pockets for pcb's, components or tools.

**Two-layer** kit features a blue static dissipative layer ( $<10^{11}/\text{sq}$ ), a conductive layer ( $<10\Omega^2/\text{sq}$ ), two  $1\text{M}\Omega$  resistors in the coiled cord, and one in the straight cord.

**Static dissipative** kit features a single layer ( $<10^9\Omega^2/\text{sq}$ ), with reinforced corners and edging,

and a  $1\text{M}\Omega$  resistor in each cord.

Both kits conform to **EN100 015-01**.

Mfrs. List No.	Order Code	1+	10+	25+
J733	<b>302-6619</b>			

## Conductive Work Station Kit

TBA

- Prevents static damaging sensitive electronic components
- **Kit contains:**  
Conductive floor and bench mats ( $1219 \times 610\text{mm}$ )  
Adjustable elasticated wrist strap  
Coiled ground cord,  $2.2\text{M}\Omega$  terminated, (2m)  
2 straight ground cords,  $1.1\text{M}\Omega$  terminated, (1.2m)  
Earth reference plate
- Conforms to **EN100 015-1**

STA34

Mfrs. List No.	Order Code	1+	10+	25+
KIT0001	<b>178-422</b>			

## Static Dissipative Workstation Kit

- Attractive, light blue Norastat work surface,  $1.2 \times 0.6\text{m}$   $R_G 10^9$  to  $5 \times 10^7\Omega$
- Adjustable wristband set
- EPA warning sign, self-adhesive  $300 \times 150\text{mm}$
- EBP plug to fit UK socket
- Straight ground cord 1.5m
- Fitted with UK mains plug

Creates a single operator ESD protected workstation. The kit includes a solder resistant dissipative table mat and all the

necessary grounding equipment for the operator and mat. The mat is more durable than a conductive mat and can be used where live equipment is being tested. A dissipative mat also offers a higher level of protection than a conductive mat (charge relaxation vs electrostatic discharge).

STA136

Mfrs. List No.	Order Code	1+	10+	25+

- Attractive, light blue Norastat work surface, 0.9 0.6m R<sub>G</sub> 10<sup>6</sup> to 5 10<sup>7</sup> Ω and Norastat floor mat 0.6 0.9m
- Adjustable wristband set and heel grounder pair
- EPA warning sign, self-adhesive 300 150mm
- Two straight ground cords 1.5m
- EBP block with 2 10mm studs and built in wrist strap tester
- Fitted with UK mains power supply

Creates a single operator ESD protected workstation. The kit includes a solder resistant dissipative table mat and all the necessary grounding equipment for the operator and mat. A pair of heel grounders

allows the operator to disconnect the wrist strap still ensuring path to ground continuity. The ground point includes a built-in wrist strap tester.

## Production/Handling Equipment — Continued

## PCB Rack

H = 315  
W = 320 (standard)  
D = 200 (inc. handles)

The antistatic printed circuit rack moulded in carbon loaded polypropylene is designed for safely holding PC boards during all stages of assembly, cleaning and testing. The modules may be combined to give any size, height, width or depth and will accommodate any width of PCB from 15 to 290mm. This may be increased to a maximum of 970mm if the extruded rails are replaced with the 147-395 1 metre rails. Two front handles are used to hold the assembly. Supplied complete with two wall mounting hooks, four back strips to prevent the PCB's from sliding out and two 320mm aluminium extrusion rails with nuts and bolts. May be used for transporting PCBs, in plating, etching and washing applications (subject to acceptance of aluminium and steel nuts and bolts in the solutions).

## Static Dissipative Floor Polish

- Non-hazardous water based
- Easy to apply, low VOC (volatile organic compounds)
- Zero tribo-generation
- Yields approximately 50m<sup>2</sup> per litre
- Durable non-slip
- To be used in conjunction with ESD footwear
- Long lasting, low maintenance
- R<sub>s</sub> 10<sup>7</sup> to 10<sup>9</sup>Ω
- Use in conjunction with C903 cleaner, Order Code 302-6668

Static dissipative floor polish can enhance the features of an existing ESD floor or make a non-ESD floor static dissipative, without the cost of replacing the entire floor.

It is a free flowing liquid emulsion which can be easily applied to any hard surfaces or sealed floors i.e. vinyl, concrete, linoleum or ceramic tiles. Complies with BS EN 100 015/1 and BS IEC 61340-5-1.

## Metallised Bubble Shielding Bags

- Combines 'Faraday Cage' and mechanical protection
- Inner layer is amine-free anti-static film
- Middle layer is anti-static bubble,  $\varnothing 8\text{mm}$ ,  $H = 5\text{mm}$
- Outer layer is buried-metal shielding film
- Not labelled or printed
- Re-useable

Shielding bubble bags are made of standard metallised film used on shielding bags laminated to a pink anti-static bubble bag. This type of packaging offers good mechanical protection too. It is partially transparent allowing inspection of contents.

