DISPLAY SETTING

1. adaptor status

When the display adaptor is connected to the computer and detected, the display utility will switch to the active status.

2. display setting Items

When users right click on the icon of the display utility, the screen will show a popup menu for users to configure the display setting, as shown in the follow figure.

The display setting menu includes the functions listed in the following table.

Menu Option	Sub-menu Option	Description
Resolution	[Resolution list]	Set the resolution for the display adaptor. This option only applies to the extend mode or primary mode.
Rotation	Rotate none	No rotation to the display. This option only applies to the extend mode or primary mode.
	Rotate 90	Rotate the display by 90 degrees clockwise. This option only applies to the extend mode or primary mode.
	Rotate 180	Rotate the display by 180 degrees clockwise. This option only applies to the extend mode or primary mode.
	Rotate 270	Rotate the display by 270 degrees clockwise. This option only applies to the extend mode or primary mode.
Extend	Тор	Attach the display adaptor as an extend display at the top of the primary display
	Bottom	Attach the display adaptor as an extend display at the bottom of the primary display
	Left	Attach the display adaptor as an extend display at the left of the primary display
	Right	Attach the display adaptor as an extend display at the right of the primary display
Primary	-	Attach the display adaptor as the primary display of the system desktop
		The origin primary display becomes the extend display of the display adaptor.
Mirror	-	Attach the display adaptor as a mirror display of the primary display
Off	-	Detach the display adaptor from the system desktop.

Note: At the present time, only Windows XP and Vista support the primary mode.

3. Display Mode Setting

The display modes include the Extend, Primary, Mirror, and Off modes. The check mark represents the active mode.

• Extend

Attach the display adaptor as an extend display of the primary display at the chosen direction

• Primary

Attach the display adaptor as the primary display, the origin of the primary display becomes the extend display of the display adaptor.

• Mirror

Attach the display adaptor as a mirror display of the primary display that clones the view on the primary display.

• Off

Detach the display adaptor from the system desktop. The display adaptor will turn off the display.

4. Display Resolution

In the extend display or primary display mode, users can set the resolution that the display equipment supports. Only the resolution supported by the display equipment, for example 1920*1080, can the menu provide such resolution setting.

The mirror mode always uses the current resolution from the primary display.

5. Rotate Setting

In the extend display or primary display mode, users can clockwisely rotate the display angle by 0/90/180/270 degrees. The mirror display mode does not support the rotate function.

6. System Display Control Panel

On Windows XP and Vista operating systems, the resolution, color depth, and extend display location can be controlled through the system display control panel. Please click on the setting menu to launch it.

Note: The USB 3.0 display adaptor does not support the primary mode under Windows 7 environment.

Q&A

This section describes the common Q&A regarding to the installation or operation of the USB-VGA Display Adapter.

Q: Why can't I make the USB USB-VGA DISPLAY ADAPTER the primary display?

A: Some video cards ship their product with a utility that prevent other video cards from being set as the primary card. Check the bottom right hand corner taskbar for the utility. Disable the utility before switching our adapter to be the primary display.

Q: Why won't my DVD player work when I move it over to the extended display?

A: Some DVD playback software packages do not support playing on a second display adapter of any kind. You may try to open the program in the secondary display first before playing the DVD.

Q: How come my video will not play on Media Player if I move it over to the extended desktop?

A: Check that you have moved the Media Player window completely over to the second screen.

Q: Why does my mouse not move pass the right side of the screen as it should on extended desktop?

A: Check the display settings and make sure that your display number '2' is on the right side of display number '1'. You can rearrange how Windows treats each display in relation to each other in the Display Properties Settings.

Q: There are lines running horizontally up and down my screen.

A: This is due to a low refresh rate setting. You can change this in the Display Properties Settings Advanced Monitor. Make sure you select the USB-VGA DISPLAY ADAPTER first and not set the refresh rate higher than what your monitor can support. This may damage your monitor. You can also try to reset/refresh/resynchronize your monitor.

TROUBLESHOOTING TIPS

The following troubleshooting tips may help if you are experiencing any difficulties using our device. Contact your dealer for additional assistance if needed.

- Check to make sure that all connectors are plugged in correctly.
- Make sure that the USB port that you are using is USB 3.0.
- Try a different USB 3.0 port and/or computer
- Check to see that the monitor is connected correctly and the power is ON.
- Try connecting the adapter directly to the computer instead of through a hub.
- Unplug all other USB devices from the system.
- Make sure to restart your computer after the driver installation.
- Unplug the adapter and re-insert it.
- Check the website to make sure you have the latest drivers.
- Reset/refresh/resynchronize your monitor.
