## GETTING STARTED

### A. Hardware Installation

#### Step 1: Connect the ADSL line

Connect the Line interface of the device to the Modem interface of a splitter using a telephone cable. Connect a telephone to the Phone interface of the splitter using a telephone cable. Connect the Line interface of the splitter to your existing, incoming line.

The splitter has three interfaces:

- Line: Connect to a wall phone jack (RJ-11 jack).
- Modem: Connect to the ADSL jack of the device.
- Phone: Connect to a telephone set.

#### Step 2: Connect the router to your LAN network

Connect the LAN interface of the router to your PC, Hub or Switch using an Ethernet cable (MDI/MDIX).

#### Note:

**Use twisted-pair Ethernet cables to connect the router to a hub or switch.**

#### Step 3: Connect the power adapter to the router

Plug one end of the power adapter into a wall outlet and connect the other end to the 12V interface of the device.

The following diagram shows how to correctly connect the router, PC, splitter and the telephone sets.

#### Step 4: Check the ADSL LED status

Please check the ADSL LED on the front panel. This light indicates the status of your ADSL broadband through your telephone line. If the light is on, you can continue setup. However if the light is flashing, there is no broadband line detected. Please call your Internet Service Provider (ISP) and inform them about the flashing ADSL light to resolve the issue.

#### Step 5: Firewall settings

Please turn off all personal firewalls before you continue the setup – firewalls can block communication between your PC and router.

**Note: You must use the power adapter included in the package with the router, do NOT attempt to use a third-party power adapter.**

#### Step 6: PC LAN IP configuration

Configure your PC's LAN settings to automatically obtain an IP address from the router by following the steps below:

1. Click **“Start”** and then select **“Control Panel”**.

2. Click **“Switch to Classic View”** in the top left to show additional setting icons.

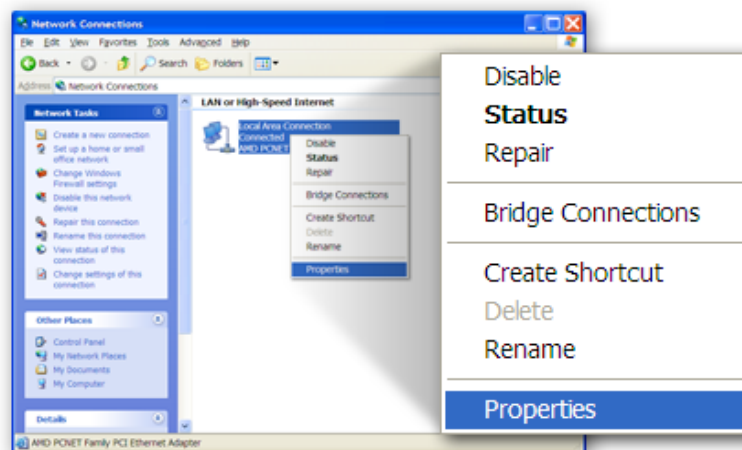

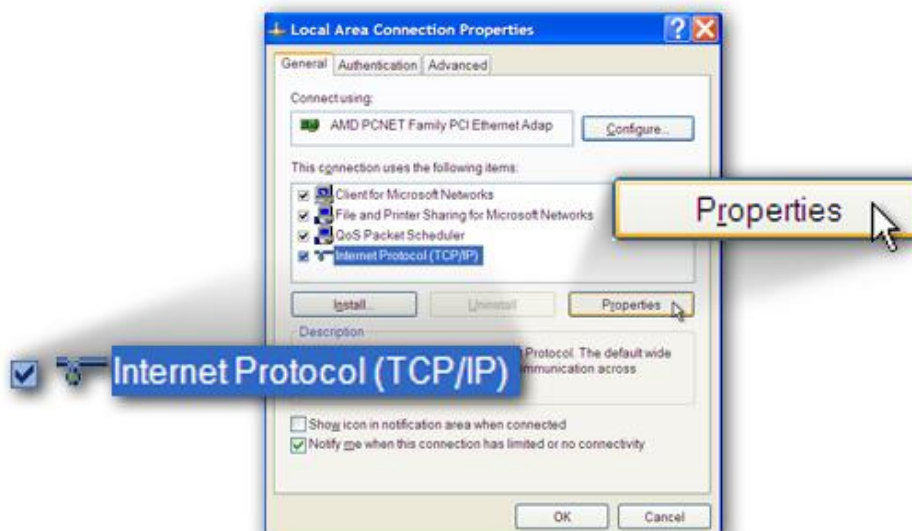

3. Locate the **“Network Connections”** icon and double-click to open network connection settings.

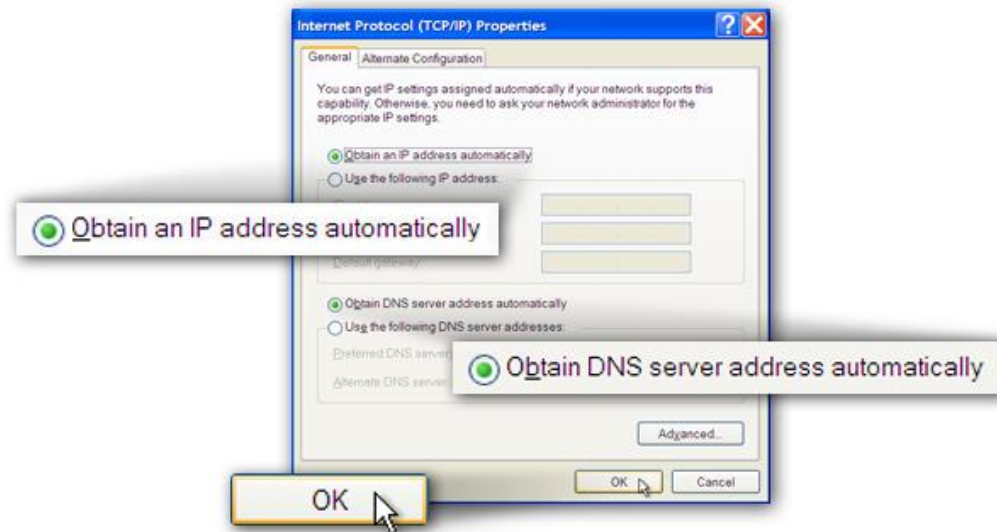

4. Select the **“Local Area Connection”** icon and right-click it to open the sub-menu, then select **“Properties”**.

5. Select **“Internet Protocol (TCP/IP)”** and then click **“Properties”**

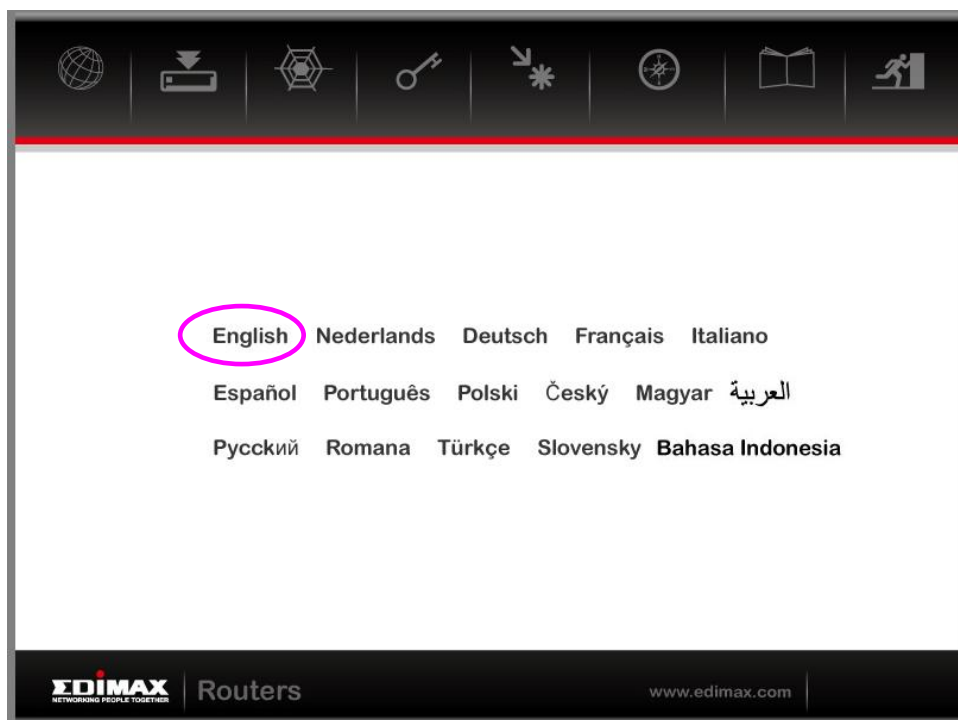

6. Ensure that **“Obtain an IP address automatically”** and **“Obtain DNS server address automatically”** are selected and then press **“OK”**.

## B. Internet Connection

You can configure the router by running the setup wizard on the CD-ROM included in the package contents. The wizard enables you to configure your Internet connection, upgrade the firmware and change the router's password. When you start the setup wizard, you will see the following screen. Please choose a language and follow the on screen instructions until setup is complete.

Alternatively, if you lose the CD-ROM or prefer a web based setup, you can login to the ADSL router using Internet Explorer, and configure the router from there using the web-based interface. Please follow the instructions below:

1. Enter the router's default IP address: **"192.168.2.1"** into your PC's web browser and press **"Enter"**.

2. The login screen below will appear. Enter the default username **"admin"** and default password **"1234"** and click **"OK"**.

3. You will arrive at the system status page as shown below.
