## Introduction

TransCanada's TC PLUS system is designed to handle the following transactional activities of pipeline customers and business partners.

- Contracting and Capacity Release
- Nominations and Scheduling
- Confirmations and Operational Balancing Agreements (OBAs)
- Invoicing

Effective June 2015, the TransCanada pipelines currently using TC PLUS include:

- Gas Transmission Northwest Corporation (GTN)
- North Baja Pipeline
- Tuscarora Gas Transmission

The TC PLUS Nominations, Scheduling and Confirmations Reference Manual will familiarize users with the system's online transactional processes related to these functions. The Manual walks Shippers through how to enter nominations and view scheduled volumes reports. It will also demonstrate to Operators the steps necessary to conduct confirmations and manage their Out of Balance Agreements (OBAs) in the system. All users are able to access and download a variety of reports through TC PLUS.

This Manual also explains some important differences between TC PLUS and the legacy system (Pacific Express) that was formerly utilized by GTN, North Baja and Tuscarora pipelines.

## Contact Information

## TC PLUS User Manuals

A variety of User Manuals are available for the various functions that the TC PLUS system accommodates:

- Contracts and Capacity Release
- Billing and Invoicing
- System Access and External Security Administrator (ESA)

Please contact one of the appropriate contacts listed above, or download the desired user manual from one of the pipeline EBBs shown above.

## TC PLUS – Changes from Pacific Express

The TC PLUS employs methodologies and business practices that may in some cases be different than those utilized in Pacific Express and the legacy systems. Some of the most significant changes are captured below. For more information about any of the changes described herein, please contact the Nominations and Scheduling group.

### Time Zone

TC PLUS uses Central Clock Time (CCT).

### Nominations: Path-Threaded

TC PLUS utilizes a path-threaded methodology. A single receipt and a single delivery comprise a path-threaded nomination, as shown in the diagram below:

This is different than in the Pacific Express system where a single nomination may contain multiple receipts and deliveries.

### Nominations: MDQ Validation

TC PLUS enforces nominations within MDQ for firm transportation contracts.

### **Nominations: Segmentation**

TC PLUS accommodates segmentation of transportation capacity. There is no need to request an “override” as with Pacific Express.

### **Nominations: Backstops**

TC PLUS balances all nominations prior to scheduling so backstop nominations (for example for parking/lending or backup supply/market) are not permitted in the system.

### **Nominations: Market Center Contracts**

TC PLUS preserves the ability to utilize Market Center contracts. Market Center contracts can be utilized for the same purposes as in Pacific Express.

Market Center nominations in TC PLUS are structured differently, due to the path-threaded platform of TC PLUS. Please refer to the **Market Center Nominations** section later in this manual for more information regarding how to structure these nominations.

To ensure gas is scheduled correctly, these nominations must be in balance. If a shipper’s nominations are not in balance when they are submitted, TC PLUS will balance them prior to beginning the scheduling process. Please refer to the **Nomination Reconciliation Report** section later in this manual for more information regarding how to ensure nominations are in balance.

### **Market Center Contracts: Priority at Physical Points**

In TC PLUS, Market Center nominations are assigned the lowest priority among nominations when there are point constraints (i.e., cuts required at a physical receipt or delivery). At these times, it is advisable to nominate directly to/from transportation contracts so that transportation priorities are taken into account during allocations for point capacity.

If point constraints occur for ID-1 cycle, the elapsed prorata scheduled quantity (EPSQ) will prevent scheduled volumes on Market Center contracts from scheduling to zero.

**Market Center Locations**

TC PLUS has logical Market Center locations. Market Center contracts must nominate either to and/or from a Market Center location when receiving or delivering gas on system.

**Elapsed Operational Capacity**

To determine available capacity, TC PLUS utilizes Elapsed Operational Capacity. This concept adjusts available capacity to account for the number of hours that have elapsed in the gas day.

**Example 1:**

Location A has a delivery capacity of 6,000 Dth.

For Timely, Evening and ID-1 no volumes were scheduled to Location A.

For ID-2 cycle, a customer nominates 6,000 Dth.

Since half of the gas day has elapsed, only ½ of the point capacity is available for gas to flow. Therefore, only 3,000 Dth out of the requested 6,000 Dth can be scheduled for ID-2 cycle.

**Example 2:**

**TIMELY CYCLE**

Location		Hours Remaining to Flow	Operational Capacity (Dth)	Previously Scheduled Qty	Incremental Nominated Qty	Over By	Total Cut Qty	Scheduled Qty
Name	ID							
Location B	123	24	120,000	0	80,000	0	0	80,000

Shipper A nominates and is scheduled 80,000 Dth

**EVENING CYCLE**

Location		Hours Remaining to Flow	Operational Capacity (Dth)	Previously Scheduled Qty	Incremental Nominated Qty	Over By	Total Cut Qty	Scheduled Qty
Name	ID							
Location B	123	24	120,000	80,000	0	0	0	80,000

Shipper A nominates and is scheduled 80,000 Dth

**ID1 CYCLE**

Location		Hours Remaining to Flow	Operational Capacity (Dth)	Previously Scheduled Qty	Incremental Nominated Qty	Over By	Total Cut	Scheduled Qty
Name	ID							
Location B	123	16	80,000	53,333	40,000	13,333	13,333	106,667

1/3 of gas day has elapsed (8 hours)  
 2/3 of Capacity still remaining ( $120,000/3 * 2 = 80,000$ )

**New Shipper for ID1**

Shipper B is nominating an incremental volume of 40,000 Dth.

**Scheduled Volumes for ID1**

Shipper A is scheduled 80,000 Dth.  
 Shipper B is scheduled 26,667 Dth out of the 40,000 Dth that they are trying to nominate for ID1.

