User's Manual

Thermocouple Input Module ST1TD2

Art. no.: 164265
01 03 2005
SH(NA)-080539
Version A

● SAFETY PRECAUTIONS ●

(Read these precautions before using.)

When using this product, thoroughly read this manual and the associated manuals introduced in this manual. Also pay careful attention to safety and handle the product properly.
The precautions given in this manual are concerned with this product only. Refer to the user's manual of the network system for safety precautions of the network system.
In this manual, safety precautions are classified into two categories: "DANGER" and "CAUTION".

⚠ DANGER	Indicates that incorrect handling may cause hazardous conditions, resulting in death or severe injury.
⚠ CAUTION	Indicates that incorrect handling may cause hazardous conditions, resulting in minor or moderate injury or property damage.

Depending on circumstances, failure to observe ⚠ CAUTION level precautions may also lead to serious results.
Be sure to observe the instructions of both levels to ensure the safety.

Store this manual in a safe place for future reference and also pass it on to the end user.

[DESIGN PRECAUTIONS]

⚠ DANGER

● If a communication error occurs in the network, the error station (MELSEC-ST system) shows the following behavior:
All outputs turn OFF. (In the MELSEC-ST system, the output status at the time of error can be set to clear/hold/preset by user parameters of each slice module. As “clear” is set by default, the outputs turn OFF when an error occurs. In the case where the system operates safely with the output set to “hold” or “preset”, change the parameter settings.)
Create an interlock circuit on the program so that the system operates safely based on the communication status information. Failure to do so may cause an accident due to faulty output or malfunction.

● Create an external fail safe circuit that will ensure the MELSEC-ST system operates safely, even when the external power supply or the system fails.
Accident may occur due to output error or malfunction.
(1) The status of output changes depending on the setting of various functions that control the output. Take sufficient caution when setting for those functions.
(2) Normal output may not be obtained due to malfunctions of output elements or the internal circuits. Configure a circuit to monitor signals whose operations may lead to a serious accident.

A - 1

[DESIGN PRECAUTIONS]

⚠ CAUTION

- Make sure to initialize the network system after changing parameters of the MELSEC-ST system or the network system. If unchanged data remain in the network system, this may cause malfunctions.

- Do not install the control wires or communication cables together with the main circuit or power wires. Keep a distance of 100 mm (3.94 inch) or more between them. Not doing so could result in malfunctions due to noise.

[INSTALLATION PRECAUTIONS]

⚠ CAUTION

- Use the MELSEC-ST system in the general environment specified in the MELSEC-ST system users manual. Using this MELSEC-ST system in an environment outside the range of the general specifications could result in electric shock, fire, erroneous operation, and damage to or deterioration of the product.

- Mount the head module and base module(s) on the DIN rail securely (one by one) referring to the MELSEC-ST system users manual and then fix them with stoppers. Incorrect mounting may result in a fall of the module, short circuits or malfunctions.

- Secure the module with several stoppers when using it in an environment of frequent vibration. Tighten the screws of the stoppers within the specified torque range. Undertightening can cause a drop, short circuit or malfunction. Overtightening can cause a drop, short circuit or malfunction due to damage to the screw or module.

- Make sure to externally shut off all phases of the power supply for the whole system before mounting or removing a module. Failure to do so may damage the module.
  (1) Online replacement of the power distribution module and/or the base module is not available. When replacing either of the modules, shut off all phases of the external power supply.
  Failure to do so may result in damage to all devices of the MELSEC-ST system.
  (2) The I/O modules and the intelligent function modules can be replaced online.
  Since online replacement procedures differ depending on the module type, be sure to make replacement as instructed.
  For details, refer to the chapter of online module change in this manual.

- Do not directly touch the module's conductive parts or electronic components. Doing so may cause malfunctions or failure of the module.

- Make sure to securely connect each cable connector. Failure to do so may cause malfunctions due to poor contact.

[INSTALLATION PRECAUTIONS]

⚠ CAUTION

- DIN rail must be conductive; make sure to ground it prior to use. Failure to do so may cause electric shocks or malfunctions. Undertightening can cause a short circuit or malfunction. Overtightening can cause a short circuit due to damage to the screw.

[WIRING PRECAUTIONS]

⚠ DANGER

- Completely turn off the external power supply when installing or placing wiring. Not completely turning off all power could result in electric shock or damage to the product.

- Always place the thermocouple or micro voltage signal cable at least 100mm(3.94inch) away from the main circuit cables and AC control lines.
  Fully keep it away from high-voltage cables and circuits which include harmonics, such as an inverter's load circuit.
  Not doing so will make the module more susceptible to noises, surges and inductions.

⚠ CAUTION

- Make sure to ground the control panel where the MELSEC-ST system is installed in the manner specified for the MELSEC-ST system. Failure to do so may cause electric shocks or malfunctions.

- Check the rated voltage and the terminal layout and wire the system correctly. Connecting an inappropriate power supply or incorrect wiring could result in fire or damage.

- Tighten the terminal screws within the specified torque range. If the terminal screws are loose, it could result in short circuits or erroneous operation. Overtightening may cause damages to the screws and/or the module, resulting in short circuits or malfunction.

- Prevent foreign matter such as chips or wiring debris from entering the module. Failure to do so may cause fires, damage, or erroneous operation.

- When connecting the communication and power supply cables to the module, always run them in conduits or clamp them. Not doing so can damage the module and cables by pulling a dangling cable accidentally or can cause a malfunction due to a cable connection fault.

- When disconnecting the communication and power supply cables from the module, do not hold and pull the cable part. Disconnect the cables after loosening the screws in the portions connected to the module. Pulling the cables connected to the module can damage the module and cables or can cause a malfunction due to a cable connection fault.

[STARTUP AND MAINTENANCE PRECAUTIONS]

⚠ DANGER

- Do not touch the terminals while power is on.
  Doing so could cause shock or erroneous operation.

- Make sure to shut off all phases of the external power supply for the system before cleaning the module or tightening screws.
  Not doing so can cause the module to fail or malfunction.

⚠ CAUTION

- Do not disassemble or modify the modules.
  Doing so could cause failure, erroneous operation, injury, or fire.

- Do not drop or give a strong impact to the module since its case is made of resin. Doing so can damage the module.

- Make sure to shut off all phases of the external power supply for the system before mounting/removing the module onto/from the control panel. Not doing so can cause the module to fail or malfunction.

- Before handling the module, make sure to touch a grounded metal object to discharge the static electricity from the human body.
  Failure to do so may cause a failure or malfunctions of the module.

- When using any radio communication device such as a cellular phone, keep a distance of at least 25cm (9.85 inch) away from the MELSEC-ST system.
  Not doing so can cause a malfunction.

[DISPOSAL PRECAUTIONS]

⚠ CAUTION

- When disposing of this product, treat it as industrial waste.

A - 4

REVISIONS

* The manual number is given on the bottom left of the back cover.

Japanese Manual Version SH-080538-A

INTRODUCTION

Thank you for choosing the ST1TD2 type MELSEC-ST thermocouple input module.
Before using the module, please read this manual carefully to fully understand the functions and performance of the ST1TD2 type MELSEC-ST thermocouple input module and use it correctly.

CONTENTS

About Manuals

The following manuals are related to this product.
Referring to this list, please request the necessary manuals.

Relevant Manuals

Manual Name	Manual Number (Model Code)
MELSEC-ST System User's Manual Explains the system configuration of the MELSEC-ST system and the performance specifications, functions, handling, wiring and troubleshooting of the power distribution modules, base modules and I/O modules. (Sold separately)	SH-080456ENG (13JR72)
MELSEC-ST PRFIBUS-DP Head Module User's Manual Explains the system configuration, specifications, functions, handling, wiring and troubleshooting of the ST1H-PB. (Sold separately)	SH-080436ENG (13JR68)
GX Configurator-ST Version 1 Operating Manual Explains how to operate GX Configurator-ST, how to set the intelligent function module parameters, and how to monitor the MELSEC-ST system. (Sold separately)	SH-080439ENG (13JU47)

Compliance with the EMC Directive and the Low Voltage Directive

When incorporating the Mitsubishi MELSEC-ST system that is compliant with the EMC directive and the low voltage directive into other machine or equipment and making it comply with the EMC directive and the low voltage directive, refer to "EMC Directive and Low Voltage Directive" of the MELSEC-ST System User's Manual.
The CE logo is printed on the rating plate of the EMC Directive and the Low Voltage Directive.
By making this product conform to the EMC directive and low voltage instruction, it is not necessary to make those steps individually.

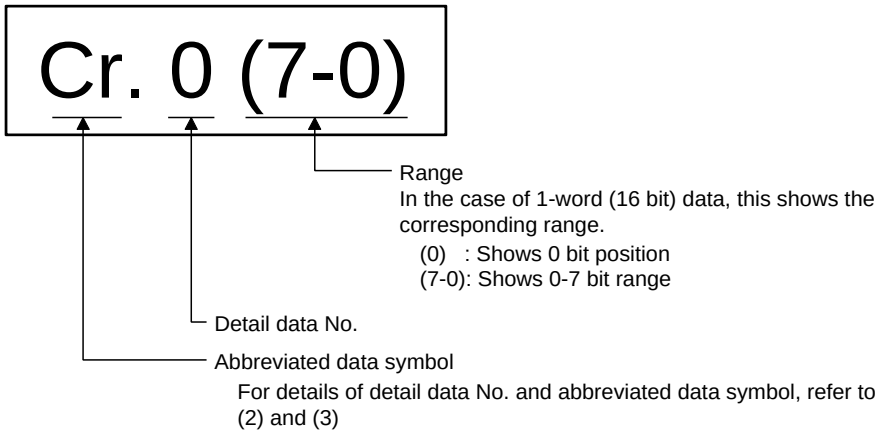
A - 9

How to Read Manual

This manual explains each area for input data and output data using the following symbols.

(1) Data symbol

<Example: Cr Command result area>



(2) Input data

Data symbol		Area	Unit	Detail data No. notation
Br	Br.00 to Br.FF	Bit Input Area	1 bit/1 symbol	Hexadecimal
Er	Er.00 to Er.FF	Error Information Area	1 bit/1 symbol	Hexadecimal
Mr	Mr.0 to Mr.127	Module Status Area	1 bit/1 symbol	Decimal
Cr	*1	Command Result Area	1 word/1 symbol	Decimal
Wr	Wr.00 to Wr.33	Word Input Area	1 word/1 symbol	Hexadecimal

*1: The following shows the data symbols and the corresponding detail areas within the command result area.

Data symbol		Area
Cr.0	Cr.0 (15-8)	Command Execution Area
	Cr.0 (7-0)	Start Slice No. of Execution Target
Cr.1		Executed Command No.
Cr.2		Response Data 1
Cr.3		Response Data 2

A - 10

(3) Output data

Data symbol		Area	Unit	Detail data No. notation
Bw	Bw.00 to Bw.FF	Bit Output Area	1 bit/1 symbol	Hexadecimal
Ew	Ew.00 to Ew.FF	Error Clear Area	1 bit/1 symbol	Hexadecimal
Sw	Sw.0 to Sw.7	System Area	1 word/1 symbol	Decimal
Cw	*1	Command Execution Area	1 word/1 symbol	Decimal
Ww	Ww.00 to Ww.33	Word Output Area	1 word/1 symbol	Hexadecimal

*1: The following shows the data symbols and the corresponding detail areas within the command execution area.

Data symbol	Area
Cw.0	Start Slice No. of Execution Target
Cw.1	Command No. to be Executed
Cw.2	Argument 1
Cw.3	Argument 2

A - 11

About the Generic Terms and Abbreviations

This manual uses the following generic terms and abbreviations to describe the ST1TD2, unless otherwise specified.

Generic Term/Abbreviation	Description
ST1TD2	Abbreviation for ST1TD2 type MELSEC-ST thermocouple input module.
Head module	ST1H-PB, MELSEC-ST PROFIBUS-DP compatible head module.
PROFIBUS-DP	PROFIBUS-DP network.
Bus refreshing module	Module that distributes the external SYS. power supply and external AUX. power supply among the head module and slice modules.
Power feeding module	Module that distributes external AUX. power supply among slice modules.
Power distribution module	Generic term for bus refreshing module and Power feeding module.
Base module	Module that transfers data/connects between the head module and slice modules, and between slice modules and external devices.
Input module	Module that handles input data in bit units.
Output module	Module that handles output data in bit units.
Intelligent function module	Module that handles input/output data in word units.
I/O module	Generic term for input module and output module.
Slice module	Module that can be mounted to the base module: power distribution module, I/O module and intelligent function module.
MELSEC-ST system	System that consists of head module, slice modules, end plates and end brackets.
GX Configurator-ST	SWnD5C-STPB-E type products. (n: 1 or later)
Configuration software	Software used to set slave parameters for head module and slice modules.(e.g., GX Configurator-DP)
User parameter	Generic term for setting items (Input type setting, Offset/gain value selection, Cold junction temperature compensation setting) set by the configuration software of the master station.
Command parameter	Generic term for setting items (Conversion enable/disable setting, Sampling process/ averaging process specification, Time/count averaging specification, Average time/average number of times setting, Alarm output setting, Upper upper limit value/Upper lower limit value/Lower upper limit value/Lower lower limit value setting, Sensor compensation value setting) set by commands. They can also be set by GX Configurator-ST.
Parameter	Generic term for user parameters and command parameters.

A - 12

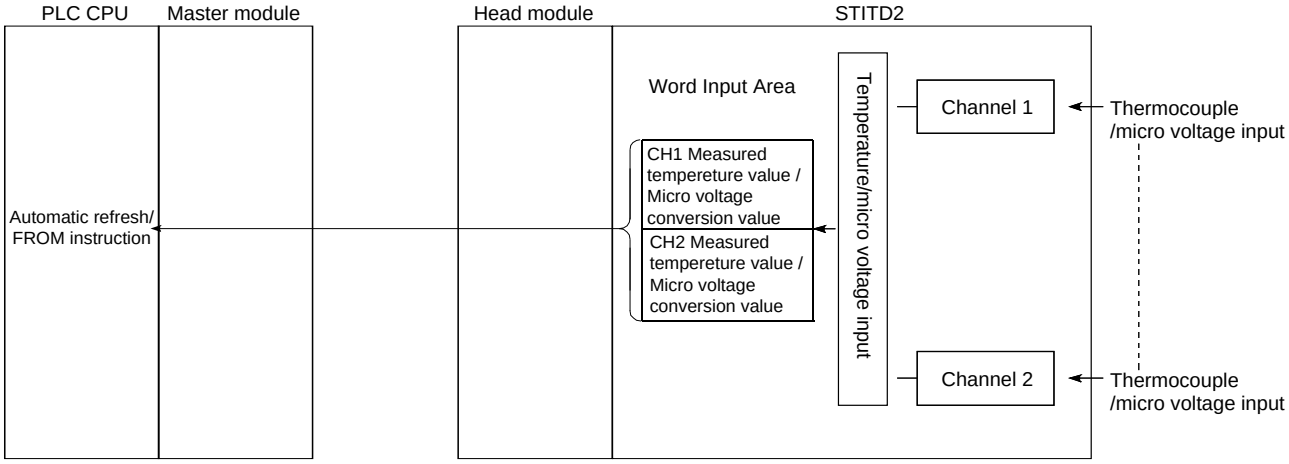
Term definition

The following explains the meanings and definitions of the terms used in this manual.

Term	Definition
Master station	Class 1 master station that communicates I/O data with slave stations.
Slave station	Device that communicates I/O data with the master station.
Repeater	Device that connects PROFIBUS-DP segments.
Bus terminator	Terminator that is connected to both ends of each PROFIBUS-DP segment
FDL address	Address assigned to the master station or slave station.
GSD file	The electronic file that includes description of the slave station parameters. The file is used to set parameters at the master station.
Input data	Data sent from the head module to the master station. The data consists of the following areas. ・[Br] Bit Input Area ・Information Area [Er] Error Information Area [Mr] Module Status Area [Cr] Command Result Area ・[Wr] Word Input Area
Output data	Data that the head module receives from the master station. The data consists of the following areas. ・[Bw] Bit Output Area ・Request Area [Ew] Error Clear Area [Sw] System Area [Cw] Command Execution Area ・[Ww] Word Output Area
I/O data	Data (input data, output data) transferred between the head module and the master station.
[Br.n] bit input	Bit input data of each module.
[Bw.n] bit output	Bit output data of each module
[Wr.n] word input	Word (16-bit) input data of an intelligent function module. In the case of analog input module, a digital output data value is stored.
[Ww.n] word output	Word (16-bit) output data of an intelligent function module. In the case of analog output module, a digital setting data value is stored.
Information area	Bit/Word input data for checking each module status and command execution results.
Request area	Bit/Word output data for requesting each module to clear errors/to execute commands.
Number of occupied I/O points	The area, that is equivalent to the occupied I/O points, is occupied in [Br] bit input area/[Bw] bit output area.
Slice No.	No. assigned to every 2 occupied I/O points of each module. This numbering starts by assigning "0" to the head module and then proceeds in ascending order. (The maximum is 127). The No. is used for specifying the execution target.
Command	Generic term for requests made by the master station in order to read each module's operating status and to set and control intelligent function module operation.

1 OVERVIEW

This User's Manual provides the specifications, handling instructions, programming methods, etc. for the ST1TD2 type MELSEC-ST thermocouple input module (hereinafter referred to as the ST1TD2).
This manual includes descriptions of only the ST1TD2.
For information on the MELSEC-ST system, refer to the MELSEC-ST System User's Manual.
ST1TD2 is a module converting the external thermocouple input value into measured temperature value of signed 16-bit binary data, and the micro voltage signal into signed 16-bit binary data.



1.1 Features

(1) One ST1TD2 enables 2-channel temperature measurement/micro voltage conversion.

By using ST1TD2, the temperature measurement or micro voltage conversion can be performed for 2 channels.

(2) Up to 26 modules can be mounted

For one head module, up to 26 ST1TD2 modules (52 channels) can be mounted.

(3) Using thermocouple complying with IEC/DIN/JIS

Eight kinds of thermocouples (K,E,J,T,B,R,S,N) complying with IEC/DIN/JIS can be used.
Using configuration software in the master station and/or GX Configurator-ST, you can choose a desirable thermocouple type for each channel.

(4) Disconnection detection

The disconnection of a thermocouple, compensation lead wire or micro voltage signal cable can be detected on each channel.

(5) Selection of sampling/time averaging/count averaging processing

As a conversion processing method, you can choose sampling processing, time averaging processing or count averaging processing on each channel.

(6) Pt1000 temperature-measuring resistor for cold junction temperature compensation

Cold junction temperature compensation will be performed automatically since a Pt1000 temperature-measuring resistor is built in the dedicated base module.

(7) Pt1000 cold junction temperature compensation enable/disable setting

Disabling cold junction temperature compensation with Pt1000 temperature-measuring resistor enables cold junction temperature compensation to be made outside the module.

If the cold junction temperature compensation accuracy of Pt1000 temperature measuring resistor is not to be ignored as an error, the accuracy can be improved by a high-precision ice bath applied externally. (Ambient air temperature 25±5°C : ±1.5°C, Ambient air temperature 0 to 55°C: ±2.5°C)

(8) One-point compensation is available using the sensor compensation function

The sensor compensation function allows 1-point compensation for each channel.

When an error is identified between the "actual temperature/voltage" and the "measured temperature/voltage", it can be compensated easily by setting the sensor compensation value.

(9) Two-point compensation is available using the offset/gain setting

The offset/gain setting allows 2-point compensated for each channel.

You can choose the user range setting (setup corrected by users) or factory default (default setting) for the offset/gain setting.

(10) Alarm output

If the temperature detected is outside the preset measurement range, an alarm can be output on each channel.

(11) Online module change

The module can be changed without the system being stopped.

(12) Easy settings using GX Configurator-ST

The optional software package (GX Configurator-ST) is available.

GX Configurator-ST is not necessarily required for the system.

However, we recommend using GX Configurator-ST, as it enables on-screen parameter setting and offset/gain setting, which reduces programming steps and makes the setting/operating status check easier.

1 - 2

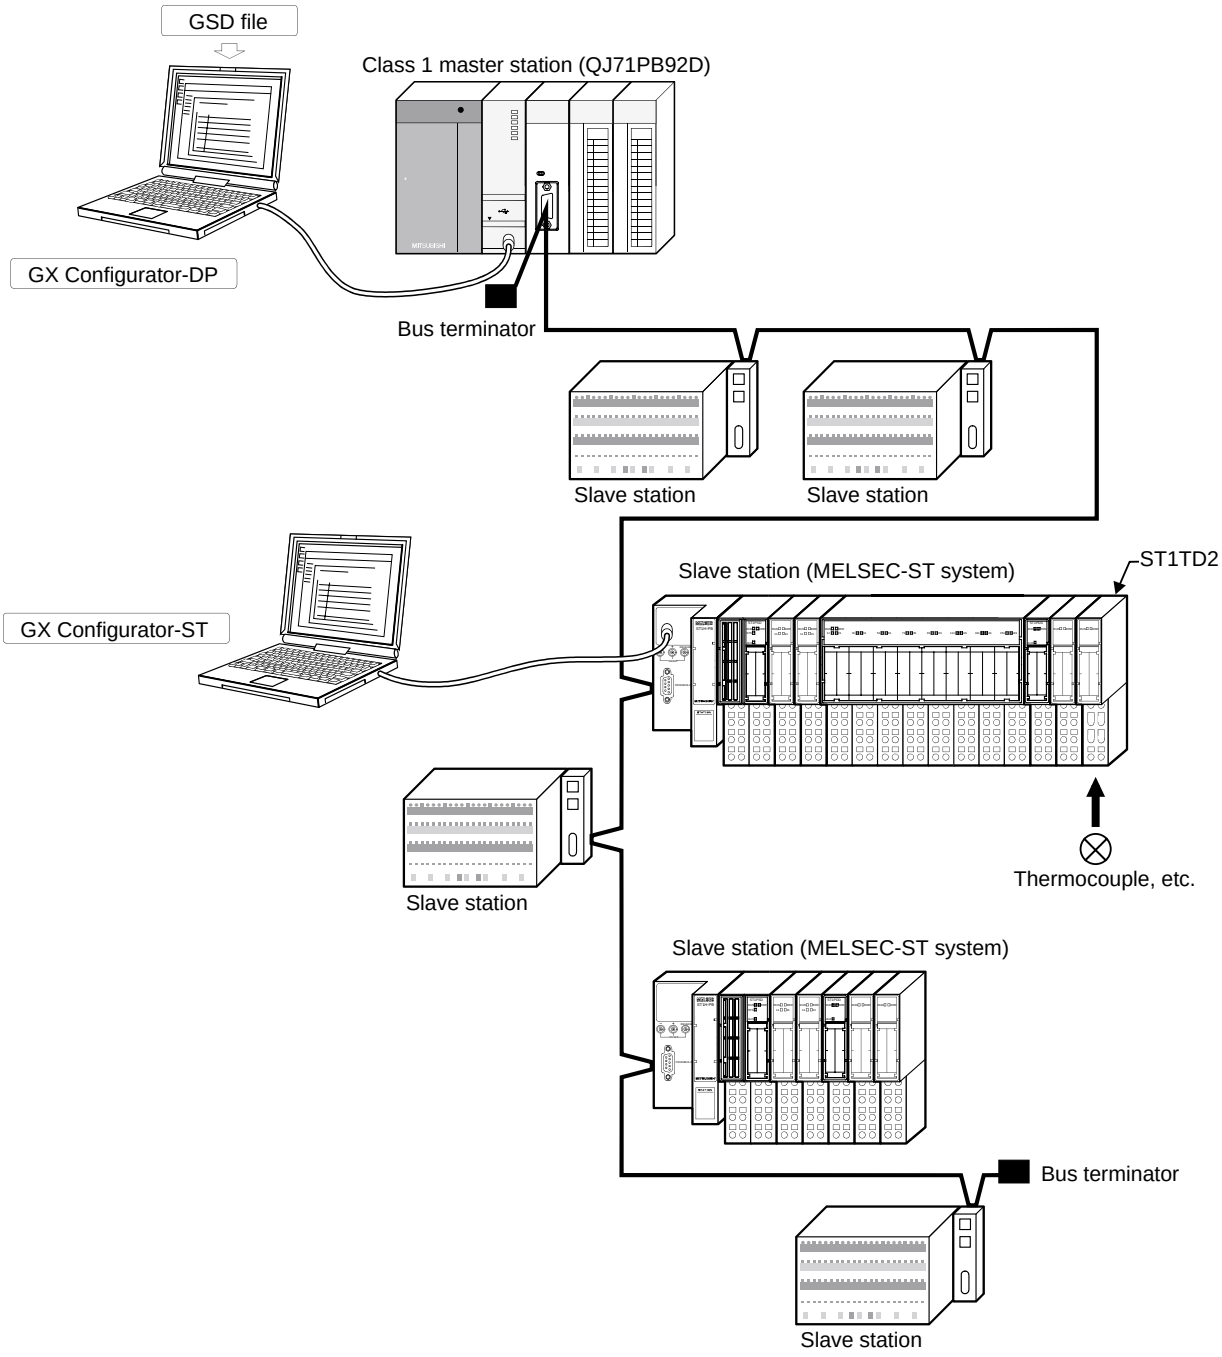
2 SYSTEM CONFIGURATION

This chapter describes the system configuration for use of the ST1TD2.

2.1 Overall Configuration

The overall configuration for use of the ST1TD2 is shown below.

<The system using QJ71PB92D>



2 - 1

2.2 Applicable System

This section explains the applicable system.

2.2.1 Applicable head module

The head module applicable to the ST1TD2 is indicated below.

Product name	Model name
MELSECT-ST PROFIBUS-DP Head Module	ST1H-PB

2.2.2 Applicable base module

The base modules applicable to the ST1TD2 are indicated below.

Type	Model name
Spring Clamp Type	ST1B-S4TD2
Screw Clamp Type	ST1B-E4TD2

2.2.3 Applicable coding element

The coding elements applicable to the ST1TD2 are indicated below.
The coding element is fitted before shipment.
It is also available separately in case it is lost.

Description	Model name
ST1TD2 coding element	ST1A-CKY-16

2.2.4 Applicable software package

The software package applicable to the ST1TD2 is indicated below.

Model name	Product name	Compatible software version
SW1D5C-STPB-E	GX Configurator-ST	Version 1.02C or later

2.2.5 Applicable GSD file

The GSD file applicable to the ST1TD2 is indicated below.

Description	Compatible version*
GSD file applicable to ST1TD2	rel. 1.01

* The GSD file name and version are displayed in the GSD file registration list of the configuration software on the master station.
Check that the version is rel. 1.01 or later.

2.3 Precautions for System Configuration

For precautions for ST1TD2 system configuration, refer to Section 3.4 "Precautions for System Configuration" in MELSEC-ST system user's manual.

3 SPECIFICATIONS

This chapter provides the specifications of the ST1TD2.
For the general specifications of the ST1TD2, refer to the MELSEC-ST System User's Manual.

3.1 Performance Specifications

This section indicates the performance specifications of the ST1TD2.

(1) Performance specifications list

Item		Specifications
Number of analog input points		2 channels / 1 module
Output	Temperature conversion value	16-bit signed binary (-2700 to 18200: Value to the first decimal place × 10 times)
	Micro voltage conversion value	16-bit signed binary (-20000 to 20000)
Standard with which thermocouple conforms		IEC584-1(1977), IEC584-2(1982), JIS C1602-1995
Usable thermocouples and measured temperature range accuracies		Refer to Section 3.1 (2)
Cold junction temperature compensation accuracy		Ambient air temperature 25±5℃ : 1.5℃ Ambient air temperature 0 to 55℃ : ±2.5℃
Thermocouple input accuracy		Based on calculation expression marked ＊1
Micro voltage input range		-80mV to 80mV (input resistance 1MΩ or more)
Micro voltage input accuracy		Ambient air temperature 25±5℃ : ±0.16mV Ambient air temperature 0 to 55℃ : ±0.32mV
Resolution	Thermocouple input	K,T:0.3℃ E:0.2℃ J:0.1℃ B:0.7℃ R,S:0.8℃ N:0.4℃
	Micro voltage input	4μV
Conversion speed		Cold junction temperature compensation setting: Not set: 30ms/channel, Set: 60ms/channel
Wire break detection		Yes (Channel independent) ＊2
Absolute maximum input		±4V
ROM write count		ROM write count by user range write or parameter setting: Up to 10,000 times
Number of occupied I/O points		4 points for each of input and output
Number of occupied slices		2
Information amount	Input data	Br.n : Number of occupancy 4, Er.n : Number of occupancy 4, Mr.n : Number of occupancy 2, Wr.n : Number of occupancy 2
	Output data	Bw.n : Number of occupancy 4, Ew.n : Number of occupancy 4, Ww.n : Number of occupancy 2
Isolation		Specific isolated area: Between thermocouple input/micro voltage input channels and internal bus — Isolation method: Photo coupler insulation — Dielectric withstand: 560V AC rms/3 cycles (elevation 2000m) — Insulation resistance: 500V DC 10MΩ or more Specific isolated area: Between thermocouple input/micro voltage input channels — Isolation method: No insulation — Dielectric withstand: — — Insulation resistance: —
Applicable base module		Spring clamp type: ST1B-S4TD2 Screw clamp type: ST1B-E4TD2
Applicable coding element		ST1A-CKY-16(dusty gray)
External AUX. power supply		24V DC (+20/-15%, ripple ratio within 5%)
		24V DC current: 0.030A
5V DC internal current consumption		0.080 A

Item	Specifications
External dimensions	77.6 (3.06in.) (H) × 12.6 (0.50in.) (w) × 55.4 (2.18in.) (D) [mm]
Weight	0.04 kg

*1: Calculate the accuracy in the following method.
(Accuracy) = (conversion accuracy) + (temperature characteristic) × (operating ambient temperature variation) + (cold junction temperature compensation accuracy)
An operating ambient temperature variation indicates a value of deviation from the operating ambient temperature range of 25±5°C.
Example: When the thermocouple used is B (Refer to Section 3.1 (2), the operating ambient temperature is 35°C, the measured temperature is 1000°C, and the cold junction temperature compensation setting is set, the accuracy is: (±3.5°C) + (±0.35°C) × (35°C - 30°C) + (±2.5°C) = ±7.75°C

*2: At wire break detection, the measured temperature value/micro voltage conversion value right before wire break occurrence is held.

3 - 2

(2) Usable Thermocouples and Measured Temperature Range Accuracies

The usable thermocouples and measured temperature range accuracies will be explained.

Usable Thermocouple Type	Measured Temperature Range *1	Conversion Accuracy (At operating ambient temperature 25±5℃)	Temperature Characteristic (Per operating ambient temperature variation of 1℃)	Max. Temperature Error at Ambient Temperature 55℃ *4
K	-270 to -200℃*3	———		
	-200 to 1200℃*2	±2.0℃	±0.2℃	±7.0℃
	1200 to 1372℃*3	———		
E	-270 to -200℃*3	———		
	-200 to 900℃*2	±1.5℃	±0.16℃	±5.5℃
	900 to 1000℃*3	———		
J	-210 to -40℃*3	———		
	-40 to 750℃*2	±1.0℃	±0.14℃	±4.5℃
	750 to 1200℃*3	———		
T	-270 to -200℃*3	———		
	-200 to 350℃*2	±2.0℃	±0.14℃	±5.5℃
	350 to 400℃*3	———		
B	0 to 600℃*3	———		
	600 to 1700℃*2	±3.5℃	±0.35℃	±12.25℃
	1700 to 1820℃*3	———		
R	-50 to 0℃*3	———		
	0 to 1600℃*2	±4.0℃	±0.35℃	±12.75℃
	1600 to 1768℃*3	———		
S	-50 to 0℃*3	———		
	0 to 1600℃*2	±4.0℃	±0.35℃	±12.75℃
	1600 to 1768℃*3	———		
N	-270 to -200℃*3	———		
	-200 to 1250℃*2	±2.5℃	±0.2℃	±7.5℃
	1250 to 1300℃*3	———		

*1: If a value entered from the thermocouple is outside the measured temperature range given in the table, it is handled as the maximum/minimum value of the measured temperature range.
*2: The accuracies in the shaded temperature ranges only are applied.
*3: Temperature measurement can be made, but accuracy is not guaranteed.
*4: It is the maximum temperature error in the case where the cold junction temperature compensation setting is set to "No". If it is set to "Yes" for thermocouple K, for example, the maximum temperature error at the ambient temperature of 55℃ is 9.5℃.

