Preparation for installation and use

Before use, you should read the user manual of your camera carefully; understand the manipulation and functional setting. The function setting of camera may influence the efficiency control of the camera.

Install and replace the battery

The low battery voltage icon [] will twinkle or the character become dim obvious when the power is not enough, that means the low battery voltage has already influence the normal work of the device, which needs to replace the battery

in time. The timer remote control uses 2pcs of AAA batteries; Please follow the steps to replace the battery if needed.

1. Slide and open the battery cover.
2. According to the signs of positive [+] and negative [-] in the battery compartment to install the battery correctly.
 You should pay attention to the polarity of battery because of the wrong installation will make the device work abnormally, or even physical injury.
3. Close the battery cover.

Preparation for installation and use

✎ Connection with the camera

1. First, fix the camera on the tripod or other fixed bracket.

2. Open protective cover of external shutter socket and put the shutter plug of shutter connect cable in place, then make sure it has been fixed firmly.

- For most of camera shutter socket, there is mis-plug interface, please note insert direction so as to avoid damage to shutter socket.

3. Insert the input plug of shutter connect cable into the output control socket of TC-252.

- The timer remote control will not be able to control the camera if the shutter connect cable hasn't insert correctly.

4. Open the camera power.

En

Preparation for installation and use

✎ Open the background light of display

Press and hold the background light button for 3 seconds, the background light will be turned on.

- Open the background light and press the button twice each 6 seconds, the background light will keep lit.
- The background light will not be close by hand; it will turn off after 6 seconds automatically without any operation.

En

Shooting control

Sketch map for selecting function mode:

The instruction is under the premise that the timer remote control and camera have been connected tightly, and turned on the power of camera and timer remote control. The detail instruction of remote shooting will be showing as follow.