**ID2 CYCLE**

Location		Hours Remaining to Flow	Operational Capacity (Dth)	Previously Scheduled Qty	Incremental Nominated Qty	Over By	Total Cut	Scheduled Qty
Name	ID							
Location B	123	12	60,000	60,000	23,333	23,333	23,333	106,667

1/2 of gas day has elapsed (12 hours)  
 1/2 of Capacity still remaining ( $120,000/2 = 60,000$ )

**New Shipper for ID2**

Shipper C is nominating an incremental volume of 10,000 Dth.

**Scheduled Volumes for ID2**

Shipper A is scheduled 80,000 Dth.  
 Shipper B is scheduled 26,667 Dth.  
 Shipper C is scheduled 0 Dth out of the 10,000 Dth that they are trying to nominate for ID2.

Note: The Operationally Available Capacity report (OAC) on the pipeline’s EBB site will always display the Operating Capacity (OPC) for the location based on the full gas day (24 hours). In this case, the OAC report for Location B would show 120,000 Dth as the Operational Capacity (OPC).

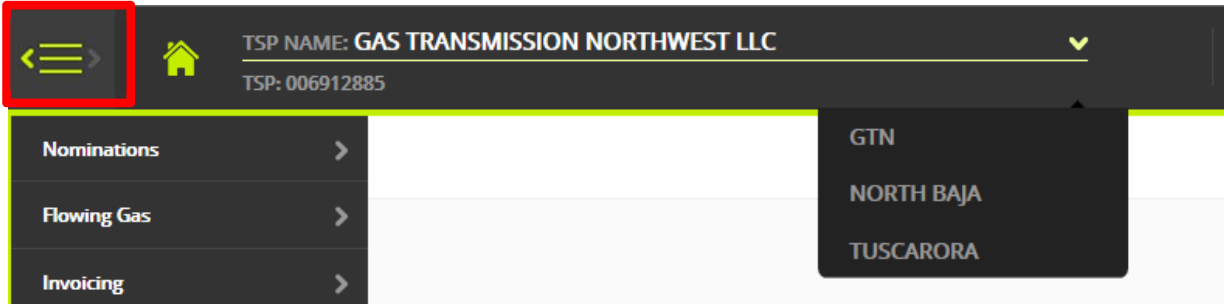

## Parking and Lending

For GTN there will be a single rate schedule for Parking and Lending activities. A single contract will be created for each park and loan activity for each location. Customers will need to get a PAL Agreement before any park and loan contract can be executed. For more information about PAL Agreements, please contact your Marketing or Contracts representative. For information about how to nominate Parking and Lending contracts, please refer to the **Parking and Lending Nominations** section later in this manual.

## Navigation

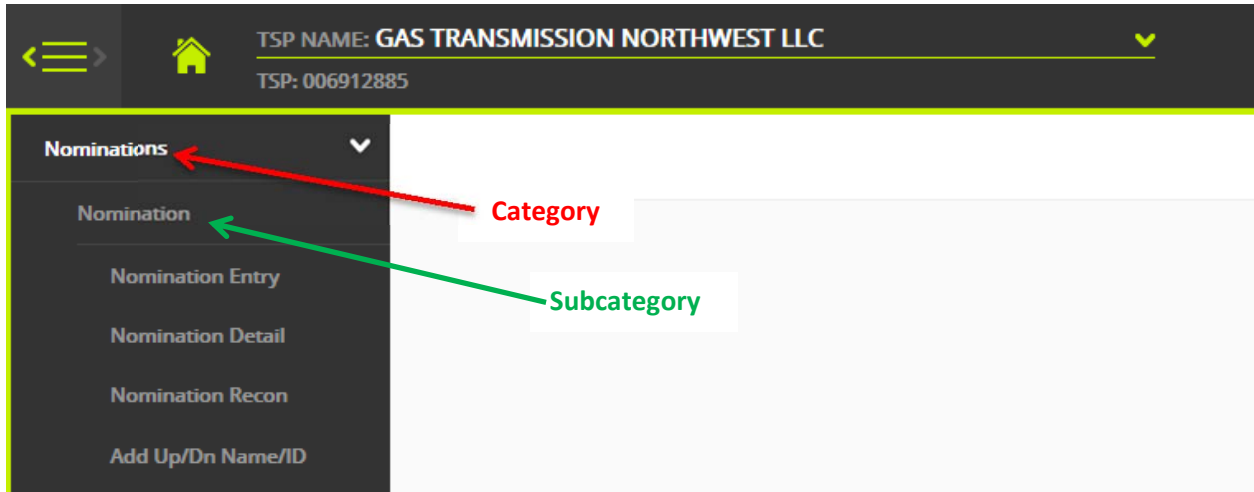

TC PLUS is a point and click system. Once you log into the system you will see the name of the pipeline you are logged into. If you have access to multiple pipelines within TC PLUS, click on the down arrow to select the pipeline you would like to access.

To display the navigation menu click on the navigation button at the top left. This will display all navigation options on the left side of the screen.