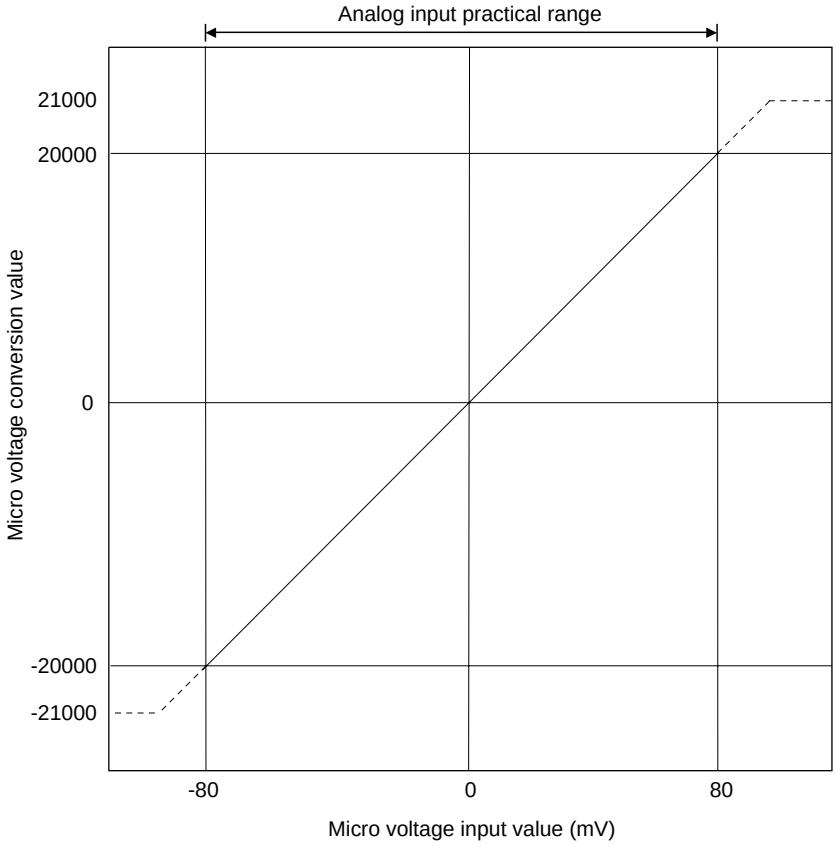
(3) Micro voltage input range and accuracies

The micro voltage input range and accuracies will be explained.

Input Type	Measurable Voltage Range	Conversion Accuracy	
		(At 25±5℃ operating ambient temperature)	(At 0 to 55℃ operating ambient temperature)
Micro voltage input	-80 to 80mV	±0.16mV	±0.32mV

3.1.1 Micro voltage I/O conversion characteristic

The factory-set micro voltage I/O conversion characteristic is shown below.



POINT
(1) Use the module within the micro voltage input range and micro voltage conversion value. Outside those ranges, the maximum resolution and accuracy may not fall within the ranges of the performance specifications. (Avoid using the dotted line areas in the chart.) (2) Do not input ±4V or more. Doing so may damage the elements. (3) When a voltage exceeding the micro voltage conversion value range (-20000 to 20000) is input, the measured micro voltage value is fixed to the maximum (21000) or the minimum (-21000).

3.1.2 Conversion speed

The conversion speed of the ST1TD2 changes depending on the input type setting (user parameter) or the cold junction compensation setting (user parameter).

[Thermocouple input and cold junction temperature compensation set to "No", or micro voltage input]
(Conversion speed) = 30ms/1channel

[Thermocouple input and cold junction temperature compensation set to "Yes"]
(Conversion speed) = 60ms/1channel

3.1.3 Intelligent function module processing time

The ST1TD2 intelligent function module processing time is (CH1 conversion speed) + (CH2 conversion speed).

For the input transmission delay time, refer to the used head module user's manual.

3.2 Function

This section explains the functions of ST1TD2.

3.2.1 Function list

Table 3.1 lists the functions of ST1TD2.

Table 3.1 ST1TD2 Function List (1/3)

Item	Description	Reference section
Temperature conversion function	(1) The "thermal EMF value" input from the thermocouple is converted into a "temperature value" to detect a temperature. (2) Temperature data are 16-bit signed binary (-2700 to 18200) and stored into Wr word input area.	Section 3.2.2
Micro voltage conversion function	(1) This function converts a micro voltage within -80mV to 80mV into a 16-bit signed binary (-20000 to 20000) and stores it into the Wr word input area.	Section 3.2.3
Conversion enable/disable function	(1) This function specifies whether temperature/micro voltage conversion is enabled or disabled on each channel. (2) Processing time can be reduced by setting the temperature or micro voltage conversion function to be enabled or disabled. • Reduced time with cold junction temperature compensation: 60ms • Reduced time without cold junction temperature compensation: 30ms In addition, it prevents unnecessary disconnection detection of unused channels. (3) By default, the conversion for all channel is enabled. [Setting method] • Conversion enable/disable setting write (Command number: 2300H, see Section 8.4.1) • GX Configurator-ST (see Section 5.3)	——
Temperature/micro voltage conversion system	(1) Sampling process A temperature/micro voltage input value is converted one by one on each channel and a measured temperature value/micro voltage value is stored after every conversion. (2) Averaging process A temperature input value/micro voltage conversion value is averaged in terms of count or time on each channel and a digital average value is stored. (3) Setting for averaging process specification, time/count averaging specification, average time/average number of times can be done on each channel. (4) Sampling process/averaging process specification defaults to sampling process performed on all channels. (5) Time averaging defaults to 480ms, and number of times averaging defaults to 480 times. [Sampling process/averaging process specification, time/count averaging specification method] • Operation condition specification value write (Command number: 2302H, see Section 8.4.2) • GX Configurator-ST (see Section 5.3) [Average time/average number of times setting method] • CH□ average time/average number of times setting write (Command number: 2304H, see Section 8.4.3) • GX Configurator-ST (see Section 5.3)	Section 3.2.4
Disconnection detection function	(1) This function detects the disconnection of the connected thermocouple/micro voltage signal cable on each channel. (2) Disconnection detection is made on only the channels set for conversion enabled.	Section 3.2.5

</table>

Table 3.1 ST1TD2 Function List (3/3)

Item	Description	Reference section
Command	(1) By using commands, command parameters can be set, and the parameter settings can be written from RAM to ROM and read from ROM to RAM.	Chapter 8
Compensation of measured temperature/micro voltage value	(1) The ST1TD2 can compensate the error between the "actual temperature/voltage" and the "measured temperature/voltage", which occurs due to various thermocouple accuracies, compensating lead length, installation condition, etc. To compensate the error, the 1-point compensation using the sensor compensation function and the 2-point compensation using the offset/gain setting can be used. 1) Sensor compensation function When the measurement range is less than 100°C or 100 digits, use the sensor compensation function. The compensation value can be easily obtained in 1-point temperature/voltage measurement only. 2) Offset/gain setting function When the measurement range is not less than 100°C or 100 digits, use the offset/gain setting function. A wide-range compensation is available. (2) For the sensor compensation or the offset/gain setting, prepare a thermometer to measure the temperature of the object. Compensation is performed based on the difference between the temperature measured by the thermometer and the one measured by the ST1TD2.	——
Sensor compensation function	(1) The measured temperature value or micro voltage conversion value is compensated based on the set sensor compensation value. The compensation is available for each channel. [Sensor compensation method] • Sensor compensation value write (Command number : 231AH, see Section 8.4.6) • GX Configurator-ST	Section 3.2.8
Offset/gain setting function	(1) Linear compensation is available by individually compensating any given 2 points (offset/gain value) within the effective range. The offset/gain setting can be made for each channel. (2) To use the user range setting, it needs to be set in the offset/gain value selection (user parameter) in advance. The offset/gain value selection can be made for each channel. Default is set to "factory default". [Offset/gain setting method] • Master station program • GX Configurator-ST [Offset/gain value selection method] • Master station configuration software • GX Configurator-ST (see Section 5.3)	Section 4.5
Online module change	(1) A module change is made without the system being stopped. [Execution procedure] • Button operation on the head module • GX Configurator-ST	Chapter 7

3.2.2 Temperature conversion function

(1) The "thermal EMF value" input from the thermocouple is converted into a "temperature value" to detect a temperature.

(2) The value of the measured temperature to the first decimal place is multiplied by 10 and the result is stored into Wr.n, Wr.n+1 CH□ measured temperature value/micro voltage value in 16-bit signed binary. (The second decimal place and on are rounded down.)

(3) A negative measured temperature value is displayed as two's complement.

(4) At power-on or reset, all channels are set to 0.

[Example 1] At the measured temperature value of 123.45℃ ..... 1234 is stored.

b15	b14	b13	b12	b11	b10	b9	b8	b7	b6	b5	b4	b3	b2	b1	b0
0	0	0	0	0	1	0	0	1	1	0	1	0	0	1	0

[Example 2] At the measured temperature value of -123.45℃ ..... -1234 is stored.

b15	b14	b13	b12	b11	b10	b9	b8	b7	b6	b5	b4	b3	b2	b1	b0
1	1	1	1	1	0	1	1	0	0	1	0	1	1	1	0

(5) Processing time can be reduced by setting unused channels to be conversion-disabled.
- Reduced time with cold junction temperature compensation: 60ms
- Reduced time without cold junction temperature compensation: 30ms

In addition, it prevents unnecessary disconnection of unused channels.

(6) Acceptable input temperature range varies with each thermocouple.
If any temperature outside of range is input, the measured temperature value will be fixed to the maximum or minimum of the selected thermocouple.

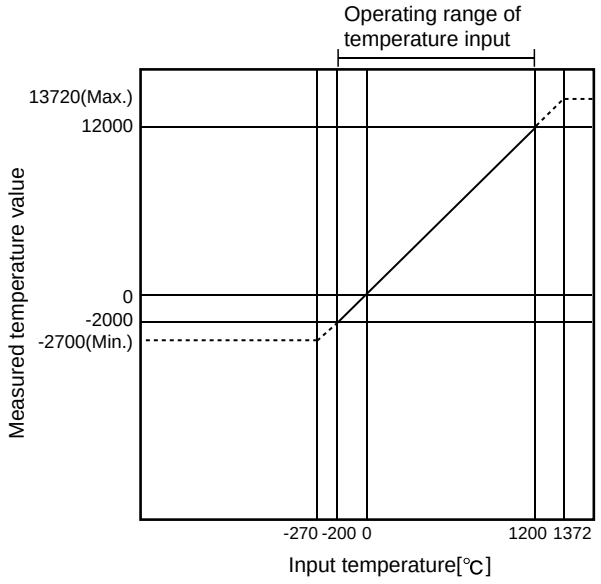

Figure 3.1 Conversion characteristic for thermocouple K

3.2.3 Micro voltage conversion function

(1) A micro voltage of -80 to 80mV is converted into a 16-bit binary value of -20000 to 20000, then stored in Wr.n , Wr. n+1 CH □ measured temperature value/micro voltage conversion value.

(2) A negative micro voltage conversion value is displayed as two's complement.

(3) At power-on or reset, all channels are set to 0.

[Example 1] At the micro voltage input value of 51.300mV ..... 12825 is stored.

b15	b14	b13	b12	b11	b10	b9	b8	b7	b6	b5	b4	b3	b2	b1	b0
0	0	1	1	0	0	1	0	0	0	0	1	1	0	0	1

[Example 2] At the micro voltage input value of -51.300mV ..... -12825 is stored.

b15	b14	b13	b12	b11	b10	b9	b8	b7	b6	b5	b4	b3	b2	b1	b0
1	1	0	0	1	1	0	1	1	1	1	0	0	1	1	1

(4) By setting unused channels to be conversion-disabled, the time of 30ms can be reduced.

(5) If any voltage outside of range is input, the micro voltage conversion value will be fixed to the maximum (21000) or minimum (-21000).

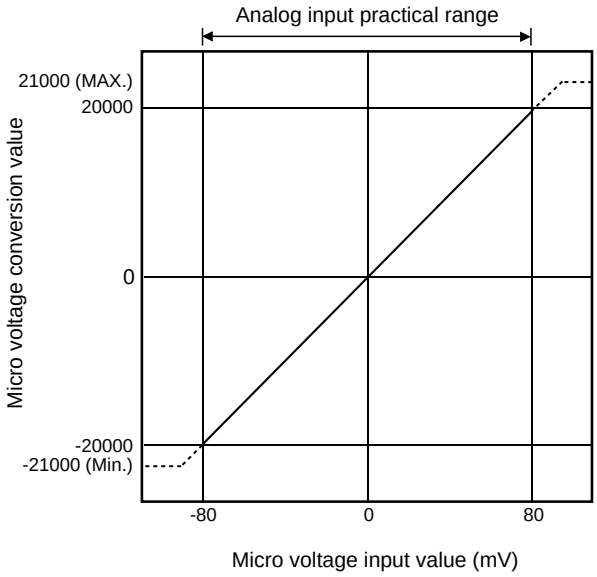

Figure 3.2 Micro voltage I/O conversion characteristic

3.2.4 Temperature/micro voltage conversion system

Temperature/micro voltage conversion can either be made by sampling processing or averaging processing.
Table 3.2 shows the processing times in combinations of the conversion enable/disable setting (command parameter), the input type setting (user parameter) and the cold junction temperature compensation setting (user parameter).

Table 3.2 CH□ processing time

Conversion enable/ disable setting	Input type setting	Cold junction temperature compensation setting	Processing time/ 1 channel
Enable	Thermocouple K, E, J, T, B, R, S, N	Yes	60ms
		No	30ms
	Micro voltage input	-*	
Disable	Thermocouple K, E, J, T, B, R, S, N	Yes	0ms
		No	
	Micro voltage input	-*	

* Cold junction temperature compensation setting will be invalid during entry of micro voltage.

(1) Sampling process

Temperature or micro voltage input values are converted one by one, and the measured temperature value or micro voltage conversion value is stored into Wr.n , Wr. n+1 CH □ measured temperature value/micro voltage conversion value each time.

(Sampling process) = (CH1 processing time*) + (CH2 processing time*)

* The processing time varies depending on the conversion enable/disable setting (command parameter), the input type setting (user parameter) and the cold junction temperature compensation setting (user parameter). (See Table 3.2.)

[Example] In the following case, the sampling process time is 90ms.

Channel 1 setting
Conversion enable/disable setting : Enable
Input type setting : Thermocouple K
Cold junction temperature compensation setting : Yes

Channel 2 setting
Conversion enable/disable setting : Enable
Input type setting : Micro voltage input
Cold junction temperature compensation setting : -

60ms+30ms=90ms

(2) Averaging process

The conversion is performed for the specified channel as many times as the setting or for the set time. Then the sum of the values other than the maximum and minimum ones is averaged and the results is stored in Wr.n , Wr. n+1 CH□ measured temperature value /micro voltage conversion value.
The applicable setting ranges for the time and number of times are given below. When the setting is outside the applicable range, the ERR. LED turns on and the conversion of the corresponding channel stops.

- Averaging processing by time: 480 to 5000ms
- Averaging processing by the number of times: 4 to 500

(a) When averaging process by time is set

The formula calculating the average number of conversions within the set time is shown below.

$$\text{(Number of average number of conversion)} = \frac{\text{(Set time)}}{\text{(CH1 processing time*) + (CH2 processing time*)}}$$

* The processing time varies depending on the conversion enable/disable setting (command parameter), the input type setting (user parameter) and the cold junction temperature compensation setting (user parameter). (See Table 3.2.)

[Example] In the following setting, the average number of conversions is 13.

Averaging time setting: 810ms
Channel 1 setting
Conversion enable/disable setting : Enable
Input type setting : Thermocouple K
Cold junction temperature compensation setting : No

Channel 2 setting
Conversion enable/disable setting : Enable
Input type setting : Micro voltage input
Cold junction temperature compensation setting : -

810ms/(30ms+30ms)=13.5(Round down the number)

(b) When averaging process by number of times

The formula expressing the relation of the set number of times and the average processing time is shown below.

(Average processing time) = (Set number of times) x (CH1 processing time* + CH2 processing time*)

* The processing time varies depending on the conversion enable/disable setting (command parameter), the input type setting (user parameter) and the cold junction temperature compensation setting (user parameter). (See Table 3.2.)

[Example] In the following setting, the average processing time is 30000ms.

Average number of times set: 500
Channel 1 setting
Conversion enable/disable setting : Enable
Input type setting : Thermocouple K
Cold junction temperature compensation setting : No

Channel 2 setting
Conversion enable/disable setting : Enable
Input type setting : Micro voltage input
Cold junction temperature compensation setting : -

500 x (30ms+30ms) = 30000ms

3.2.5 Disconnection detection function

(1) If disconnection of a thermocouple, compensation lead wire, or the micro voltage signal line is detected, the ERR.LED will light up, and a system error will be stored in Er. n+3 to Er. n CH □ error information. (Refer to section 3.3.2)

(2) Disconnection is detected on only the channels set for conversion enabled.

(3) Disconnection is detected on each channel.

(4) If disconnection is detected, the measured temperature value or micro voltage conversion value right before the detection will be held.

(5) The relationships between disconnection detection and conversion enable/disable setting are indicated below.

Connection Status	Conversion Enable/Disable Setting	Disconnection Detection Flag
 No disconnection	Enable	OFF
	Disable	
 Disconnected	Enable	ON
	Disable	OFF
 No connection	Enable	ON
	Disable	OFF

POINT

- Any channel where no thermocouple, compensation lead wire or micro voltage signal line is connected must be set to "conversion disable".
  If unconnected channel is set as conversion-enabled, disconnection is detected.
- If disconnection is detected, measured temperature value and micro voltage conversion value immediately before detection is kept, then Br.n+2 conversion completion flag turns off (0).
  If connection is restored after disconnection is detected, updating of measured temperature value and micro voltage conversion value re-starts, then Br.n+2 conversion completion flag turns on (1).
- If a value greater than 80mV is entered, wire disconnection may be detected.
  Use the module within the allowable range of each input type.
- Use the module within the allowable input range of each input type.
  If an analog value exceeding the input range is entered, wire disconnection will be detected.
- Refer to Section 4.4 for the wiring of the thermocouple, compensation lead wire or micro voltage signal cable.
- Refer to Section 9.2.3 for the troubleshooting of disconnection detection.

3.2.6 Alarm output function

(1) If a detected measured temperature value/micro voltage conversion value rises to or above the upper upper limit value or falls to or below the lower lower limit value and enters the alarm output range, Br.n+1 alarm output signal turns on (1) and the alarm information is stored into Er.n+3 to Er.n CH□ error information. (Refer to Section 3.3.2)

(2) When the measured temperature value/micro voltage conversion value falls below the upper lower limit value or rises above the lower upper limit value and returns to within the setting range after the alarm output,
Er.n+3 to Er.n CH□ error information of the corresponding channel is automatically cleared.
Br.n+1 alarm output signal turns off (0) only when values detected on all channels return to within the setting range.

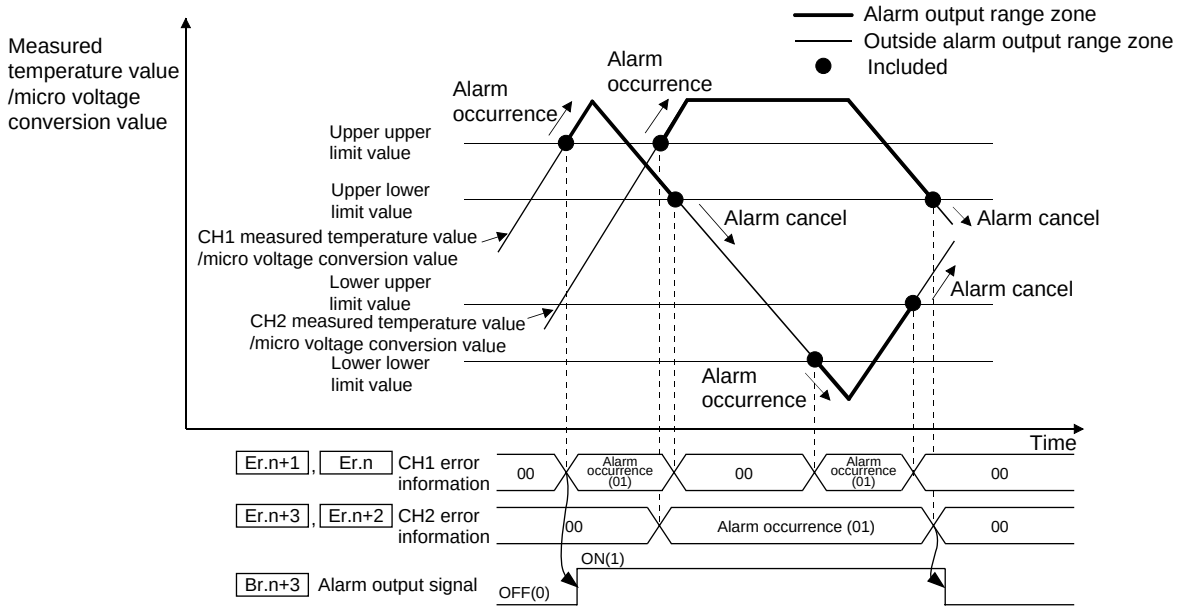
(3) Alarm output processing can be specified for each channel.
The default is set to No alarm output processing performed on all channels.

(4) Set the 4 alarm output values: upper upper limit value, upper lower limit value, lower upper limit value and lower lower limit value.
If a channel setting does not meet the condition shown in (a) and (b), it is considered as an error and the ERR.LED will light up.
(a) Setting range on each input type is shown below.
Setting of thermocouple input is performed in 0.1℃ unit.
[Example] To set to 0.3℃ ..... Enter "3".

Input type	Setting range (Accuracy guarantee range)
Thermocouple K	-2700 to 13720 (-2000 to 12000)
Thermocouple E	-2700 to 10000 (-2000 to 9000)
Thermocouple J	-2100 to 12000 (-400 to 7500)
Thermocouple T	-2700 to 4000 (-2000 to 3500)
Thermocouple B	0 to 18200 (6000 to 17000)
Thermocouple R	-500 to 17680 (0 to 16000)
Thermocouple S	-500 to 17680 (0 to 16000)
Thermocouple N	-2700 to 13000 (-2000 to 12500)
Micro voltage input	-21000 to 21000 (-20000 to 20000)

(b) The following is a conditional expression of the setting value.
Lower lower limit value ≤ lower upper limit value ≤ upper lower limit value ≤ upper upper limit value

(5) An alarm is output for only the channel for which conversion is enabled.

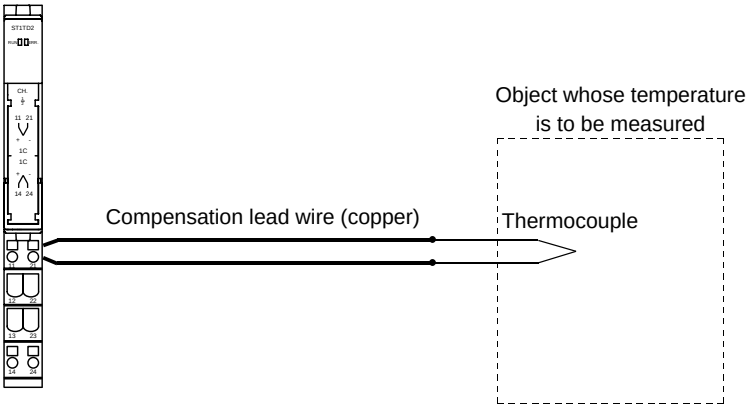


3.2.7 Cold junction temperature compensation setting

ST1TD2 can perform the following two kind of cold junction temperature compensation by selecting Yes/No of cold junction temperature compensation with Pt1000 temperature-measuring resistor using configuration software at the master station.

(1) Using Pt1000 temperature-measuring resistor to perform cold junction temperature compensation (cold junction temperature compensation set to "Yes")

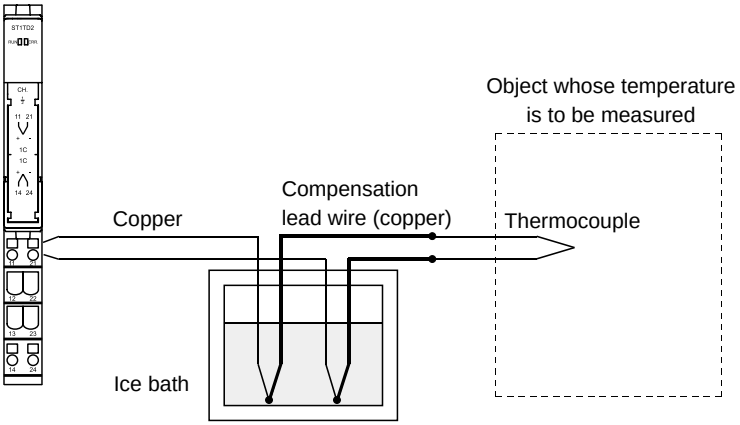
Cold junction temperature compensation is performed automatically by a Pt1000 temperature-measuring resistor built in a base module for ST1TD2.



(2) Performing cold junction temperature compensation externally (cold junction temperature compensation set to "No")

Use this function for high-precision temperature measurement, such as the case where an error in cold junction temperature compensation accuracy (Ambient air temperature 25± 5℃: ±1.5℃, Ambient air temperature 0 to 55℃: ±2.5℃) by Pt1000 temperature-measuring resistor built in a base module for ST1TD2 can not be ignored.

By providing a precision ice bath externally, the thermoelectromotive force generated at the tip of the thermocouple can be led to this module without any change, improving the cold junction temperature compensation accuracy.



POINT

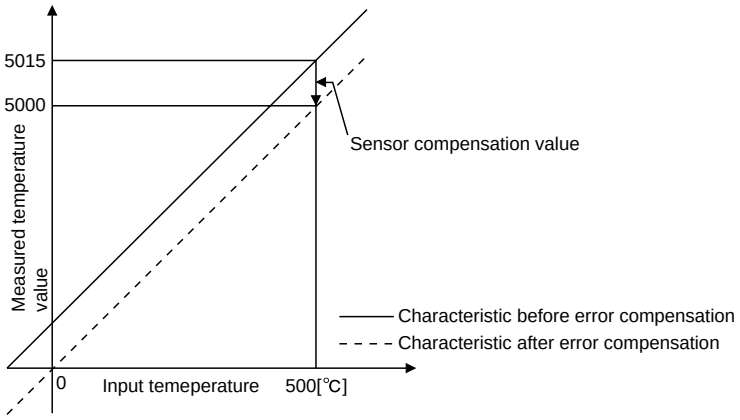
The ice bath is designed to connect the thermocouple and a lead wire in the pot whose internal temperature is controlled to be 0°C.
Hence, the thermoelectromotive force at the contact portion of the thermocouple and lead wire will be 0mV, preventing the generation of extra thermoelectromotive force which can cause errors.

3.2.8 Sensor compensation function

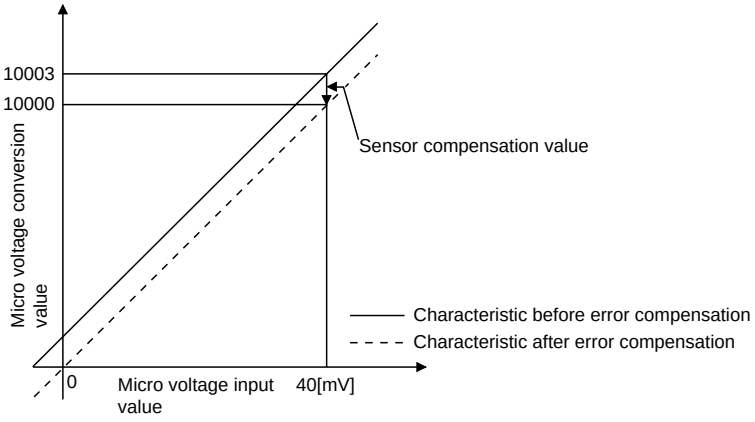
(1) Various thermocouple accuracies, compensating lead length, installation condition, etc. can result in an error between the "actual temperature/voltage" and the "measured temperature/voltage".
The sensor compensation function corrects the error.
The measured temperature value or micro voltage conversion value is compensated based on the set sensor compensation value.
The compensation is available for each channel.

(2) The setting range is -500 to 500.
In the case of thermocouple input, set the value in units of 0.1℃.
The setting for the micro voltage input is performed in units of 4μV/digit.

Example 1) When the measured temperature (501.5℃) is higher than the actual temperature (500.0℃) by 1.5℃, set -15 as the sensor compensation value.
500.0(℃) - 501.5(℃) = -1.5(℃)
-1.5(℃) x 10 =-15



Example 2) When the micro voltage conversion value is 10003 at 40mV input, set -3 as the sensor compensation value.
10000 - 10003 = -3



3.3 I/O Data

The ST1TD2 has the areas for data transfer with the head module as indicated in Table 3.3.
This section explains the composition of each area.

Table 3.3 I/O Data List

Transfer direction	Item		Number of Occupancy	Default value	Reference section
ST1TD2 → Head module (Input Data)	Br Bit Input Area		4	0	Section 3.3.1
	Information Area	Er Error Information Area	4	0	Section 3.3.2
		Mr Module Status Area	2	0	Section 3.3.3
	Wr Word Input Area		2	0	Section 3.3.4
Head module → ST1TD2 (Output Data)	Bw Bit Output Area		4	0	Section 3.3.5
	Request Area	Ew Error Clear Area	4	0	Section 3.3.6
	Ww Word Output Area		2	0	Section 3.3.7

3 - 18

3.3.1 Bit input area

This section explains the Br bit input area.

Bit input	Item	Description
Br.n	Module ready	(1) Turns on (1) when conversion is ready after the MELSEC-ST system (ST1TD2) is powered on or the head module is reset. (2) When the Br.n Module ready signal is off (0), conversion processing is not performed. Br.n Module ready turns off (0) in the following situations: • In offset/gain setting mode • When the ST1TD2 has a watchdog timer error • In module change enabled status during online module change (refer to Chapter 7)
Br.n+1	Convert setting completed flag	(1) After Bw.n+1 convert setting request has turned on (1), this turns on (1) when user parameter and command parameter setting check is completed. (Turns on (1) if a setting error is detected.) [When parameter setting check result is normal]  [When parameter setting check result is abnormal] 
Bit input	Item	Description
Br.n+2	Conversion completed flag	(1) After Bw.n+1 convert setting request has turned on (1), Br.n+2 conversion completed flag turns on (1) when conversion is completed on all channels for which conversion is enabled. (2) The Br.n+2 conversion completed flag is processed only once when the Bw.n+1 convert setting request is changed. (a) When Bw.n+1 convert setting request is turned from off (0) to on (1) When the measured temperature value / micro voltage conversion value is stored into Wr.n, Wr.n+1 CH□ measured temperature value/micro voltage conversion value, Br.n+2 conversion completed flag turns on (1). Specifying averaging process will cause a delay in turning Br.n+2 conversion completed flag on (1) by the processing time. (b) When Bw.n+1 convert setting request is turned from on (1) to off (0) Br.n+2 conversion completed flag turns off (0). (3) When disconnection is detected on any of the conversion-enabled channels, Br.n+2 conversion complete flag turns OFF (0). When connection is restored after the disconnection detection, updating of the measured temperature value/micro voltage conversion value is resumed and Br.n+2 conversion complete flag turns ON (1) again.
Br.n+3	Alarm output signal	(1) Turns on (1) when the measured temperature value/micro voltage conversion value falls outside the setting range for the CH□ upper upper limit value/upper lower limit value (command parameter) and CH□ lower upper limit value/lower lower limit value (command parameter) on either channel where the alarm output is validated and conversion is enabled. (2) Turns off (0) automatically when the measured temperature value/micro voltage conversion value returns to within the setting range on all channels for which enabled conversion is enabled. 
3 - 20

3.3.2 Error information area

This section explains the Er error information area.

<table>
<tr><th colspan="2">Error information</th><th>Item</th><th>Description</th></tr>
<tr><td>Er.n+1</td><td>Er.n</td><td>CH1 error information</td><td rowspan="2">(1) Stores the error information or alarm information when an error or alarm occurs.
(2) The stored error information can be cleared by turning on (1) the Ew.n error clear request. (Refer to Section 3.3.6)
(3) If an alarm and a system error occur at the same time, a system error takes precedence and will be written over the area.
(4) The alarm information is automatically cleared when the measured temperature value/micro voltage conversion value returns to within the setting range. (Refer to Section 3.3.1.)
<table>
<tr><th>Er.n+1

<table>
<tr><th>Word input</th><th>Item</th><th>Description</th></tr>
<tr><td>Wr.n</td><td>CH1 measured temperature value/micro voltage conversion value</td><td rowspan="2">(1) The measured temperature value/micro voltage conversion value converted from an analog value is stored into Wr.n, Wr.n+1 CH□ measured temperature value/micro voltage conversion value for each channel.
(2) The digital value is stored in 16-bit signed binary.</td></tr>
<tr><td>Wr.n+1</td><td>CH2 measured temperature value/micro voltage conversion value</td></tr>
</table>

3.3.5 Bit output area

This section explains the Bw bit output area.

Bit output	Item	Description
Bw.n	System area	Use prohibited (fixed to 0)
Bw.n+1	Convert setting request	(1) Turn this item from off (0) to on (1) to validate the settings of the user parameter and command parameter. (a) When writing the command parameter, make sure to turn the Bw.n+1 convert setting request off (0) to stop the conversion. When it is on (1), the command parameter cannot be written. (b) Regardless of whether the Bw.n+1 convert setting request is on (1) or off (0), the user parameter are written but not validated. (Turn the Bw.n+1 convert setting request from off (0) to on (1).) (2) Turn this on (1) to start conversion for the channel for which conversion set to be enabled in the conversion enable/disable setting (command parameter). When it turns off (0), the conversion is stopped. (3) For the on (1)/off (0) timing, refer to the Br.n+1 column in Section 3.3.1. OFF (0): Conversion stop (Default) ON (1): Conversion start
Bw.n+2	System area	Use prohibited (fixed to 0)
Bw.n+3		

3 - 22

3.3.6 Error clear area

This section explains the Ew error clear area.

Error clear area	Item	Description
Ew.n	Error clear request	(1) Turn this request on (1) to clear the Er.n+3 to Er.n CH□ error information. (2) After confirming that the Er.n+3 to Er.n CH□ error information has been cleared, turn off (0) the Ew.n error clear request. OFF (0): No error clear requested (Default) ON (1): Error clear requested Ew.n+1 Ew.n+2 Ew.n+3	System area	Use prohibited (fixed to 0)

3.3.7 Word output area

The ST1TD2 does not use the Ww word output area since it is operational without reserving the area.
To make effective use of the Ww word output area, select "ST1TD2 (without Ww)" using the configuration software of the master station or GX Configurator-ST. The number of occupancy of the Ww word output area in the ST1TD2 is 0.

