Balance Applications - Athletic Training 14

Rehab & Running

"Among physical therapists and other sports-medicine specialists, the thought is, if athletes are using Balance Boards in certain ways, those techniques should also be good for patients who need to restore functional strength. So what's the bottom line? Balance Board training can dramatically improve the strength and coordination of all the key muscles involved in running. This should help you avoid injuries - and make you a considerably more powerful runner".

Walt Reynolds, C.S.C.S. - Running Research News, December 1998

Performance & Safety

"Like anything else, balance is a skill", said John Bliedernicht, President of Sports Health C.A.R.E. Inc., a Chicago medical rehabilitation clinic. "And like any other skill, you've got to constantly practice it to preserve it ... After a while, (balance) exercises awaken reflexes and teach body awareness and control on a subconscious level. This can translate into lasting improvements in posture and overall quality of movement", Mr. Bliedernicht added, "regardless of age".

Liz Neporent, New York Times, January 1999

Athletic Training

"It was almost 20 years ago that I purchased our first Pro Fitter from you to rehabilitate a player's ankle. Since then, we have purchased another Pro Fitter and a large collection of your Balance Boards ... We have found your products to be high quality and something the players find fun, challenging and enjoy using. Thanks for helping to keep us healthy, strong and ready to play."

Jerry Attaway, Physical Development Coordinator, San Francisco Forty-Niners Football Club

13 Active Office - Balance Applications

Active Standing

At work or at home, stand on a Wobble Board while you're talking on the phone or while taking a stretch break. You will quickly enjoy the benefits of stronger ankles and better balance.

The Ideal Footrest

When used as a footrest, an adjustable height Wobble Board allows dynamic movement of your legs and feet so they won't get tired from being in the same position for hours. Footrest height should be set to allow your hips and knees to be at 90° angles. When Wobble Boards are combined with an Exercise Ball Chair or Active Disc, you will see improvements in balance, core stability and your overall relationship with gravity.

What is Balance Training? 2

Balance Training Explained

Balance Training is the process of coaching our bodies and brains into gradually feeling comfortable with a full range of motion and stability activities. It demands physical and mental attention in order to create awareness of how the body moves in a variety of conditions. Our sense of proprioception can be trained to anticipate many different movements, so our bodies can react gracefully. An essential component of injury prevention, Balance Training is recommended for all ages. Ongoing Balance Training will keep our minds and bodies constantly aware of themselves, and functioning together. Fitterfirst has a variety of Balance Boards to suit your specific balance training needs.

Benefits of Balance Board Training:

- Improved balance and coordination.
- Better proprioceptive awareness
- Improved core stability & strength.
- Increased leg strength.
- Greater ankle Range of Motion (R.O.M.)
- Improved flexibility and agility.
- Enhanced performance in sport and daily life.
- Pre-habilitation: Prevent injuries.

“

Elite athletes depend on Wobble Boards and Bongo Boards to train dynamic balance. These highly effective tools are fun to use and my clients love them

3 What is Balance Training?

Improve Your Quality of Life!

Daily use of a Balance Board is an asset to your health and well-being. Much like brushing your teeth regularly, using a Balance Board is a simple exercise that will have a profound impact on your overall health. Regardless of your age or ability, Balance Boards can help you maintain a better relationship with gravity. Balance Training will let you experience ease of movement, and even improved posture. You feel more confident in your movements, whether climbing stairs or playing a sport. The more you use a Balance Board, the better your agility and reaction skills will become. Oh yeah, did we mention **it's fun?**

The Balance Game

Daily opportunities to balance

- Balance on one foot while putting on your socks. *For an added challenge, try closing your eyes.*
- Brush your teeth balancing on one leg.
- Stand up and balance on one leg when on the phone.
- Try sitting on a fitness ball instead of a chair.
- Use a Wobble Board while doing dumbbell exercises.
- Tight-rope walk along the edge of curbs.
- Use the swings, slides and teeter totter in your local park
- Play catch with a ball or Frisbee standing on one leg (do both sides).

“

Young or old, it's never too late to start, and once you experience the benefits of it, you too will be hooked on the Balance Game for the rest of your life!

Balance Applications - Active Aging 12

Age Gracefully:

Falls and impaired mobility are a serious problem for the elderly. Approximately 1/3 of people over 65 experience a fall each year, with 1 in 20 falls resulting in serious injuries like hip, wrist or forearm fractures. The good news is that much of the decline in balance can be reversed through a program of balance training. One study found that healthy people as old as 90 years old can reduce the tendency to fall by 50% through balance training. It's not hard to see that this can help keep people independent and mobile far longer.

Sherri Kwasnicki, Fitness Columnist, The Province, Vancouver, BC

“

People as old as 90 years old can reduce the tendency to fall by 50% through balance training.

”

Staying Upright in a Wobbly World

A recent analysis of seven studies that focused on improving balance showed that people older than 60 who exercised regularly lowered their stumble risk by 13%. **Those whose workouts included balance training lowered their risk by 25%.** More recently, a study by Edward R. Laskowski, M.D., a physical medicine and rehabilitation specialist, showed the value of practicing on a Wobble Board... People in the study who used the Wobble Board for 15 minutes a day trained their ankle muscles to brace them in a way that would help protect them if they took a wrong step... Research is showing that movement is essential to retaining your health and vigor as you age. Doing exercise to build strength and enhance balance is an important complement to maintaining cardiovascular fitness through aerobic movement.