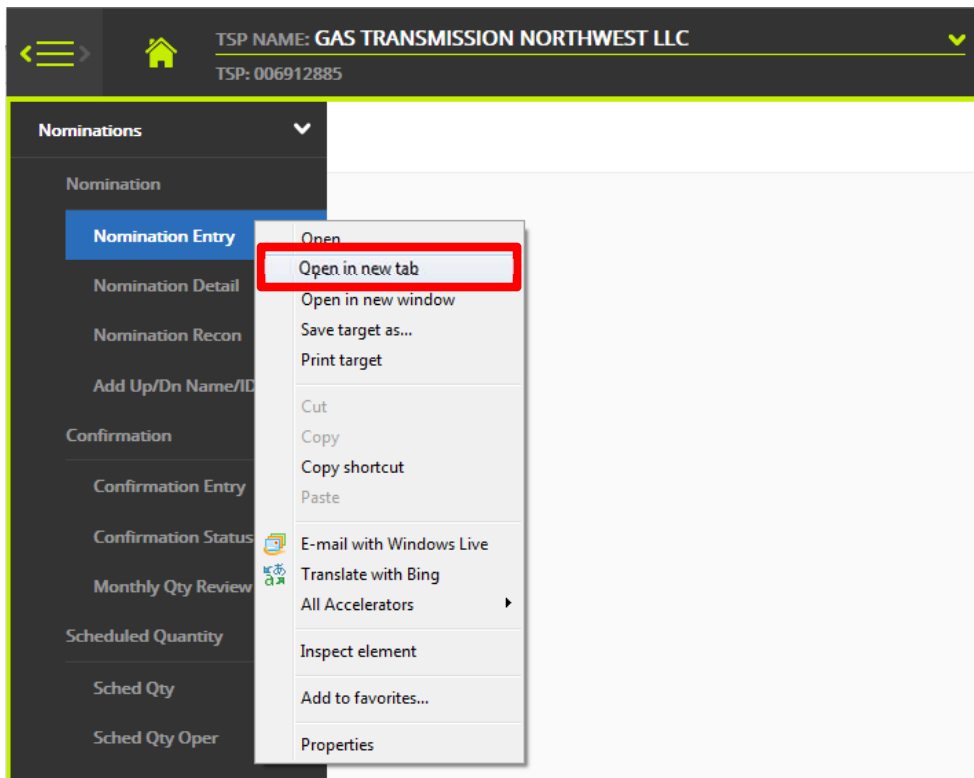

Click on any category to expand the options within that category.

Click on the sub category to access the window for the desired transaction or report.

Multiple tabs may also be opened, which provides the flexibility to switch back and forth from screen to screen. To do this, from the navigation menu, highlight the menu item and right click. A pop-up will appear on the right. Click on "Open in New Tab".

A new tab will be opened. Next, click on this tab to go to the desired task.  
Note: Users may open multiple tabs in the application.

To leave any screen and return to the home page menu, click on the house symbol at the top of the screen.

## Nominations

### Nomination & Confirmation Timelines

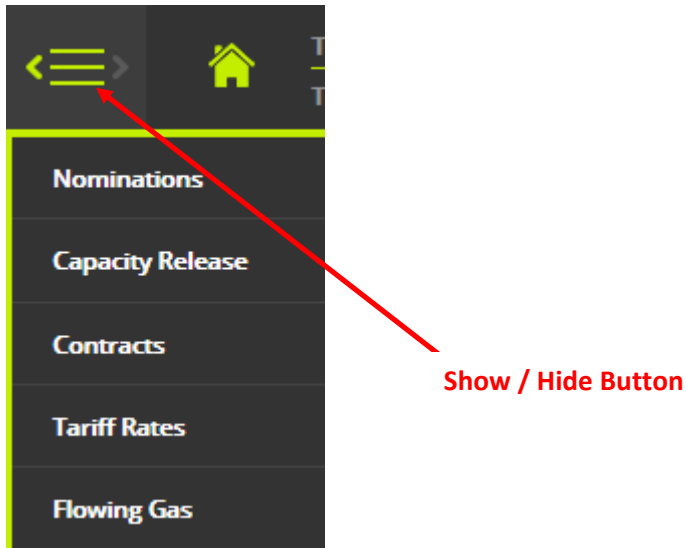

TC PLUS will follow the NAESB deadline standards. All times shown are in Central Clock Time (CCT).

	Day Prior to Gas Flow		On Gas Day	
	Timely Nomination	Evening Nomination	Intraday 1	Intraday 2
Nomination Deadline	11:30 AM	6:00 PM	10:00 AM	5:00 PM
Operator Confirmation	3:30 PM	9:00 PM	1:00 PM	8:00 PM
Scheduled Quantities	4:30 PM	10:00 PM	2:00 PM	9:00 PM
Effective Gas Flow Time	9:00 AM	9:00 AM	5:00 PM	9:00 PM
IT Bumping	N/A	Yes	Yes	No

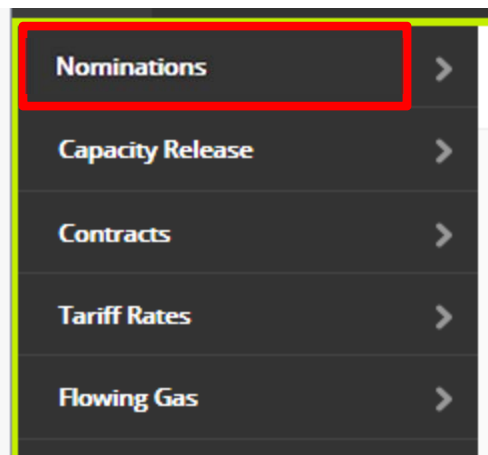

## Creating a Nomination

To view the main menu categories and sub-categories click on the show/hide button on the upper left corner.

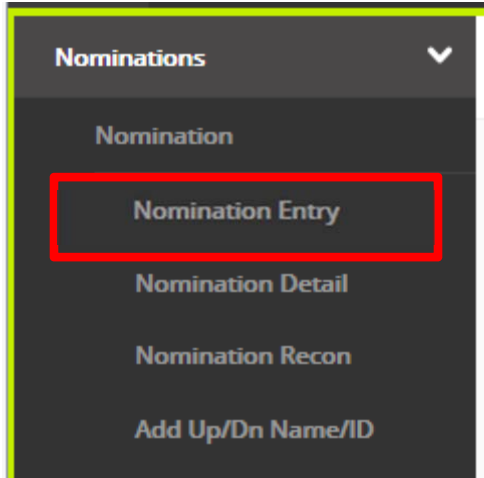

Click on **Nominations** from the drop down Menu on the left-hand side of the screen.

From the **Nominations** Menu, click on **Nomination Entry**

The Nomination Entry screen will open.