3.4 Memory and Parameters

This section explains the memory and parameters of the ST1TD2.

3.4.1 Memory

RAM and ROM are available as the parameter storage memory of the ST1TD2.

(1) RAM

(a) The ST1TD2 operates based on the parameter settings stored in the RAM.

(b) The parameter settings stored in the RAM become valid when the Bw.n+1 convert setting request turns from OFF to ON.

(2) ROM

(a) The ROM stores the parameters. The stored parameters are not erased at power-off.

(b) The parameters stored in the ROM are transferred to the RAM when:
- The MELSEC-ST system (ST1TD2) is powered off, then on.
- The head module is reset.
- Parameter setting ROM read (command number: 3300H) is executed.

3.4.2 Parameters

The ST1TD2 has user parameters and command parameters.

(1) User parameters

(a) Setting item

- Input type setting
- Offset/gain value selection
- Cold junction temperature compensation setting

(b) Setting method

Set the parameters using the configuration software of the master station. When the MELSEC-ST system is tested alone, set the parameters using GX Configurator-ST.

(2) Command parameters

(a) Setting item

- Conversion enable/disable setting
- Sampling process/averaging process specification
- Time/count averaging specification
- Average time/average number of times setting
- Alarm output setting
- Upper upper limit value/upper lower limit value/lower upper limit value/lower lower limit value setting
- Sensor compensation value setting

(b) Setting method

1) Command

Execute a command from the master station to write the settings to the RAM of the ST1TD2.
When the command parameters are written in advance using Parameter setting ROM write (command number: 3301H), master station program steps can be reduced.

2) GX Configurator-ST

Use of GX Configurator-ST allows the parameters to be easily set on-screen, reducing master station program steps.
Write and save the settings, which are used for a MELSEC-ST system startup, to the ROM. (Use write to RAM when conducting a test temporarily.)

4 SETUP AND PROCEDURES BEFORE OPERATION

4.1 Handling Precautions

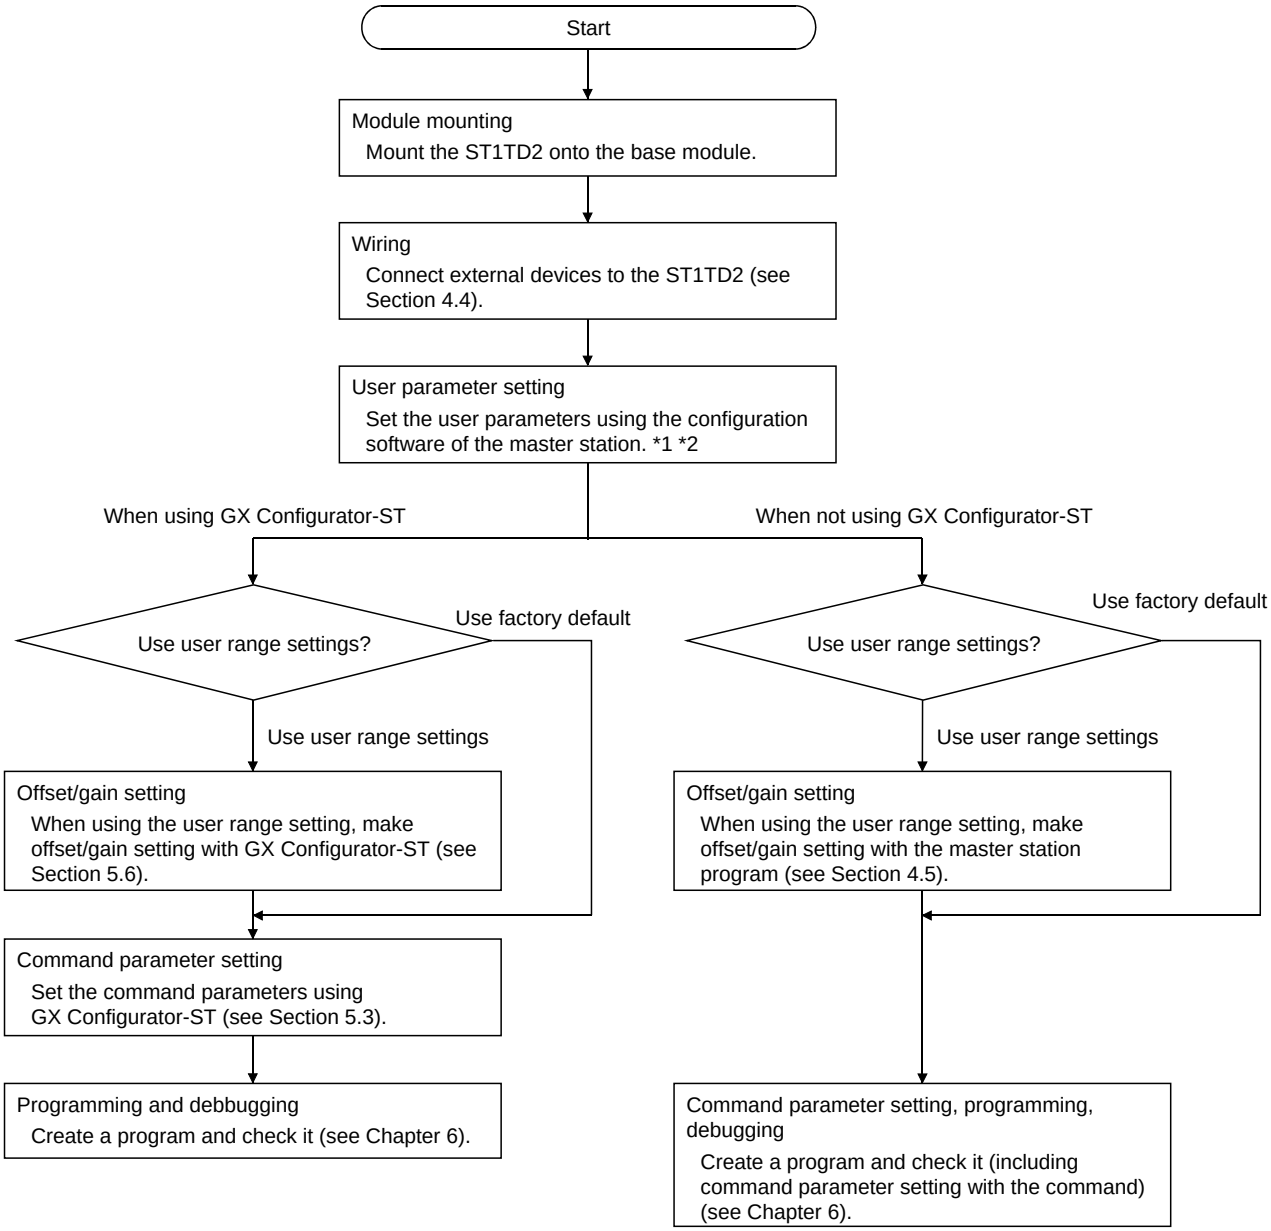
(1) Do not drop the module or give it hard impact since its case is made of resin.
Doing so can damage the module.

(2) Do not disassemble or modify the modules.
Doing so could cause failure, malfunction, injury or fire.

(3) Be careful not to let foreign particles such as swarf or wire chips enter the module.
They may cause a fire, mechanical failure or malfunction.

4 - 1

4.2 Setup and Procedure before Operation



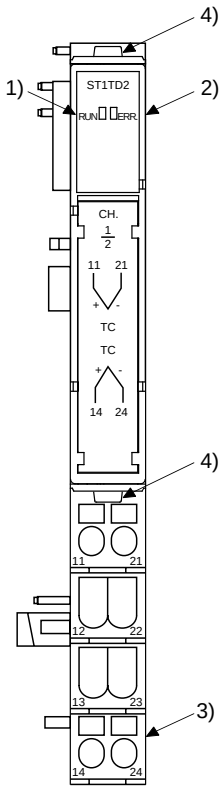
*1 When using the user range setting, set the offset/gain value selection (user parameter) as "user range setting".
*2 If executing offset / gain setting in the program, set the input type setting (user parameter) appropreate for the offset/gain setting.
(If making the offset / gain setting with GX Configurator-ST, set the input type using GX Configurator-ST.)

POINT

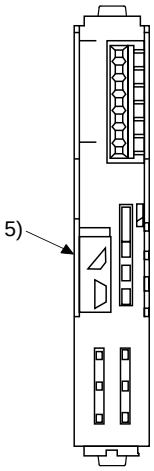
Refer to Section 3.4 for details of the user parameter and command parameter.

4.3 Part Names

The name of each part in the ST1TD2 is listed below.
The following shows the ST1TD2 mounted on the spring clamp type base module.



[Rear view of ST1TD2]



No.	Name and appearance	Description
1)	RUN LED	RUN LED and ERR. LED (on/flashing/off) indicate various statuses of the ST1TD2 (see section 4.3.1).
2)	ERR. LED	
3)	Terminal block	The input signal wires of the ST1TD2 are connected to the terminal block of the base module. [Applicable base modules] Spring Clamp Type : ST1B-S4TD2 Screw Clamp Type : ST1B-E4TD2
4)	Slice module fixing hooks (at both ends)	Used for mounting/dismounting the ST1TD2 to/from the base module. While pressing the hooks at both ends, mount/dismount the ST1TD2.
5)	Coding element	Prevents the module from being mounted incorrectly. The coding element consists of two pieces, and its shape varies depending on the model name. When the ST1TD2 is mounted on the base module and then dismounted, one piece of the coding element remains on the base module, and the other remains on the ST1TD2. The ST1TD2 can be mounted onto the base module only when the two pieces of the coding elements are matched. [Applicable coding element] ST1TD2 : ST1A-CKY-16

POINT
In order to ensure safety, make sure to attach the coding element to the base module and ST1TD2.

Terminal No.	Signal name		Terminal No.	Signal name	
11	CH1	TC+	21	CH1	TC-
12	Vacancy		22	Vacancy	
13	Vacancy		23	Vacancy	
14	CH2	TC+	24	CH2	TC-

4.3.1 Status confirmation by LED

Table 4.1 explains the LED indications.

Table 4.1 LED Indications

LED indication		Operating status
RUN LED	ERR.LED	
On	Off	Normal
	On	System error is occurring
Flashing (1s interval)	Off	The data communication has stopped or the parameter communication is faulty between the master module and head module, other slice module is faulty or an internal bus error is occurring.
	On	System error is occurring when the data communication has stopped or the parameter communication is faulty between the master module and head module, other slice module is faulty or an internal bus error has occurred.
Flashing (0.5s interval)	Off	Module is in offset/gain setting mode.
	On	System error is occurring in offset/gain setting mode.
Flashing (0.25s interval)	Off	Module is selected as the target of online module change.
	On	System error is occurring when module is selected as the target of online module change.
Off	Off	Power is off or online module change is being made.
	On	System error is occurring during online module change.

4.4 Wiring

The wiring precautions and examples of module connection are provided in this section.

4.4.1 Wiring precautions

In order to optimize the functions of the ST1TD2 and ensure system reliability, external wiring, that is protected from noise, is required.
Please observe the following precautions for external wiring:

(1) Use separate cables for the AC control circuit and the external input signals of the ST1TD2 to avoid the influence of the AC side surges and inductions.

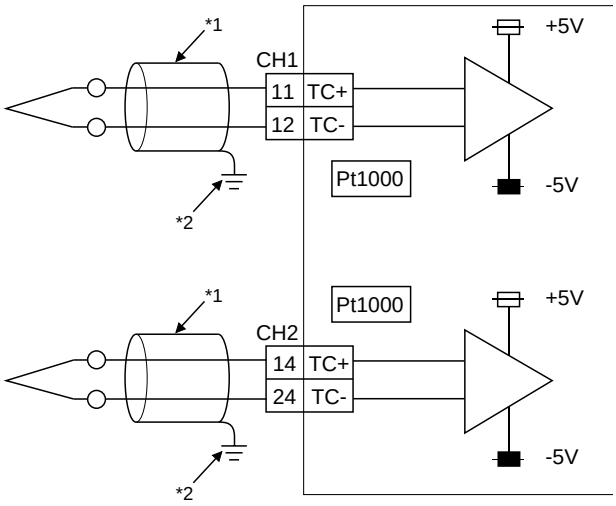
(2) Do not bring/install the cables closer to/together with the main circuit line, a high-voltage cable or a load cable from other than the MELSEC-ST system. Doing so may increase the effects of noise, surges and induction.

(3) Always place the thermocouple/micro voltage signal cable at least 100mm (3.94inch) away from the main circuit cables and AC control lines.
Fully keep it away from high-voltage cables and circuits which include harmonics, such as an inverter's load circuit.
Not doing so will make the module more susceptible to noises, surges and inductions.

4.4.2 External wiring

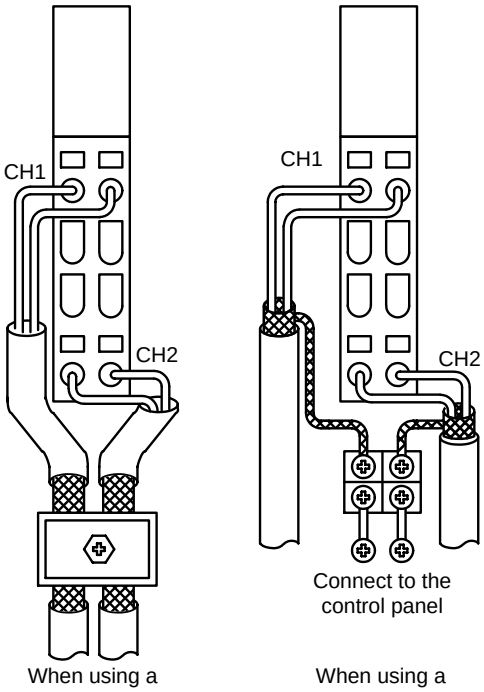
Connect the cables to the base module (sold separately).

(1) Thermocouple



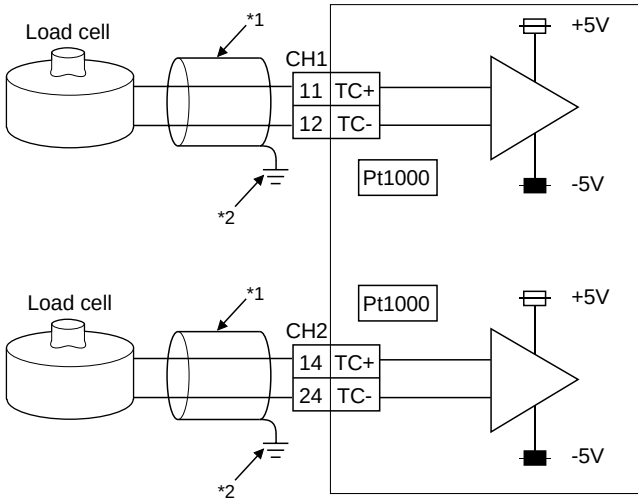
*1 As cables, always use shielded compensation conductors.
Also, wire the shielded cables as short as possible.

*2 Ground the shield through the cable clamp or terminal block.
Depending on noise conditions, however, it is recommended to ground the shield on the external device side.



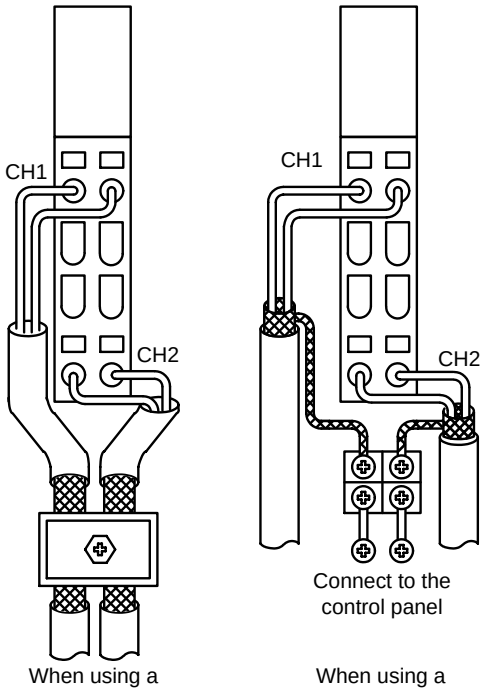
4 - 6

(2) Micro voltage signal



*1 As cables, always use shielded conductors.
Also, wire the shielded cables as short as possible.

*2 Ground the shield through the cable clamp or terminal block.
Depending on noise conditions, however, it is recommended to ground the shield on the external device side.



POINT
Any channel where no thermocouple, compensation conductor or micro voltage signal cable is connected must be set to "conversion disable". If unconnected channel is set as conversion enable, disconnection is detected.

4 - 7

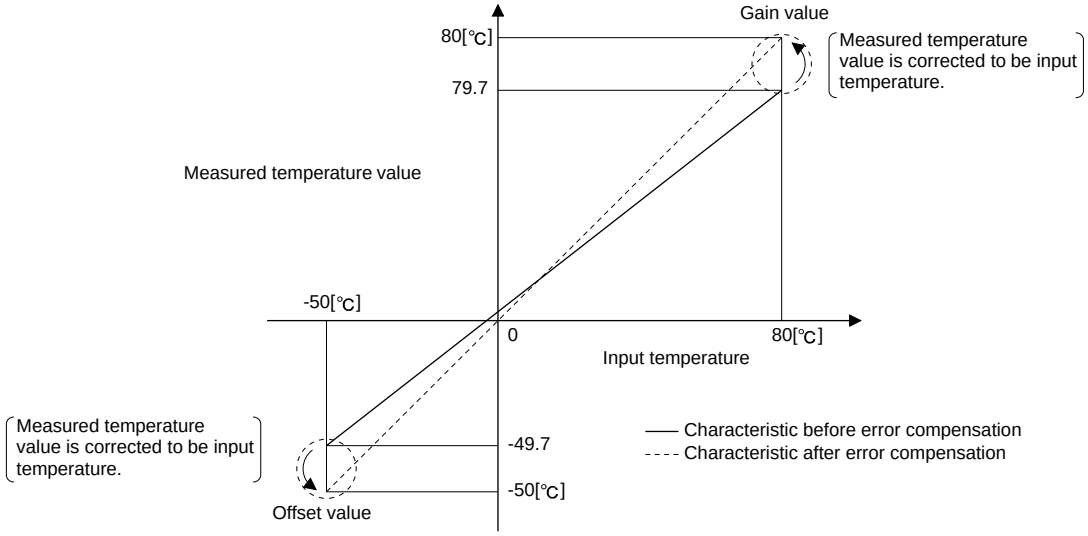
4.5 Offset/gain Setting

This section explains the offset/gain setting.

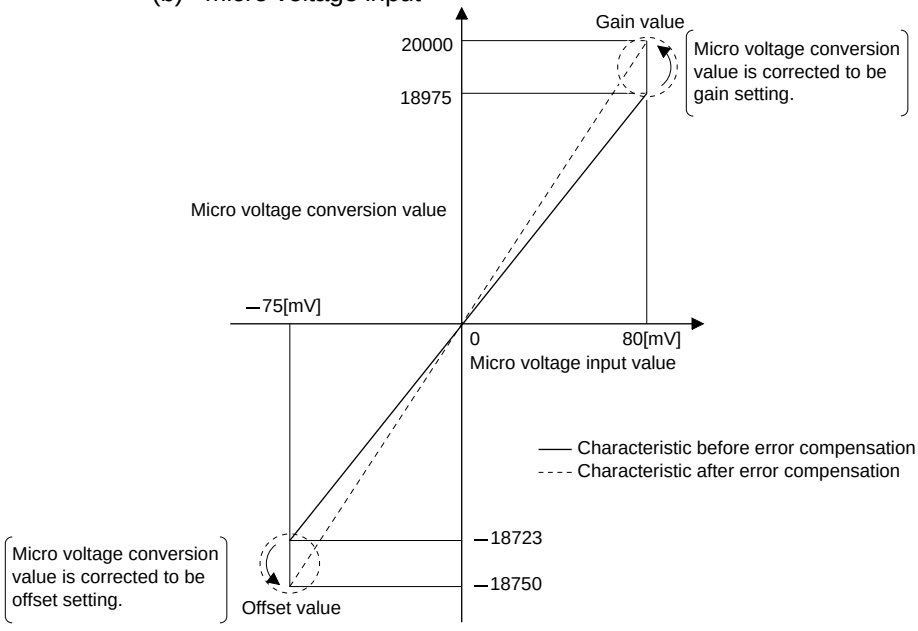
(1) The offset/gain setting is a function designed to compensate for the value at any two points (offset value/gain value) within the operating range when the proper measured temperature value/micro voltage conversion value is not available at system startup or when the input type is changed.

(2) The following are the relationships between the measured temperature value/ micro voltage conversion value and respective input value corrected by the offset value/gain value.

(a) Thermocouple input



(b) Micro voltage input



POINT

(1) Make the offset/gain setting within the measured temperature guarantee range (refer to Section 3.1 (2), or within the measurable voltage range (refer to Section 3.1 (3)). If the setting is made outside these ranges, the resolution and accuracy may not fall within the ranges of the performance specifications.

(2) Obtain the offset value and gain value in the status of actual use.
After the setting is completed, make sure that the offset value and gain value are set correctly in the status of actual use.

(3) The offset and gain values are stored into the ROM and are not erased at power-off.

(4) When making the offset/gain setting, write the values to the ROM using User range write (command number: 3305H). Data can be written to the ROM up to 10,000 times.
To prevent accidental write to the ROM, write to ROM is counted from the time of power-on.

(5) If an error occurs during offset/gain setting, the offset and gain values are not written to the ST1TD2.
Set the correct offset and gain values again.

(6) High accuracy is ensured when the offset and gain values are set as the minimum and maximum values of the operating range.

(7) High accuracy can be obtained if the offset/gain setting is done after 30-minute power-up.

(8) Always set the offset and gain values so that they will satisfy the following conditions. An error will occur if any of the conditions are not satisfied.
Condition 1: Within the input enabled range
Condition 2: Offset value < Gain value
Condition 3: (Gain value) - (offset value) > 0.2 [°C] (for temperature input)
or (Gain value) - (offset value) > 20 [μV] (for micro voltage input)

(9) For thermocouple input, error compensation may also be made using a standard DC voltage generator or like instead of inputting a temperature directly to the thermocouple.

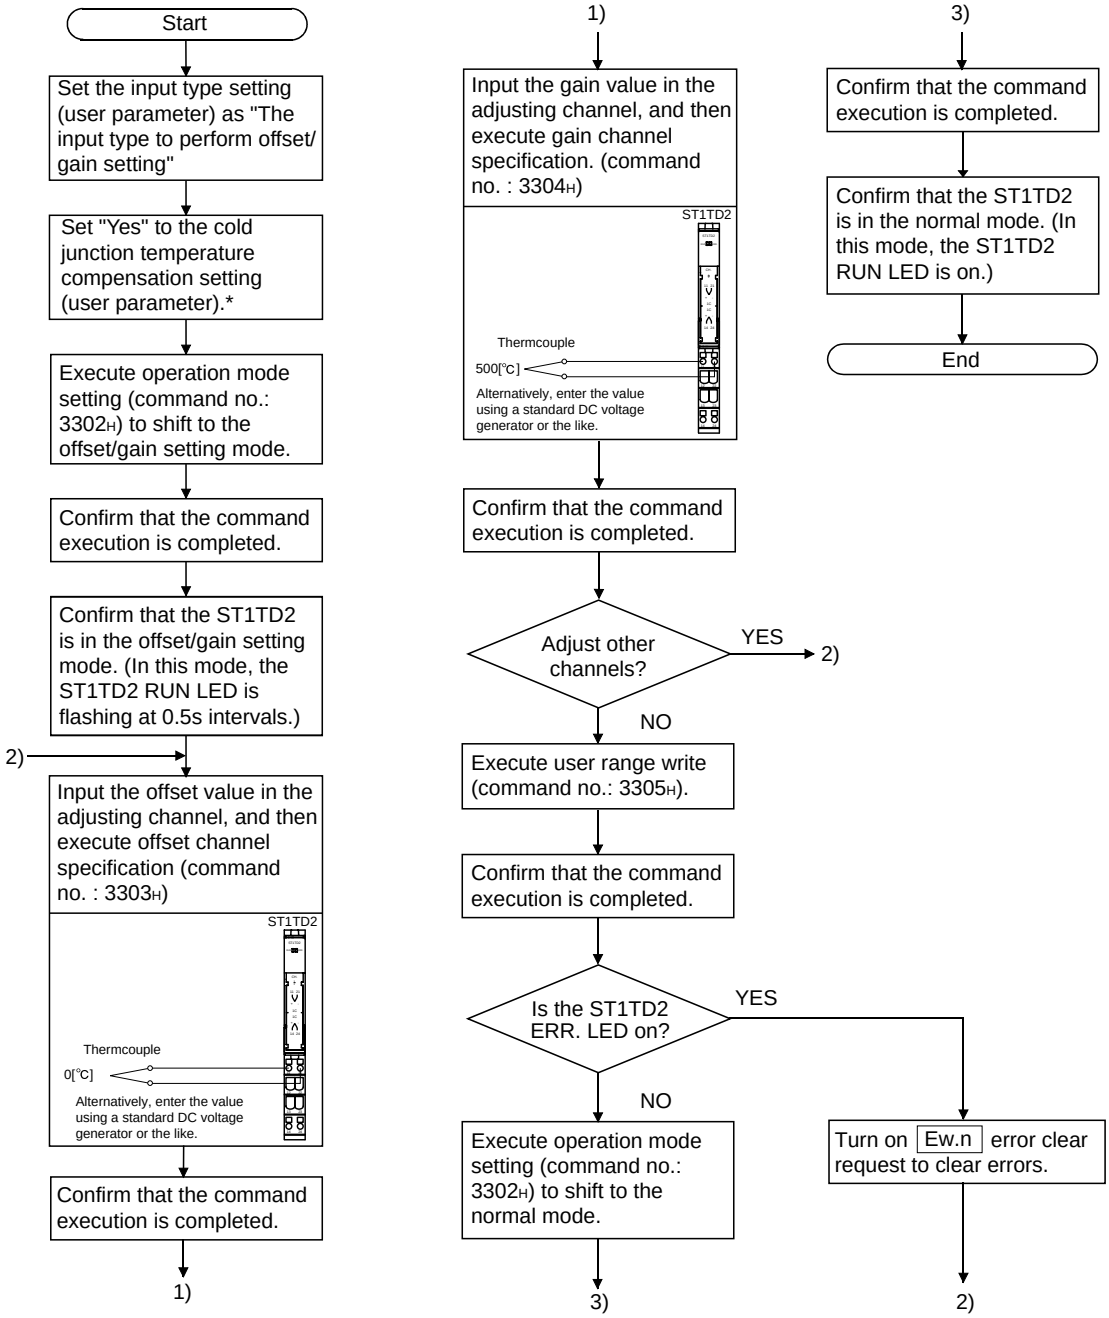
Power value of standard DC voltage generator	=	Thermoelectromotive force value of thermocouple used as offset/gain value relative to input temperature

4 - 9

4.5.1 Offset/gain settings procedure

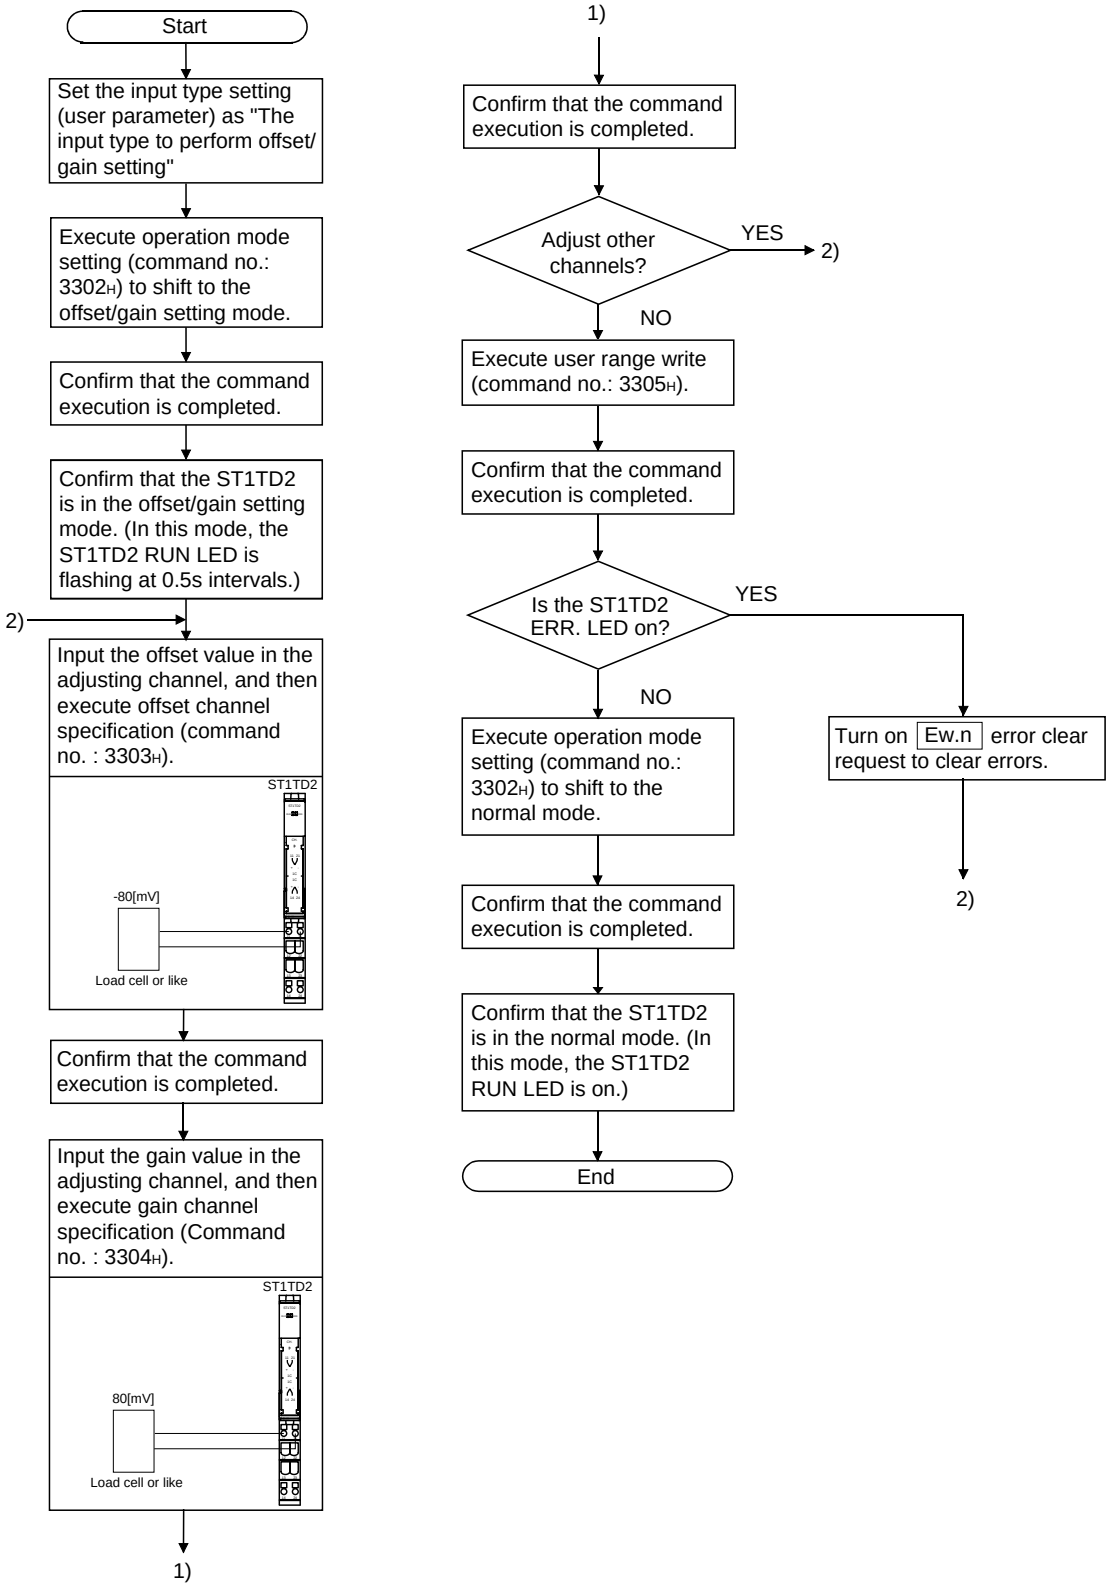
If using the user range setting, perform the offset/gain setting in the procedure shown in the section 4.5.1(1) or 4.5.1(2).
When the factory default is used, the offset/gain setting is not necessary.
If the GX Configurator-ST has been installed, perform the offset/gain settings according to the procedure described in Section 5.6.

(1) Offset/gain setting for thermocouple input



* When inputting a value with a standard D/C voltage generator or when actually using the module with the cold junction temperature compensation setting set to "No", set the cold junction temperature compensation setting to "No".

(2) Offset/gain setting for micro voltage input



(3) Programming

The program examples are given in this section, showing the mode switching (between the normal mode and the offset/gain setting mode), the channel specification for the offset/gain setting, the offset/gain value adjustment, and the offset/gain value writing to the ST1TD2.

(a) When QJ71PB92D is used as master station

The program example is based on the system configuration given in Section 6.2.