**Moisture Vapour Barrier Bags**

- Outer layer: static dissipative barrier
- Middle layer: Aluminium foil
- Inner layer: static dissipative polyethylene
- $R_S < 10^{11} \Omega$
- MVTR: 0.008g/sqm/24hrs
- Static decay: <0.1sec (5000-50Volts)

Static dissipative, high barrier bags suitable for vacuum packaging and/or nitrogen flushing. Meet the requirement of **MIL B81750C** and **EIA 583**. Offers ESD and EMI/RFI shielding.

STA130

**Dessicant Sachets and Humidity Indicator Cards****Dessicant Sachets**

- Non-indicating fabric
- Paper, heat sealed
- Printed 'Silica gel - do not eat'
- Meets **BS 2540:1991**

For use in conjunction with moisture barrier bags whenever moisture control is a critical factor in the packaging of electrostatic sensitive devices.

**Humidity Indicator Cards**

- Meets **EIA 583**
- Packed in tins

A low cost method of indicating humidity conditions within moisture barrier bags when used to ship electrostatic sensitive devices.

## IC Tubes

Five popular lengths (3, 5, 7, 11 and 20 inch) of pre-holed (unless otherwise stated), anti-static IC tubes in 300 mil and 600 mil configurations allowing for convenient IC storage. Each tube has a selection of holes and the chips are secured by the use of a "thumb tak" (for tubes with no holes an end bung is available).

A simple but effective "nail-saver" tool is also available for easy removal/re-insertion of the "thumb tak" eliminating sore hands and broken fingernails.

## Test and Calibration

## Selecting a Service

Calibration of equipment is essential in any Company who have or are in pursuit of a quality assurance approvals. The Process of calibration ensures the accuracy of measurement and hence gives peace of mind to the user, which is important in R&D, maintenance, and production environments.

## Standard Calibration

1. Instruments Calibrated To Manufactures Specification
2. Calibration Labels
3. Integrity Seals
4. Calibration Certificate
5. All Calibration Results Recorded
6. Results Stored For 5 Years
7. Re-Calibration Advice
8. Suitable For ISO9000

## Recalibration

Recalibration reminders will be sent out a month before calibration due dates. A return label will be enclosed for your use. Recalibration charges are indicated by the charge code along side each product and are the same as newly calibrated product.

## Wrist Strap Auditing Tester

- Function test button
- Main lead is 1 metre long

The concept of this auditing system is to test the wrist straps without disconnecting them from their grounding point, hence testing the whole grounding circuit rather than just the wrist strap itself, as it would be done with a conventional tester.

- Checks UK 13 Amp mains socket for good earth and correct wiring
- Can be used for footwear verification
- Ideal for an ESD co-ordinator or auditor
- Pass range: 0.75 to 35MΩ ±6%
- Red LED indicates fail, green LED and buzzer indicate pass

## Portable EBP Tester

- Provides Earth Bonding Point and wrist strap tester in one block
- Simply 'Touch to Test' on demand tester
- Operators connected to another EBP in proximity of the instrument can test too
- For bench top or front mounting
- Uses an external power supply
- 5V test voltage
- Pass range: 0.75 to 35MΩ
- Conforms to IEC 61340-5-1
- Red LED indicates fail, green LED and buzzer indicate pass

- Supplied with mounting screws, power supply, and calibration certificate

This unique instrument provides an EBP with two 10mm snap fastener connections and a tester in one block, and is to be mounted in a convenient place on the operator workstation. Path to ground can also be tested with this instrument. It can be calibrated using Order Code 595-962 calibration box.

Wrist Strap Tester 745	997-1341			
Wrist Strap Tester with PSU 746	335-8355			
Standard Calibration Charge		Each		

† Available until stocks are exhausted

## Static Sensor

- Measures static voltages on objects and surfaces
- Lightweight hand-held unit
- Accurate LCD display
- 0-1990V and 0-19.9kV ranges
- 2 output jacks for remote monitoring/recording
- Battery level check facility
- Supplied with 9V battery and operating instructions

H = 41, W = 67, D = 111

STA68

Mfrs. List No.	Order Code	1+	3+	5+
709	681-453			
Standard Calibration Charge		Each		

## Static Field Meter

- Locates and measures static charges
- Accurate LED display, 0 to ±1999V per inch
- Compact, hand-held design
- 'Sample' and 'Hold' reading feature
- Low battery indicator
- Supplied with isolated plate fixture, lightweight ground card, battery and full operating instructions

H = 33, W = 61, D = 107

STA69

Mfrs. List No.	Order Code	1+	3+	5+
713	681-441			
Standard Calibration Charge		Each		

## Portable 100V Test Kit

- Includes H700 tester, one H7007 probe and one HA108 concentric ring probe and leads
- Handy carry case lined with anti-static foam
- Used to measure R<sub>S</sub> and R<sub>F</sub> of bench and floor surfaces
- Supplied with calibration certificate

This kit provides the necessary equipment required to ensure compliance of the EPA's. It comprises instruments and accessories in a handy carry case.