**NOMINATION ENTRY**

**Filter**      **Business Entity**

Year: 2015    Month: May    Day: -- All --    Svc Req Name: AnyGasCo    Svc Req: 741258963    Svc Req K: -- Select One --    Rate Sched: --

No Nominations exist.															

**Matrix Section**

To create a new nomination, select the contract from the Svc Req K drop down list in the filter section of the screen.

Then fill in data for the following fields in the form section:

- Date and Cycles (the gas day begins at 9AM on day 1 and ends at 9AM the next calendar day)
  - Begin Date
  - End Date
  - Cycle
- Receipt / Delivery Locations
  - Based on the path of the nomination the following will display:
    - Fuel Rate
    - Fuel Qty
    - Path Miles
  - Rec Loc Name – this is the name of the receipt location
  - Rec Loc – this is the number of the receipt location
  - Up Name – this is the Entity name of the upstream party
  - Up ID – this is the ID number of the upstream party
  - Up K – this is the contract # of the upstream party. IF a GTN contract, a dropdown list will appear. If an off-system contract, the field is freeform.
  - Rec Qty – this is the receipt quantity
  - Rec Rank – this is the rank of the receipt nomination
  - Del Loc Name – this is the name of the delivery location
  - Del Loc – this is the number of the delivery location
  - Dn Name – this is the Entity name of the downstream party.
  - Dn ID – this is the ID number of the downstream party
  - Dn K – this is the contract # of the downstream party. If it is a GTN contract, a dropdown list will appear. If it is an off-system contract, the field is freeform.
  - Del Qty – this is the delivery quantity
  - Del Rank – this is the rank of the delivery nomination
- Transaction Specific Notes
  - TT – this is the transaction type (current business will default)
  - Pkg ID – this is an optional field for freeform text
  - Nom Sub Cycle – this will default to being checked. If you don't want your nomination to be automatically re-nominated for subsequent cycles, then uncheck the box.

Review nomination and click on "Submit"

You will receive in the top left corner a message that your nomination was saved successfully

- Your Nomination will populate at the bottom of the nomination matrix section with a new nomination ID (Nom ID).

## Filtering and Copying Nominations

The filter section of the screen allows users to filter by date, service requester name (if agent for more than one company), and contract. Once filters have been selected, the screen will display existing nominations based on these filter options.

This feature is helpful if users want to copy nomination information from prior gas days for a new nomination.

**NOMINATION ENTRY**

Identify the nomination to be copied and on the right side of the window under Actions, click on "Copy". At this point the nomination information will copy to the screen however it won't assign it a new Nom ID until the nomination is edited and saved.

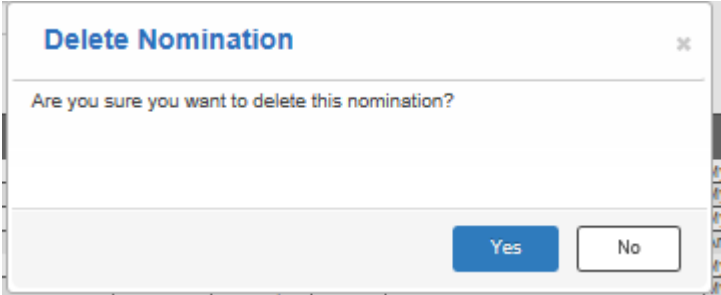

The copied nomination will appear in the form section. Please note that the Date/Cycle column will show the date/cycle that was selected prior to copying the nomination. Be sure to double check and modify these parameters as needed before saving the copied nomination as a new nomination.

Once the nomination has been submitted, click Reset prior to copying the next nomination.

If a nomination is copied to the form section and not submitted, the Reset button should be clicked to clear out the form prior to copying the next nomination.

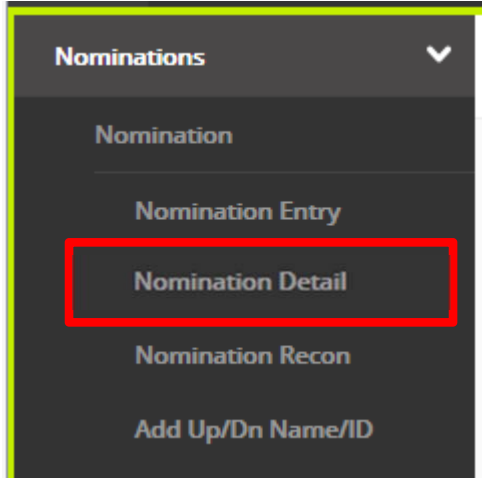

The option to delete a nomination is only available before the gas day/cycle deadline specified for that nomination. To delete a nomination, click on “Delete” in the Actions section of the nomination line. A pop up window will appear and Yes must be clicked in order to delete the nomination.

## Nomination Detail Screen

From the **Nominations** Menu, select **Nomination Detail**

The **Nomination Detail Summary** screen will display. Select the desired fields for the filter and click "Retrieve" to see the nominations that correspond to the filter selections.

## Nomination Dates

TC PLUS supports the use of overlapping nominations. An example of overlapping nominations is as follows:

<b>Nomination #1</b> <i>Submitted</i>	Begin Date:	11/01/15 @ 09:00
	End Date:	12/01/15 @ 09:00
<b>Nomination #2</b> <i>Submitted</i>	Begin Date:	11/15/15 @ 09:00
	End Date:	11/20/15 @ 09:00
<b>Nomination #3</b> <i>Automatically created</i>	Begin Date:	11/21/15 @ 09:00
	End Date:	12/01/15 @ 09:00

Nomination #1 will be in effect from 11/01/15 @ 09:00 until 11/15/15 @ 09:00

Nomination #2 will be in effect from 11/15/15 @ 09:00 until 11/20/15 @ 09:00

Nomination #3 will be automatically created and used 11/20/15 @ 09:00 until 12/01/15 @ 09:00

Note: The nominations in this scenario will all retain the same Nomination ID. To determine which nomination to use, TC PLUS will look at the effective date and then look at the date the nomination was created. For scheduling purposes, TC PLUS uses the most recently submitted nomination for a specified period.