5 GX Configurator-ST

This chapter explains the functions of GX Configurator-ST used with the ST1TD2.
For details of GX Configurator-ST, refer to the GX Configurator-ST Operating Manual.

5.1 GX Configurator-ST Functions

Table 5.1 lists the GX Configurator-ST functions used with the ST1TD2.

Table 5.1 List of GX Configurator-ST Functions Used with ST1TD2

Item	Description	Reference section
Parameter Setting	(1) The following parameter items can be set on GX Configurator-ST. • CH□ input type setting • CH□ offset/gain value selection • CH□ cold junction compensation • CH□ conversion enable/disable setting • CH□ time/number of times specification • CH□ sampling process/averaging process setting • CH□ alarm output setting • CH□ average time/average number of times setting • CH□ upper upper limit value/upper lower limit value/lower upper limit value/lower lower limit value • CH□ sensor compensation value setting (2) Specify the area (RAM or ROM) where parameter setting will be registered. (3) Using GX Configurator-ST, parameter setting can be made while online module change is performed.	Section 5.3
Input/output monitor	(1) The I/O data of the ST1TD2 can be monitored.	Section 5.4
Forced output test	(1) Test can be conducted with the values set in the Bw bit output area or Ew error clear area of the ST1TD2.	Section 5.5
Offset/gain setting	(1) The offset and gain values of the user range can be easily set on-screen. (2) Using GX Configurator-ST, gain/offset setting can be made while online module change is performed.	Section 5.6
Online module change	(1) A module can be replaced without the system being stopped.	Chapter 7

5.2 Project Creation

When the MELSEC-ST system can be connected to a personal computer with GX Configurator-ST preinstalled, select [get system] to create a project.
Even if there is no MELSEC-ST system, a project can be created.
For project creation and get system, refer to the GX Configurator-ST Operating Manual.

5 - 2

5.3 Parameter Setting

This section explains how to set the parameters.

(1) Mode changing

The mode need not be changed.
Either the edit mode or diagnosis mode can be used for the setting.

(2) Displaying "Parameter Setting" screen

1) Select ST1TD2 on the "Module Information List" screen or "System Monitor" screen.
2) Click [Edit] → [Parameter Setting].

(3) Display/Setting Screen

(4) Display/setting details

When setting the parameters of multiple channels, make the following setting for each channel.

(a) User parameters

Set the user parameters using the configuration software of the master station.

When the MELSEC-ST system is tested alone, set the parameters using GX Configurator-ST.

1) Input type setting

Set the input type.

Select the input type from among the following types.

Input type	Measured temperature
Thermocouple K	-270 to 1372°C
Thermocouple E	-270 to 1000°C
Thermocouple J	-210 to 1200°C
Thermocouple T	-270 to 400°C
Thermocouple B	0 to 1820°C
Thermocouple R	-50 to 1768°C
Thermocouple S	-50 to 1768°C
Thermocouple N	-270 to 1300°C
Micro voltage input	-80 to 80mV

2) Setting type

The input type setting currently valid is stored.

Setting is not allowed.

3) Offset/gain value selection

Set the factory default or user range setting.

4) Cold junction compensation

Set whether cold junction temperature compensation is enable or disable.

Disable : Cold junction temperature compensation disabled

Enable : Cold junction temperature compensation enabled

(b) Command parameters

By setting the command parameters using GX Configurator-ST, master station program steps can be reduced.

Write and save the settings, which are used for a MELSEC-ST system startup, to the ROM. (Use RAM when conducting a test temporarily.)

1) Conversion enable/disable setting

Set whether conversion is enabled or disabled.

Disable : Conversion disabled

Enable : Conversion enabled

2) Time/number of times specification

Specify the time/number of times when the averaging processing is selected.

3) Sampling process/averaging process setting

Specify the sampling processing or averaging processing.

4) Alarm output setting

Set whether alarm output processing is performed or not.
Disable : Alarm output processing not performed
Enable : Alarm output processing performed

5) Average time/average number of times setting

Set the average time or average number of times.
Their setting ranges are indicated below.
Average number of times : 4 to 500 times
Average time : 480 to 5000ms

6) Upper upper limit value/Upper lower limit value/Lower upper limit value/Lower lower limit value

Set the upper upper limit value, upper lower limit value, lower upper limit value and lower lower limit value of the alarm output.
Setting range on each input type is shown below.
In the case of thermocouple input, set the value in units of 0.1℃.
[Example] To set to 0.3℃ ..... Enter "3".

Input type	Setting range (Accuracy guarantee range)
Thermocouple K	-2700 to 13720 (-2000 to 12000)
Thermocouple E	-2700 to 10000 (-2000 to 9000)
Thermocouple J	-2100 to 12000 (-400 to 7500)
Thermocouple T	-2700 to 4000 (-2000 to 3500)
Thermocouple B	0 to 18200 (6000 to 17000)
Thermocouple R	-500 to 17680 (0 to 16000)
Thermocouple S	-500 to 17680 (0 to 16000)
Thermocouple N	-2700 to 13000 (-2000 to 12500)
Micro voltage input	-21000 to 21000 (-20000 to 20000)

7) Sensor compensation value setting

Set the sensor compensation value.
The setting range of the sensor compensation value is –500 to 500.
In the case of thermocouple input, set the value in units of 0.1℃.
[Example] To set to 0.3℃ ..... Enter "3".
The setting for the micro voltage input is performed in increments of 4μV/digit.
[Example] When the micro voltage conversion value is 10003 at 40mV input ..... Enter “-3”.

(5) Parameter writing

1) From the "Channel:" pull-down menu, select the channel where the parameters will be set.
2) Select the parameter items to be written to the ST1TD2 by checking the corresponding "select" check box.
3) Make setting in the "Setting Value" field.
4) Select the target memory (RAM or ROM) from the pull-down menu of "Target Memory".
5) Click the Download button.

When writing the parameters of multiple channels to the ST1TD2, perform the operations in steps 1) to 5) for each channel.

5.4 Input/Output Monitor

This section explains how to monitor the I/O data of the ST1TD2.

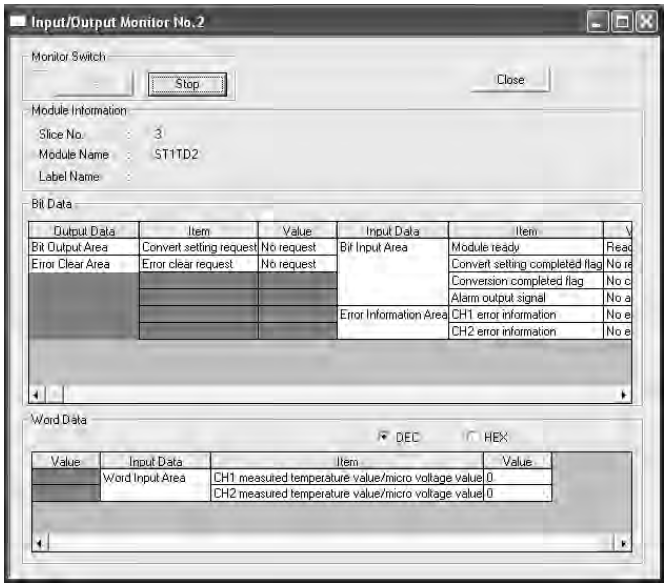
(1) Mode changing

Click [Mode] → [Diagnosis].

(2) Displaying "Input/Output Monitor" screen

1) Select ST1TD2 on the "System Monitor" screen.
2) Click the Input/Output Monitor button.
   Monitor starts as soon as the "Input/Output Monitor" screen is displayed.

(3) Display/Setting Screen



(4) Display/setting details

(a) Bit Data

Input/Output Data	Item	Description
Bit Output Area	Convert setting request	The status of Bw.n+1 Convert setting request is displayed.
Error Clear Area	Error clear request	The status of Ew.n Error clear request is displayed.
Bit Input Area	Module ready	The status of Br.n Module ready is displayed.
	Convert setting completed flag	The status of Br.n+1 Convert setting completed flag is displayed.
	Conversion completed flag	The status of Br.n+2 Conversion completed flag is displayed.
	Alarm output signal	The status of Br.n+3 Alarm output signal is displated.
Error Information Area	CH□ error information	The status of Er.n+3 to Er.n CH□ error information is displayed.

(b) Word Data

The display format (decimal/hexadecimal) can be changed.

Input/Output Data	Item	Description
Word Input Area	CH□ measured temperature value/micro voltage value	The value of Wr.n , Wr.n+1 CH□ measured temperature value/micro voltage value is displayed.

5.5 Forced Output Test

This section explains a forced output test.
Conduct the test after setting values to the bit output area or error clear area of the ST1TD2.

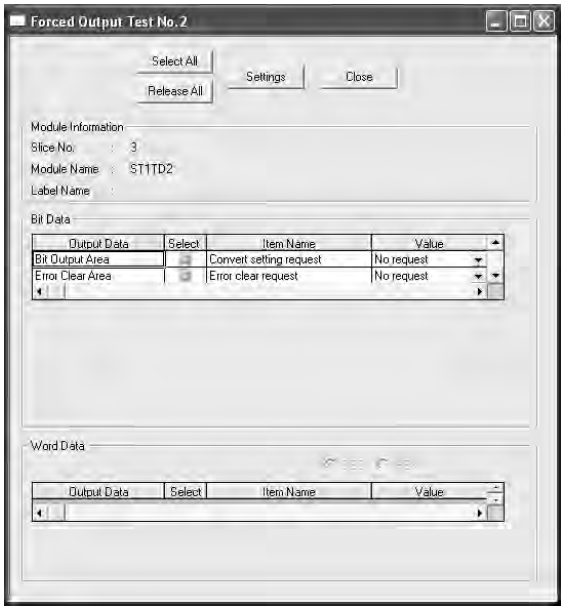
(1) Mode changing

Click [Mode] → [Diagnosis].

(2) Displaying "Forced Output Test" screen

1) Select ST1TD2 on the "System Monitor" screen.
2) Click the Forced Output Test button.

(3) Display/Setting Screen



(4) Display/setting details

(a) Bit Data

Output Data	Item	Description
Bit Output Area	Convert setting request	The setting of Bw.n+1 Convert setting request can be changed.
Error Clear Area	Error clear request	The setting of Ew.n Error clear request can be changed.

(b) Word Data

Unavailable for the ST1TD2.

(5) Test operation

1) Select the test item by checking the corresponding "Select" check box.
2) Make setting in the "Value" field.
3) Click the Settings button. *
   Clicking the Settings button executes the test.
   *: When the module is not in the forced output test mode, a screen asking whether to switch to the forced output test mode. Click the OK button to switch to the forced output test mode.
   When the module is switched to the forced output test mode, the RUN LED of the head module flashes.

POINT
When the forced output test mode has been cancelled, make sure that the RUN LED of the head module is on.

5 - 9

5.6 Offset/Gain Setting

This section explains how to make offset/gain setting.

(1) Input type setting

Set the input type for the offset/gain setting on the parameter setting screen.
For the parameter setting, refer to Section 5.3.

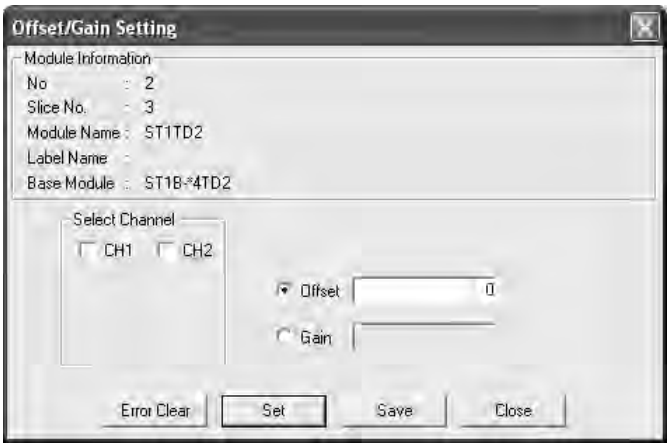
(2) Mode changing

Click [Mode] → [Diagnosis].

(3) Displaying "Offset/Gain Setting" screen

1) Select ST1TD2 on the "System Monitor" screen.
2) Click the Offset/Gain Setting button. *
   *: When the module is not in the forced output test mode, a screen appears asking whether to switch to the forced output test mode. Click the OK button to switch to the forced output test mode.
   When the module is switched to the forced output test mode, the RUN LED of the head module flashes.
3) As a screen appears asking whether to switch to the offset/gain setting mode, click the OK button to switch to the offset/gain setting mode.
   After switched to the offset/gain setting mode, the RUN LED of ST1TD2 flashes (0.5s interval) and the ST1TD2 stops.

(4) Display/Setting Screen



(5) Offset/gain setting

When setting different offset and gain values for different channels, perform the operations in (a), (b) for each channel.
Since the operation in (c) is to be done to write the offset/gain settings of all channels to the ST1TD2, perform it only once at the last.

(a) Offset value setting operation

1) Select the channel where the offset value will be set by checking the corresponding "Select channel" check box.
   By checking multiple check boxes, values can be set to multiple channels at the same time.
2) Specify "Offset".
3) Enter a value as an offset value to the channel to be adjusted, set a temperature setting value or voltage setting value which suits to input, and then click the Set button.
   • The setting for the temperature setting value is performed in units of 0.1℃.
   [Example] To set to 0.3℃ ..... Enter "3".
   • The setting for the voltage setting value is performed in units of 0.01mV.
   [Example] To set to 3mV ..... Enter "300".
   Setting range on each input type is shown below.

Input type	Setting range (Accuracy guarantee range)
Thermocouple K	-2700 to 13720 (-2000 to 12000)
Thermocouple E	-2700 to 10000 (-2000 to 9000)
Thermocouple J	-2100 to 12000 (-400 to 7500)
Thermocouple T	-2700 to 4000 (-2000 to 3500)
Thermocouple B	0 to 18200 (6000 to 17000)
Thermocouple R	-500 to 17680 (0 to 16000)
Thermocouple S	-500 to 17680 (0 to 16000)
Thermocouple N	-2700 to 13000 (-2000 to 12500)
Micro voltage input	-8000 to 8000 (-8000 to 8000)

(b) Gain value setting

1) Select the channel where the gain value will be set by checking the corresponding "Select channel" check box.
   By checking multiple check boxes, values can be set to multiple channels at the same time.
2) Specify "Gain".

3) Enter a value as a gain value to the channel to be adjusted, set a temperature setting value or voltage setting value which suits to input, and then click the Set button.
   • The setting for the temperature setting value is performed in units of 0.1℃.
   [Example] To set to 0.3℃ .....Enter "3".
   • The setting for the voltage setting value is performed in units of 0.01mV.
   [Example] To set to 3mV ..... Enter "300".
   Setting range on each input type is shown below.

Input type	Setting range (Accuracy guarantee range)
Thermocouple K	-2700 to 13720 (-2000 to 12000)
Thermocouple E	-2700 to 10000 (-2000 to 9000)
Thermocouple J	-2100 to 12000 (-400 to 7500)
Thermocouple T	-2700 to 4000 (-2000 to 3500)
Thermocouple B	0 to 18200 (6000 to 17000)
Thermocouple R	-500 to 17680 (0 to 16000)
Thermocouple S	-500 to 17680 (0 to 16000)
Thermocouple N	-2700 to 13000 (-2000 to 12500)
Micro voltage input	-8000 to 8000 (-8000 to 8000)

(c) Offset/gain setting writing

Click the Save button.
The offset/gain settings for all channels are written to the ST1TD2.

POINT

(1) Clicking the Save button in the following condition generates errors.
For details of error codes, refer to Section 9.1.
   • Offset value ≥ Gain value (Error code : 400 □H)
   • (Gain value) - (Offset value) ≤ 0.2[℃] (for temperature input)
   (Error code : 410 □H)
   • (Gain value) - (Offset value) ≤ 20[μV] (for micro voltage input)
   (Error code : 410 □H)
   In this case, click the Error Clear button to clear the error, and make setting again.

(2) When the offset/gain setting screen is closed, the screen displays a message that asks if you are sure to change to the normal mode. Click the OK button to change to the normal mode.
When the module is put in the normal mode, the RUN LED of the ST1TD2 turns on.

(3) When the forced output test mode has been released, make sure that the RUN LED of the head module is on.

6 PROGRAMMING

This chapter explains program examples available when the QJ71PB92D and AJ71PB92D/A2SJ71PB92D are used as the master station.

REMARK

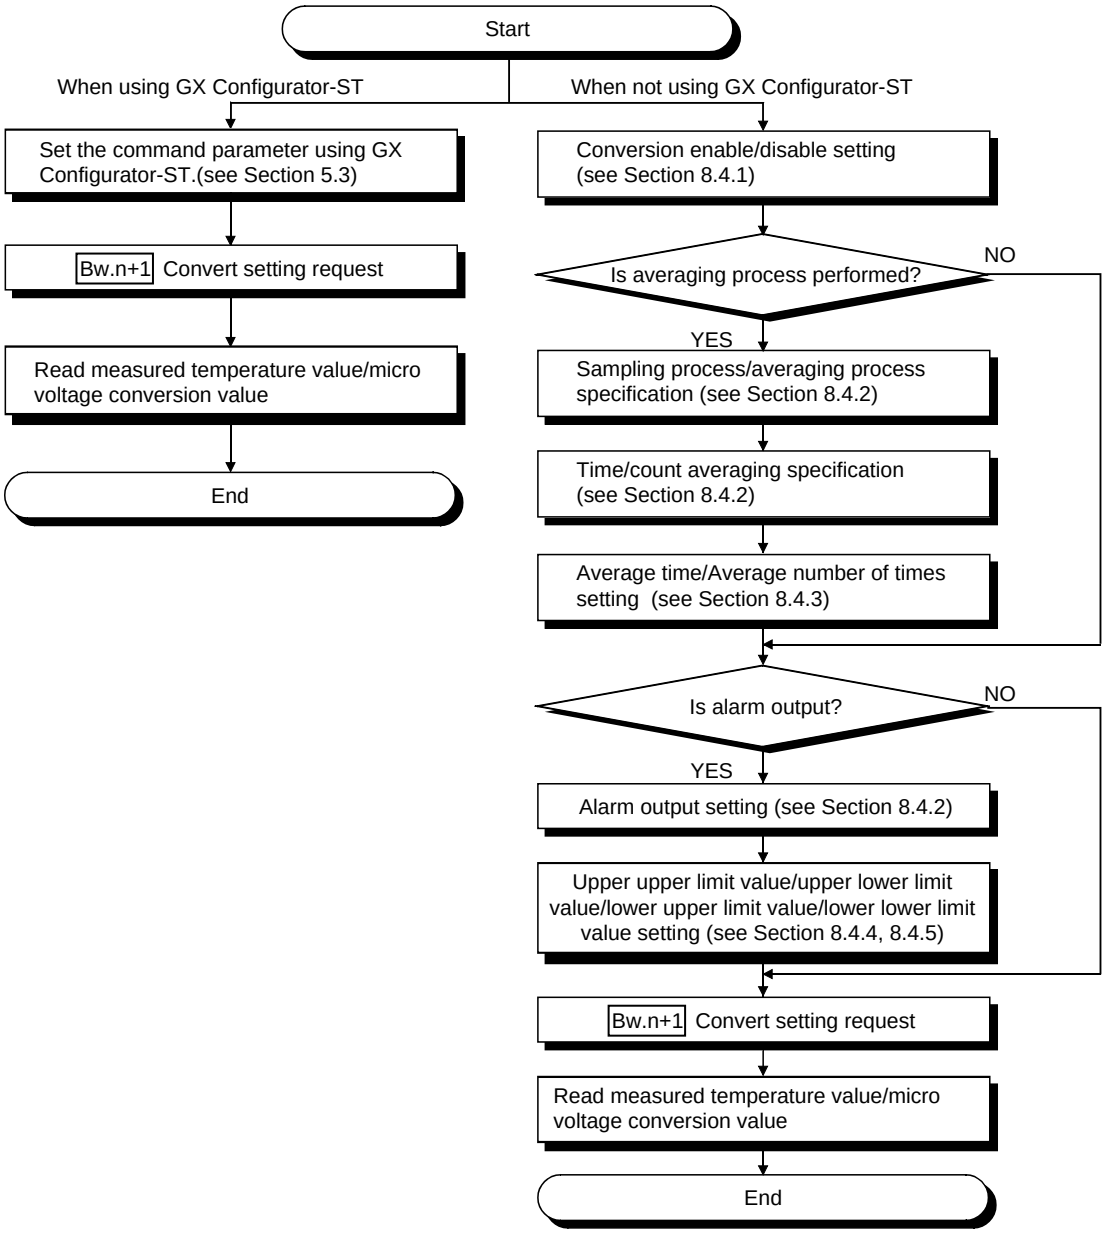
Refer to the following manuals for details of the QJ71PB92D and AJ71PB92D/A1SJ71PB92D.
<QJ71PB92D>
- PROFIBUS-DP Interface Module User's Manual
- SH-080127 (13JR22)

<AJ71PB92D/A1SJ71PB92D>
- PROFIBUS-DP Interface Module type AJ71PB92D/A1SJ71PB92D User's Manual
- IB-66773 (13JL20)

6 - 1

6.1 Programming Procedure

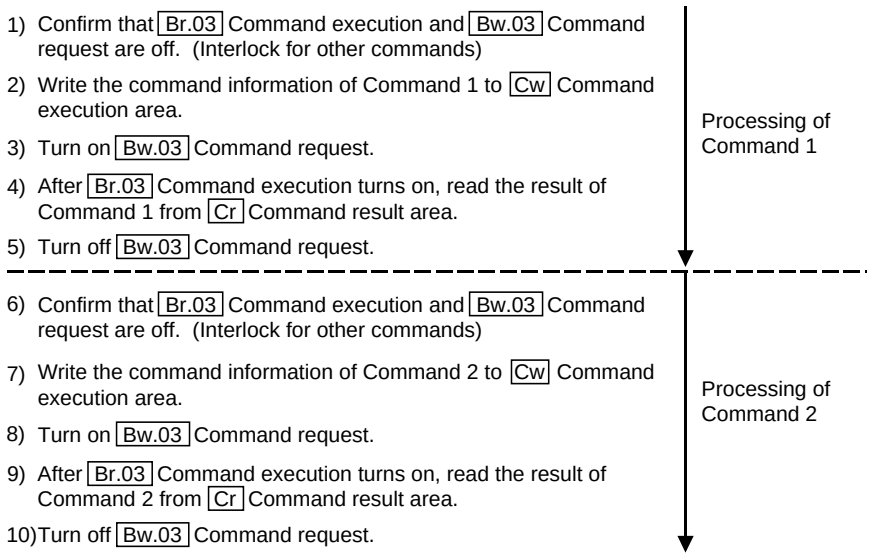
In the following procedure, create a program enabling execution of the temperature conversion or micro voltage conversion in the ST1TD2.
When utilizing the program example introduced in this chapter for an actual system, fully verify that there are no problems in controllability in the target system.



POINT

(1) While a command is being executed, other command is not executable.
Also, a command can be executed for only one module.
When executing the same command for multiple modules or executing several kinds of commands, provide an interlock in the program using Br.03 Command execution and Bw.03 Command request as shown below.

<Example>
Executing 2 commands (Commands 1 and 2) consecutively



If a command is executed without any interlock, the following status will be generated.

1) When turning off Bw.03 Command request before completion of the command:
   • Br.03 Command execution does not turn on.
   • The command result is not stored in Cr Command result area.
   • The command requested once may be executed.
2) When executing a command inadvertently during execution of other command:
   The command is executed based on the information written in Cw Command execution area at the time that Bw.03 Command request turns on.

(2) Performing online module change may require a previous arrangement, depending on the use condition.
For details, refer to Section 7.2.

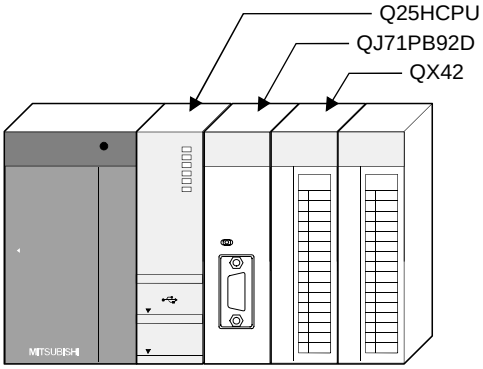
6.2 When QJ71PB92D is Used as Master Station

This section explains program examples available when the QJ71PB92D is used as the master station.
Section 6.2.1 uses the following system configuration example for explanation.

(1) System configuration of master station (QJ71PB92D)

The system configuration of the master station (QJ71PB92D) used in this section is shown below.

(a) System configuration of master station (QJ71PB92D)



(b) Settings of master station (QJ71PB92D)

Item		Setting
I/O signals		X/Y000 to X/Y01F
Operation mode		Extended service mode (MODE E)
I/O data area (buffer memory) for FDL address 1 (MELSEC-ST system)	Input data	0(0_H) to 10($0A_H$)
	Output data	960($3C0_H$) to 970($3CA_H$)

REMARK

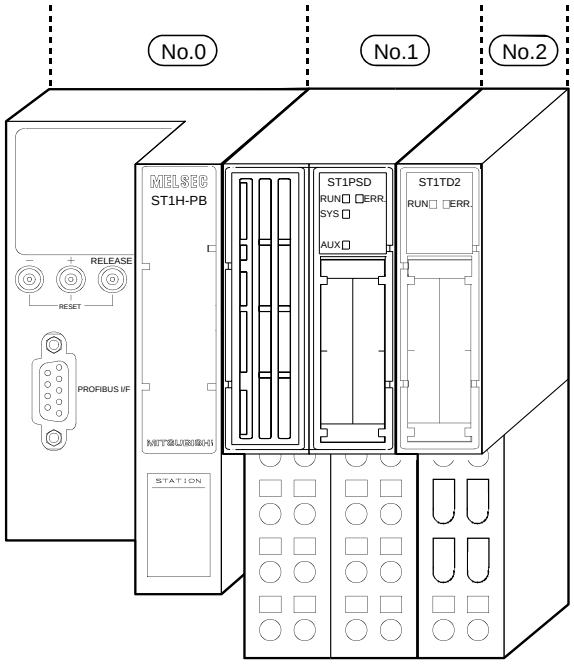
The MELSEC-ST system varies in I/O data size depending on the maximum input/output point settings and the number of mounted intelligent function modules. Hence, the master station's is operation mode is set to the extended service mode (MODE E) where the data size is variable.

(2) System configuration of MELSEC-ST system

The following system configuration is used as the MELSEC-ST system for explanation.

(a) System configuration of slave station (MELSEC-ST system)

1) FDL address: 1
2) Maximum I/O point setting: 32-point mode

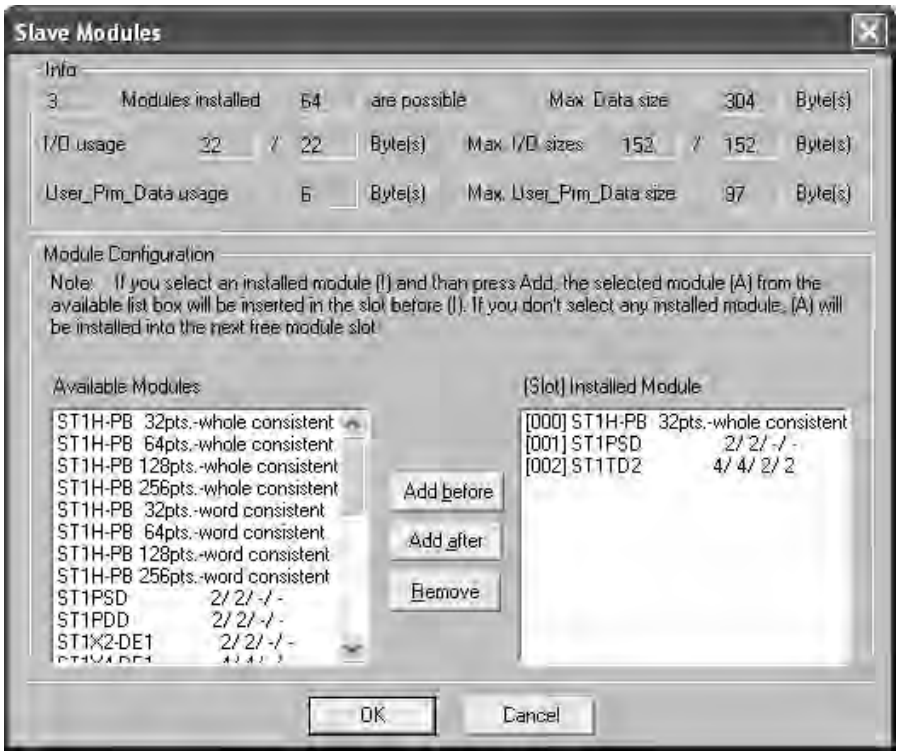


The following table uses the maximum input/output points setting sheet given in the Head Module User's Manual.

No.	Module Name	Number of Occupied I/O Points	Start Slice No. (Number of occupied slices)	Wr.n	Ww.n	5V DC Internal Current Consumption (Total)	24V DC Current (Total)	System Length (Total)
0	ST1H-PB	4	0(2)	—	—	0.530A(0.530A)	0A(0A)	—
1	ST1PSD	2	2(1)	—	—	—	—	25.2mm(25.2mm)
2	ST1TD2	4	3(2)	2	2	0.080A(0.610A)	＊1	12.6mm(37.8mm)
Total		10	—	2	2	—	—	—

＊1: The 24V DC current changes depending on the external device connected to each slice module.
Confirm the current consumption of the external device connected to each slice module, and calculate the total value.
Refer to the MELSEC-ST System User's Manual for details of current consumption calculation.

(b) GX Configurator-DP setting



(c) ST1TD2 setting

The input type is set by GX Configurator-DP.

- Conversion-enabled channel..... CH1, CH2
- CH1 Input type setting ..... Thermocouple K
- CH2 Input type setting ..... Micro voltage input
- Sampling process channel CH2
- Count-based averaging process channel
  ..... CH1 (average number of times: 50)
- Alarm output channel
  ..... CH1 (upper upper limit value, upper lower limit value: 2000)
  (lower upper limit value, lower lower limit value: 0)
- Sensor compensation channel..... CH2 (compensation value: 2)

(3) I/O data assignment

The following shows the I/O data assignment result in the system configuration example given in (2) in this section.

(a) Input data

Buffer memory address Decimal (Hexadecimal)	b15							b8	b7							b0	
0 (0H)	Br.0F	Br.0E	Br.0D	Br.0C	Br.0B	Br.0A	Br.09	Br.08	Br.07	Br.06	Br.05	Br.04	Br.03	Br.02	Br.01	Br.00	Br Bit input area
	0						No.2				No.1		No.0				
1 (1H)	Br.1F	Br.1E	Br.1D	Br.1C	Br.1B	Br.1A	Br.19	Br.18	Br.17	Br.16	Br.15	Br.14	Br.13	Br.12	Br.11	Br.10

6 - 7

(4) Device assignment in program examples

The program example in this section uses the following device assignment.

