Volk Super 66 £230*

The Super 66 Stereo Fundus lens is specifically designed for high resolution/high magnification viewing of the central retina. It's enhanced 3-D stereoscopic design enables discernment of subtle macular and optic disc detail, making it ideal for detecting changes related to choroidal neovascular membranes, macular edema, serious detachments and other macular abnormalities.

*Includes quality storage case

Lens	Field of View	Image Mag.	Laser Spot	Working Distance	Primary Application

Volk G-4 Goniofundus £270*

The NF G-4 design features 4 precisely angled 64° mirrors to deliver a complete view of the anterior chamber angle with slight rotation and a small 8.4mm radius contact surface that's ideal for both static and dynamic gonioscopy. The NF (no flange/no fluid) design eliminates the need for viscous interface solutions such as methylcellulose. Artificial tears or a thick natural tear layer is sufficient. The NF lens design is available in a small hand held ring (25.5mm diameter).

*Includes quality storage case

Lens	Mirror Angles	Image Mag.	Laser Spot Size	Contact Diameter
G-4 Goniofundus	4 x 64°	1.0x	1.0x	8.4mm

Order any Volk & get a Universal Oculus for		£235	LSV/OU

Volk G-3 Goniofundus £270*

Volk's G-3 goniofundus lenses incorporate 3 mirrors angled at 60°, 66°, and 76°. The all glass 3 mirror design is ideal for anterior chamber as well as central and peripheral fundus viewing and treatment. The retinal viewing mirrors are accurately angled and spaced 120° apart to eliminate "gaps" in the visualised fundus. The central portion of the lens also provides direct observation of the central portion of the posterior pole. Solid, all-glass design means no more fogging.

*Includes quality storage case

Lens	Mirror Angles	Image Mag.	Laser Spot Size	Contact Diameter

Volk Super VitreoFundus® £235*

Volk's Super VitreoFundus® provides ultra wide-field viewing and outstanding small pupil properties for quick and comprehensive fundus exams at the slit lamp. It has been specifically designed to provide a wide field of view through small pupils without the steep learning curve of typical small pupil lenses. Delivering an incredible 124° dynamic field of view with ample .57x magnification, it is ideally suited as your primary care retinal scanning lens. Volk high index glass ensures high resolution images - even with slit lamp settings of 25x and above.

*Includes quality storage case

Lens	Field of View	Image Mag.	Laser Spot	Working Distance	Primary Application

Auto Lensmeter £975

A quality instrument comparable to other lensmeters but at a lower price. Will measure single vision, bifocal (trifocal), progressive power, contact and sunglass lenses whose transmittance is over 10%. Can also measure pupil distance, pupil height & lens diameter.

Also included is a UV measuring instrument, a thermosensitive printer & 3 FREE printer rolls of paper.

Speed of display & measurement is fast, accurate & efficient, while performance is free from interruption by environmental light.

- Sphere: 0 to ±25D (0.01 D, 0. 120, 0.25D steps)
- Cylinder: 0 to 10D (0.01D, 0.12D, 0.25D steps)
- Axis: 0 to 180° (1° steps)
- Add: 0 to 10D (0.01D, 0.12D, 0.25D steps)
- Prism: 0 to 10 A (0.01 A, 0.12 A, 0.25 A steps)
- Step: 0.01D
- PD: 80mm
- Lens diameter: Max. approx. 120mm
- Compensation of: Abbe number range: 20 to 60 high index lenses
- Measurable: >10% and over; (20% and overt 15D to ±25D)
- Contact Lenses: 0 to 25D.BC 6.00 to 9.00
- Display: Full graphic LCD with back light (Black/White) 320x240(mm)
- Printer: Built-in thermosensitive printer, paper size 38mm
- Power source: 100-120V-/200-240V- choice of 50 or 60hz
- Weight: 7kgs