### Additional Items to Note:

- There can be multiple nominations for a single contract.
- Submitting a new nomination will replace an existing nomination for the date specified when all parameters other than volume and rank are the same (up/down contract, receipt/delivery location). The most recently submitted nomination will be used by the system for scheduling purposes.
- If you wish to *correct, edit or modify* an existing nomination without re-keying all the information again, you can copy the nomination and submit changes. For more information, refer to the [Filtering and Copying Nominations](#) section.
- A single gas day nomination begins at 9 AM on Day 1 and ends at 9 AM on the next calendar day.
- A monthly nomination will begin at 9 AM on the first day of the month and end at 9 AM on the first day of the following month. For example, a nomination for the month of June 2015 would begin at 9 AM on 06/01/2015 and would end at 9 AM on 07/01/2015.
- The system will not allow nominations to be submitted after the corresponding nomination cycle deadline. If the deadline has passed, the nomination start time will default to the next cycle.

## Market Center Nominations

- No fuel is required for a Market Center (MC) nomination because no transportation occurs.
- Market Center contracts can be used at physical locations where a Market Center location exists.
- TC PLUS balances all nominations prior to starting the scheduling process.
- Multiple ways of nominating.

Example 1: The following example for MyGasCo, Market Center K#17116, illustrates how aggregating gas into and out of a Market Center can be used with multiple suppliers and markets:

**NOMINATION ENTRY**

## Nomination Reconciliation Report

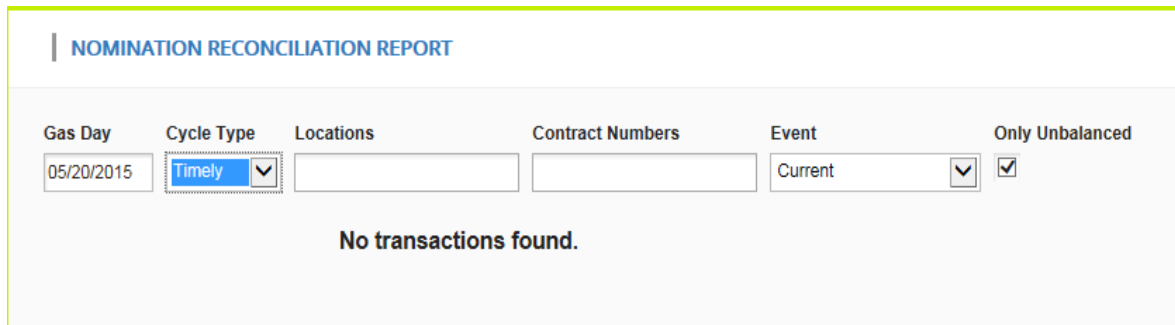

The Nomination Reconciliation Report (Nomination Recon) screen is used to make sure that contracts nominating into and out of Market Center locations are in balance prior to the beginning of a cycle.

You can access the **Nomination Recon** screen in TC PLUS under the **Nominations** heading on the left hand side.

From the **Nominations** Menu, select **Nomination Recon**

You will be directed to the screen below.

A screenshot of the "NOMINATION RECONCILIATION REPORT" screen. At the top, the title "NOMINATION RECONCILIATION REPORT" is displayed in blue. Below the title are several filter fields: "Gas Day" with a text input containing "05/20/2015"; "Cycle Type" with a dropdown menu showing "Timely"; "Locations" with an empty text input; "Contract Numbers" with an empty text input; "Event" with a dropdown menu showing "Current"; and "Only Unbalanced" with a checked checkbox. Below the filters, the text "No transactions found." is centered on the screen.

The **Only Unbalanced** box is checked by default. To view all nominations into and out of Market Center locations, uncheck the box.

This screen will display all nominations that are nominated into a Market Center and all nominations out of the Market Center location. It will also indicate if suppliers or markets have not entered a nomination to match.

Example 1: "Balanced" Market Center

**NOMINATION RECONCILIATION REPORT**

Gas Day: 05/03/2015    Cycle Type: Timely    Locations: Kingsgate MC    Contract Numbers:    Event: Current    Only Unbalanced:

Expand All

**Kingsgate MC — 370636** in balance

+	MyGasCo 17116	14,000	▶	MyGasCo 17115	14,000
+	MyGasCo 17116	25,500	▶	MyGasCo 17116	25,500
+	MyGasCo 17116	5,000	▶	Margaret Oil 17049	5,000
+	MyGasCo 17116	4,500	▶	AAA Energy Group 17013	4,500
+	MyGasCo 17116	2,000	▶	AAA Energy Group 17019	2,000

Example 2: "Out of Balance Market Center "

Margaret Oil K#17049 has not entered nomination to receive gas from MyGasCo K#17116

**NOMINATION RECONCILIATION REPORT**

Gas Day: 05/03/2015    Cycle Type: Timely    Locations: Kingsgate MC    Contract Numbers:    Event: Current    Only Unbalanced:

Expand All

**Kingsgate MC — 370636** out of balance

+	MyGasCo 17116	5,000	▶	Margaret Oil 17049	0	5,000
---	---------------	-------	---	--------------------	---	-------

Example 3: Once a market center is balanced, the Nomination Recon report will show no transactions out of balance:

---

**NOMINATION RECONCILIATION REPORT**

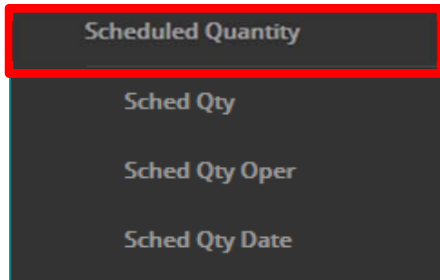

Gas Day	Cycle Type	Locations	Contract Numbers	Event	Only Unbalanced
05/20/2015	Intraday 1 <input type="button" value="v"/>	<input type="text"/>	<input type="text"/>	Current <input type="button" value="v"/>	<input checked="" type="checkbox"/>

**No transactions found.**

## Scheduled Quantity Reports for Shippers

The Scheduled Quantity reports are designed to provide the shipper with the scheduled quantities for a particular contract during the course of the gas day.