(a) Devices used by QJ71PB92D

Device	Application	Device	Application
X0	Exchange start end signal	Y0	Exchange start request signal
X1B	Communication READY signal		
X1D	Module READY signal	—	
X1F	Watchdog timer error signal		

(b) Devices used by user

Device	Application	Device	Application
X20	PROFIBUS-DP exchange start command	M0	Refresh start request
X30	ST1TD2 error code read request	M1	CH1 conversion completed signal
X31	ST1TD2 error clear request	M2	CH2 conversion completed signal
D500	CH1 measured temperature value read destination	M100	Command execution signal
D501	CH2 micro voltage conversion value read destination	M200	Operation condition set value write signal
D600, D601	ST1TD2 error code read destination	M201	Average time/average number of times set value write signal
—		M202	CH1 upper upper/upper lower limit set value write signal
		M203	CH1 lower upper/lower lower limit set value write signal
		M204	Conversion enable/disable setting write signal
		M205	Sensor compensation value write signal
		M206	Conversion completed channel read signal
		M210	Conversion start signal
		M230	ST1TD2 error clear request signal

(c) Devices used in I/O data

1) Br Bit input area

Br.n Bit input	Information	Master station side device	Slice No.	Module name
Br.00	Module READY	D1000.0	0	ST1H-PB
Br.01	Forced output test mode	D1000.1		
Br.02	Module being changed online	D1000.2	1	
Br.03	Command execution	D1000.3		
Br.04	External power supply status	D1000.4	2	ST1PSD
Br.05		D1000.5		
Br.06	Module ready	D1000.6	3	ST1TD2
Br.07	Convert setting completed flag	D1000.7		
Br.08	Conversion completed flag	D1000.8	4	
Br.09	Alarm output signal	D1000.9		
Br.0A	—	D1000.A	—	—
to				
Br.1F	—	D1001.F	—	—

2) Er Error information area

Er.n Error information	Information	Master station side device	Slice No.	Module name
Er.00	Head module error information	D1002.0	0	ST1H-PB
Er.01		D1002.1		
Er.02		D1002.2	1	
Er.03		D1002.3		
Er.04	Bus refreshing module error information	D1002.4	2	ST1PSD
Er.05		D1002.5		
Er.06	CH1 error information	D1002.6	3	ST1TD2
Er.07		D1002.7		
Er.08	CH2 error information	D1002.8	4	
Er.09		D1002.9		
Er.0A	_	D1002.A	_	_
to				
Er.1F	_	D1003.F	_	_

3) Mr Module status area

Mr.n Module status	Information	Master station side device	Slice No.	Module name
Mr. 0	Head module existence information	D1004.0	0	ST1H-PB
Mr. 1		D1004.1	1	
Mr.2	Bus refreshing module existence information	D1004.2	2	ST1PSD
Mr.3	Module status	D1004.3	3	ST1TD2
Mr.4		D1004.4	4	
Mr.5	_	D1004.5	_	_
to				
Mr.15	_	D1004.F	_	_

4) Cr Command result area

Cr Command result area	Information	Master station side device	Slice No.	Module name
Cr.0	Cr.0(15-8) Command Execution Result, Cr.0(7-0) Start Slice No. of Execution Target	D1005	_	_
Cr.1	Executed Command No.	D1006		
Cr.2	Response Data 1	D1007		
Cr.3	Response Data 2	D1008		

6 - 9

5) Wr Word input area

Wr.n Word input	Information	Master station side device	Slice No.	Module name
Wr.00	CH1 measured temperature value/micro voltage conversion value (Wr.n)	D1009	3	ST1TD2
Wr.01	CH2 measured temperature value/micro voltage conversion value (Wr.n+1)	D1010		

6) Bw Bit output area

Bw.n Bit output	Information	Master station side device	Slice No.	Module name

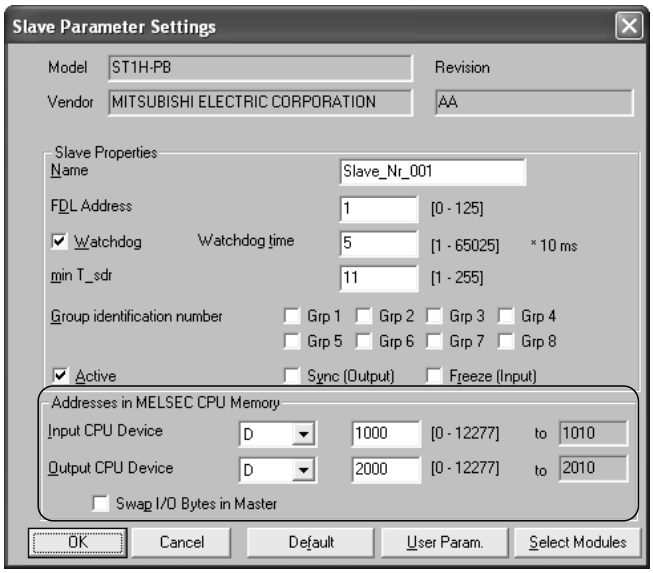
6.2.1 Program example available when using auto refresh in QJ71PB92D

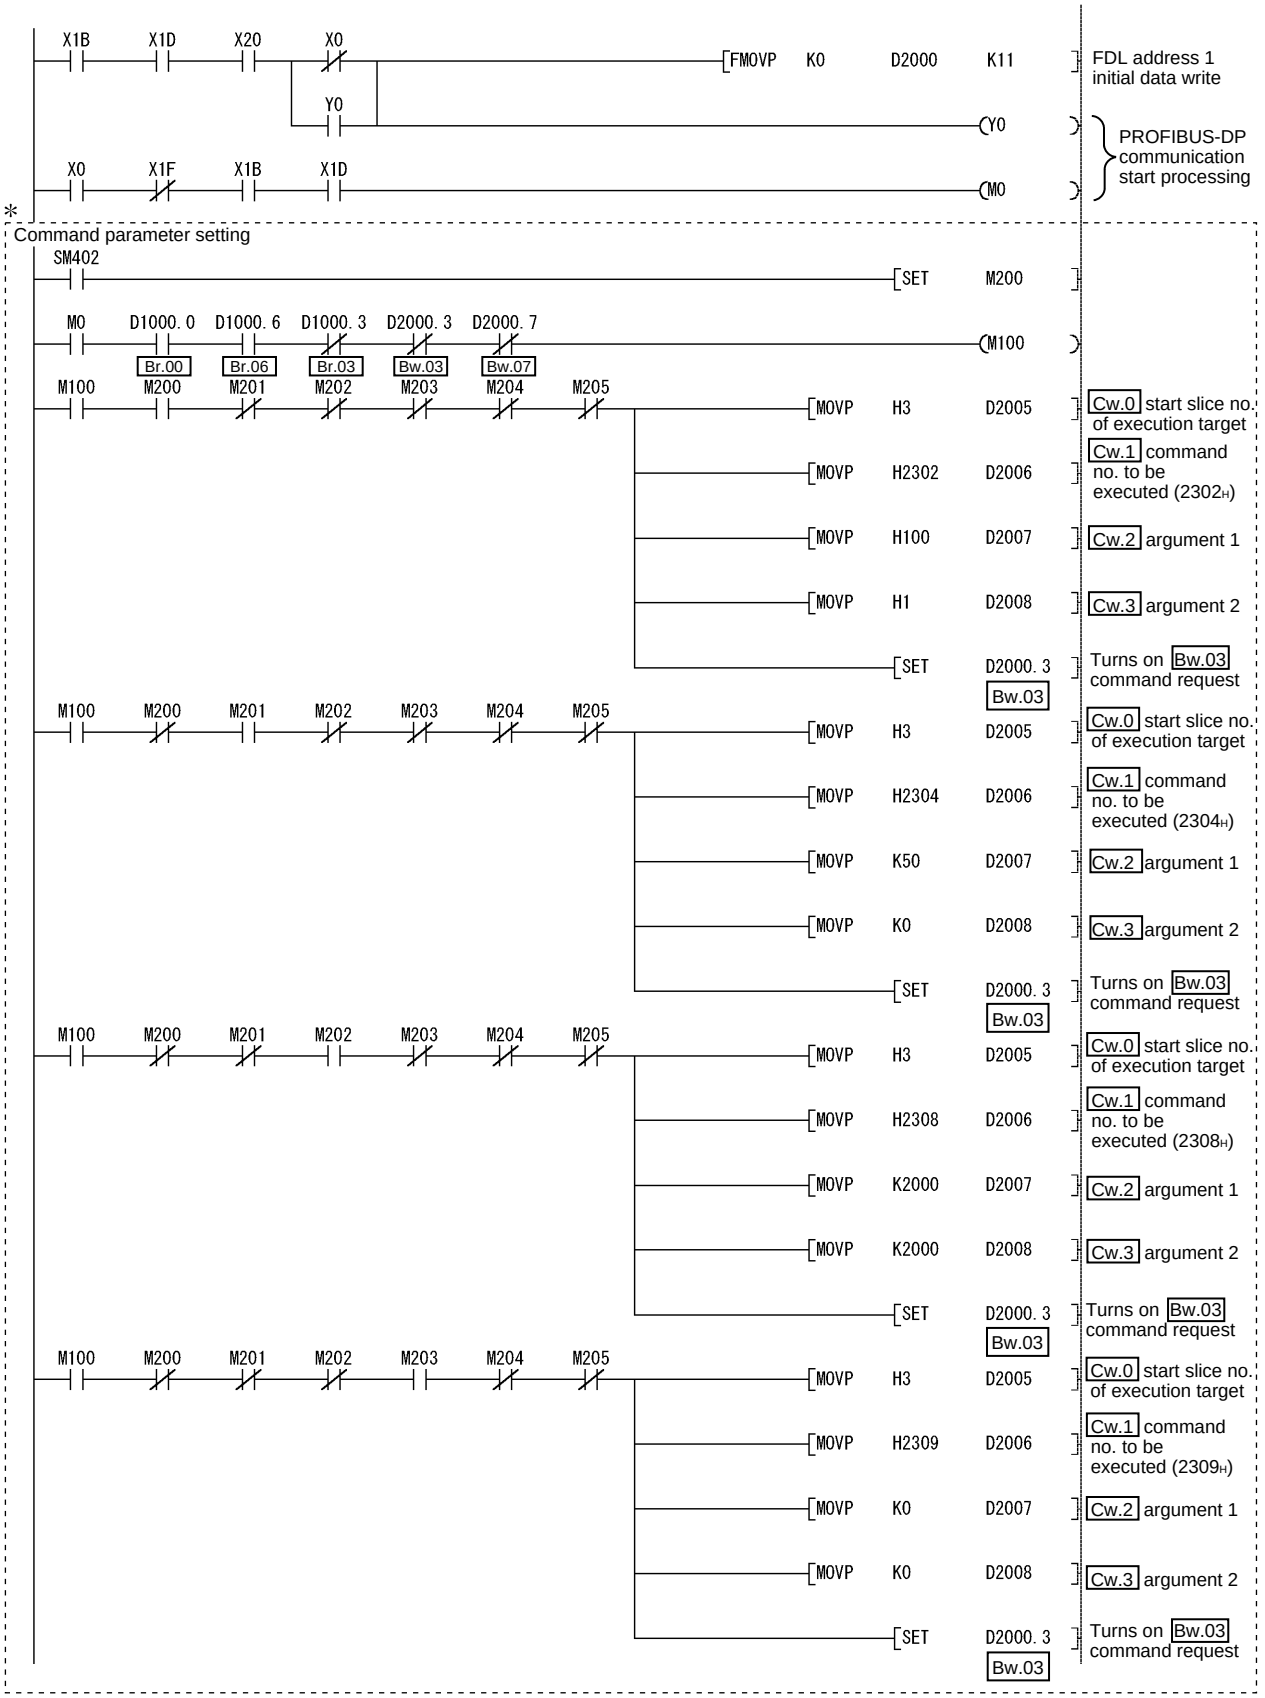
This section explains a program example available when auto refresh is used in the QJ71PB92D to communicate with the MELSEC-ST system.
The program example in this section is based on the system configuration in Section 6.2.

(1) Auto refresh setting

To use auto refresh, setting must be made on GX Configurator-DP.
Refer to the GX Configurator-DP Manual for details.

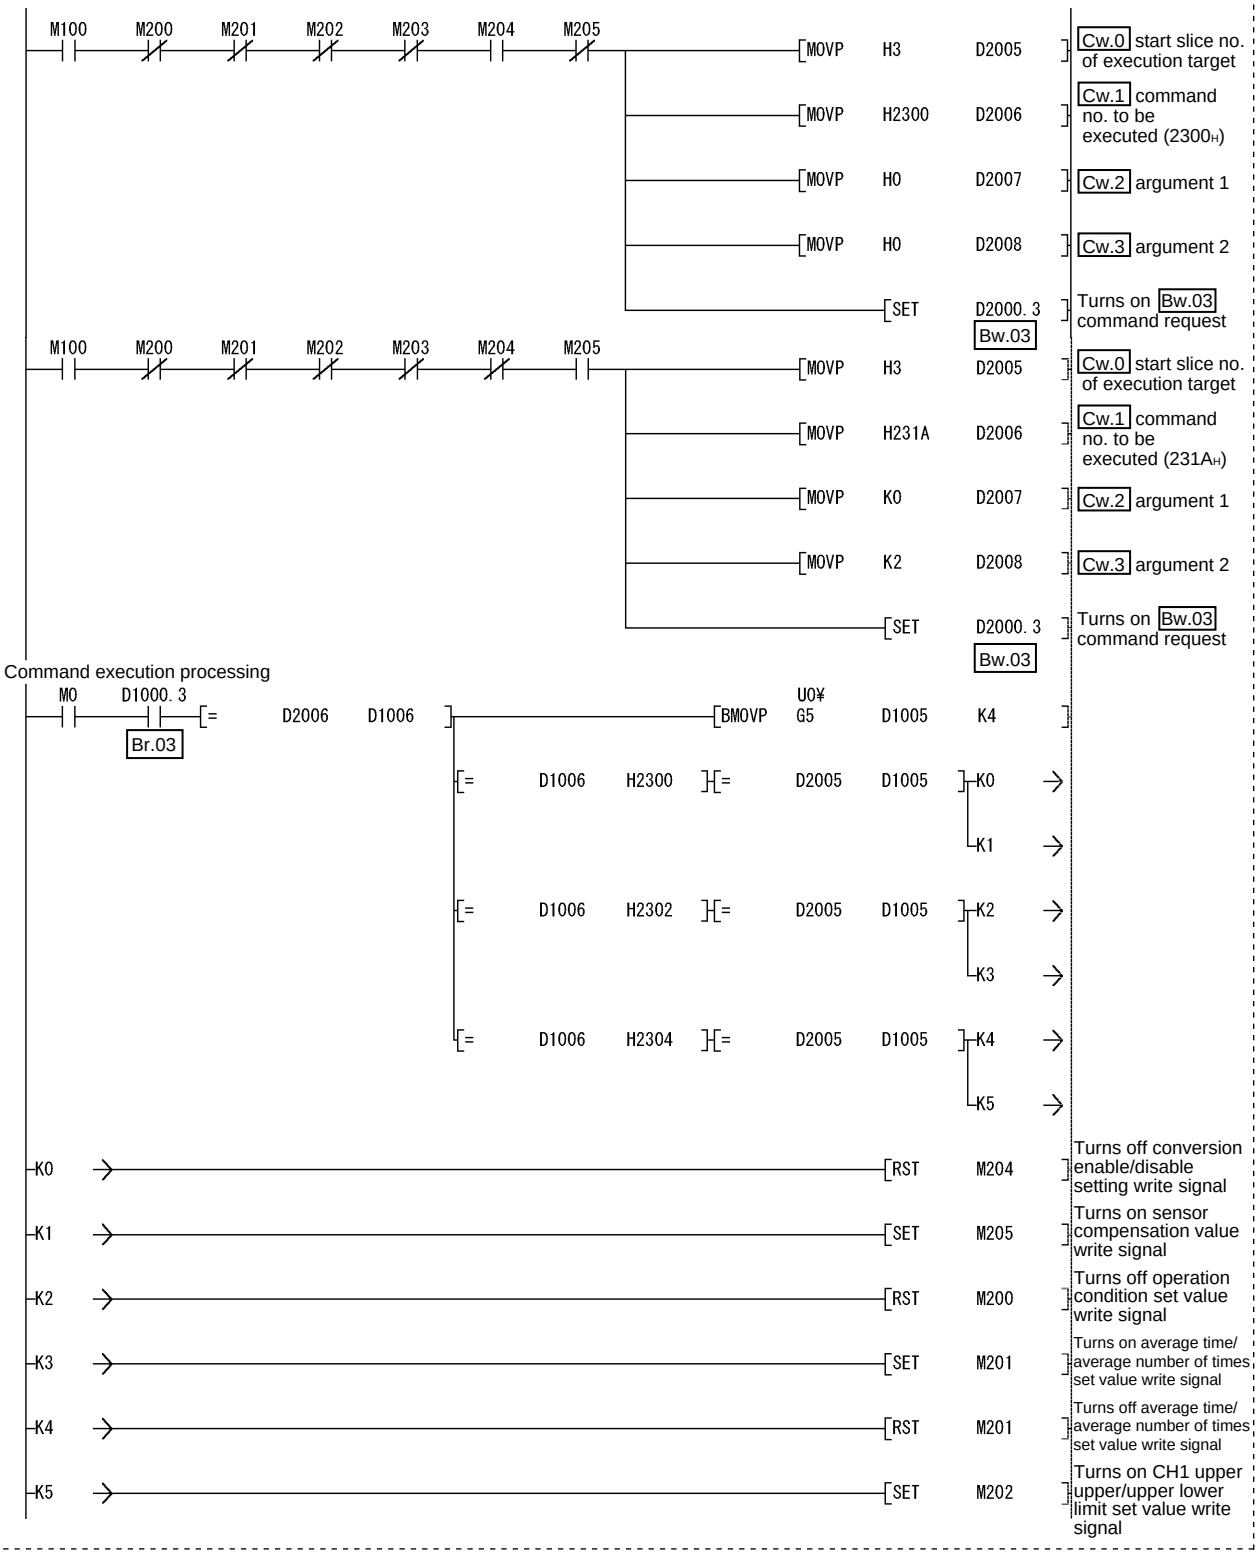


(2) Programming example

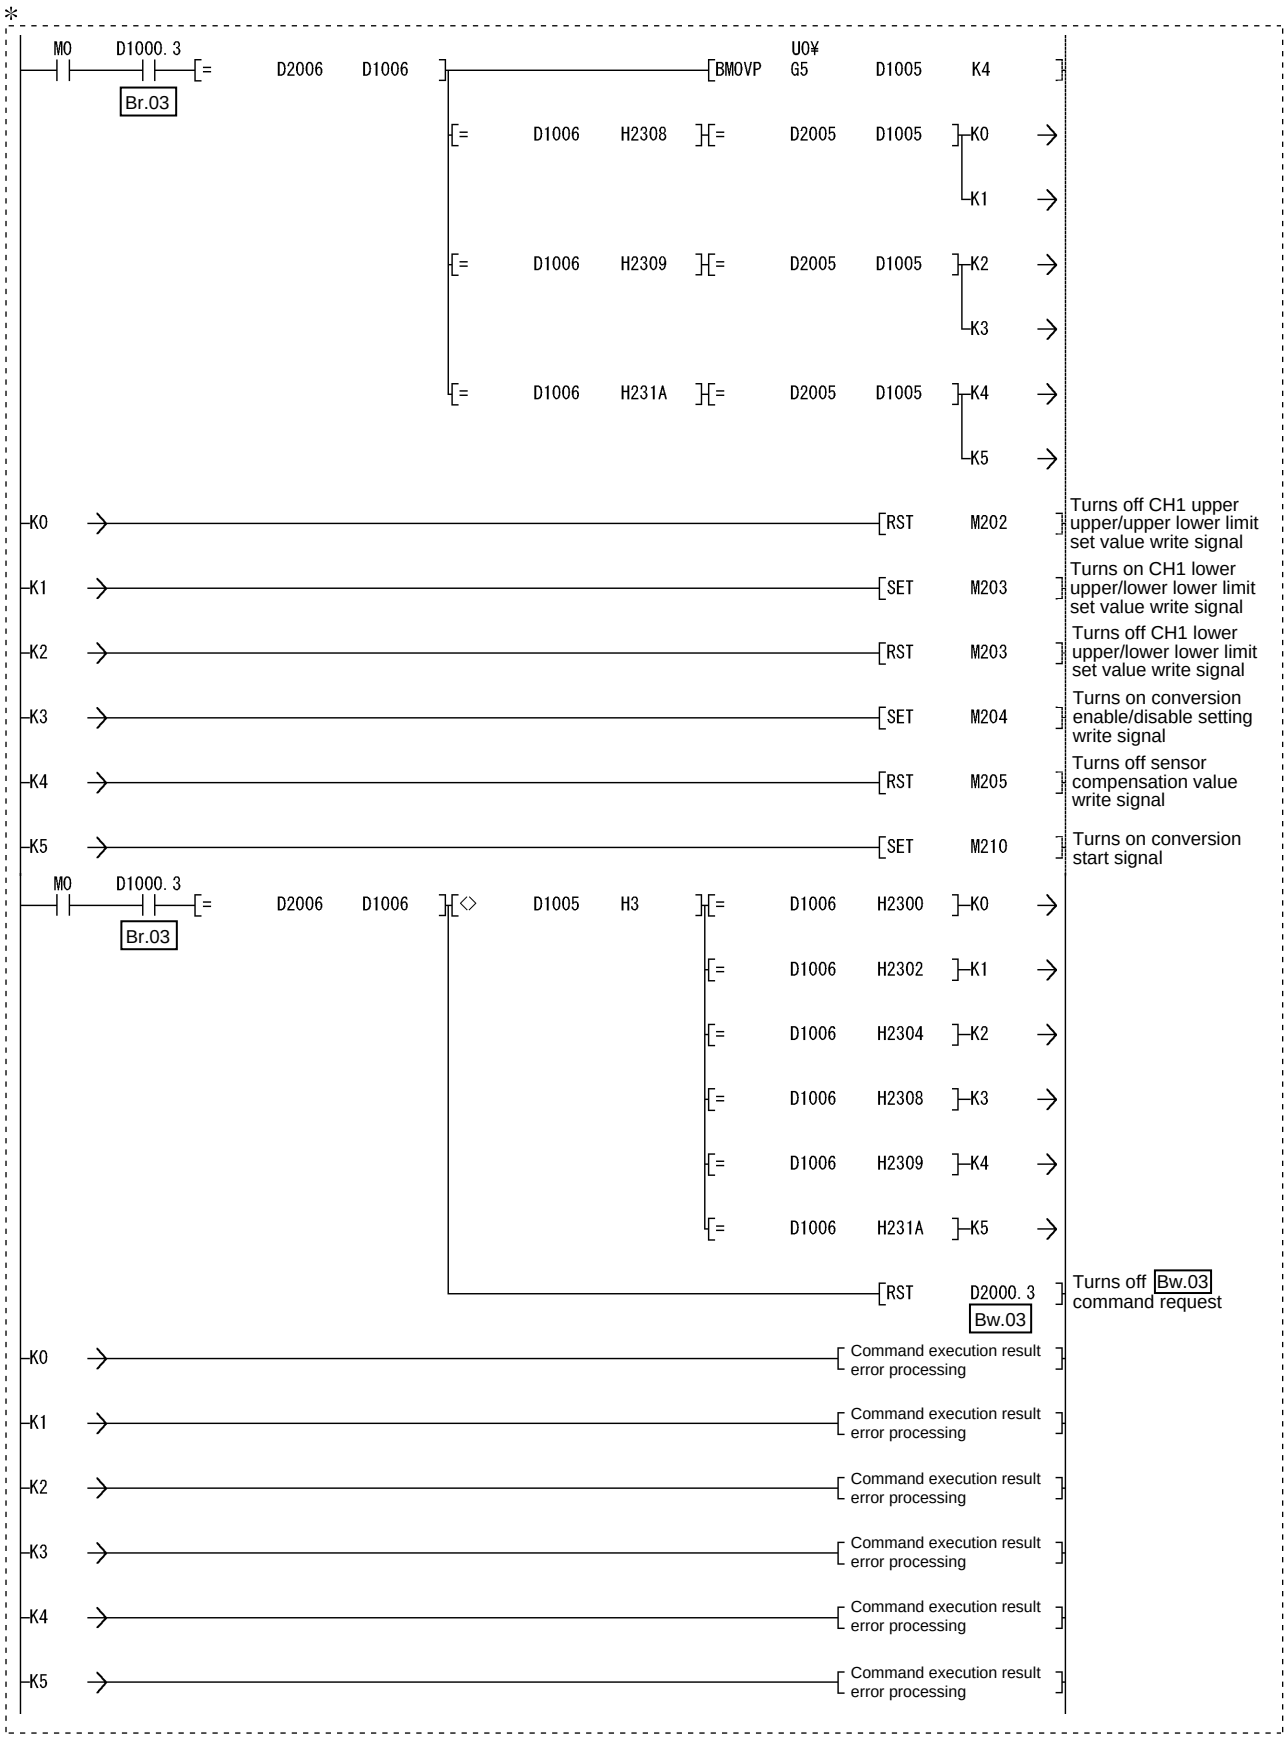


* The program area enclosed by the dotted line is not required when GX Configurator-ST is used to set the command parameters.

*



* The program area enclosed by the dotted line is not required when GX Configurator-ST is used to set the command parameters.



* The program area enclosed by the dotted line is not required when GX Configurator-ST is used to set the command parameters.

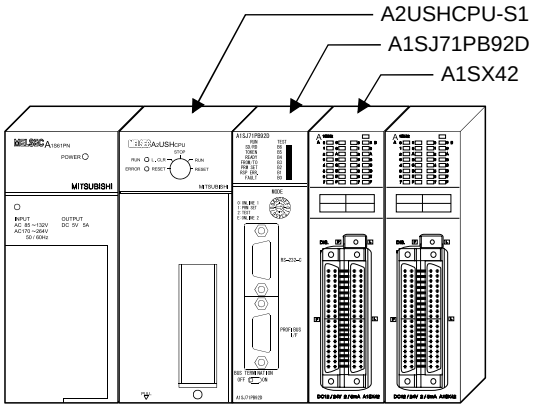
6.3 When Using AJ71PB92D/A1SJ71PB92D as Master Station

This section explains a program example available when the AJ71PB92D/A1SJ71PB92D is used as the master station.
The program example shown here is the case where the A1SJ71PB92D is used as the master station.

(1) System configuration of master station (A1SJ71PB92D)

The system configuration of the master station (A1SJ71PB92D) used in this section is shown below.

(a) System configuration of master station (A1SJ71PB92D)



(b) Settings of master station (A1SJ71PB92D)

Item		Setting
I/O signals		X/Y000 to X/Y01F
Operation mode		Extended service mode (MODE E)
I/O data area (buffer memory) for FDL address 1 (MELSEC-ST system)	Input data	0(0_H) to 10($0A_H$)
	Output data	960($3C0_H$) to 970($3CA_H$)

REMARK

The MELSEC-ST system changes in I/O data size depending on the maximum input/output point setting and the number of mounted intelligent function modules. Hence, the master station operation mode is set to the extended service mode (MODE E) where the data size is variable.

(2) System configuration of MELSEC-ST system

The MELSEC-ST system has the system configuration as described in Section 6.2 (2).

(3) I/O data assignment

The I/O data assignment result is the same as that described in Section 6.2 (3).

(4) Device assignment in program examples

The program example in this section uses the following device assignment.

(a) Devices used by A1SJ71PB92D

Device	Application	Device	Application
X0	Exchange start end signal	Y0	Exchange start request signal
X0D	Watchdog timer error signal		
X1B	Communication READY signal	—	
X1D	Module READY signal		

(b) Devices used by user

Device	Application	Device	Application
X20	PROFIBUS-DP exchange start command	M0	Refresh start request
X30	ST1TD2 error code read request	M1	CH1 conversion completed signal
X31	ST1TD2 error clear request	M2	CH2 conversion completed signal
D500	CH1 measured temperature value read destination	M100	Command execution signal
D501	CH2 micro voltage conversion value read destination	M200	Operation condition set value write signal
D600, D601	ST1TD2 error code read destination	M201	Average time/average number of times set value write signal
—		M202	CH1 upper upper/upper lower limit set value write signal
		M203	CH1 lower upper/lower lower limit set value write signal
		M204	Conversion enable/disable setting write signal
		M205	Sensor compensation value write singal
		M206	Conversion completed channel read signal
		M210	Conversion start signal
		M230	ST1TD2 error clear request signal

(c) Devices used in I/O data

1) Br Bit input area

Br.n Bit input	Information	Master station side device	Slice No.	Module name

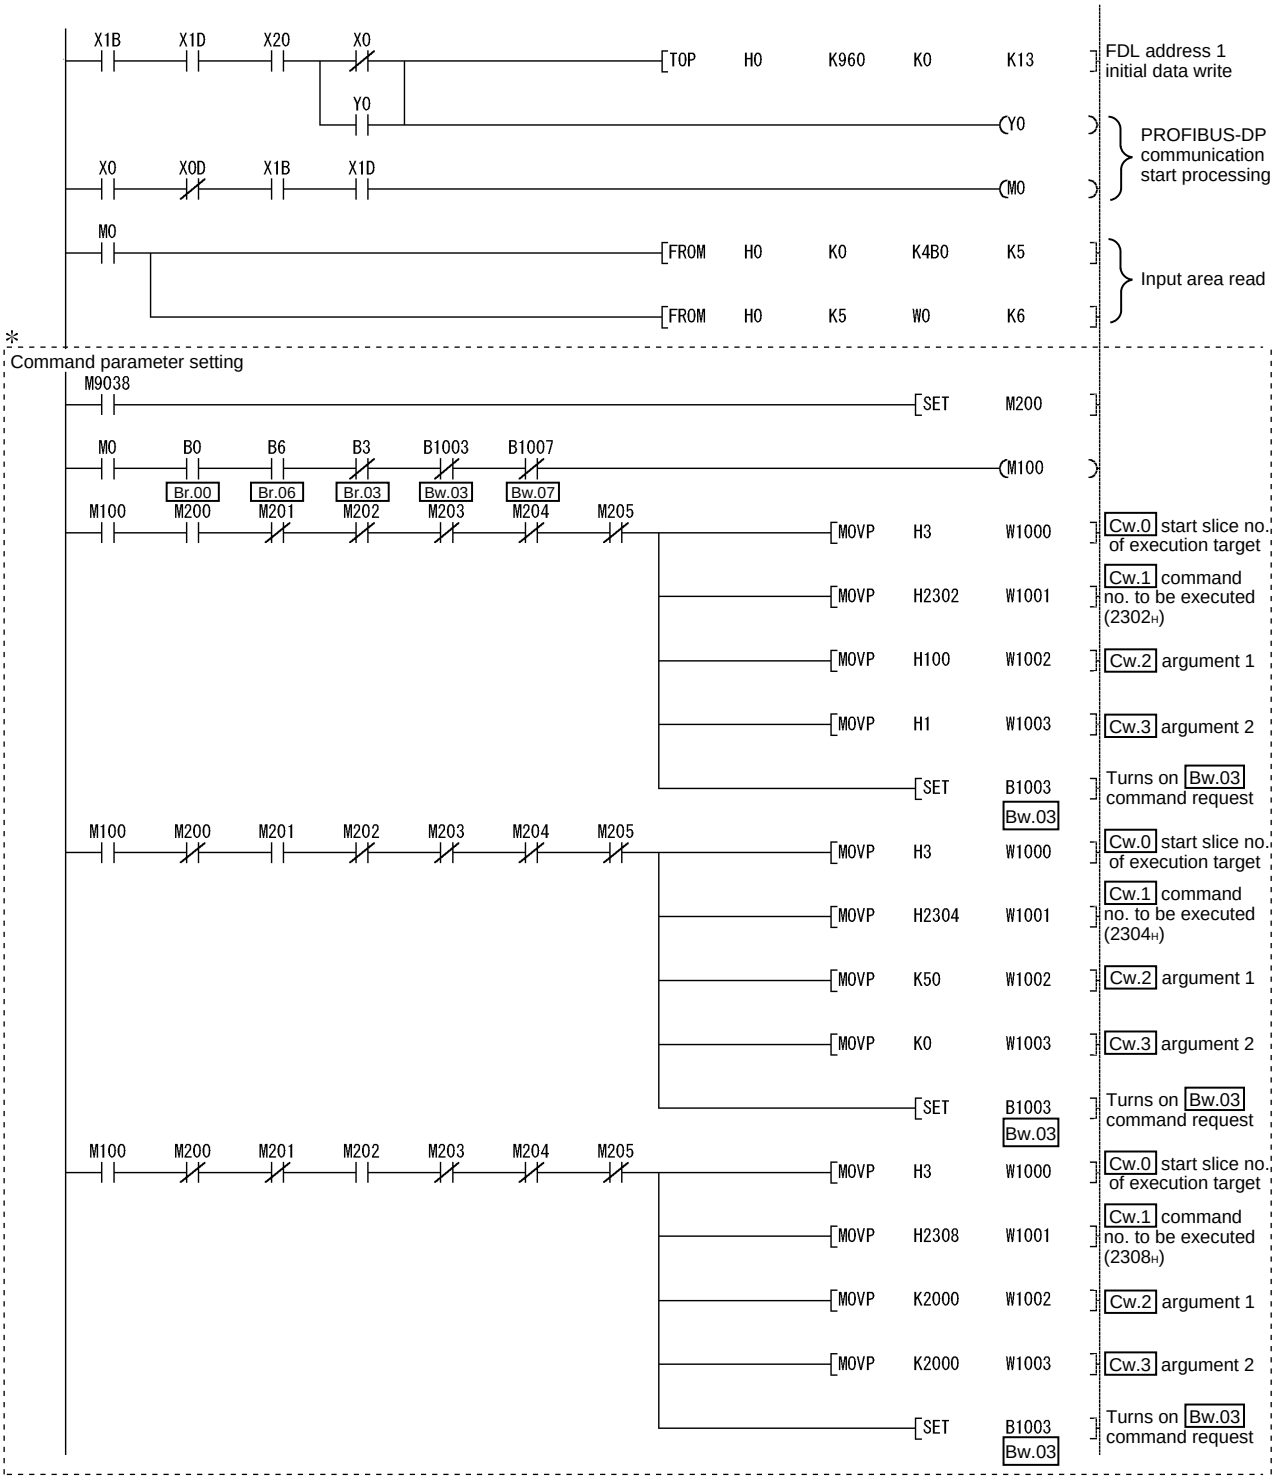
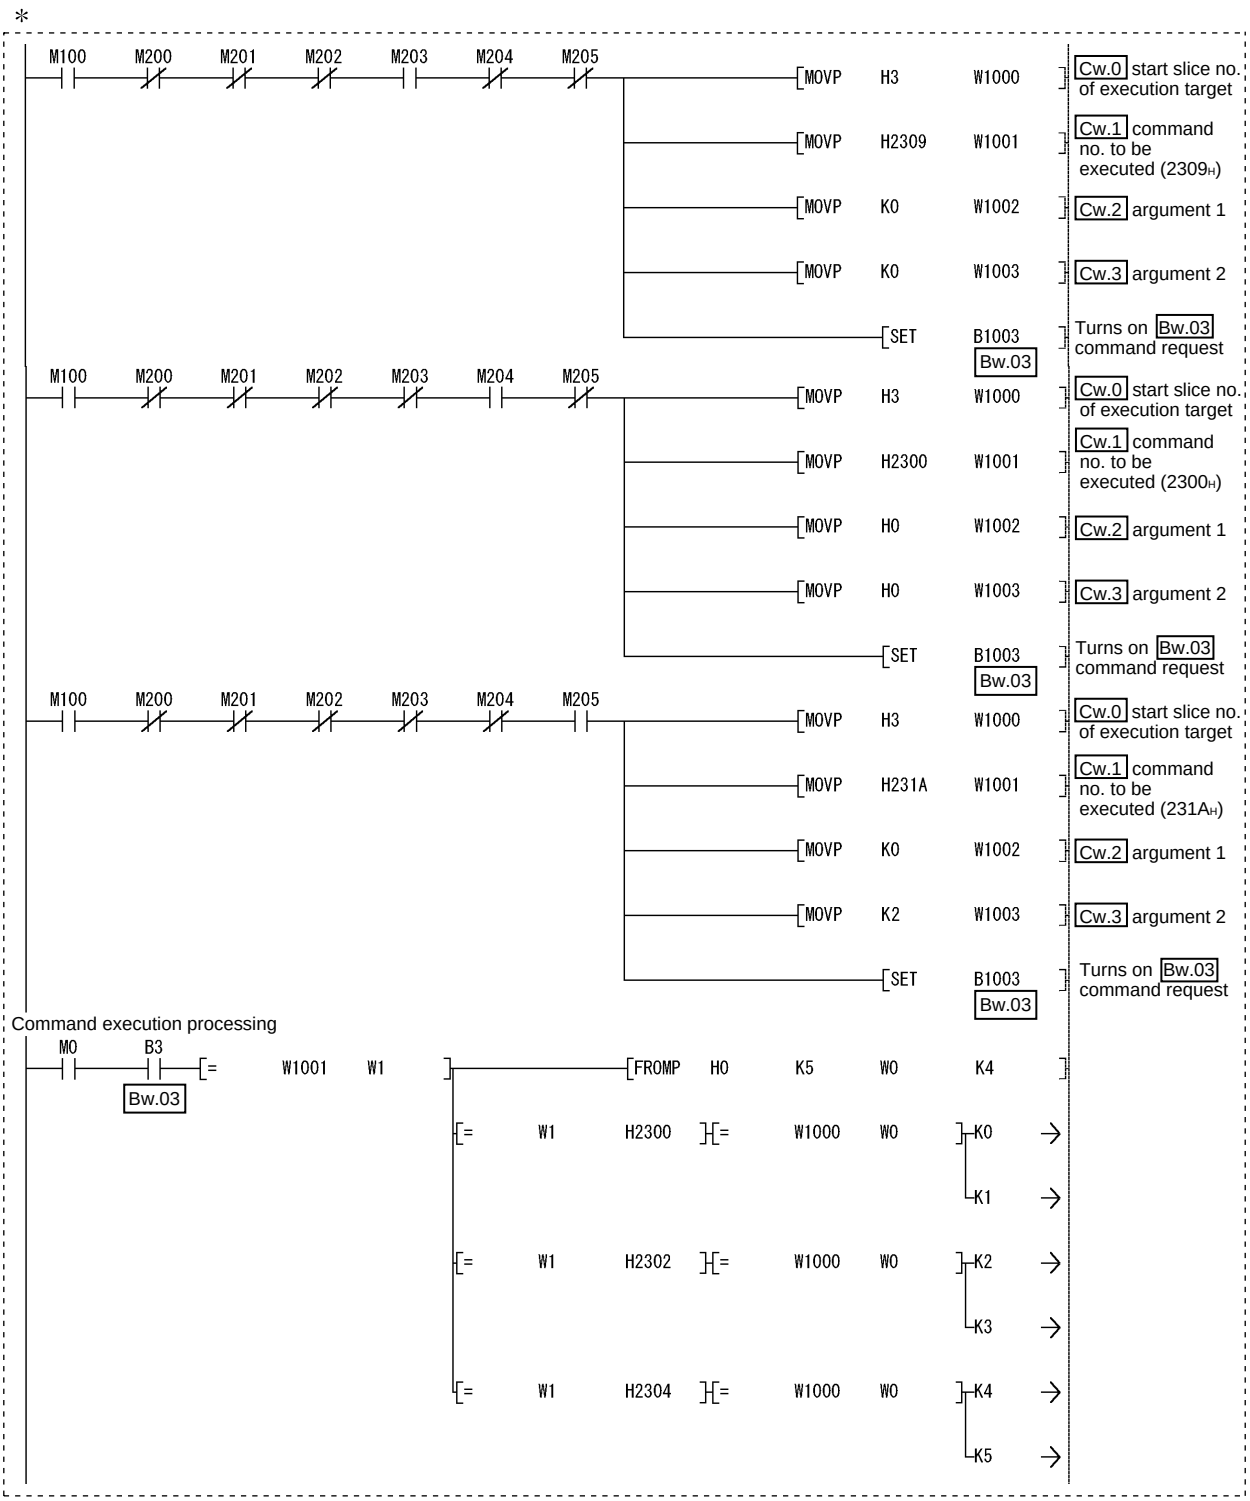
(5) Program example

