## 1. PRODUCT DESCRIPTION

Regarding to the communication of broadband becomes more and more popular, traditional CCTV surveillance system is gradually upgraded to packet switching TCP/IP network. The DVR-461 supports the latest technology - H.264, that can compress the video file to be minimum size. H.264 compress rate is 2 times of MPEG-4 that can increase the recording time in the same HDD size and let the monitor screen have better and smoothly view quality via Internet or local network.

The DVR-461 supports up to 4 cameras. On the other hand, it is designed to be an entry-level of security device. Easily installation and operation, it is suit to the Home/SOHO market. Video data recording, remote surveillance over a secure IP network and viewing/recording/playback at the same time are key features to a full-time security application.

DVR-461 provides triplex DVR selection of IP surveillance products to meet more application demands. The Network DVR can be placed either in LAN or WAN connected with easy-to-remember DDNS feature. With the Plug-N-Watch capability of web browser, a network administrator or system operator can seamlessly complete network deployment in a few minutes.

In various surveillance applications via RS-485 interface, the Network DVR is capable to control most types of PTZ protocols. With integrated alarm I/O, it can detect record and ring a siren. The Network DVR can also do motion detection / schedule recording to complete surveillance plans. Besides control by front panel and remote controller, it is also support operate by USB mouse.

Securing content stored on hard-disk based on digital video recorder systems and providing conditional access to managing stored content; PLANET Digital Video Recorder series offer a perfect solution for both security professionals and business owners who want the unparalleled flexibility and reliability in IP surveillance field.