You can access scheduled quantity reports in TC PLUS under the **Scheduled Quantity** heading on the left hand side.

**Sched Qty** – Scheduled Quantity report shows the scheduled volumes for a given gas day, cycle and contract.

**SCHED QTY**

Receipt Total						19,528	Delivery Total						19,528						
Receipt Grand Total						19,528	Delivery Grand Total						19,528						

**Sched Qty Date** – Scheduled Quantity by Date report provides the filtering option to view scheduled quantities for a given range of dates. With this report, shippers have a variety of additional options to filter by and access to view the information through printing, csv, excel and pdf format.

Shippers that act as agents for other shippers have the option to review and download reports as the agent.

## Parking and Lending Nominations

For GTN there will be a single rate schedule for Parking and Lending activities. A single contract will be created for each park and loan activity for each location. Customers will need to get a PAL Agreement before any park and loan contract can be executed. For more information about PAL Agreements, please contact your Marketing or Contracts representative.

In TC PLUS, nominations for Parking and Lending nominations will require the shipper to reference the Parking or Lending contract in the upstream or downstream contract field from the transportation or market center contract nomination.

A separate nomination on the parking or lending contract is not required. They can be nominated on an FT, IT or MC contract. There is no fuel required for these transactions.

Each Park or Loan contract will have its own contract number and a new contract will be executed with each deal for a specific term.

Parks will be delivered to a specified MC location as designated in the contract (Receipt Loc = MC). DN K = Park Contract.

Loans will be receipt to a specified MC location as designated in the contract (Receipt Loc = MC). Up K = Loan Contract.

The example below shows a park nomination moving gas from the shipper's Market Center and parking it in inventory on their park contract 17112.

**NOMINATION ENTRY**

To do a “Loan Payback” nomination, the shipper will reference the Loan Payback contract as the Dn K on the Market Center or Transportation contract that will be doing the loan payback of the gas.

## OPERATOR / OBA INFORMATION

### Confirmations

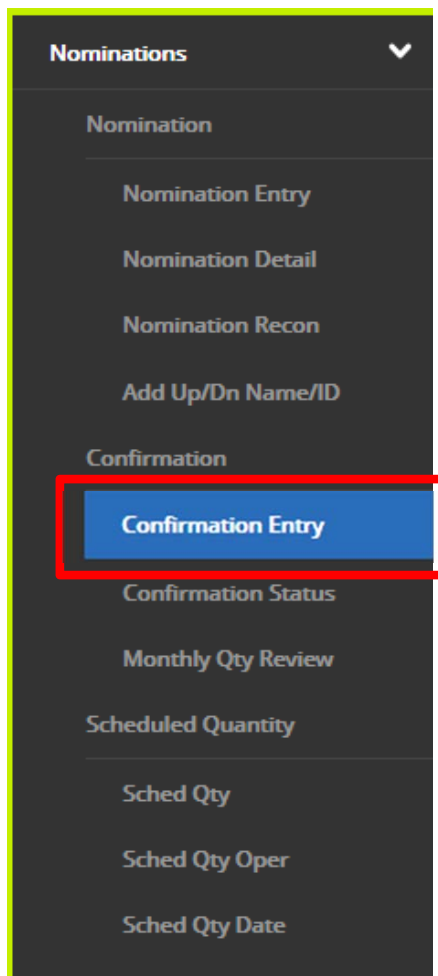

Operators may elect to be either Active or Passive for Confirmations.

If an operator is passive, all volumes that are nominated with confirmable supply/market will schedule fully for each cycle. Even if an operator is set up as passive, it is still possible to confirm actively in TC PLUS using the Confirmation Entry screen.

Operators have the ability to confirm volumes under the Confirmation Entry screen for all NAESB cycles.

Active operators must confirm any new volumes nominated to a location for a gas day.

From the **Nominations** Menu under **Confirmation**, select **Confirmation Entry**.

Users will be directed to the screen below:

Return to Confirmation Status | CONFIRMATION ENTRY: SOUTH BEND

<b>Total Delivery Qty</b>								34,000	34,000	0				
<b>Net Qty</b>								(D) 34,000	(D) 34,000	(Delivery) 0				

This screen will default to the first Location that needs to be confirmed.

All shipper nominations will display and Operators will need to confirm volumes under the “Confirm Qty” column.

The following data fields are used:

- Loc Name – Location Name
- K Flo – Receipt (R) or Delivery (D)
- Svc Req Name – Shipper’s Name on pipe
- Svc Req K – Shipper’s Contract on pipe
- Up/DN Name – Shipper’s name on other pipe
- Up/DN ID – Shipper’s Duns number on other pipe
- Up/Dn K – Shipper’s Contract number on other pipe
- Nom Qty – Quantity nominating on pipe
- Prelim Qty – Preliminary quantity to be confirmed by pipe
- Confirmed Qty – Quantity confirmed by other pipe
- End Date – End date you wish to confirm volume
- Conf Sub Cycle – Click to allow volume to continue to roll for next cycle
- RR – Reduction Reason code
- Last Updated By – logon id information for last person confirmed
- Conf Trk ID – ID created by pipe for tracking purposes

Operators can either select “Confirm All” to populate the Confirmed Qty column, or confirm volumes for each row individually.

The "Conf Sub Cycle" column is checked by default. This indicates that the confirmed volumes will continue to be confirmed for subsequent cycles for the gas day. "Conf Sub Cycle" may be unchecked if Operator does not want the volumes to be automatically confirmed for the remainder of the gas day.