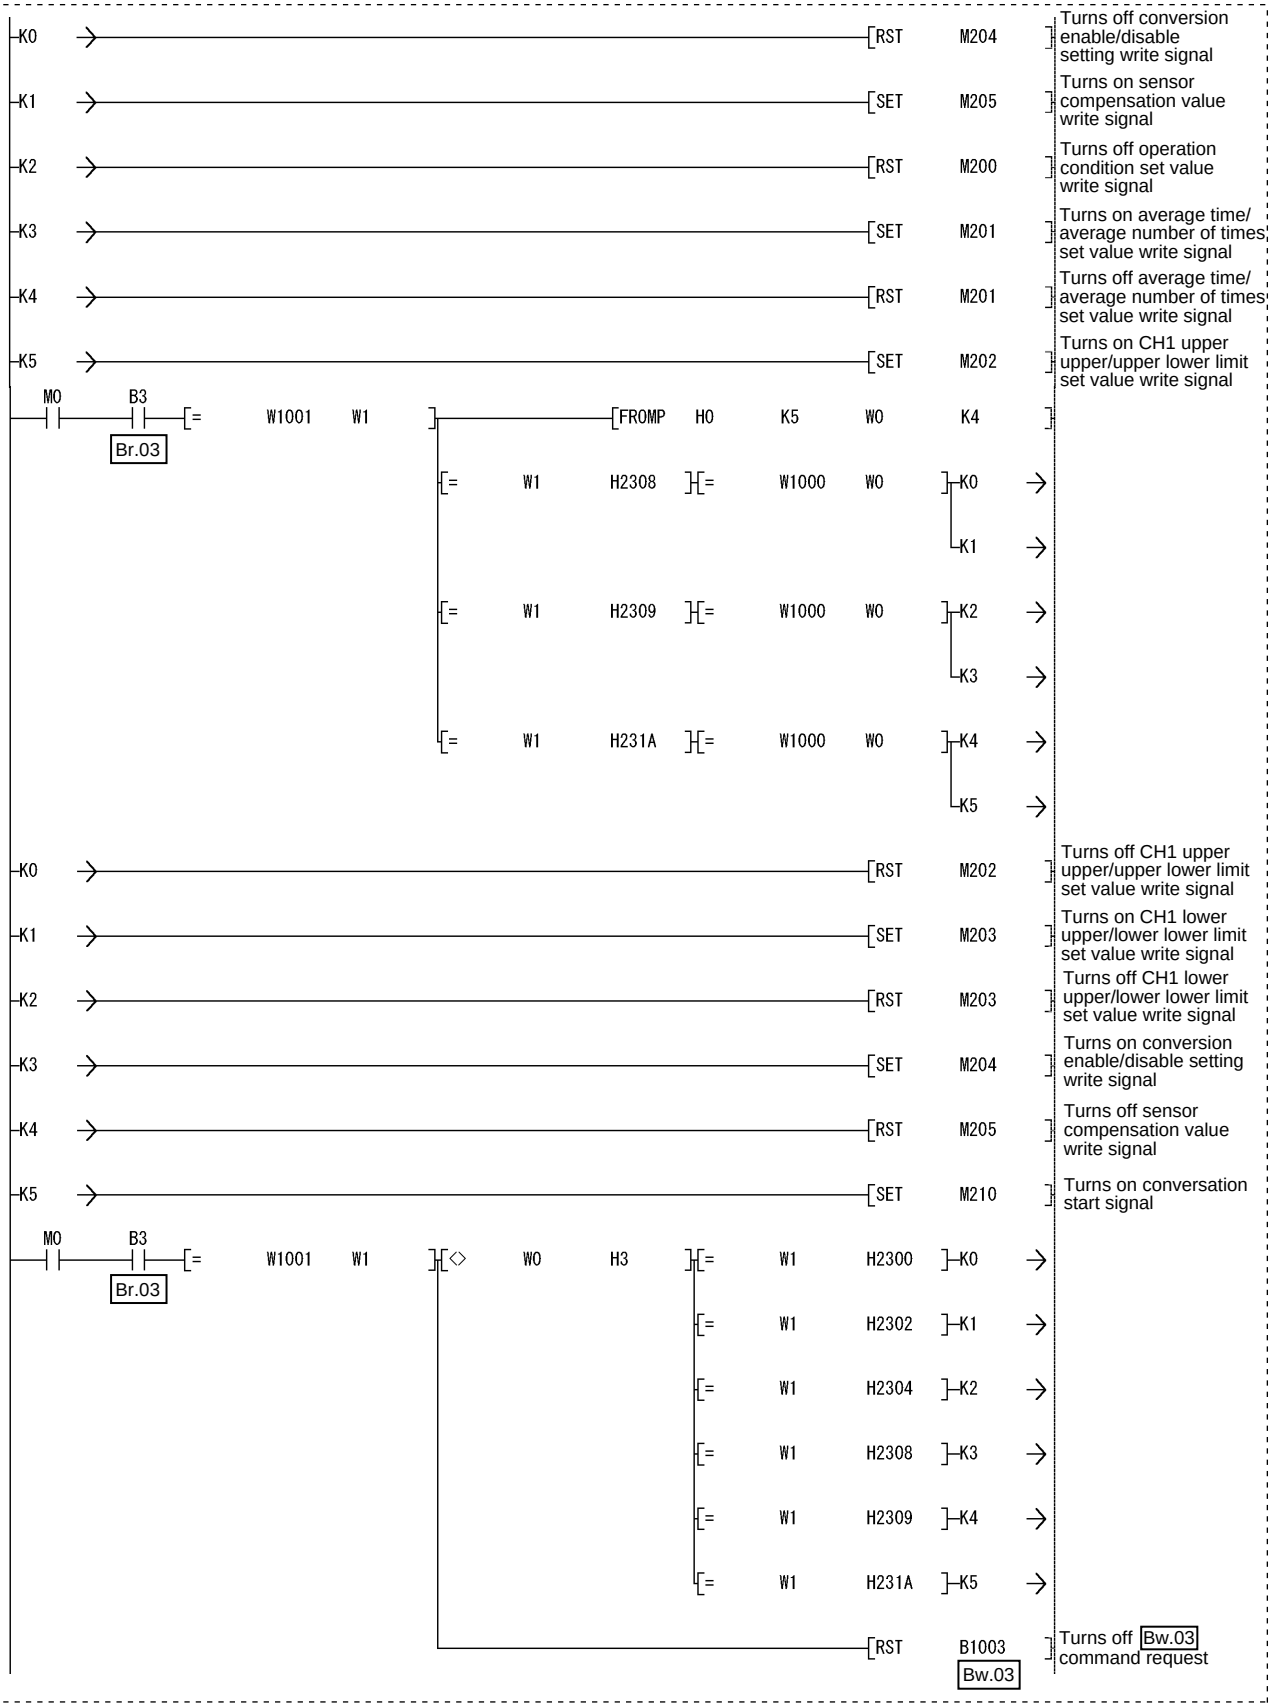


* The program area enclosed by the dotted line is not required when GX Configurator-ST is used to set the command parameters.

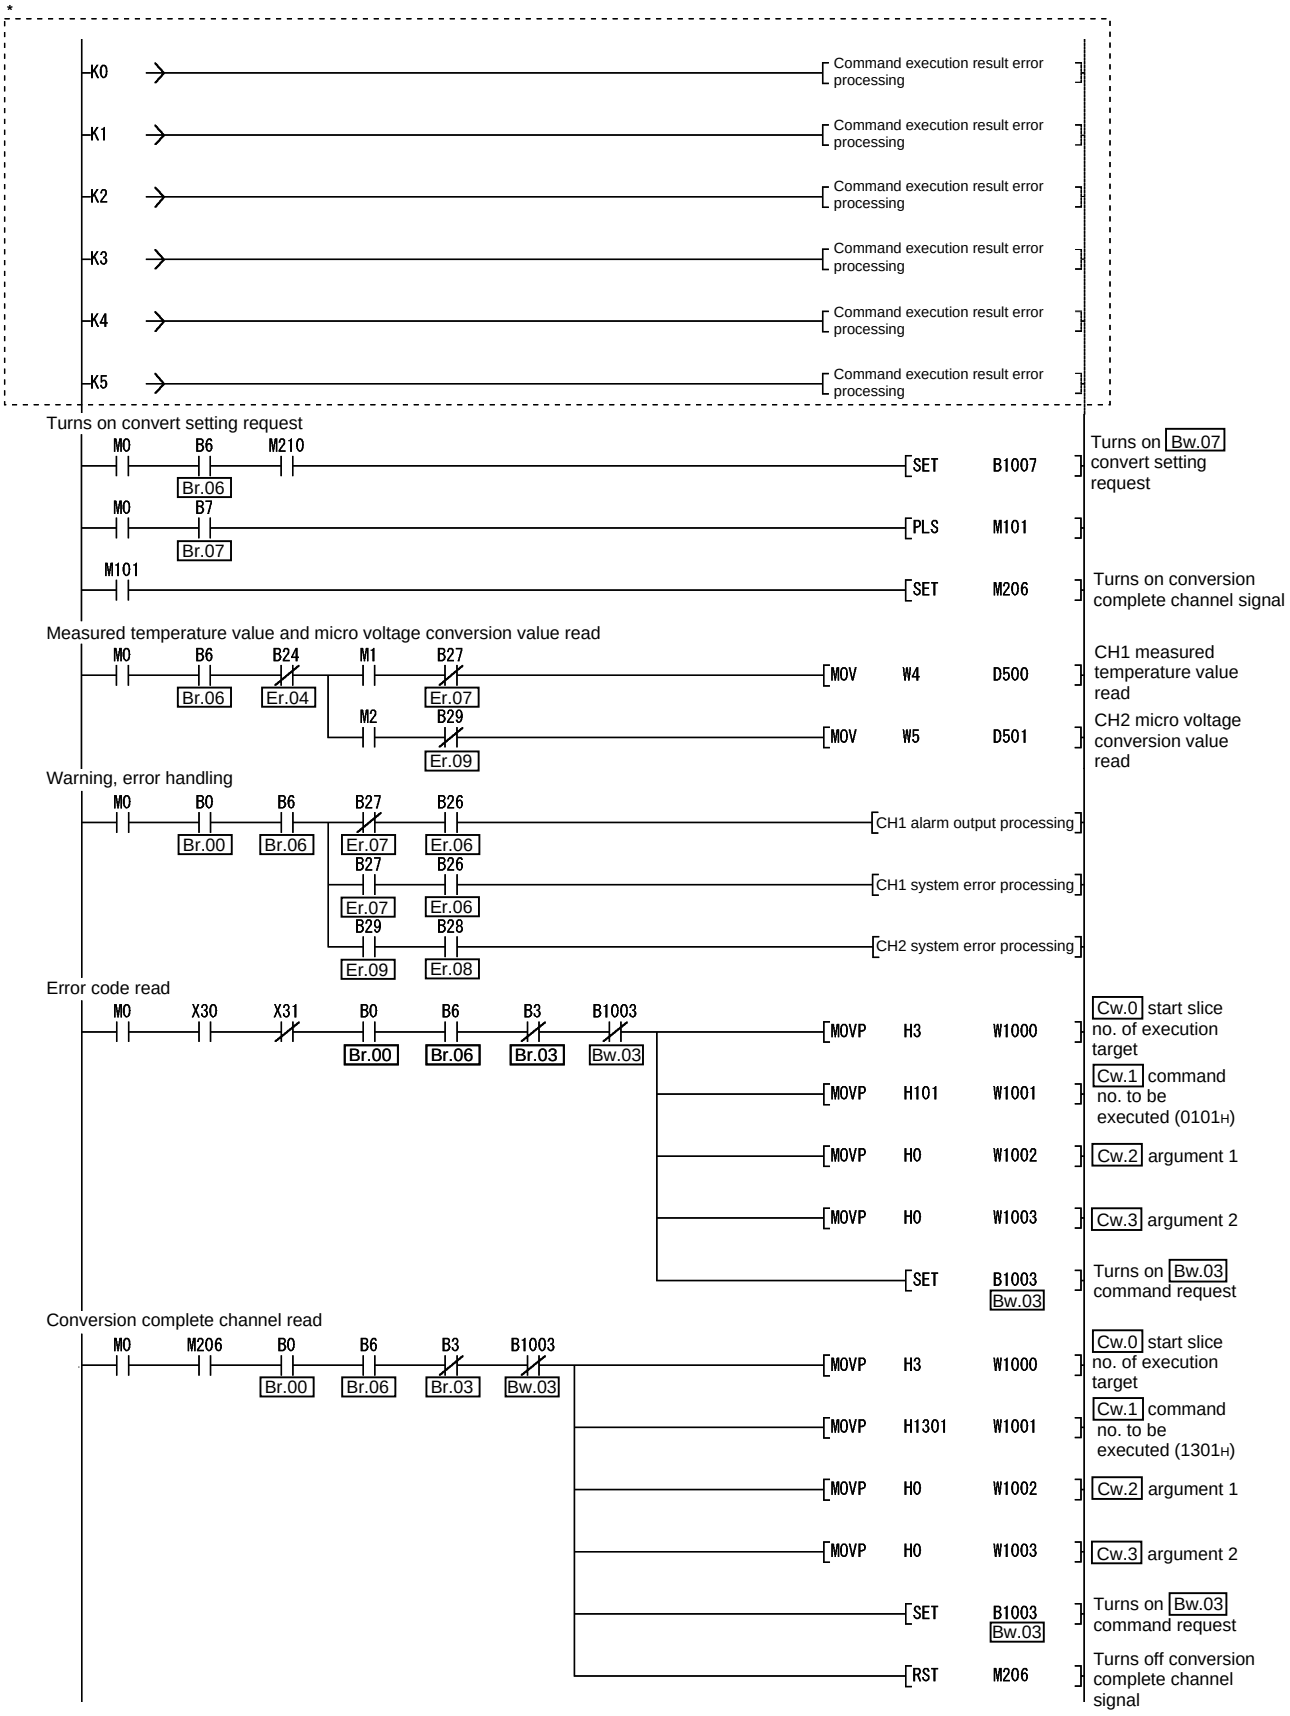


* The program area enclosed by the dotted line is not required when GX Configurator-ST is used to set the command parameters.

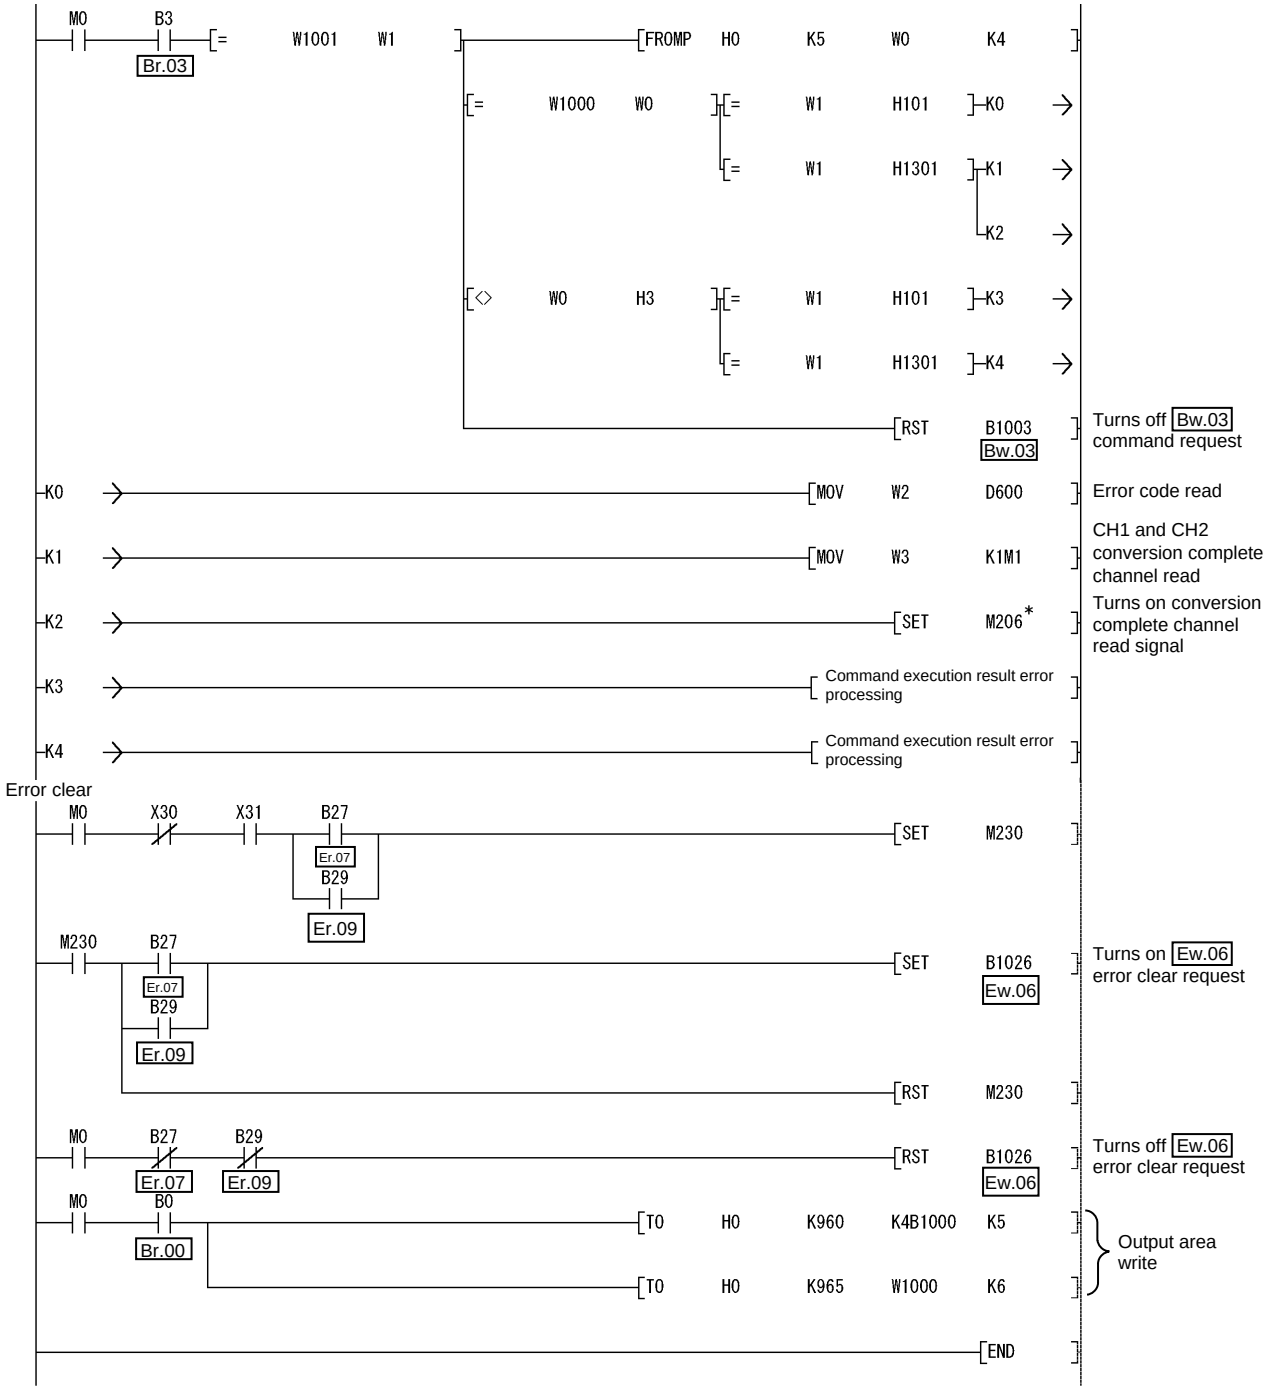
*



* The program area enclosed by the dotted line is not required when GX Configurator-ST is used to set the command parameters.



∗ The program area enclosed by the dotted line is not required when GX Configurator-ST is used to set the command parameters.



* To use more than one ST1TD2, change the part marked with an astarisk (*) to the conversion complete channel read signal of the 2nd ST1TD2 or after, and add the relevant conversion complete channel read program and the processing program for command execution.

7 ONLINE MODULE CHANGE

When performing online module change, make sure to read through Section 4.4 "Online module change" in the head module user's manual.
This chapter describes the specifications of an online module change.

(1) Perform an online module change by operating the head module buttons or using GX Configurator-ST.

(2) The user parameter, command parameter and user range setting's offset/gain setting values are automatically handed down to the new module.

(3) Using GX Configurator-ST, the offset/gain setting can be made during an online module change.
When higher accuracy is required, perform the offset/gain setting during an online module change using GX Configurator-ST.

7.1 Precautions for Online Module Change

The following are the precautions for online module change.

(1) To perform the online module change, the system configuration must be appropriate for execution of the online module change.
For details, refer to the MELSEC-ST System User's Manual, "3.4 Precautions for System Configuration".
Executing the online module change in an inappropriate system configuration may result in malfunction or failure.
In such a system configuration, shut off all phases of the external power supply for the MELSEC-ST system to replace a slice module.

(2) Be sure to perform an online module change in the "online module change procedure" in the user's manual of the used head module and in the procedure given in Section 7.4.1 of this manual.
Failure to do so can cause a malfunction or failure.

(3) Before starting an online module change, confirm that the external device connected with the slice module to be removed will not malfunction.

(4) Only the slice modules of the same model name can be replaced online. It is not possible to replace with/add the slice module of different model name.

(5) Only one slice module can be replaced in a single online module change process. To replace multiple slice modules, perform an online module change for each module.

(6) While an online module change is being executed (while the REL. LED of the head module is on), no command can be executed from the master station to the slice module being replaced online.
To do so will cause an error.

7 - 1

(7) When changing the user parameter of the slice module from the master station during online module change (while the head module's REL. LED is on), change it after the online module change is completed.
If the user parameter setting is changed from the master station during the online module change, the new setting is not validated since the new user parameter values are overwritten by the user parameter saved in the head module when the online module change is finished.

(8) During an online module change, the ERR. LED of the head module turns on only when an error related to the online module change occurs.
It will not turn on or flicker when any other error occurs.

(9) While an online module change is being executed (while the REL. LED of the head module is on), the following data of the slice module being replaced online all turn to 0 (OFF).
- Br.n Bit input
- Er.n Error information
- Mr.n Module status
- Wr.n Word input

(10) After an online module change, the accuracy of the user range setting is decreased about three times or more compared with the one before the online module change.
When the user range setting is used, set the offset and gain values again as necessary.

(11) Make sure to perform online module change in the normal mode.

(12) Except the error clear request, the forced output test of GX Configurator-ST cannot be used for the module being changed online.
If it is used, the module will not operate. It will not display an error, either.

7.2 Preparations for Online Module Change

Prepare GX Configurator-ST when changing the ST1TD2 online.
Depending on the module failure status, the user parameter, command parameter and user range setting's offset/gain setting values may not be saved into the head module.
Refer to Section 7.4.1 for the procedure used in the parameter setting or offset/gain setting during an online module change.
When GX Configurator-ST is unavailable, make the following preparations.
Failure to do so may not import the offset/gain setting values of user range setting and others to the new module, if these settings cannot be saved into the head module.

(1) Command parameter

When GX Configurator-ST is unavailable, the command parameter must be set by commands after an online module change is finished. Include a command parameter setting program in the master station program.
Refer to Section 6.2.1 and Section 6.3 for the command parameter setting program.

(2) Offset/gain setting values

When the user range setting is used and GX Configurator-ST is unavailable, the offset/gain setting must be made by commands after completion of online module change. Include an offset/gain setting program in the master station program.
Refer to Section 4.5 for the offset/gain setting program.

POINT
When GX Configurator-ST is unavailable, set the command parameter and offset/gain setting values after the module has operated once by default.

REMARK

The preparations for the user parameter are not specially required since the values set by the configuration software of the master station are written from the head module.

7.3 Disconnecting/Connecting the External Device for Online Module Change

Disconnect and connect the ST1TD2 external device according to the following.

(1) Disconnection

Power off the external device.

(2) Connection

Power on the external device.

7.4 Online Module Change Procedure

This section explains how to make the parameter setting or offset/gain setting during an online module change when the user parameter, command parameter and user range setting's offset/gain setting values could not be saved in the head module or when the user range setting is used and high accuracy is required.
For the other online module change procedure, refer to the user's manual of the head module.

7.4.1 When parameter setting or offset/gain setting is performed using GX Configurator-ST during online module change

POINT

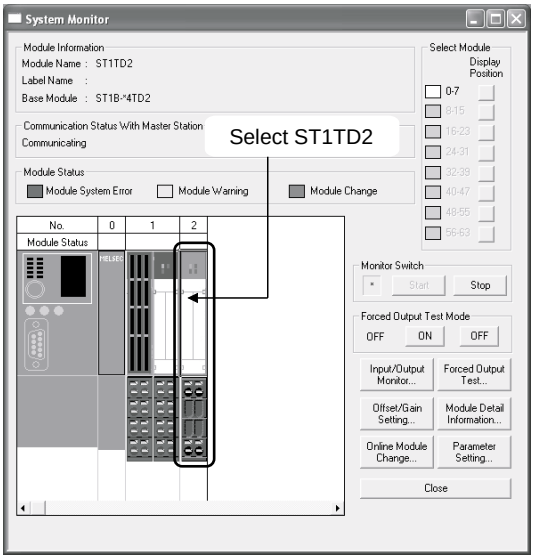
If a slice module different from the target one is selected by mistake, restart the operation as instructed below.

(1) To restart the operation at step 3)
Click the Cancel button on the screen to terminate online module change.

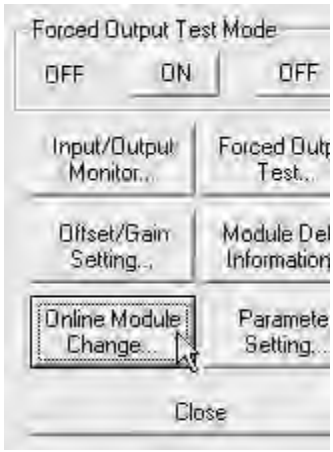
(2) When you noticed on the screen in step 4)
Do not change the slice module, click the Next button, and perform the operations in steps 7), 12), 13) to complete the online module change once.

(3) To restart the operation at step 7)
Mount the removed slice module again, click the Next button, and perform the operations in steps 12), 13) to complete the online module change once.

Preparation for replacing ST1TD2



↓



↓

(Continued to next page.)

1) Select the ST1TD2 to be replaced online on the "System Monitor" screen.

2) Click the Online Module Change button on the "System Monitor" screen.
Then, confirm that the RUN LED of the selected ST1TD2 is flashing at 0.25s intervals.

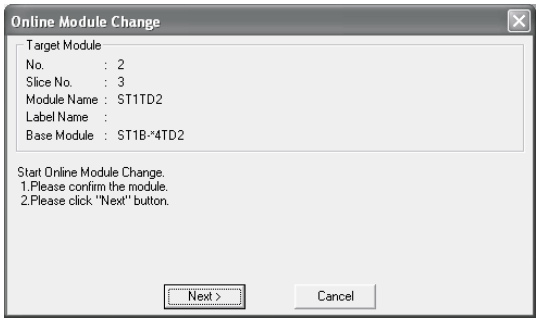
REMARK

Instead of the above, the following operations are also available.

- Select [Diagnostics] → [Online Module Change].
- Right-click the ST1TD2 selected at step 1), and click [Online Module Change] on the menu.

(From the previous page.)

↓



3) Confirm that the ST1TD2 displayed as "Target Module" is the ST1TD2 to be replaced and click the Next button.

(a) Clicking the Next button validates the settings and the following will be performed.
- Puts the head module into the online module change mode.
- Save the user parameter, command parameter and user range setting's offset/gain setting values of the ST1TD2 to be changed into the head module.

(b) After clicking the Next button, confirm the following module statuses.
- The REL. LED of the head module is on.
- The RUN LED of the target ST1TD2 is off.
- The "Module Status" indicator of the target module has turned purple. This applies only when monitoring from the "System Monitor" screen.

(c) If the user parameter, command parameter and user range setting's offset/gain setting values could not be read from the ST1TD2, the REL. LED and ERR. LED of the head module turn on and the corresponding error message is displayed on the screen by the operation in step 7).
Confirm the error definition.
For details of the error code reading operation and error code of the head module, refer to the user's manual of the used head module.
When making parameter setting and offset/gain setting to the new ST1TD2, perform the operations in step 4, and later.

When not executing online module change, click the Cancel button.

(a) Clicking the Cancel button causes the screen to show that online module change is cancelled.

Clicking the Exit button returns to the step 1).

↓

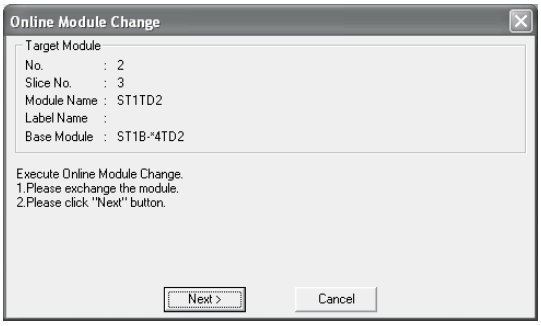
(Continued to next page.)