Step Safely - Take These Safety Steps

1. Adjust Wobble Boards to the lowest possible setting for first time use.
2. Only use these products on a dry surface free of any obstacles.
3. You may need to step off quickly- make sure you have ample space
4. If you feel unsafe or feel like you may fall:
 - Step off the Board. Do not use again until you have the help of a spotter or some other suitable form of balance aid.
 - Stand in a doorway and touch both sides of the door frame beside you.

Always maintain proper upright posture with your head up, back straight and knees bent. Keep your eyes focused straight ahead. **Do not stare down** at the ground or at your feet as this may lead to loss of balance.

If used properly, Wobble and Rocker Boards are fun and FUNCTIONAL training tools. The basic idea is to move the Board in a controlled manner in all directions. It is more important to maintain correct posture than it is to successfully complete these exercises. With practice you will be able to do these exercises and **maintain a proper heads-up posture**. The exercises on the following pages outline the basic activities you can do on these Boards.

Weeble Board Exercises 10

Weighted Squat

- Perform a squat while attempting to keep the edges of the Boards from touching the floor.

Lunges

- Begin with your front foot on a single Weeble Board.
- Lunge forward until your front knee reaches 90°.
- Add weights to increase challenge.

Push Ups

- Start with wrists centered on each Board.
- Use caution as wrists are in full flexion position.
- Try different width and staggered board positions.
- Try one foot to increase challenge.

Combo & Combobble Exercises

Basic Exercises:

- Rock back and forth or from side-to-side.
- Change the fulcrum as ability progresses.
- Experiment with different foot positions for an added challenge.

Advanced Exercises:

- Using a wider stance, attempt full squats.
- Close your eyes, always use a spotter when you first try this.
- Always **USE YOUR BALANCE BOARD** with caution.

9 Rocker Board Exercises

Basic

Front to Back

Side to Side

Position your feet shoulder-width apart, centrally on the Board. Begin by slowly moving the Board side-to-side, or front-to-back with a controlled movement.

Tri-level design allows user to adjust the single plane tilt from 10°, 12° and 15°. This varies the Boards degree of difficulty.

Intermediate

- Try adding in other exercises while attempting to maintain control. Some suggestions are squats, lunges, push-ups and ball tossing/bouncing.
- Incorporate other equipment such as a Body Blade™.
- Advanced users may attempt these exercises on one foot for greater challenge.

Rehabilitation

- By rotating your stance on the Rocker Board, you can gently increase your ankle's R.O.M.
- Helps to restore stability.

Remember - only you and your Medical Professional will know what is best for you!

Wobble Board Exercises 6

Basic

Begin with a gentle Range of Motion (R.O.M.) on the Wobble Board until you become familiar with the movement. Exercises such as side-to-side, front-to-back, and circular rotation are all excellent basic exercises to start with.

TIP
Always maintain stable upright body position and posture heads-up looking straight ahead

Balance Aids can be used by individuals with limited balance and during early rehabilitation for additional support.

Side to Side

With your feet planted squarely on the Wobble Board, begin a slow controlled movement from side-to-side without the front or back touching the floor.

Front to Back

Slowly, and in a controlled manner, move the Board from front-to-back.

Rotation

- Rotate the Wobble Board using a controlled circular motion.
- Remain balanced on the sphere without the sides touching the floor.

Calf Stretch

- Keep the heel of your back leg on the floor and lean forward until you feel a stretch.
- Effectively stretches the calf (gastrocnemius & soleus).

7 Wobble Board Exercises

Intermediate

Balanced Push-ups

- Start on your knees and work up to full push-ups as you become comfortable with the challenge.
- Use caution and be aware that the wrists are in a full flexion position for this activity.
- Ensure that your hands stay on top of the Board or else your fingers might get pinched!
- Improves core stability.

Variation

Ab Training

- While seated on the Board maintain proper posture while using your trunk muscles to begin a slow rotational movement.
- If you have ever had back problems, consult with a physician before doing these activities.
- Improves core strength, R.O.M. and mobility in the lower back and trunk.

Variation

Kneeling Exercises

- Kneel on the Board with your hands on your hips, or by your side.
- Use your trunk muscles to begin a slow rotational movement.
- After several rotations, stop and rotate the Board in the opposite direction.
- Increases R.O.M. and stability of the trunk and pelvic areas.

Variation

Wobble Board Exercises 8

Advanced

Motor Skill Training

- Perform any of the previous exercises while bouncing or throwing a ball or doing some other dynamic activity.
- Enhances hand-eye coordination and subconscious reaction.
- Your conscious mind focuses on one activity while your subconscious mind is working on ankle R.O.M. and overall stability.

Variation

One Leg Exercises

- Perform the basic moves while balancing on one leg.
- Position your foot arch directly over the center of the Board, so that you can comfortably move the Board in any direction.
- Exercises require more strength and stability and you may feel that one leg is much stronger than the other.

Variation

Eyes Closed

- This is the most difficult way to use Wobble and Rocker Boards.
- Always start the exercise with your eyes open. When you and your spotter are ready, close your eyes only until you feel off balance.
- Enhances proprioceptive response and reaction time.
- Only attempt when you have achieved an advanced level of stability and balance.

Warning: This activity is risky and falls should be expected.

Perform with a spotter.