Clicking "Submit" at the top right hand corner will save all the confirmed volumes.

## Monthly Quantity Review for Operators

The Monthly Quantity Review screen reflects the pipeline's final, end of day, scheduled volume for each day in the month.

After the close of each gas day's ID-2 cycle, final volumes are available for review. The intent is to give pipeline operators the ability to verify the pipeline's scheduled volumes. This helps with identifying and reconciling mismatches.

The **Monthly Qty Review** screen is accessed in TC PLUS under **Confirmation** on the left hand side.

When **Monthly Qty Review** is selected, users are directed to the screen below:

If the operator enters a volume in the “Interconnect Verified Qty” column that is different from the “Scheduled Qty” number, the difference will display in the “Variance” column.

If a variance occurs, both interconnects are mutually responsible for communicating with one another and addressing out the discrepancy in a timely manner.

TC PLUS requires that these volumes be verified no later than the 2<sup>nd</sup> business day of the month for the prior month.

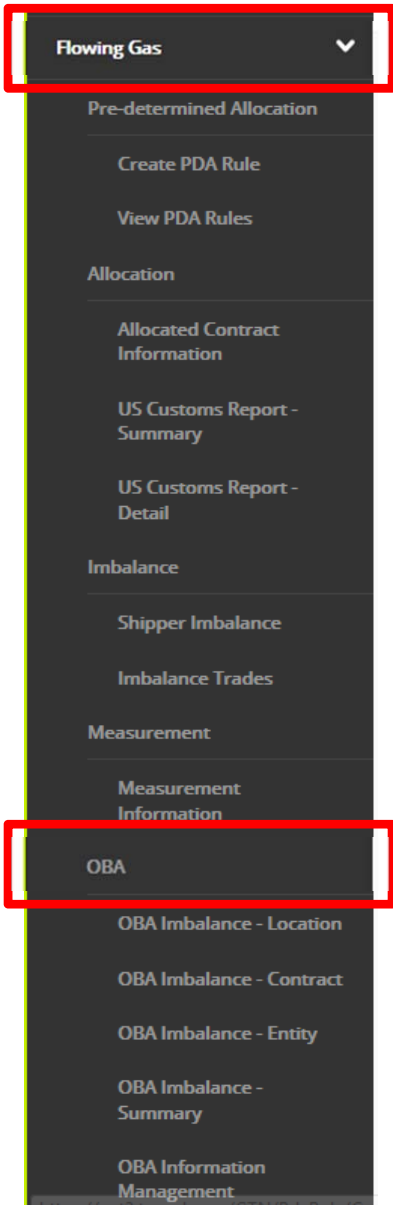

## OBA Reporting

### Flowing Gas Menu

On the Flowing Gas menu, OBA balances can be viewed in multiple locations and arrangements. A simple month-to-date view can be seen if the contract is pulled up under “Allocated Contract Information” in addition to any allocated transportation contracts.

The main area for viewing OBA information is under the OBA subsection. Click on Flowing Gas, then OBA:

## OBA Imbalance – Location

This report provides a narrowed view to a specific location and will provide the running balance for that location.

If an operator manages multiple locations, or is an agent for multiple locations, it is necessary to choose the location from the Loc Name drop down (some locations will be for a flow direction). Then, the production period month and year need to be selected.

OBA IMBALANCE AT LOCATION
Print

Loc Name	Dir Flo	Loc	Date
APS Yucca	D	953796	09/2014

- Positive = Due From Transportation Service Provider
- Negative = Due To Transportation Service Provider

Day	Scheduled (DTH)	Measured (DTH)	Daily imbalance
1	10,874	0	10,874
<b>Total Scheduled</b>		<b>Total Measured</b>	<b>Net Daily Imbalance</b>
	10,874	0	10,874

## OBA Imbalance - Contract

This will be the primary view for all the activity and contract cumulative. Enter the date and the contract number in the filter section of the screen and each location for the contract will be displayed. The location daily balance is similar to the OBA Imbalance – Location.

OBA IMBALANCE AT CONTRACT
Print

Svc Req K	Locations	Date
125005	APS YUCCA	08/2014

- Positive = Due From Transportation Service Provider
- Negative = Due To Transportation Service Provider

**Delivery - APS YUCCA - Loc: 953796**

Day	Scheduled (DTH)	Measured (DTH)	Daily imbalance
1	10,874	11,188	(314)
2	7,890	0	7,890
3	10,874	4,868	6,006
4	10,874	9,409	1,465

The bottom section of the screen will have a summary section in which all locations for a given contract are tabulated together and the cumulative OBA balance is calculated.

- BOM – stands for Beginning of Month
- EOM – stands for End of Month

This screen also allows users to see the cumulative balance at a specific location. By using the locations drop down menu and selecting only one location or a combination of locations users can view that locational cumulative imbalance, which can assist in prioritizing payback and OBA management.

**Summary**

				BOM Imbalance
				0
Day	Net Scheduled (DTH)	Net Measured (DTH)	Net Daily imbalance	Cumulative Imbalance
1	10,874	2,048	8,826	8,826
2	10,874	3,769	7,105	15,931
3	7,500	4,153	3,347	19,278
4	10,874	4,427	6,447	25,725
5	10,874	6,723	4,151	29,876
<b>Total Scheduled</b>		<b>Total Measured</b>	<b>Current Month Net Imbalance</b>	<b>EOM Imbalance</b>
50,996		21,120	29,876	29,876

## OBA Imbalance – Entity

This screen provides a view of the combined imbalance position for a Service Requester and is primarily for those with multiple OBA contracts.

To retrieve data, select Service Requestor Name and Date. This view is the summation of all OBA contracts associated with a given Service Requestor.