7 - 6

(From the previous page.)

↓

Disconnection from external device

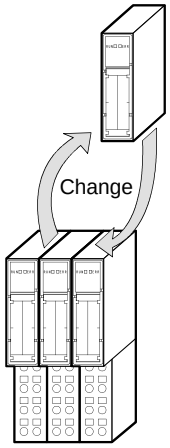


4) As the left screen appears, power off the external device connected with the ST1TD2 to be removed.

POINT
If the external device cannot be powered off, shut off all phases of the external power for the MELSEC-ST system and replace the ST1TD2.

↓

Replacing ST1TD2



5) Remove the ST1TD2 and replace with new one.

↓

Connection to external device after replacement

6) Mount a new ST1TD2. And then, power on the external device.

↓

(Continued to next page.)

(From the previous page.)

↓

Operations after external device connection

7) After connecting to the external device, click the Next button on the screen at step 4).

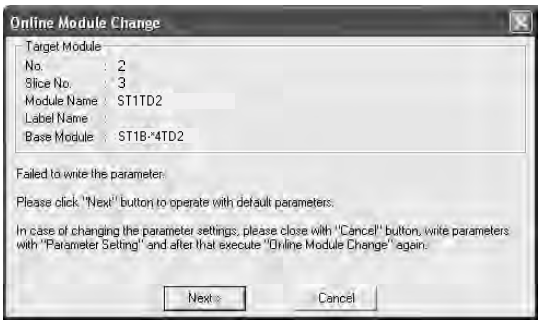
(a) Clicking the Next button performs the following.

- Checks whether the module name of the newly mounted slice module is the same as that of the removed one.
- Write the user parameter, command parameter and user range setting's offset/gain setting values, which were saved in the head module in step 3), to the mounted ST1TD2.

(b) After clicking the Next button, confirm the following module statuses.

- The REL. LED of the head module is flashing.
- The RUN LED of the newly mounted ST1TD2 is flashing (at 0.25s intervals).

Clicking the Cancel button, i.e., interrupting online module change returns to step 1) In this case, select the same slice module as selected before, and complete online module change. Note that selecting different one causes an error.



If the parameter setting or user range setting's offset/gain setting values could not be written to the ST1TD2, the REL. LED and ERR. LED of the head module turn on and the screen shown on the left appears.
Confirm the error definition.
For details of the error code reading operation and error code of the head module, refer to the user's manual of the used head module.

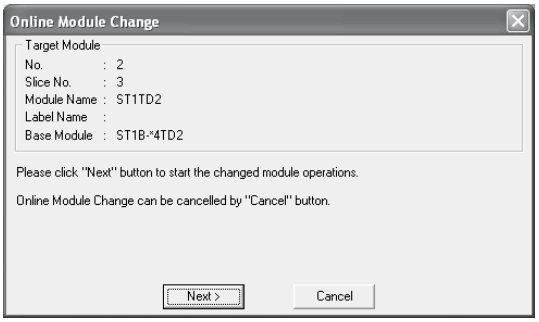
↓

(Continued to next page.)

(From the previous page.)

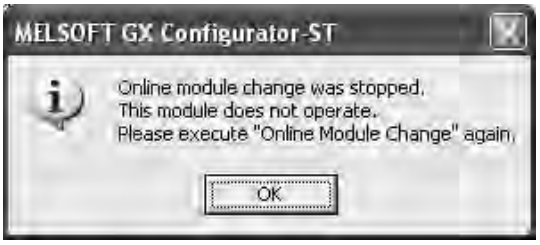
↓

Parameter setting/offset/gain setting



8) Click the Cancel button to stop the online module change.

↓



9) Click the OK button.

↓

10) Make parameter setting or offset/gain setting.
Follow the procedure in Section 5.3 for the parameter setting, or the procedure in Section 5.6 for the offset/gain setting.
The following describes the POINT of parameter setting and offset/gain setting to be noted during the online module change.

POINT

(1) As the system is already in the diagnostic mode, the mode need not be changed.

(2) When setting the parameters during an online module change, write them to both the RAM and ROM.
After the control resumes, the module will operates with the setting written on the RAM.

(3) If the parameter setting or user range setting's offset/gain setting values could not be read from the old ST1TD2, the user parameter have been written when the operation in step 7, was performed.
Using GX Configurator-ST, check whether the user parameter have been written.

(4) When offset/gain setting was made during an online module change, the RUN LED of the ST1TD2 flickers at 0.25s intervals even in the offset/gain setting mode.

↓

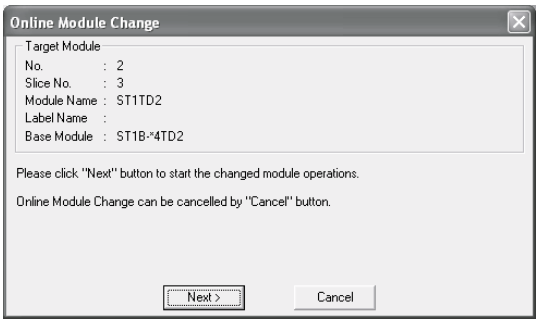
(Continued to next page.)

(From the previous page.)

↓

Processing after parameter setting or offset/gain setting

11) After parameter setting or offset/gain setting, execute the operations in steps 1), 2) to resume the online module change.
* Select the same ST1TD2 as before the online module change was stopped.
If the selected ST1TD2 is different, an error will occur.



12) Clicking the Next button releases the head module from the online module change mode.
(a) Clicking the Next button performs the following.
- Releases the head module from the online module change mode.
- Restarts refreshing the I/O data, etc.

(b) After clicking the Next button, confirm the following module statuses.
- The REL. LED of the head module is off.
- The RUN LED of the newly mounted ST1TD2 is on.
- The "Module Status" indicator of the target ST1TD2 has turned white. This applies only when monitoring from the "System Monitor" screen.

(c) If the head module cannot be released from the online module change mode, both REL. LED and ERR. LED of the head module turn on.
Confirm the error definition.
For details of the error code reading operation and error code of the head module, refer to the user's manual of the used head module.

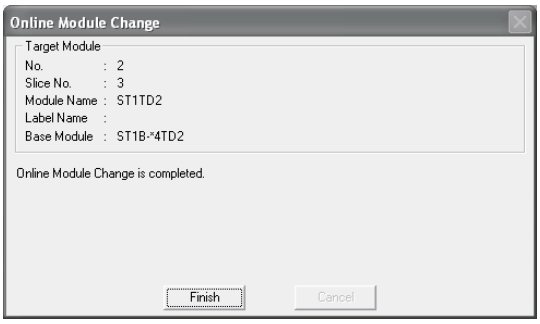
When interrupting online module exchange, click the Cancel button.
(a) Clicking the Cancel button, i.e., interrupting online module change returns to step 1). In this case, select the same slice module as selected before, and complete online module change.
Note that selecting different one causes an error.

↓

(Continued to next page.)

(From the previous page.)

↓



↓

(Completed)

13) The left screen appears showing that online module change has been completed.
Click the Finish button.

7 - 11

8 COMMAND

This chapter explains the commands.

8.1 Command List

The ST1TD2 supports command execution that uses the Cw Command execution area/Cr Command result area of the head module.
For the command execution procedure, refer to the user's manual of the used head module.
A list of commands that can be executed by the ST1TD2 is given in Table 8.1.

Table 8.1 Command List (1/2)

Command			Description	Executability			Reference section
Command type	Command No.	Command name		1)	2)	3)	
Common command	0100H	Operating status read request	Reads the operating status of the ST1TD2.	○	○	○	Section 8.2.1
	0101H	Error code read request	Reads the error code of the ST1TD2.	○	○	○	Section 8.2.2
ST1TD2 parameter setting read command	1300H	Conversion enable/ disable setting read	Reads the conversion enable/disable setting from the RAM of the ST1TD2.	○	○	○	Section 8.3.1
	1301H	Conversion completion channel read	Reads the currently valid conversion enable/ disable setting and conversion completed status.	○	○	○	Section 8.3.2
	1302H	Operation condition set value read	Reads the sampling process/averaging process specification and alarm output setting from the RAM of the ST1TD2.	○	○	○	Section 8.3.3
	1304H	CH□ average time/ average number of times set value read	Reads the set number of times or time amount of the averaging process from the RAM of the ST1TD2.	○	○	○	Section 8.3.4
	1308H	CH1 upper upper/upper lower limit set value read	Reads the upper upper limit value/upper lower limit value/lower upper limit value/lower lower limit value of the alarm output from the RAM of the ST1TD2.	○	○	○	Section 8.3.5
	1309H	CH1 lower upper/lower lower limit set value read					Section 8.3.6
	130AH	CH2 upper upper/upper lower limit set value read					Section 8.3.5
	130BH	CH2 lower upper/lower lower limit set value read					Section 8.3.6
	1318H	User parameter set value read	Reads the input type setting, offset/gain value selection and cold junction temperature compensation setting RAM of the ST1TD2.	○	○	○	Section 8.3.7
	131AH	Sensor compensation value read	From the ST1TD2's RAM, reads out a compensation value when an error is identified between "the actual temperature/voltage" and "the measured temperature/voltage".	○	○	○	Section 8.3.8

○: Can be executed ×: Cannot be executed

1) When Bw.n+1 convert setting request is OFF (0) in the normal mode
2) When Bw.n+1 convert setting request is ON (1) in the normal mode
3) When the module is in the offset/gain setting mode

Table 8.1 Command List (2/2)

Command			Description	Executability*			Reference section
Command type	Command No.	Command name		1)	2)	3)	
ST1TD2 parameter setting write command	2300H	Conversion enable/ disable setting write	Writes the conversion enable/disable setting to the RAM of the ST1TD2.	○	×	×	Section 8.4.1
	2302H	Operation condition set value write	Writes the sampling process/averaging processing specification and alarm output setting to the RAM of the ST1TD2.	○	×	×	Section 8.4.2
	2304H	CH□ average time/ average number of times set value write.	Writes the set number of times or time amount of the averaging processing to the RAM of the ST1TD2.	○	×	×	Section 8.4.3
	2308H	CH1 upper upper/upper lower limit set value write	Writes the upper upper limit value/upper lower limit value or lower upper limit value/lower lower limit value of the alarm output to the RAM of the ST1TD2.	○	×	×	Section 8.4.4
	2309H	CH1 lower upper/lower lower limit set value write					Section 8.4.5
	230AH	CH2 upper upper/upper lower limit set value write					Section 8.4.4
	230BH	CH2 lower upper/lower lower limit set value write					Section 8.4.5
	231AH	Sensor compensation value write	Writes a compensation value to the ST1TD2's RAM when an error is identified between "the actual temperature/voltage" and "the measured temperature/voltage".	○	×	×	Section 8.4.6
ST1TD2 control command	3300H	Parameter setting ROM read	Reads the parameters from the ROM of the ST1TD2 to the RAM.	○	×	×	Section 8.5.1
	3301H	Parameter setting ROM write	Writes the parameters from the RAM of the ST1TD2 to the ROM.	○	×	×	Section 8.5.2
	3302H	Operation mode setting	Changes the mode of the ST1TD2.	○	×	○	Section 8.5.3
	3303H	Offset channel specification	Specifies the offset channel of offset/gain setting and adjusts the offset value.	×	×	○	Section 8.5.4
	3304H	Gain channel specification	Specifies the gain channel of offset/gain setting and adjusts the gain value.	×	×	○	Section 8.5.5
	3305H	User range write	Writes the adjusted offset/gain settings to the ROM of the ST1TD2	×	×	○	Section 8.5.6

○: Can be executed ×: Cannot be executed

1) When Bw.n+1 convert setting request is OFF (0) in the normal mode
2) When Bw.n+1 convert setting request is ON (1) in the normal mode
3) When the module is in the offset/gain setting mode
* If a command is executed when it cannot be executed, it fails and "06H" or "13H" is stored into the Cr.0(15-8) Command execution result.

8

8 - 2

8.2 Common Command

8.2.1 Operating status read request (Command No.: 0100H)

Reads the operating status of the ST1TD2.

(1) Values set to Cw Command execution area

Cw Command execution area	Setting value
Cw.0	Set the start slice no. of the ST1TD2 where the command will be executed. (Hexadecimal)
Cw.1	0100H
Cw.2	Fixed to 0000H (Any value other than 0000H is ignored.)
Cw.3	

(2) Execution result in Cr Command result area

The execution result of the command changes depending on the result (normal completion or abnormal completion) in Cr.0(15-8) Command execution result.

(a) Normal completion (When Cr.0(15-8) Command execution result is 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	The operating status of the ST1TD2 is stored.  1) 0: Normal 1: System error
Cr.3	The current operation mode of the ST1TD2 is stored.  1) 01: Normal mode 10: Offset/gain setting mode

(b) Abnormal completion (When Cr.0(15-8) Command execution result is other than 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below.  *1: When 0FH is stored into the Cr.0(15-8) Command Execution Result, 00H (start slice No. of head module) is stored into the Cr.0(7-0) Start Slice No. of Execution Target.
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	Cw.3 Argument 2 at command execution is stored.

8.2.2 Error code read request (Command No.: 0101H)

Reads the error code of the ST1TD2.

(1) Values set to Cw Command execution area

Cw Command execution area	Setting value
Cw.0	Set the start slice no. of the ST1TD2 where the command will be executed. (Hexadecimal)
Cw.1	0101H
Cw.2	Fixed to 0000H (Any value other than 0000H is ignored.)
Cw.3	

(2) Execution result in Cr Command result area

The execution result of the command changes depending on the result (normal completion or abnormal completion) in Cr.0(15-8) Command execution result.

(a) Normal completion (When Cr.0(15-8) Command execution result is 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. b15 to b8 b7 to b0 Cr.0(15-8) Command Execution Result | Cr.0(7-0) Start Slice No. of Execution Target 00H: Normal completion
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	The error code currently occurring in the ST1TD2 is stored. (Hexadecimal) Refer to Section 9.1 for details of the error code.
Cr.3	The alarm information is stored for each channel. b15 to b4 b3 to b0 0 | 1) 1) CH□ alarm status (b0: CH1 upper limit value, b1: CH1 lower limit value, b2: CH2 upper limit value, b3: CH2 lower limit value) 0: Normal 1: Alarm occurrence

(b) Abnormal completion (When Cr.0(15-8) Command execution result is other than 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below.  *1: When 0FH is stored into the Cr.0(15-8) Command Execution Result, 00H (start slice No. of head module) is stored into the Cr.0(7-0) Start Slice No. of Execution Target.
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	Cw.3 Argument 2 at command execution is stored.

8.3 ST1TD2 Parameter Setting Read Command

8.3.1 Conversion enable/disable setting read (Command No.: 1300H)

Reads the conversion enable/disable setting from the RAM of the ST1TD2.

(1) Values set to Cw Command execution area

Cw Command execution area	Setting value
Cw.0	Set the start slice no. of the ST1TD2 where the command will be executed. (Hexadecimal)
Cw.1	1300H
Cw.2	Fixed to 0000H (Any value other than 0000H is ignored.)
Cw.3	

(2) Execution result in Cr Command result area

The execution result of the command changes depending on the result (normal completion or abnormal completion) in Cr.0(15-8) Command execution result.

(a) Normal completion (When Cr.0(15-8) Command execution result is 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	The conversion enable/disable setting written to the RAM is stored for each channel.  1) CH□ Conversion enable/disable setting (b0: CH1, b1: CH2) 0: Conversion enable 1: Conversion disable
Cr.3	0000H

(b) Abnormal completion (When Cr.0(15-8) Command execution result is other than 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below.  *1: When 0FH is stored into the Cr.0(15-8) Command Execution Result, 00H (start slice No. of head module) is stored into the Cr.0(7-0) Start Slice No. of Execution Target.
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	Cw.3 Argument 2 at command execution is stored.

8 - 8

8.3.2 Conversion completion channel read (Command No.: 1301H)

Reads the currently valid conversion enable/disable setting and conversion completed status.

(1) Values set to Cw Command execution area

Cw Command execution area	Setting value
Cw.0	Set the start slice no. of the ST1TD2 where the command will be executed. (Hexadecimal)
Cw.1	1301H
Cw.2	Fixed to 0000H (Any value other than 0000H is ignored.)
Cw.3	

(2) Execution result in Cr Command result area

The execution result of the command changes depending on the result (normal completion or abnormal completion) in Cr.0(15-8) Command execution result.

(a) Normal completion (When Cr.0(15-8) Command execution result is 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	The currently valid conversion enable/disable setting is stored for each channel.  1) CH□ conversion enable/disable setting (b0: CH1, b1: CH2) 0: Conversion enable 1: Conversion disable
Cr.3	The conversion completed status is stored for each channel.  1) CH□ conversion completed setting (b0: CH1, b1: CH2) 0: Conversion being executed or not used 1: Conversion completed

(b) Abnormal completion (When Cr.0(15-8) Command execution result is other than 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below.  *1: When 0FH is stored into the Cr.0(15-8) Command Execution Result, 00H (start slice No. of head module) is stored into the Cr.0(7-0) Start Slice No. of Execution Target.
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	Cw.3 Argument 2 at command execution is stored.

8 - 10

8.3.3 Operation condition set value read (Command No.: 1302H)

Reads the averaging process specification and alarm output setting from the RAM of the ST1TD2.

(1) Values set to Cw Command execution area

Cw Command execution area	Setting value
Cw.0	Set the start slice no. of the ST1TD2 where the command will be executed. (Hexadecimal)
Cw.1	1302H
Cw.2	Fixed to 0000H (Any value other than 0000H is ignored.)
Cw.3	

(2) Execution result in Cr Command result area

The execution result of the command changes depending on the result (normal completion or abnormal completion) in Cr.0(15-8) Command execution result.

(a) Normal completion (When Cr.0(15-8) Command execution result is 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	The averaging process specification is stored for each channel.  1) Time averaging/number of times averaging specification (b0: CH1, b1: CH2) 0: Number of times averaging 1: Time averaging 2) Averaging-processed channel specification (b8: CH1, b9: CH2) 0: Sampling process 1: Averaging process
Cr.3	The alarm output setting is stored for each channel.  1) Alarm output setting (b0: CH1, b1: CH2) 0: Alarm output processing not performed 1: Alarm output processing performed

(b) Abnormal completion (When Cr.0(15-8) Command execution result is other than 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below.  *1: When 0FH is stored into the Cr.0(15-8) Command Execution Result, 00H (start slice No. of head module) is stored into the Cr.0(7-0) Start Slice No. of Execution Target.
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	Cw.3 Argument 2 at command execution is stored.

8.3.4 CH□ average time/average number of times set value read (Command No.: 1304H)

Reads the set number of times or time amount of the averaging process from the RAM of the ST1TD2.

(1) Values set to [Cw] Command execution area

[Cw] Command execution area	Setting value
[Cw.0]	Set the start slice no. of the ST1TD2 where the command will be executed. (Hexadecimal)
[Cw.1]	1304H
[Cw.2]	Fixed to 0000H (Any value other than 0000H is ignored.)
[Cw.3]	

(2) Execution result in [Cr] Command result area

The execution result of the command changes depending on the result (normal completion or abnormal completion) in [Cr.0(15-8)] Command execution result.

(a) Normal completion (When [Cr.0(15-8)] Command execution result is 00H)

[Cr] Command result area	Result details
[Cr.0]	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. [Cr.1]	The executed command no. is stored. (Hexadecimal)
[Cr.2]	The set number of times or time of the averaging process for channel 1 is stored. The value in the following range is stored. The averaging processing is by the number of times : 4 to 500 (times). The averaging processing by the times : 480 to 5000 (ms).
[Cr.3]	The set number of times or time of the averaging process for channel 2 is stored. The range of the stored value is the same as in [Cr.2] Response data 1.

(b) Abnormal completion (When Cr.0(15-8) Command execution result is other than 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below.  *1: When 0FH is stored into the Cr.0(15-8) Command Execution Result, 00H (start slice No. of head module) is stored into the Cr.0(7-0) Start Slice No. of Execution Target.
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	Cw.3 Argument 2 at command execution is stored.

8.3.5 CH□ upper upper/upper lower limit set value read (Command No.: 1308H, 130AH)

Reads the upper upper limit value/upper lower limit value of the alarm output from the RAM of the ST1TD2.

(1) Values set to [Cw] Command execution area

[Cw] Command execution area	Setting value
[Cw.0]	Set the start slice no. of the ST1TD2 where the command will be executed. (Hexadecimal)
[Cw.1]	CH1 upper upper/upper lower limit set value read: 1308H CH2 upper upper/upper lower limit set value read: 130AH
[Cw.2]	Fixed to 0000H (Any value other than 0000H is ignored.)
[Cw.3]	

(2) Execution result in [Cr] Command result area

The execution result of the command changes depending on the result (normal completion or abnormal completion) in [Cr.0(15-8)] Command execution result.

(a) Normal completion (When [Cr.0(15-8)] Command execution result is 00H)

[Cr] Command result area	Result details
[Cr.0]	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. [Cr.1]	The executed command no. is stored. (Hexadecimal)
[Cr.2]	The CH□ upper upper limit value is stored. (16-bit signed binary) The range to store the data is from -32768 to 32767.
[Cr.3]	The CH□ upper lower limit value is stored. (16-bit signed binary) The range of the stored value is the same as in [Cr.2] Response data 1.

(b) Abnormal completion (When Cr.0(15-8) Command execution result is other than 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below.  *1: When 0FH is stored into the Cr.0(15-8) Command Execution Result, 00H (start slice No. of head module) is stored into the Cr.0(7-0) Start Slice No. of Execution Target.
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	Cw.3 Argument 2 at command execution is stored.

8 - 16

8.3.6 CH□ lower upper/lower lower limit set value read (Command No.: 1309H, 130BH)

Reads the lower upper limit value/ lower lower limit value of the alarm output from the RAM of the ST1TD2.

(1) Values set to Cw Command execution area

Cw Command execution area	Setting value
Cw.0	Set the start slice no. of the ST1TD2 where the command will be executed. (Hexadecimal)
Cw.1	CH1 lower upper/ lower lower limit set value read: 1309H CH2 lower upper/ lower lower limit set value read: 130BH
Cw.2	Fixed to 0000H (Any value other than 0000H is ignored.)
Cw.3	

(2) Execution result in Cr Command result area

The execution result of the command changes depending on the result (normal completion or abnormal completion) in Cr.0(15-8) Command execution result.

(a) Normal completion (When Cr.0(15-8) Command execution result is 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	The CH□ lower upper limit value is stored. (16-bit signed binary) The range to store the data is from -32768 to 32767.
Cr.3	The CH□ lower lower limit value is stored. (16-bit signed binary) The range of the stored value is the same as in Cr.2 Response data 1.

(b) Abnormal completion (When Cr.0(15-8) Command execution result is other than 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below.  *1: When 0FH is stored into the Cr.0(15-8) Command Execution Result, 00H (start slice No. of head module) is stored into the Cr.0(7-0) Start Slice No. of Execution Target.
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	Cw.3 Argument 2 at command execution is stored.

8 - 18

8.3.7 User parameter set value read (Command No.: 1318H)

Reads the input type setting, offset/gain value selection and cold junction temperature compensation setting from the RAM of the ST1TD2.

(1) Values set to Cw Command execution area

Cw Command execution area	Setting value
Cw.0	Set the start slice no. of the ST1TD2 where the command will be executed. (Hexadecimal)
Cw.1	1318H
Cw.2	Fixed to 0000H (Any value other than 0000H is ignored.)
Cw.3	

(2) Execution result in Cr Command result area

The execution result of the command changes depending on the result (normal completion or abnormal completion) in Cr.0(15-8) Command execution result.

(a) Normal completion (When Cr.0(15-8) Command execution result is 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2 *	The input type setting, offset/gain value selection and cold junction temperature compensation setting written to the RAM are stored for each channel.  1) CH□input type setting (b0 to b3:CH1,b4 to b7:CH2) 0000 : Thermocouple K 0001 : Thermocouple E 0010 : Thermocouple J 0011 : Thermocouple T 0100 : Thermocouple B 0101 : Thermocouple R 0110 : Thermocouple S 0111 : Thermocouple N 1111 : Micro voltage input 2) CH□ offset/gain setting (b8:CH1,b9:CH2) 0 : Factory default 1 : User range setting 3) CH□cold junction temperature compensation setting (b12:CH1,b13:CH2) 0 : Cold junction temperature compensation not performed 1 : Cold junction temperature compensation performed
Cr.3 *	The currently valid input type setting, offset/gain value selection, cold junction temperature compensation setting are stored for each channel. The stored values are the same as those of Cr.2 Response data 1.

* If the stored values differ between Cr.2 Response data 1 and Cr.3 Response data 2, refer to Section 3.4 and take corrective action.

(b) Abnormal completion (When Cr.0(15-8) Command execution result is other than 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below.  *1: When 0FH is stored into the Cr.0(15-8) Command Execution Result, 00H (start slice No. of head module) is stored into the Cr.0(7-0) Start Slice No. of Execution Target.
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	Cw.3 Argument 2 at command execution is stored.

8 - 21

8.3.8 Sensor compensation value read (Command No.: 131AH)

From the ST1TD2's RAM, reads out a compensation value when an error is identified between "the actual temperature/voltage" and "the measured temperature/voltage".

(1) Values set to Cw Command execution area

Cw Command execution area	Setting value
Cw.0	Set the start slice no. of the ST1TD2 where the command will be executed. (Hexadecimal)
Cw.1	131AH
Cw.2	Fixed to 0000H (Any value other than 0000H is ignored.)
Cw.3	

(2) Execution result in Cr Command result area

The execution result of the command changes depending on the result (normal completion or abnormal completion) in Cr.0(15-8) Command execution result.

(a) Normal completion (When Cr.0(15-8) Command execution result is 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	The CH1 sensor compensation value is stored. The range to store the data is from -500 to 500.
Cr.3	The CH2 sensor compensation value is stored. The range of the stored value is the same as in Cr.2 Response data 1.

(b) Abnormal completion (When Cr.0(15-8) Command execution result is other than 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below.  *1: When 0FH is stored into the Cr.0(15-8) Command Execution Result, 00H (start slice No. of head module) is stored into the Cr.0(7-0) Start Slice No. of Execution Target.
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	Cw.3 Argument 2 at command execution is stored.

8.4 ST1TD2 Parameter Setting Write Command

8.4.1 Conversion enable/disable setting write (Command No.: 2300H)

Writes the conversion enable/disable setting to the RAM of the ST1TD2.
This command can be executed only when Bw.n+1 convert setting request is off (0) in the normal mode.

(1) Values set to Cw Command execution area

Cw Command execution area	Setting value
Cw.0	Set the start slice no. of the ST1TD2 where the command will be executed. (Hexadecimal)
Cw.1	2300H
Cw.2	Set the conversion enable/disable setting for each channel. b15 to b2 b1 b0 0 | 1) CH□ Conversion enable/disable setting (b0: CH1, b1: CH2) 0: Conversion enable 1: Conversion disable
Cw.3	Fixed to 0000H (Any value other than 0000H is ignored.)

(2) Execution result in Cr Command result area

The execution result of the command changes depending on the result (normal completion or abnormal completion) in Cr.0(15-8) Command execution result.

(a) Normal completion (When Cr.0(15-8) Command execution result is 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. b15 to b8 b7 to b0 Cr.0(15-8) Command Execution Result | Cr.0(7-0) Start Slice No. of Execution Target 00H: Normal completion
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	0000H

(b) Abnormal completion (When Cr.0(15-8) Command execution result is other than 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below.  *1: When 0FH is stored into the Cr.0(15-8) Command Execution Result, 00H (start slice No. of head module) is stored into the Cr.0(7-0) Start Slice No. of Execution Target.
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	Cw.3 Argument 2 at command execution is stored.

8 - 25

8.4.2 Operation condition set value write (Command No.: 2302H)

Writes the averaging process specification and alarm output setting to the RAM of the ST1TD2.
This command can be executed only when Bw.n+1 convert setting request is off (0) in the normal mode.

(1) Values set to Cw Command execution area

Cw Command execution area	Setting value
Cw.0	Set the start slice no. of the ST1TD2 where the command will be executed. (Hexadecimal)
Cw.1	2302H
Cw.2	Specify the channel where sampling process or averaging process will be performed. When averaging process is specified, specify time or number of times.  1) Time/number of times specification (b0: CH1, b1: CH2) 0: Number of times averaging 1: Time averaging 2) Averaging-processed channel specification (b8: CH1, b9: CH2) 0: Sampling process 1: Averaging process
Cw.3	Specify the channel where alarm output will be executed.  1) Alarm output setting (b0: CH1, b1: CH2) 0: Alarm output processing not performed 1: Alarm output processing performed

(2) Execution result in Cr Command result area

The execution result of the command changes depending on the result (normal completion or abnormal completion) in Cr.0(15-8) Command execution result.

(a) Normal completion (When Cr.0(15-8) Command execution result is 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	0000H
Cr.3	

(b) Abnormal completion (When Cr.0(15-8) Command execution result is other than 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below.  *1: When 0FH is stored into the Cr.0(15-8) Command Execution Result, 00H (start slice No. of head module) is stored into the Cr.0(7-0) Start Slice No. of Execution Target.
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	Cw.3 Argument 2 at command execution is stored.

8.4.3 CH□ average time/average number of times set value write (Command No.: 2304H)

Writes the set number of times or time amount of the averaging processing to the RAM of the ST1TD2.
This command can be executed only when Bw.n+1 convert setting request is off (0) in the normal mode.

(1) Values set to Cw Command execution area

Cw Command execution area	Setting value
Cw.0	Set the start slice no. of the ST1TD2 where the command will be executed. (Hexadecimal)
Cw.1	2304H
Cw.2	Set the number of times or time of the averaging process for channel 1. The value in the following range is stored. The averaging process by the number of times: 4 to 500 (times). The averaging processing by the time: 480 to 5000 (ms).
Cw.3	Set the number of times or time of the averaging process for channel 2. The setting range is the same as in Cw.2 Argument 1.

(2) Execution result in Cr Command result area

The execution result of the command changes depending on the result (normal completion or abnormal completion) in Cr.0(15-8) Command execution result.

(a) Normal completion (When Cr.0(15-8) Command execution result is 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	0000H
Cr.3	

(b) Abnormal completion (When Cr.0(15-8) Command execution result is other than 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below.  *1: When 0FH is stored into the Cr.0(15-8) Command Execution Result, 00H (start slice No. of head module) is stored into the Cr.0(7-0) Start Slice No. of Execution Target.
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	Cw.3 Argument 2 at command execution is stored.

8.4.4 CH□ upper upper/upper lower limit set value write (Command No.: 2308H, 230AH)

Writes the upper upper limit value/upper lower limit value to the RAM of the ST1TD2. This command can be executed only when Bw.n+1 convert setting request is off (0) in the normal mode.

(1) Values set to Cw Command execution area

Cw Command execution area	Setting value
Cw.0	Set the start slice no. of the ST1TD2 where the command will be executed. (Hexadecimal)
Cw.1	CH1 upper upper/upper lower limit set value write: 2308H CH2 upper upper/upper lower limit set value write: 230AH
Cw.2	Set the upper upper limit value of the alarm output. Setting range on each input type is shown below. Setting of thermocouple input is in 0.1℃ unit. [Example] To set to 0.3℃ ...Store 3. Input type / Setting range (Accuracy guarantee range) Thermocouple K: -2700 to 13720 (-2000 to 12000) Thermocouple E: -2700 to 10000 (-2000 to 9000) Thermocouple J: -2100 to 12000 (-400 to 7500) Thermocouple T: -2700 to 4000 (-2000 to 3500) Thermocouple B: 0 to 18200 (6000 to 17000) Thermocouple R: -500 to 17680 (0 to 16000) Thermocouple S: -500 to 17680 (0 to 16000) Thermocouple N: -2700 to 13000 (-2000 to 12500) Micro voltage input: -21000 to 21000 (-20000 to 20000) Make setting to satisfy the condition of upper upper value ≧ upper lower value ≧ lower upper value ≧ lower lower value.
Cw.3	Set the upper lower limit value of the alarm output. The setting range is the same as in Cw.2 Argument 1

(2) Execution result in Cr Command result area

The execution result of the command changes depending on the result (normal completion or abnormal completion) in Cr.0(15-8) Command execution result.

(a) Normal completion (When Cr.0(15-8) Command execution result is 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. b15 to b8 b7 to b0 Cr.0(15-8) Command Execution Result | Cr.0(7-0) Start Slice No. of Execution Target 00H: Normal completion
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	0000H
Cr.3	

(b) Abnormal completion (When Cr.0(15-8) Command execution result is other than 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below.  *1: When 0FH is stored into the Cr.0(15-8) Command Execution Result, 00H (start slice No. of head module) is stored into the Cr.0(7-0) Start Slice No. of Execution Target.
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	Cw.3 Argument 2 at command execution is stored.

8.4.5 CH□ lower upper/ lower lower limit set value write (Command No.: 2309H, 230BH)

Writes the lower upper limit value/lower lower limit value to the RAM of the ST1TD2. This command can be executed only when Bw.n+1 convert setting request is off (0) in the normal mode.