HA712	 302-6747			
Standard Calibration Charge		S  Each 		

## Surface Resistance Test Kit

- Comprehensive kit for point-to-point and point-to-earth resistance measurements
- Kit contains:
  - One dual voltage surface resistivity meter (see order code 877-657)
  - Two cylindrical probes
  - Two 4mm shrouded test leads
- Meter requires a 9V battery, order code 908-526
- Supplied in tough, attractive carry case

STA82

 877-669				
Standard Calibration Charge		S  Each 		

## Surface Resistivity Probe

This probe provides a non-destructive means of testing surface resistivity of flat conductive or static dissipative materials, and complies with **EN100 015-1**. The probe has two rubber coated brass electrodes in the recommended parallel bar configuration. The probe may be used with Order Code 676-433 or similar 'megger' meter.

STA70

Mfrs. List No.	Order Code	1+	Price Each	5+
H1003	233-006			

## Concentric Ring Probe

- Built in 2.5kg weight
- Conductive rubber electrodes 63mm and 30mm diameter
- Insulation resistance between electrodes higher than  $10^{12}\Omega$  at 1000V test voltage
- Shrouded sockets for connecting to H801
- Supplied in carry case

The concentric ring probe is designed to make surface and volume resistance measurement to **BS IEC 61340-5-1**. It will provide more accurate measurements than a square probe, especially on the high resistance range (for  $R > 10^9\Omega$ ), as it features uniform electrification lines on the tested material. The probe is fitted with a mechanism to equally distribute the load between its two electrodes.

STA125

Mfrs. List No.	Order Code	1+	Price Each	5+
HA108	302-6759			

## Probe Sets

- Used to measure  $R_s$ ,  $R_g$
- HA1011 contains one concentric ring probe and one cylindrical probe
- HA1013 contains one concentric ring probe and two cylindrical probes

Probes are often bought singly but the convenience of probe sets makes them popular too. These sets are packaged in a handy anti-static foam-lined carrying case that measures 300 230 80mm. The case is attractively labelled.

STA124

Mfrs. List No.	Order Code	1+	Price Each	5+
2 piece probe set	HA1011		302-6760	
3 piece probe set	HA1013		302-6772	

## Resistance Probe

H = 80, Dia = 63

- Tests effectiveness of ESD protected
- Resistance-to-ground, or point-to-point measurements
- Conductive rubber contact surface
- Standard 2.3kg weight
- 4mm safety socket, accepts 'standard' banana plugs
- Complies with **EN100 015-1** and ESD Association Standard No 4.1.
- For use with ohmmeter BM80, Order code 626-247

STA71

Mfrs. List No.	Order Code	1+	Price Each	5+	25+
H1007	595-731				

## Dual Voltage Surface Resistivity Tester

- 100V test voltage, 10V below  $10^5\Omega$
- Simple push button operation
- $10^4$  to  $10^{12}\Omega$  range
- Rubber-coated electrodes
- May be used with external probes – order code 595-731
- Requires a 9V battery see Order Code 908-526
- Conforms to **EN100 015-1**

STA80

Order Code	1+	Price Each	5+	10+
 877-657				
Standard Calibration Charge		S  Each 		

## Surface Resistivity Indicator

H = 25, W = 67, D = 115

- Ideal for work benches, floors, mats, bags and boxes
- Measures between  $10^5$  and  $10^{13}$  ohms/sq.
- Yellow warning LED shows  $>10^{13}$  insulator
- Red LEDs indicate  $10^5$ - $10^{12}$  range
- Uses ASTM recommended parallel bar method
- Also measures surface-to-ground via cable provided
- Supplied with soft carry case
- Requires PP3 battery, order code 908-526

STA72

Mfrs. List No.	Order Code	1+	Price Each	5+
H703	 212-878			
Standard Calibration Charge		S  Each 		

## Calibration Unit

- All testers require re-calibration annually
- For use with Vermason wrist strap and footwear testers
- Pre-set to **EN100 015-1** settings:
  - Upper limit 35M $\Omega$
  - Lower limit 0.75M $\Omega$  wriststrap
  - 0.1M $\Omega$  footwear
- Full operating instructions included