Day	Net Scheduled (DTH)	Net Measured (DTH)	Net Daily imbalance	Cumulative Imbalance
1	10,874	2,048	8,826	8,826
2	10,874	3,769	7,105	15,931
3	7,500	4,153	3,347	19,278
4	10,874	4,427	6,447	25,725
5	10,874	6,723	4,151	29,876
	<b>Total Scheduled</b>	<b>Total Measured</b>	<b>Current Month Net Imbalance</b>	<b>EOM Imbalance</b>
	50,996	21,120	29,876	29,876

## OBA Imbalance – Confirmation Statement

This will provide the contract imbalance for a closed month.

The Confirmation Statement(s), as stipulated by the OBA contract, provide a mechanism for confirming agreement or disagreement of the balances.

To retrieve data:

- Select Date
- Select Svc Req Name
- Click Retrieve

Selection results will appear.

Click the View link under “Actions”

A PDF document will be downloaded for review  
 All OBA contract holders should verify the information contained in the OBA Confirmation Statement and return a signed copy of the Statement to the contacts listed on the statement by e-mail or facsimile. Contract holders should indicate agreement or disagreement with the stated values.

## General TC PLUS Info

### Contact Set Up to Receive Reports

Operators and Shipper can set themselves up to receive emailed reports for Scheduled Volumes. This process is managed under Entities in TC PLUS.

On the **TC PLUS Customer Activities Menu**, select **Entities**, located on the lower left hand side, then **View Entities**.

Next, click on the legal entity name.

**VIEW ENTITIES**

Entity Name:  Duns: -- All -- Status: Select or start typing Pipelines: -- All --

Legal Entity Name	Entity Short Name	Entity ID	DUNS ID	Status	Pipelines
AnyGasCo	AnyGasCo	17	741258963	Active	North Baja, GTN, Tuscarora

Total Records: 1

Previous 1 Next

A new screen with tabs will appear:

**VIEW ENTITY DETAILS**

Entity | Addresses | **Contacts**

**Contacts** Add Contact+

**i** The highlighted contacts are attached to external users and can only be removed if the corresponding user is inactive.

Contact Id	First Name	Last Name	Country	Work Phone	Email	IM Type	IM Id	Type	Address	Actions
34	Bill	Jones	USA	(111) 111-1111	test@test.com	AIM		Invoice	717 Texas	Edit
17	Michael	Smith	USA	(999) 999-9999	test@test.com	AIM		Contracts	717 Texas	Edit

Add Contact+

Select the **Contacts** tab and either edit a current contact or select the **Add Contact+** link to create a new one.

The field **Contact Type:** is where users can select the desired report(s). Nominations are for shippers and Confirmations are for operators.

### Add Contact

Phone:

By selecting the Contact Type "Nominations" you will automatically receive by email the Scheduled Qty by Shipper report.

By selecting the Contact Type "Confirmations" you will automatically receive by email the Scheduled Qty by Operator report

## Notices

The schedule for planned maintenance work on a given pipeline can be found in TC PLUS or the pipeline website. The maintenance schedule lists the location of maintenance work, the milepost, start date, end date and the limitations on capacity at the impacted location. The maintenance schedule is frequently updated and posted well in advance of the maintenance start date.

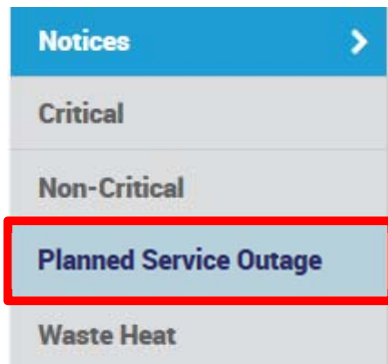

From the **TC PLUS Home Page**, select **Notices**, located on the lower left hand side, then Select **View Notices**.

You will be directed to the screen below.

From the pipeline website, select **Notices**, located on the left hand side, then select **Planned Service Outage**.

You will be directed to the screen below.

## Fuel Rates

Fuel rates will be calculated automatically on the **Nomination Entry** screen when an upstream or downstream volume is entered.

Fuel rates are posted on the website approximately seven days prior to the beginning of the month. To locate the posted fuel rates.

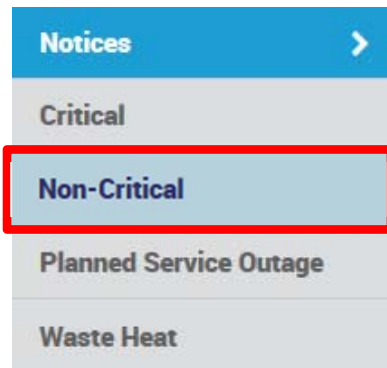

From the **TC PLUS Home Page**, select **Notices**, located on the lower left hand side, then **View Notices** and then the applicable monthly fuel rate notice from the list of Non-Critical notices.

You will be directed to the screen below.

A screenshot of a search filter interface. On the left is a dropdown menu with options: '-- Select One --', 'Critical', 'Non-Critical' (highlighted in blue), 'Planned Service Outage', and 'Waste Heat'. To the right are four input fields: 'Notice Type' with a dropdown set to '-- All --', 'Notice Status' with a dropdown set to '-- Select One --', 'Notice Eff Date' with a date input field and a calendar icon, and 'Notice End Date' with a date input field and a calendar icon. A blue 'Retrieve' button is on the far right.

From the pipeline website, select **Notices**, located on the left hand side, then select **Non-Critical**.

## Calculating Fuel Rate

The following formula is used to calculate fuel in TC PLUS.

$$\text{Delivered Quantity} / (1 - \text{Fuel Rate}) = \text{Receipt Quantity}$$

An example of a receipt-based fuel calculation:

1. Start with your delivered quantity (10,000 Dths).
2. Determine the transportation path (Kingsgate to Malin).
3. Look up the fuel rate for the path (e.g., 0.030000).
4. Divide the delivered quantity by one minus the fuel rate (0.970000).
5. The result is your receipt quantity:

$$10,000 \text{ Dths} / (0.970000) = 10,309 \text{ Dths}$$