(1) Values set to Cw Command execution area

Cw Command execution area	Setting value
Cw.0	Set the start slice no. of the ST1TD2 where the command will be executed. (Hexadecimal)
Cw.1	CH1 lower upper/ lower lower limit set value write: 2309H CH2 lower upper/ lower lower limit set value write: 230BH
Cw.2	Set the lower upper limit value of the alarm output. Setting range on each input type is shown below. Setting of thermocouple input is in 0.1℃ unit. [Example] To set to 0.3℃ ...Store 3. Input type / Setting range (Accuracy guarantee range) Thermocouple K: -2700 to 13720 (-2000 to 12000) Thermocouple E: -2700 to 10000 (-2000 to 9000) Thermocouple J: -2100 to 12000 (-400 to 7500) Thermocouple T: -2700 to 4000 (-2000 to 3500) Thermocouple B: 0 to 18200 (6000 to 17000) Thermocouple R: -500 to 17680 (0 to 16000) Thermocouple S: -500 to 17680 (0 to 16000) Thermocouple N: -2700 to 13000 (-2000 to 12500) Micro voltage input: -21000 to 21000 (-20000 to 20000) Make setting to satisfy the condition of upper upper value ≧ upper lower value ≧ lower upper value ≧ lower lower value.
Cw.3	Set the lower lower limit value of the alarm output. The setting range is the same as in Cw.2 Argument 1

(2) Execution result in Cr Command result area

The execution result of the command changes depending on the result (normal completion or abnormal completion) in Cr.0(15-8) Command execution result.

(a) Normal completion (When Cr.0(15-8) Command execution result is 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. b15 to b8 b7 to b0 Cr.0(15-8) Command Execution Result / Cr.0(7-0) Start Slice No. of Execution Target 00H: Normal completion
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	0000H
Cr.3	

(b) Abnormal completion (When Cr.0(15-8) Command execution result is other than 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below.  *1: When 0FH is stored into the Cr.0(15-8) Command Execution Result, 00H (start slice No. of head module) is stored into the Cr.0(7-0) Start Slice No. of Execution Target.
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	Cw.3 Argument 2 at command execution is stored.

8.4.6 Sensor compensation value write (Command No.: 231AH)

Writes a compensation value to the ST1TD2's RAM when an error is identified between "the actual temperature/voltage" and "the measured temperature/voltage".

(1) Values set to Cw Command execution area

Cw Command execution area	Setting value
Cw.0	Set the start slice no. of the ST1TD2 where the command will be executed. (Hexadecimal)
Cw.1	231AH
Cw.2	Set the sensor compensation value for channel 1. Setting of thermocouple input is in 0.1℃ unit. [Example] To set to 0.3℃ ...Enter "3". Setting of micro voltage input is in 4μV /digits unit. [Example] When the micro voltage conversion value is 10003 at 40mV input … Enter "-3". The setting range is -500 to 500.
Cw.3	Set the sensor compensation value for channel 2. The setting range is the same as in Cw.2 Argument 1

(2) Execution result in Cr Command result area

The execution result of the command changes depending on the result (normal completion or abnormal completion) in Cr.0(15-8) Command execution result.

(a) Normal completion (When Cr.0(15-8) Command execution result is 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	0000H
Cr.3	

(b) Abnormal completion (When Cr.0(15-8) Command execution result is other than 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below.  *1: When 0FH is stored into the Cr.0(15-8) Command Execution Result, 00H (start slice No. of head module) is stored into the Cr.0(7-0) Start Slice No. of Execution Target.
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	Cw.3 Argument 2 at command execution is stored.

8.5 ST1TD2 Control Command

8.5.1 Parameter setting ROM read (Command No.: 3300H)

Reads the parameters from the ROM of the ST1TD2 to the RAM.
This command can be executed only when Bw.n+1 convert setting request is off (0) in the normal mode.

(1) Values set to Cw Command execution area

Cw Command execution area	Setting value
Cw.0	Set the start slice no. of the ST1TD2 where the command will be executed. (Hexadecimal)
Cw.1	3300H
Cw.2	Fixed to 0000H (Any value other than 0000H is ignored.)
Cw.3	

(2) Execution result in Cr Command result area

The execution result of the command changes depending on the result (normal completion or abnormal completion) in Cr.0(15-8) Command execution result.

(a) Normal completion (When Cr.0(15-8) Command execution result is 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. b15 to b8 b7 to b0 Cr.0(15-8) Command Execution Result / Cr.0(7-0) Start Slice No. of Execution Target 00H: Normal completion
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	0000H
Cr.3	

(b) Abnormal completion (When Cr.0(15-8) Command execution result is other than 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. b15 to b8 b7 to b0 Cr.0(15-8) Command Execution Result / Cr.0(7-0) Start Slice No. of Execution Target *1 Other than 00H: Abnormal completion (see Section 8.6) *1: When 0FH is stored into the Cr.0(15-8) Command Execution Result, 00H (start slice No. of head module) is stored into the Cr.0(7-0) Start Slice No. of Execution Target.
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	Cw.3 Argument 2 at command execution is stored.

8.5.2 Parameter setting ROM write (Command No.: 3301H)

Writes the parameters from the RAM of the ST1TD2 to the ROM.
This command can be executed only when Bw.n+1 convert setting request is off (0) in the normal mode.

(1) Values set to Cw Command execution area

Cw Command execution area	Setting value
Cw.0	Set the start slice no. of the ST1TD2 where the command will be executed. (Hexadecimal)
Cw.1	3301H
Cw.2	Fixed to 0000H (Any value other than 0000H is ignored.)
Cw.3	

(2) Execution result in Cr Command result area

The execution result of the command changes depending on the result (normal completion or completion) in Cr.0(15-8) Command execution result.

(a) Normal completion (When Cr.0(15-8) Command execution result is 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	0000H
Cr.3	

(b) Abnormal completion (When Cr.0(15-8) Command execution result is other than 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below.  *1: When 0FH is stored into the Cr.0(15-8) Command Execution Result, 00H (start slice No. of head module) is stored into the Cr.0(7-0) Start Slice No. of Execution Target.
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	Cw.3 Argument 2 at command execution is stored.

POINT

Execute Parameter setting ROM write (command number: 3301H) after confirming that normal operation is performed with the settings written to the RAM.

8.5.3 Operation mode setting (Command No.: 3302H)

Changes the mode of the ST1TD2. (Normal mode to offset/gain setting mode, offset/gain setting mode to normal mode)
This command can be executed when Bw.n+1 convert setting request is off (0) in the normal mode or when the module is in the offset/gain setting mode.

(1) Values set to Cw Command execution area

Cw Command execution area	Setting value
Cw.0	Set the start slice no. of the ST1TD2 where the command will be executed. (Hexadecimal)
Cw.1	3302H
Cw.2	Set the operation mode. 0000H : Normal mode 0001H : Offset/gain setting mode
Cw.3	Fixed to 0000H (Any value other than 0000H is ignored.)

(2) Execution result in Cr Command result area

The execution result of the command changes depending on the result (normal completion or abnormal completion) in Cr.0(15-8) Command execution result.

(a) Normal completion (When Cr.0(15-8) Command execution result is 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	0000H

(b) Abnormal completion (When Cr.0(15-8) Command execution result is other than 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below.  *1: When 0FH is stored into the Cr.0(15-8) Command Execution Result, 00H (start slice No. of head module) is stored into the Cr.0(7-0) Start Slice No. of Execution Target.
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	Cw.3 Argument 2 at command execution is stored.

8.5.4 Offset channel specification (Command No.: 3303H)

Specify the channel where the offset value will be adjusted.
When this command is executed, the value given to ST1TD2 is written in RAM as the offset value.
This command can be executed only in the offset/gain setting mode.

(1) Values set to Cw Command execution area

Cw Command execution area	Setting value
Cw.0	Set the start slice no. of the ST1TD2 where the command will be executed. (Hexadecimal)
Cw.1	3303H
Cw.2	Specify the channel where the offset value of offset/gain setting will be adjusted. Values can be set to multiple channels at a time.  1) Offset channel specification (b0: CH, b1: CH2) 0: Invalid 1: Channel to set
Cw.3	Set the acceptable temperature setting value and/or voltage setting value for input. • The temperature setting value is set in the unit of 0.1℃. [Example] To set to 0.3℃ ...Store 3. • The voltage setting range is set in the unit of 0.01mV. [Example] To set to 3mV...Store 300. Setting range on each input type is shown below.

Input type	Setting range (Accuracy guarantee range)
Thermocouple K	-2700 to 13720 (-2000 to 12000)
Thermocouple E	-2700 to 10000 (-2000 to 9000)
Thermocouple J	-2100 to 12000 (-400 to 7500)
Thermocouple T	-2700 to 4000 (-2000 to 3500)
Thermocouple B	0 to 18200 (6000 to 17000)
Thermocouple R	-500 to 17680 (0 to 16000)
Thermocouple S	-500 to 17680 (0 to 16000)
Thermocouple N	-2700 to 13000 (-2000 to 12500)
Micro voltage input	-8000 to 8000 (-8000 to 8000)

(2) Execution result in Cr Command result area

The execution result of the command changes depending on the result (normal completion or abnormal completion) in Cr.0(15-8) Command execution result.

(a) Normal completion (When Cr.0(15-8) Command execution result is 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	0000H
Cr.3	

(b) Abnormal completion (When Cr.0(15-8) Command execution result is other than 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below.  *1: When 0FH is stored into the Cr.0(15-8) Command Execution Result, 00H (start slice No. of head module) is stored into the Cr.0(7-0) Start Slice No. of Execution Target.
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	Cw.3 Argument 2 at command execution is stored.

8.5.5 Gain channel specification (Command No.: 3304H)

Specify the channel where the gain value will be adjusted.
When this command is executed, the value given to ST1TD2 is written in RAM as the gain value.
This command can be executed only in the offset/gain setting mode.

(1) Values set to [Cw] Command execution area

[Cw] Command execution area	Setting value
[Cw.0]	Set the start slice no. of the ST1TD2 where the command will be executed. (Hexadecimal)
[Cw.1]	3304H
[Cw.2]	Specify the channel where the gain value of offset/gain setting will be adjusted. Values can be set to multiple channels at a time.  1) Gain channel specification (b0: CH1, b1: CH2) 0: Invalid 1: Channel to set
[Cw.3]	Set the acceptable temperature setting value and/or voltage setting value for input. • The temperature setting value is set in the unit of 0.1℃. [Example] To set to 0.3℃ ...Store 3. • The voltage setting range is set in the unit of 0.01mV. [Example] To set to 3mV...Store 300. Setting range on each input type is shown below.

Input type	Setting range (Accuracy guarantee range)
Thermocouple K	-2700 to 13720 (-2000 to 12000)
Thermocouple E	-2700 to 10000 (-2000 to 9000)
Thermocouple J	-2100 to 12000 (-400 to 7500)
Thermocouple T	-2700 to 4000 (-2000 to 3500)
Thermocouple B	0 to 18200 (6000 to 17000)
Thermocouple R	-500 to 17680 (0 to 16000)
Thermocouple S	-500 to 17680 (0 to 16000)
Thermocouple N	-2700 to 13000 (-2000 to 12500)
Micro voltage input	-8000 to 8000 (-8000 to 8000)

(2) Execution result in Cr Command result area

The execution result of the command changes depending on the result (normal completion or abnormal completion) in Cr.0(15-8) Command execution result.

(a) Normal completion (When Cr.0(15-8) Command execution result is 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	0000H
Cr.3	

(b) Abnormal completion (When Cr.0(15-8) Command execution result is other than 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below.  *1: When 0FH is stored into the Cr.0(15-8) Command Execution Result, 00H (start slice No. of head module) is stored into the Cr.0(7-0) Start Slice No. of Execution Target.
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	Cw.3 Argument 2 at command execution is stored.

8.5.6 User range write (Command No.: 3305H)

Writes the adjusted offset/gain settings to the ROM of the ST1TD2.
This command can be executed only in the offset/gain setting mode.

(1) Values set to Cw Command execution area

Cw Command execution area	Setting value
Cw.0	Set the start slice number of the ST1TD2 where the command will be executed. (Hexadecimal)
Cw.1	3305H
Cw.2	Fixed to 0000H (Any value other than 0000H is ignored.)
Cw.3	

(2) Execution result in Cr Command result area

The execution result of the command changes depending on the result (normal completion or abnormal completion) in Cr.0(15-8) Command execution result.

(a) Normal completion (When Cr.0(15-8) Command execution result is 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below. Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	0000H
Cr.3	

(b) Abnormal completion (When Cr.0(15-8) Command execution result is other than 00H)

Cr Command result area	Result details
Cr.0	The command execution result is stored into the higher byte, and the start slice No. of execution target into the lower byte in hexadecimal as shown below.  *1: When 0FH is stored into the Cr.0(15-8) Command Execution Result, 00H (start slice No. of head module) is stored into the Cr.0(7-0) Start Slice No. of Execution Target.
Cr.1	The executed command no. is stored. (Hexadecimal)
Cr.2	Cw.2 Argument 1 at command execution is stored.
Cr.3	Cw.3 Argument 2 at command execution is stored.

8.6 Values Stored into Command Execution Result

The following table indicates the values stored into Cr.0(15-8) Command execution result in Cr Command result area.

Cr.0 (15-8) Command execution result	Description	Corrective action
00H	Normal completion	—
01H	The requested command is not available for the specified module.	Check Table 8.1 to see if the requested command no. can be used with the ST1TD2 or not.
		Check whether the specified start slice No. of execution target is the start slice No. of the ST1TD2.
02H	The value set in Cw.2 Argument 1 or Cw.3 Argument 2 is outside the allowable range.	Check whether the value set to Cw.2 Argument 1 or Cw.3 Argument 2 in the command execution area is within the range usable for the requested command no.
03H	The start slice No. of the execution target is wrong.	Check whether the ST1TD2 is mounted to the specified start slice No. of execution target.
		Check whether the specified start slice No. of execution target is the start slice No. of the ST1TD2.
04H	There is no response from the specified module.	Check Table 8.1 to see if the requested command no. can be used with the ST1TD2 or not. When the requested command no. can be used, the possible cause is a ST1TD2 failure. Please consult your local distributor or branch office, explaining a description of the problem.
05H	No communication is available with the specified module.	The possible cause is a ST1TD2 failure. Please consult your local distributor or branch office, explaining a description of the problem.
06H	The requested command is not executable in the current operating status (operation mode) of the module.	Check Table 8.1 to see if the requested command number can be used with the ST1TD2 or not.
		User range write (command number: 3305H) or Parameter setting ROM write (command number: 3301H) was executed more than 25 times after power-on. (Error code: 1200H) Execute the command after clearing the error using Ew.n error clear request.
		When offset/gain setting was made, the offset value was greater than or equal to the gain value (Error code: 400□H). After clearing the error using Ew.n error clear request, make the offset/gain setting again so that the offset value is less than the gain value.
		When setting the offset/gain values, the gain value minus the offset value is less than or equal to 0.2℃, or less than or equal to 20μV. (Error Code: 410□H.) After clearing errors using Ew.n Error clear request, make the offset/gain setting again so that the gain value minus the offset value is more than 0.2℃, or more than 20μV.

Cr.0 (15-8) Command execution result	Description	Corrective action
07H	The module has already been in the specified mode.	Continue the processing since the operation mode of the ST1TD2 specified by the start slice No. of execution target is the mode already requested.
08H	The module cannot be changed into the specified mode.	Execute the command after turning Bw.n+1 convert setting request to OFF (0).
09H	The specified module is in the online module change status.	Execute the command after online module change is completed.
10H	Data cannot be read from the specified module.	Execute the command again. If the problem on the left persists, the possible cause is a ST1TD2 failure. Please consult your local distributor or branch office, explaining a description of the problem.
11H	Data cannot be written to the specified module.	
13H	The specified module is not in the status available for parameter writing.	Execute the command after turning Bw.n+1 convert setting request to OFF (0).
0FH	The value of Cw.0 Start Slice No. of Execution Target is outside the applicable range.	Check whether the value set at Cw.0 Start Slice No. of Execution Target is not more than 7FH.

8 - 47

9 TROUBLESHOOTING

This chapter explains the errors that may occur when the ST1TD2 is used, and how to troubleshoot them.

9.1 Error Code List

In the ST1TD2, when an error occurs due to write of data to the master module, executing error code read request (command no.: 0101H) stores the error code into Cr Command result area of the head module.

Table 9.1 Error code list (1/2)

Error code (Hexadecimal)	Error level	Error name	Description	Corrective action
1100H	System error	ROM error	ROM fault.	Power the ST1TD2 off and then on, or reset the head module. If the error code given on the left is still stored, the possible cause is a ST1TD2 failure. Please consult your local Mitsubishi representative, explaining a detailed description of the problem.
1200H	System error	Number of writes for ROM error	Parameter setting ROM write (command no.: 3301H) or User range write (command no.: 3305H) was executed more than 25 times after power-on.	After power-on, execute the command for a single module, or write offset/gain settings to the ROM using GX Configurator-ST, within 25 times.
			Offset/gain settings were written to the ROM using GX Configurator-ST more than 25 times after power-on.	
1300H	System error	Converter error	A converter is faulty.	Turn the convert setting request off to clear the error. Then, turn the convert setting request on again.
1400H	System error	Base module error	Base module fault.	Power the ST1TD2 off and then on, or reset the head module. If the error code given on the left is still stored, the possible cause is a base module failure. Please consult your local Mitsubishi representative, explaining a detailed description of the problem.*
200□H	System error	Input type setting error	The value set to input type setting is outside the valid range. □ indicates the number of the channel where the error has occurred.	Set a value that is within the valid range.
210□H	System error	Average setting error	The average time setting is outside the range 480 to 5000ms. □ indicates the number of the channel where the error has occurred.	Set a value that is within the valid range.
220□H	System error	Average setting error	The average number of times setting is outside the range 4 to 500 times. □ indicates the number of the channel where the error has occurred.	Set a value that is within the valid range.

* If the error code: 1400H is stored after replacing the base module, the ST1TD2 may be faulty. Please consult your local Mitsubishi representative, explaining a detailed description of the problem.

Table 9.1 Error code list (2/2)

<table>
<tr><th>Error code (Hexadecimal)</th><th>Error level</th><th>Error name</th><th>Description</th><th>Corrective action</th></tr>
<tr><td>300□H</td><td>System error</td><td>Alarm setting error</td><td>The value set to the upper upper limit value/upper lower limit value/lower upper limit value/lower lower limit value of the alarm output is outside the valid range.
Setting range on each input type is shown below.

□ indicates the number of the channel where the error has occurred.</td></tr>
<tr><td>400□H</td><td>System error</td><td>User range setting error</td><td>In User range setting, offset value is equal to or greater than gain value.
□ indicates the number of the channel where the error has occurred.</td><td>Reset the range so that offset value is smaller than gain value.</td></tr>
<tr><td>410□H</td><td>System error</td><td>User range setting error</td><td>In user range setting, gain value - offset value ≦ 0.2 [℃] or gain value - offset value ≦ 20[μV]
□ indicates the number of the channel where the error has occurred.</td><td>Reset the user range to gain value - offset value > 0.2[℃] or gain value - offset value > 20[μV].</td></tr>
<tr><td>500□H</td><td>System error</td><td>Disconnection detection error</td><td>Line break down has been detected.
□ indicates the number of the channel where the error has occurred.</td><td>Check for any abnormality on the signal lines by doing a visual check and performing a continuity check.</td></tr>
</table>

POINT

(1) When multiple errors of the same level occur, the code of the error first found by the ST1TD2 is stored.
(2) The error can be cleared by turning on Ew.n error clear request.

9 - 3

9.2 Troubleshooting

9.2.1 When the RUN LED is flashing or turned off

(1) When flashing at 0.5s intervals

Check item	Corrective action
Is the offset/gain setting mode active ?	Execute Operation mode setting (command number: 3302_H) to active the normal mode. (see Section 8.5.3).

(2) When flashing at 0.25s intervals

Check item	Corrective action
Is the module selected as the target of online module change?	Refer to Chapter 7 and take corrective action.

(3) When flashing at 1s intervals

Check item	Corrective action
Has data communication been stopped between the master station and head module?	Refer to the MELSEC-ST System User's Manual and take corrective action.
Has a parameter communication error occurred between the master station and head module?	
Has an error occurred in another slice module?	
Has an internal bus error occurred?	

(4) When off

Check item	Corrective action
Is a module change enabled during an online module change?	Refer to Chapter 7 and take corrective action.
Is External SYS. power supply being supplied?	Check whether the supply voltage of the bus refreshing module is within the rated range.
Is the capacity of the bus refreshing module adequate?	Calculate the current consumption of the mounted modules, and check that the power supply capacity is sufficient.
Is the ST1TD2 correctly mounted on the base module?	Check the mounting condition of the ST1TD2.
Has a watchdog timer error occurred?	Power the ST1TD2 off and then on, or reset the head module, and check whether the LED turns on. If the LED still does not turn on, the possible cause is a ST1TD2 failure. Please consult your local Mitsubishi representative, explaining a detailed description of the problem.

9.2.2 When the RUN LED and the ERR. LED turned on

Check item	Corrective action
Is an error being generated?	Confirm the error code and take corrective action described in Section 9.1.

9.2.3 When line break down has been detected

Check item	Corrective action
Check whether the thermocouple, compensation lead wire or micro voltage signal cable is connected incompletely or not.	Connect the thermocouple, compensation lead wire or micro voltage signal cable securely.
Is the terminal screw tightened enough when the base module is screw clamp type?	Retighten the terminal screws within the specified torque range. For the specified torque range of terminal screw, refer to the MELSEC-ST System User's Manual.
Check the connected thermocouple, compensation lead wire or micro voltage signal cable for wire break.	Make continuity check on the thermocouple, compensation lead wire or micro voltage signal cable, and replace it if it is broken.
Check whether the channel where no thermocouple or micro voltage signal cable is connected is set to conversion-enabled.	Check the channels which are set to conversion-enabled and the channels where thermocouples or micro voltage signal cables are connected, and make the correct conversion enable setting.

9.2.4 Measured temperature value/micro voltage conversion cannot be read

Check item	Corrective action
Is external AUX. power being supplied?	Check whether the power distribution modules is supplied with a 24V DC voltage.
Is there any fault with the analog signal lines such as broken or disconnected line?	Check for any abnormality on the signal lines by doing a visual check or continuity check.
Are the offset/gain settings correct?	Verify that the offset/gain settings are correct. (see section 4.5 and 5.6) When the user range setting is used, switch it to the factory default setting and check whether conversion is performed correctly or not. If it is correctly performed, redo the offset/gain setting.
Is the input type setting correct?	Execute user range set value read (command number: 1318_H) and confirm the input type setting. (see section 8.3.7) If the input type setting is wrong, make the setting again using the configuration software of the master station.
Is the conversion enable/disable setting for the channel, where data was input, set to Disable?	Execute conversion enable/disable setting read (command number: 1300_H) and confirm the conversion enable/disable setting. (see section 8.3.1) If conversion is disabled, enable conversion by executing conversion enable/disable setting write (command number: 2300_H) or using GX Configurator-ST (see section 5.3 and 8.4.1).
Are Bw.n+1 convert setting request and Br.n+1 convert setting completed flag on?	Check whether Bw.n+1 convert setting request and Br.n+1 convert setting completed flag are on or off using the program of the master station or the I/O monitor of GX Configurator-ST (see section 5.4). If Bw.n+1 convert setting request and Br.n+1 convert setting completed flag are off, reexamine the program of the master station (see section 3.3.1 and 3.3.5).

9.2.5 Measured temperature value is abnormal

Check Item	Corrective action
Check whether the connected thermocouple or compensation lead wire differs from the setting.	Set the input type setting (User Parameter) to the connected thermocouple type.
Check whether the connected thermocouple or compensation lead wire is connected reversely.	Connect the thermocouple or compensation lead wire correctly.
Check for noise in the thermocouple input.	Check influence from the ground and adjacent devices, and take action to prevent noise.
Is the cold junction temperature compensation setting correct?	Set the cold junction temperature compensation setting (User Parameter) correctly.
Check whether conversion is made with the other thermocouple set after setting of the offset/gain value.	Make offset/gain setting again for the thermocouple changed.

9.2.6 Micro voltage conversion value is abnormal

Check Item	Corrective action
Check whether the input type set is a thermocouple or not.	Set the input type setting (User Parameter) to the micro voltage input.
Check the micro voltage signal cable for noise.	Check influence from grounding and adjacent equipment, and take noise reduction measures.
After offset/gain value setting, the other signal cable was connected.	Make offset/gain setting again with the newly connected signal cable.

POINT

If the normal measured temperature value/measured micro voltage value cannot be read after taking corrective actions corresponding to the above check items, the possible cause is a module failure. Please consult your local Mitsubishi representative, explaining a detailed description of the problem.

APPENDIX

Appendix 1 Accessories

This section explains the accessories related to the ST1TD2.

(1) Wiring maker

For how to use the wiring marker, refer to the MELSEC-ST System User's Manual.

Model name	Description	Color
ST1A-WMK-BL	Terminal marker (-, 0V, N)	Blue
ST1A-WMK-BK	Terminal marker (Signal wire)	Black

(2) Coding element

The coding element is fitted before shipment.
It is also available as an option in case it is lost.

Model name	Description	Shape*		Color
		Base module side	Slice module side	
ST1A-CKY-16	Coding element for ST1TD2			Dusty gray

*Indicates the position of the projection or hole when the coding element is viewed from above.
: Projection : Hole

Appendix 3 Allowable Temperature Differences

Conform to IEC584-2, JIS C1602-1995

Component symbol	Measured temperature	Class	Allowable difference
K	- 40℃ or more but less than 375℃	Class 1	±1.5℃
	375℃ or more but less than 1000℃		±0.4% of the measured temperature
	- 40℃ or more but less than 333℃	Class 2	±2.5℃
	333℃ or more but less than 1200℃		±0.75% of the measured temperature
	- 200℃ or more but less than -167℃	Class 3	±1.5% of the measured temperature
	- 167℃ or more but less than 40℃		±2.5℃
E	- 40℃ or more but less than 375℃	Class 1	±1.5℃
	375℃ or more but less than 800℃		±0.4% of the measured temperature
	- 40℃ or more but less than 333℃	Class 2	±2.5℃
	333℃ or more but less than 900℃		±0.75% of the measured temperature
	- 200℃ or more but less than -167℃	Class 3	±1.5% of the measured temperature
	- 167℃ or more but less than 40℃		±2.5℃
J	- 40℃ or more but less than 375℃	Class 1	±1.5℃
	375℃ or more but less than 750℃		±0.4% of the measured temperature
	- 40℃ or more but less than 333℃	Class 2	±2.5℃
	333℃ or more but less than 750℃		±0.75% of the measured temperature
T	- 40℃ or more but less than 125℃	Class 1	±0.5℃
	125℃ or more but less than 350℃		±0.4% of the measured temperature
	- 40℃ or more but less than 133℃	Class 2	±1℃
	133℃ or more but less than 350℃		±0.75% of the measured temperature
	- 200℃ or more but less than -67℃	Class 3	±1.5% of the measured temperature
	- 67℃ or more but less than 40℃		±1℃
B	600℃ or more but less than 1700℃	Class 2	±0.25% of the measured temperature
	600℃ or more but less than 800℃	Class 3	±4℃
	800℃ or more but less than 1700℃		±0.5% of the measured temperature
R	0℃ or more but less than 1100℃	Class 1	±1℃
	0℃ or more but less than 600℃	Class 2	±1.5℃
	600℃ or more but less than 1600℃		±0.25% of the measured temperature
S	0℃ or more but less than 1100℃	Class 1	±1℃
	0℃ or more but less than 600℃	Class 2	±1.5℃
	600℃ or more but less than 1600℃		±0.2% of the measured temperature
N	- 40℃ or more but less than 375℃	Class 1	±1.5℃
	375℃ or more but less than 1000℃		±0.4% of the measured temperature
	- 40℃ or more but less than 333℃	Class 2	±2.5℃
	333℃ or more but less than 1200℃		±0.75% of the measured temperature
	- 200℃ or more but less than -167℃	Class 3	±1.5% of the measured temperature
	- 167℃ or more but less than 40℃		±2.5℃

Note : The allowable difference refers to the maximum allowable limit for the difference between the resultant temperature of a conversion from thermal electromotive force using a standard thermal electromotive force chart, and the temperature at temperature detector contact.
The greater value of ℃ or % will take effect for the allowable difference.

App - 3

Appendix 4 Thermal Electromotive Force Chart

The calculation formula for accuracy differs according to the relation between the measured temperature and the operating ambient temperature.

(1) When the measured temperature is higher than the operating ambient temperature

(Accuracy) = (conversion accuracy) + (temperature characteristic) × (operating ambient temperature variation) + (cold junction temperature compensation accuracy)

Operating ambient temperature variation: A value of deviation from the operating ambient temperature range of 25±5°C

Example: When the thermocouple used is B (Refer to Section 3.1 (2), the operating ambient temperature is 35°C, the measured temperature is 1000°C, and the cold junction temperature compensation setting is set, the accuracy is:
(±3.5°C) + (±0.35°C) × (35°C - 30°C) + (±2.5°C) = ±7.75°C

(2) When the measured temperature is lower than the operating ambient temperature

(Accuracy) = (conversion accuracy) + (temperature characteristic) × (operating ambient temperature variation) + (cold junction temperature compensation accuracy) × (compensation value for cold junction compensation accuracy)

Operating ambient temperature variation: A value of deviation from the operating ambient temperature range of 25±5°C

When the measured temperature is lower than the operating ambient temperature, the cold junction compensation accuracy is lowered because the thermocouple's thermal electromotive force does not have a linear characteristic. Based on the thermal electromotive force table, compensate for the cold junction compensation accuracy.

Example) In the case of the thermocouple E (Refer to Section 3.1 (2)), operating ambient temperature of 25°C, measured temperature of -100°C and the cold junction temperature compensation yes setting,
Type E thermal electromotive force at around 25°C: 61μV/°C
Type E thermal electromotive force at around -100°C: 45μV/°C
The compensation value for cold junction compensation accuracy is:
[61μV/°C]/[45μV/°C] = 1.4
And the accuracy is:
(±1.5°C) + (±1.5°C)×1.4 =±3.6°C

App - 4

Appendix 4.1 Standard Thermal Electromotive Force of K

WARRANTY

Please confirm the following product warranty details before starting use.

1. Gratis Warranty Term and Gratis Warranty Range

If any faults or defects (hereinafter "Failure") found to be the responsibility of Mitsubishi occurs during use of the product within the gratis warranty term, the product shall be repaired at no cost via the dealer or Mitsubishi Service Company. Note that if repairs are required at a site overseas, on a detached island or remote place, expenses to dispatch an engineer shall be charged for.

[Gratis Warranty Term]

The gratis warranty term of the product shall be for one year after the date of purchase or delivery to a designated place.

Note that after manufacture and shipment from Mitsubishi, the maximum distribution period shall be six (6) months, and the longest gratis warranty term after manufacturing shall be eighteen (18) months. The gratis warranty term of repair parts shall not exceed the gratis warranty term before repairs.

[Gratis Warranty Range]

(1) The range shall be limited to normal use within the usage state, usage methods and usage environment, etc., which follow the conditions and precautions, etc., given in the instruction manual, user's manual and caution labels on the product.

(2) Even within the gratis warranty term, repairs shall be charged for in the following cases.

1. Failure occurring from inappropriate storage or handling, carelessness or negligence by the user. Failure caused by the user's hardware or software design.
2. Failure caused by unapproved modifications, etc., to the product by the user.
3. When the Mitsubishi product is assembled into a user's device, Failure that could have been avoided if functions or structures, judged as necessary in the legal safety measures the user's device is subject to or as necessary by industry standards, had been provided.
4. Failure that could have been avoided if consumable parts (battery, backlight, fuse, etc.) designated in the instruction manual had been correctly serviced or replaced.
5. Failure caused by external irresistible forces such as fires or abnormal voltages, and Failure caused by force majeure such as earthquakes, lightning, wind and water damage.
6. Failure caused by reasons unpredictable by scientific technology standards at time of shipment from Mitsubishi.
7. Any other failure found not to be the responsibility of Mitsubishi or the user.

2. Onerous repair term after discontinuation of production

(1) Mitsubishi shall accept onerous product repairs for seven (7) years after production of the product is discontinued. Discontinuation of production shall be notified with Mitsubishi Technical Bulletins, etc.

(2) Product supply (including repair parts) is not possible after production is discontinued.

3. Overseas service

Overseas, repairs shall be accepted by Mitsubishi's local overseas FA Center. Note that the repair conditions at each FA Center may differ.

4. Exclusion of chance loss and secondary loss from warranty liability

Regardless of the gratis warranty term, Mitsubishi shall not be liable for compensation to damages caused by any cause found not to be the responsibility of Mitsubishi, chance losses, lost profits incurred to the user by Failures of Mitsubishi products, damages and secondary damages caused from special reasons regardless of Mitsubishi's expectations, compensation for accidents, and compensation for damages to products other than Mitsubishi products and other duties.

5. Changes in product specifications

The specifications given in the catalogs, manuals or technical documents are subject to change without prior notice.

6. Product application

(1) In using the Mitsubishi MELSEC programmable logic controller, the usage conditions shall be that the application will not lead to a major accident even if any problem or fault should occur in the programmable logic controller device, and that backup and fail-safe functions are systematically provided outside of the device for any problem or fault.

(2) The Mitsubishi general-purpose programmable logic controller has been designed and manufactured for applications in general industries, etc. Thus, applications in which the public could be affected such as in nuclear power plants and other power plants operated by respective power companies, and applications in which a special quality assurance system is required, such as for Railway companies or National Defense purposes shall be excluded from the programmable logic controller applications.

Note that even with these applications, if the user approves that the application is to be limited and a special quality is not required, application shall be possible.

When considering use in aircraft, medical applications, railways, incineration and fuel devices, manned transport devices, equipment for recreation and amusement, and safety devices, in which human life or assets could be greatly affected and for which a particularly high reliability is required in terms of safety and control system, please consult with Mitsubishi and discuss the required specifications.
