This price sheet should be used whenever additional features or upgrades are to be installed in 2000 Series Paging Terminals already in the field. Many features and options have a "System Requirements" section. This is intended to indicate to the sales person what hardware and software must be installed in the system for the feature to work correctly with an existing system. If these hardware and software requirements are not met, the customer must purchase those additional items needed. Note that when purchasing these additional items, there may be additional system requirements for those additional items. All these requirements must be met before a system can be guaranteed to work when it reaches the customer site.

NOTE: All ' * ' items need to have a ZBASE update ordered.

Zetron's IP Fire Station Alerting (IP FSA) system is ideal for any municipality that has IP network links between its central communications center and its fire stations. Using IP to send control commands between the central site and the fire station increases the alerting speed and broadens connectivity options. Voice announcements can be configured for VoIP or radio transmission. Existing Model 6/26 dispatch systems can be upgraded to IP FSA.

M6300 RoIP GATEWAY

Price Sheet 001-0279 Rev. D

Zetron's RoIP Gateway allows legacy Tone Remote Control (TRC) or E&M wireline control equipment to operate over modern IP networks. It is suitable for use with all Zetron consoles for remoting radios from the console system over Ethernet IP. The RoIP Gateway can also be used with many other manufacturer's TRC/E&M wireline control equipment, as well as many non-radio, specialty voice applications (e.g. hoot-n-holler and intercom lines). By connecting radios at both ends, it can also be used to bridge two geographically diverse radio systems together. The RoIP Gateway transports 4-wire audio, COR/PTT, RS-232 serial data and one generic binary I/O signal over an IP network.

The Model 6304 IP Console Gateway is specially designed for connecting a remote console position (Integrator RD, 4018 or 4118) to a Series 4000 system over an IP network.

NOTE: IP networks must meet the network requirements found on the RoIP Gateway spec sheet (005-1400). Reliable transport of in-band tone signaling requires that audio compression not be used and requires that the IP network have no packet loss. Also, IP network latency may have an adverse affect on serial data protocols used by certain radios. Certain serial data-controlled radios may not support direct RS-232 connection and therefore may require additional serial data conversion devices.

GATEWAYS

DC power cabling kit supplied. Order AC power converter option separately. Includes CD with manual. Gateways work in pairs; order 2 per remote console or radio.

Max Dispatch - Standard

Price Sheet 001-0281 Rev. AB

MAX Dispatch Standard is an end-to-end IP based telecommunications console system. Because MAX Dispatch employs the latest, standards-based IP protocols and IT best practices, it offers the highest levels of interoperability, scalability, and usability. This product is packaged to meet the needs of smaller sized systems that may only need a handful of advanced console features. MAX Dispatch Standard packages 1 console position and 10 radio channels together in a non-redundant configuration. Up to 2 additional positions (for a total of 3) may be added as well as up to 10 additional radio channels (for a total of 20). Software features sets may be added to each console position as necessary. If redundancy is required, that may be added on to the system.

Model 600/620 High Speed Simulcast Paging System

MA ITT57_ 2-Way Radio Equipment & Supplies, 002-0044 Rev.

Price Sheet 001-0203 Rev. J

CE APPROVED The Model 600 Wireless Data Manager accepts TNPP input from up to three TNPP links, efficiently batches the pages with timing information from an attached GPS (not included), and delivers the pages across a link to multiple Model 620 Wireless Data Encoders. Powered by 12VDC (external power supply optional). The Model 620 Wireless Data Encoder receives batches of paging data from the Model 600, and encodes the data for POCSAG or FLEX. At the precise time indicated by an attached GPS (not included), the encoded message batch is sent to the transmitter, resulting in synchronous broadcast with other Model 620 controlled transmitters. Powered by 12VDC (external power supply optional). Each Model 600 and Model 620 requires a GPS. The GPS is not included. GPS equipment may be purchased from Zetron (call factory for pricing and availability). The GPS may be shared with other compatible devices. Software interface for Trimble GPS protocol (TSIP) included. Other GPS protocols available (call factory for details).

Model 807, Model 827, Model 844 & Model 427

MA ITT57_ 2-Way Radio Equipment & Supplies, 002-0044 Rev.

Price Sheet 001-0036 Rev. Z

The Model 807 is a lower priced single site version of the Model 827 Trunking Controller. The Model 807 supports mobile dispatch service only. The unit cannot be fitted with telephone interconnect, but may be combined with the Model 827 and telephone interconnect option in single site systems requiring limited telephone access. The Model 807 supports a full range of MPT voice and data services for smaller single site systems. The Model 827 Trunking System Controller implements the MPT 1327 standard in a single controller package. Each repeater at the trunked radio site requires a model 827. All controllers are connected by a PCM bus cable (1 meter - included). Configuration software is included with the system. Only one management PC is required for interface to all channels at the site, and may be located on-site or remotely. The Model 844 4-Port Intersite Link is a control unit designed to provide an economical and efficient way to bring Intersite linking capability to your Zetron MPT 1327 trunking system. The Model 427 Peripheral Equipment Interface is a control unit designed to connect up to four MAP27 peripheral devices such as dispatcher consoles (like the Zetron Model 4217) to a Zetron MPT1327 Trunked Radio System. CE Approved
