InSight Audit® – ICD-10 Transition Plan

The deadline for the transition to ICD-10 is fast approaching. This document will provide the key information you need for your InSight Audit® preparations ahead of the October 2015 deadline.

When will the ICD-10 compliant version be available?

InSight Audit® has been compliant with the ICD-10 transition since **April 2014**. As a web based product, all clients are already using the compatible version.

What additional hardware / infrastructure will I need to put in place?

The transition to ICD-10 will **not** require any changes to the current software and hardware requirements currently specified for InSight Audit®.

What additional costs can I expect?

Craneware will **not** be charging fees for the upgrading of InSight Audit® to accommodate the ICD-10 transition. Similarly, there will be **no** additional maintenance or support fees relating to the associated modifications. However like any large regulatory upgrade, there may be indirect operational costs within your own facility/organization associated with these changes.

How will the User Interface change for InSight Audit®?

The User Interface for InSight Audit® will contain only a very minor labelling change to rename the ICD-9 field to read "**Diagnosis Codes**".

The new ICD-10 codes will be automatically extracted from your 837 claims just as ICD-9 codes are today, and displayed in the Patient Record.

We expect to continue to accept dual code input for approximately 3 years to allow our clients to support RAC or compliance issues that may be of concern.

What preparations do I need to make?

InSight Audit® already accommodates the 5010 version of the HIPAA interfaces and so your ICD-10 import files will continue to operate as before and no adjustments will be necessary.

What testing will I need to perform?

InSight Audit® has been fully tested by our Quality Assurance team prior to release to our clients. We do not anticipate that you will need to perform any further testing or validation for InSight Audit®.

What training is available?

The enhancements to InSight Audit® have been designed to be very intuitive and therefore we do not anticipate that users will require any additional training. The User Manual and the regular InSight Audit® training sessions will shortly be updated to take account of the presence of ICD-10.
